We American citizens of Polish descent in Chicago, Ill., assembled here at the 20th anniversary commemorating the Katyn massacre, appeal to the President of the United States and request that he direct the proper U.S. agencies to carry out the congressional committee's recommendations.

We emphasize that the Katyn massacre is one of many acts of genocide committed by Soviet Russia upon the captive nations.

The glorious past of our Nation demands that we defend justice rather than appease criminals.

Washington Report

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my newsletter of April 30, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas, April 30, 1960)

H.R. 10213, a bill to amend the National Housing Act (short title, "Emergency Home Ownership Act") provoked one of the hottest, most controversial and partisan political debates of the year. The controversy surrounded the authorization of $1 billion additional Federal funds for the purchase of FHA and VA mortgages on new home construction. The bill's preamble became an outline of the conflicting views. The preamble states, "A bill to amend the National Housing Act to halt the serious slump in residential construction, to increase both on-site and offsite job opportunities, to help achieve an expanding full employment economy and to broaden home ownership opportunities for the American people." The disagreement focused on the short title, "Emergency Home Ownership Act." Members chose sides over whether there was (Democrats) or was not (Republicans) an emergency.

Arguments for the bill: (1) Employment is off in residential construction, estimated housing starts of 1,100,000 in 1960 are 150,000 less than 1959; (2) tight money market requires Federal aid; (3) "little man" needs additional help to acquire home. Arguments against: (1) The estimated 1.1 to 1.2 million housing starts will be a good year; 1959 was the second best year in history; 4½ million unemployed is not alarming, employment is at the highest point in history; bad weather accounts for some dropoff; (2) tight money is the result of (a) business boom and demand for money to expand, (b) Government borrowing in short-term field because of interest ceiling in long-term field takes much of money available otherwise for home financing; (3) "little man" is not helped but hurt by this $1 billion Federal spending and its inflationary impact; actually, this is a subsidy for one segment of our economy.

Here is a good example of the basic clash between the liberal and conservative philosophies as championed by the Democrat and Republican Parties respectively. The liberals believe growth and economic well-being of the Nation depends on Federal spending, while the Republicans believe that private initiative, spending, and investment promote the only healthy growth. How can Federal handouts, as "aid," help the people when all the money must be taken from them? The redistribution of money through taxation has been accomplished so thoroughly already that more Federal aid can come only from taxing the low and middle income brackets. Then when we borrow to spend more than we take in, we inflate, that is, cheapen, our money. Inflation again hurts most those in the lower income groups.

Challenge on fiscal responsibility: The minority report on the housing bill, prepared by Republican Members, points it up as "a clear-cut challenge to the Congress on the question of fiscal responsibility." The minority said, "Even the title of the bill—Emergency Home Ownership Act—condemns

this proposal. There simply is no emergency. Last year our economy and the well-being of our people moved to new highs. Virtually all competent observers agree that this year will be even better. And yet, under this bill, a billion dollar back-door raid would be made on the Treasury for the purchase of mortgages at subsidy prices. In this time of prosperity, fiscal responsibility requires that the Congress achieve a noninflationary Federal budget. Irresponsible spending proposals of this type must be stopped."

New housing starts are not the whole picture: In considering the role of housing in our economy, one important fact should not be overlooked. New housing construction is only one part of the picture. People also become homeowners by buying existing homes and get better homes by expenditures for modernization. A breakdown of the $15 billion in loans made by member institutions of the Federal Home Loan Bank Board last year shows only a third of that money borrowed for new home construction. The rest of it went into purchases of existing homes and for repair and remodeling. The liberals were playing a housing-starts numbers game by alluding to only one part of the picture in presenting the housing bill.

Indiana Congressman CHARLIE HALLECK, Republican leader, summed the thing up pretty succinctly stating, "The bill represented a billion dollars worth of baloney." Needless to say, the bill cleared the House by a vote of 214 to 163. Should the Senate pass it as well, it faces an almost certain Presidential veto, but will remain very much alive as an election issue.

Figures in last week's newsletter: Last week the figure for the foreign aid bureaucracy was given as 12,500 people; actually, the foreign aid program gives employment to more than 50,000 people, a figure I hope, desperately, we can reduce.

SENATE

TUESDAY, MAY 3, 1960

The Senate met at 12 o'clock meridian, and was called to order by the Vice President.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

O Father of mankind, to whom all souls are dear, while for this hallowed moment we bow and are silent, breathe on us, breath of God; fill us with life anew.

We confess that, unmindful of how fallible we are, forgetting that a humble and a contrite heart is the only sacrifice Thou dost require, too often pride of our own attitudes and opinions blinds us to the inadequacy of our own judgments. Make us worthy of these days of world destiny in which our common humanity faces powers of malignant evil seeking to debauch and enslave Thy sons and daughters.

Enable us to incarnate the faith we profess, that linking our endeavors to Thy eternal purposes, we may be faithful ministers of the truth which makes men free.

In the Redeemer's name we pray. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Monday, May 2, 1960, was dispensed with.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the Senate by Mr. Miller, one of his secretaries.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had passed the bill (S. 1605) granting the consent of Congress to the States of Kansas and Nebraska to negotiate and enter into a compact relating to the apportionment of the waters of the Big Blue River and its tributaries as they affect such States, with an amendment, in which it requested the concurrence of the Senate.

The message also announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 113. An act to prohibit the severance of service connection which has been in effect for 10 or more years, except under certain limited conditions;

H.R. 276. An act to amend section 3011 of title 38, United States Code, to establish a new effective date for payment of additional compensation for dependents;

H.R. 641. An act to amend title 38, United States Code, to make uniform the marriage date requirements for service-connected death benefits;

H.R. 1907. An act to amend the Veterans' Preference Act of 1944 to define mothers for for purposes of such act;

H.R. 5850. An act for the relief of the Borough of Ford City, Pa.;

H.R. 7502. An act to revise the determination of basic pay of certain deceased veterans in computing dependency and indemnity compensation payable by the Veterans' Administration;

H.R. 8098. An act to specify certain creditable service for pension purposes;

H.R. 8740. An act to provide for the leasing of oil and gas interests in certain lands owned by the United States in the State of Texas;

H.R. 9785. An act to provide for equitable adjustment of the insurance status of certain members of the Armed Forces;

H.R. 9788. An act to amend section 3104 of title 38, United States Code, to prohibit the furnishing of benefits under laws administered by the Veterans' Administration to any child on account of the death of more than one parent in the same parental line;

H.R. 9818. An act to provide for the conveyance of certain real property of the United States to the State of Florida;

H.R. 10108. An act to authorize reimbursement of certain Veterans' Administration beneficiaries and their attendants for ferry fares, and bridge, road, and tunnel tolls;

H.R. 10164. An act to change the name of the locks and dam numbered 41 on the Ohio River at Louisville, Ky.;

H.R. 10548. An act to amend the Helium Act of September 1, 1937, as amended, for the defense, security, and the general welfare of the United States;

H.R. 10596. An act to change the method of payment of Federal aid to State or territorial homes for the support of disabled soldiers, sailors, airmen, and marines of the United States;

H.R. 10703. An act to grant a waiver of national service life insurance premiums to certain veterans who became totally disabled in line of duty between the date of application and the effective date of their insurance;

H.R. 10898. An act to amend section 315 of title 38, United States Code, to provide additional compensation for seriously disabled veterans having four or more children;

H.R. 10997. An act to grant to the Government of Guam certain filled lands, submerged lands, and tidelands; and

H.R. 11045. An act to amend section 704 of title 38, United States Code, to permit the conversion or exchange of policies of national service life insurance to a new modified life plan.

The message further announced that the House had agreed to a concurrent resolution (H. Con. Res. 633) relating to restoration of freedom to captive nations, in which it requested the concurrence of the Senate.

HOUSE BILLS REFERRED OR PLACED ON CALENDAR

The following bills were severally read twice by their titles and referred or placed on the calendar as indicated:

H.R. 113. An act to prohibit the severance of service connection which has been in effect for 10 or more years, except under certain limited conditions;

H.R. 276. An act to amend section 3011 of title 38, United States Code, to establish a new effective date for payment of additional compensation for dependents;

H.R. 641. An act to amend title 38, United States Code, to make uniform the marriage date requirements for service-connected death benefits;

H.R. 7502. An act to revise the determination of basic pay of certain deceased veterans in computing dependency and indemnity compensation payable by the Veterans' Administration;

H.R. 8098. An act to specify certain creditable service for pension purposes;

H.R. 9785. An act to provide for equitable adjustment of the insurance status of certain members of the Armed Forces;

H.R. 9788. An act to amend section 3104 of title 38, United States Code, to prohibit the furnishing of benefits under laws administered by the Veterans' Administration to any child on account of the death of more than one parent in the same parental line;

H.R. 10703. An act to grant a waiver of national service life insurance premiums to certain veterans who became totally disabled in line of duty between the date of application and the effective date of their insurance;

H.R.10898. An act to amend section 315 of title 38, United States Code, to provide additional compensation for seriously disabled veterans having four or more children; and

H.R. 11045. An act to amend section 704 of title 38, United States Code, to permit the conversion or exchange of policies of national service life insurance to a new modified life plan; to the Committee on Finance.

H.R. 1907. An act to amend the Veterans' Preference Act of 1944 to define mothers for purposes of such act; to the Committee on Post Office and Civil Service.

H.R. 5850. An act for the relief of the Borough of Ford City, Pa.; to the Committee on the Judiciary.

H.R. 8740. An act to provide for the leasing of oil and gas interests in certain lands owned by the United States in the State of Texas;

H.R. 10548. An act to amend the Helium Act of September 1, 1937, as amended, for

the defense, security, and the general welfare of the United States; and

H.R. 10997. An act to grant to the government of Guam certain filled lands, submerged lands, and tidelands; to the Committee on Interior and Insular Affairs.

H.R. 9818. An act to provide for the conveyance of certain real property of the United States to the State of Florida; to the Committee on Agriculture and Forestry.

H.R. 10108. An act to authorize reimbursement of certain Veterans' Administration beneficiaries and their attendants for ferry fares, and bridge, road, and tunnel tolls; and

H.R. 10596. An act to change the method of payment of Federal aid to State or territorial homes for the support of disabled soldiers, sailors, airmen, and marines of the United States; to the Committee on Labor and Public Welfare.

H.R. 10164. An act to change the name of the locks and dam numbered 41 on the Ohio River at Louisville, Ky.; placed on the calendar.

HOUSE CONCURRENT RESOLUTION REFERRED

The concurrent resolution (H. Con. Res. 633) relating to restoration of freedom to captive nations, was referred to the Committee on Foreign Relations, as follows:

Whereas the rulers of the Soviet Union have repeatedly declared their determination to pursue relentlessly their political, economic, and ideological drive for a worldwide victory for communism; and

Whereas, in its efforts to attain that objective, the Soviet Union, through force of arms, subversion, infiltration, and other methods, has imposed puppet Communist regimes upon the people of the captive nations of Eastern and Central Europe and exerted tireless effort to crush their spirit and to transform their countries into replicas—on political, economic, social, cultural, and administrative levels—of the Soviet Union; and

Whereas, in direct violation of the provisions of the Yalta agreement, the people of the captive nations are still being denied the opportunity to solve their problems by democratic means and to choose, through free and unfettered elections, national governments of their own free choice; and

Whereas, in contravention of duly ratified treaties of peace, of the Charter of the United Nations, and of expressions of the United Nations General Assembly, the people of the captive nations are being systematically deprived of the exercise of fundamental freedoms and basic human rights; and

Whereas the United States of America has consistently refused to sanction, either directly or by implication, the political status quo of the captive nations; and

Whereas the United States of America has stood firmly on the principle of self-determination, welcoming the enlargement of the area of freedom and self-government and insisting on the inalienable right of the people of the captive nations to live under governments of their own choice; and

Whereas the establishment of just and lasting peace is inconceivable without the restoration of freedom, independence, and national sovereignty to the captive people of Eastern and Central Europe, which objective the United States of America is determined to pursue by all feasible means: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That—

(1) the Congress of the United States calls for the respect of the fundamental freedoms and human rights of the people of the captive nations;

(2) the Congress of the United States reaffirms its belief in the inalienable right of the people of the captive nations to live under governments of their own choice; and

(3) the Congress of the United States expresses the hope that the President will pursue energetically at the forthcoming summit conference the restoration of the fundamental freedoms and basic human rights of the people of the captive nations.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour; and I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Foreign Relations Committee and the Committee on Interstate and Foreign Commerce were authorized to meet during the session of the Senate today.

REQUEST FOR AUTHORIZATION FOR ANTITRUST SUBCOMMITTEE TO MEET DURING THE SENATE SESSION

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Antitrust Subcommittee be permitted to sit during the session of the Senate today.

Mr. DIRKSEN. Mr. President, I must object.

The VICE PRESIDENT. Objection is heard.

MEMORIAL

The VICE PRESIDENT laid before the Senate a resolution adopted by the Long Island General Assembly, Fourth Degree, Knights of Columbus, Brooklyn, N.Y., remonstrating against the adoption of Senate Resolution 94, relating to the jurisdiction of the World Court; which was referred to the Committee on Foreign Relations.

RESOLUTION OF BOARD OF SUPERVISORS, PIERCE COUNTY, WIS.

Mr. WILEY. Mr. President, I received today a resolution adopted by the Pierce County, Wis., Board of Supervisors, forwarded to me by Donald O. Smith, county clerk. I ask that the resolution be printed in the RECORD and appropriately referred.

There being no objection, the resolution was referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

"RESOLUTION 35

"Whereas the debt of the Federal Government has reached tremendous proportions, and

"Whereas little or no effort is being made to reduce this debt, and

"Whereas it is vital to the financial security of the country that the debt be paid: Now, therefore, be it

"Resolved, That the Pierce County Board of Supervisors go on record favoring a 2-percent annual reduction of the national debt, based on greater efficiency in Government operations rather than on an increase in the annual budget; and be it further

"Resolved, That copies of this resolution be sent to Senators ALEXANDER WILEY and WILLIAM PROXMIRE, Congressman LESTER JOHNSON, and all other county boards in Wisconsin.

"Dated this 25th day of April 1960.

"Respectfully submitted.

"EDWIN NELSON.
"LARS FLORNESS.
"HARRY O. WINGER.
"ALVIE HOWARD."

STATE OF WISCONSIN,
County of Pierce, ss:

I, Donald O. Smith, duly elected, qualified and acting county clerk in and for Pierce County, Wis., do hereby certify that the foregoing is a true and correct copy of Resolution No. 35 which was adopted by the Pierce County Board of Supervisors on April 25, 1960.

Dated at Ellsworth, Wis., this 27th day of April 1960.

DONALD O. SMITH,
County Clerk.

WILLIAM G. SIMON—RESOLUTION

Mr. CASE of New Jersey. Mr. President, the Association of Chiefs of Police of Essex County has recently sent me a copy of a resolution it has adopted which pays tribute to the work of Special Agent William G. Simon, who was formerly in charge of the Newark office of the Federal Bureau of Investigation.

I ask unanimous consent that this resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas William G. Simon, Special Agent formerly in charge of the Newark, N.J., office of the Federal Bureau of Investigation while so connected, did, most diligently and with outstanding effect and result, cooperate in the educational and training programs of the various associations of police officials, including county associations of chiefs of police, and particularly the program of the New Jersey State Association of Chiefs of Police, by aiding in the establishment of, and teaching in, schools for instruction to police throughout the State of New Jersey; and

Whereas the Association of Chiefs of Police of Essex County, N.J., recognizes that the untiring efforts of William G. Simon, his knowledge, enthusiasm and rare spirit, and through the cooperation of the Federal Bureau of Investigation did most materially contribute to the unqualified success of the aforementioned courses of instruction, merit our deep appreciation and particular and significant mention: Now, therefore, be it

Resolved, That William G. Simon in recognition of the above mentioned special and particular qualities, and for the services he has rendered to law enforcement, be earnestly commended by the Association of Chiefs of Police of Essex County, N.J., assembled at their regular monthly meeting on March 24, 1960; and, be it further

Resolved, That copies of this resolution be forwarded to the Attorney General of the United States, Hon. William P. Rogers; to the Director of the Federal Bureau of Investigation, Hon. J. Edgar Hoover; to William Webb Burke, Special Agent in Charge, Federal Bureau of Investigation, Newark, N.J.; and to William G. Simon; and, be it further

Resolved, That copies of this resolution be forwarded to the Honorable Senators Clifford P. Case and Harrison A. Williams Jr.,

Peter W. Rodino, Representative of the 10th Congressional District of New Jersey, Hugh J. Addonizio, Representative of the 11th Congressional District of New Jersey, and George M. Wallhauser, Representative of the 12th Congressional District of the State of New Jersey, and in addition, that copies of this resolution be forwarded to Hon. Robert B. Meyner, Governor of the State of New Jersey, and Hon. David D. Furman, attorney general of the State of New Jersey.

FRED HESS,
President.
HENRY LIEBERKNECK,
Recording Secretary.

REPORTS OF A COMMITTEE

The following reports of a committee were submitted:

By Mr. BYRD of Virginia, from the Committee on Finance, without amendment:

H.R. 1217. An act to suspend for 2 years the import duty on certain amorphous graphite (Rept. No. 1332).

By Mr. BYRD of Virginia, from the Committee on Finance, with amendments:

H.R. 9308. An act to extend for 3 years the suspension of duty on imports of crude chicory and the reduction in duty on ground chicory (Rept. No. 1333).

EXECUTIVE REPORT OF A COMMITTEE

As in executive session,

The following favorable report of a nomination was submitted:

By Mr. THURMOND, from the Committee on Armed Services:

Col. Harris B. Hull, Regular Air Force, for temporary appointment as brigadier general in the U.S. Air Force.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. MURRAY (by request):

S. 3468. A bill to amend section 2455 of the Revised Statutes; to the Committee on Interior and Insular Affairs.

By Mr. BARTLETT (for himself and Mr. GRUENING):

S. 3469. A bill to amend the act of March 8, 1922, as amended, to extend its provisions to public sales; to the Committee on Interior and Insular Affairs.

By Mr. McCARTHY:

S. 3470. A bill to prohibit residence requirements as conditions for eligibility under State plans for aid to the blind; to the Committee on Finance.

By Mr. CLARK (for himself, Mr. McCARTHY, Mr. McNAMARA, Mr. RANDOLPH, Mr. HARTKE, and Mr. McGEE):

S. 3471. A bill to implement the Employment Act of 1946 by providing standby authority to prevent or lessen the impact of economic recessions through the liberalization and acceleration of certain programs administered by the Federal Government; to the Committee on Banking and Currency.

(See the remarks of Mr. CLARK when he introduced the above bill, which appear under a separate heading.)

By Mr. ROBERTSON:

S. 3472. A bill to extend the Defense Production Act of 1950, as amended, for an additional 2 years; to the Committee on Banking and Currency.

By Mr. MAGNUSON (by request):

S. 3473. A bill to provide for advance consultation with the Fish and Wildlife Service and with State wildlife agencies before the beginning of any Federal program involving the use of pesticides or other chemicals designed for mass biological controls; to the Committee on Interstate and Foreign Commerce.

By Mr. KERR:

S. 3474. A bill to amend the Internal Revenue Code of 1954 to permit a deduction by life insurance companies in determining gain or loss from operations of an amount equal to 2 percent of the premiums from individual accident and health insurance contracts; and

S. 3475. A bill to amend the Internal Revenue Code of 1954 to provide for life insurance companies the same treatment with respect to losses on certain investment securities as is provided for banks; to the Committee on Finance.

STANDBY ANTIRECESSION ACT OF 1960

Mr. CLARK. Mr. President, I introduce, for appropriate reference, a bill entitled "The Standby Antirecession Act of 1960."

This bill carries out one of the recommendations of the Special Committee on Unemployment Problems, of which the able junior Senator from Minnesota [Mr. McCARTHY] served as chairman.

Joining as cosponsors of the measure are all of the other majority members of that committee, including the chairman, the senior Senator from Michigan [Mr. McNAMARA], the senior Senator from West Virginia [Mr. RANDOLPH], the junior Senator from Indiana [Mr. HARTKE], and the junior Senator from Wyoming [Mr. McGEE].

The bill would create jobs when it is most important to create jobs—at the beginning of a recession.

Economists have argued for many years that business cycles could be leveled out if public works were used as a countercyclical device. When private investment dips, we should compensate with public spending. When private spending revives, and we become concerned about inflation rather than recession, we should reduce public spending.

But, while the principle has been acknowledged for a generation, we have never succeeded in carrying it out. Between recessions, a suitable shelf of public works is not planned. When the recession strikes, we seem unable to move promptly and decisively.

Those of my colleagues who were Members of the last Congress will recall that, when the 1958–59 recession began, precious months were lost debating whether anything should be done at all. Still more energy was expended arguing whether a tax cut or public works was the proper answer. Eventually we did neither. We did enact the Emergency Housing Act of 1958, sponsored by the distinguished junior Senator from Alabama [Mr. SPARKMAN], which made $1 billion available for low-cost home construction; but beyond that we simply waited for the recession to work itself out.

We are still waiting. Meanwhile, the budget deficit resulting from the slump was $12.4 billion in the last fiscal year alone. I am satisfied that a large part of that loss might have been avoided—along with the suffering and hardship of hundreds of thousands of the unemployed and their families—if we had acted promptly and decisively as soon as it became clear that a recession was upon us.

It seems clear, from our experience, that if prompt action is to be taken, at the crucial time, the legislation must be on the books in advance. It must be so designed as to encourage the advance planning of construction projects which will be ready to go when the signal is given. And, while I do not mean to predict another downturn, it may be significant that in our hearings both the U.S. Chamber of Commerce and the AFL–CIO regarded future recessions as inevitable.

Our bill is an effort to meet the need for advance preparations. It seeks to stimulate small construction projects of all kinds, which can be quickly started and quickly terminated. It provides authority to accelerate $1 billion of authorized Federal and federally aided public works, $1 billion for loans for State and local public works, and $1 billion for purchase of mortgages on low-cost private housing, along the lines of the Emergency Housing Act of 1958. The ultimate cost to the taxpayer would be negligible, since the Federal programs would not be expanded, but merely moved forward in time, while the loans for State and local public works and housing construction would be repayable with interest.

The act would be "triggered" when unemployment increased for 6 consecutive months, on a seasonally adjusted basis, and reached a point above 5 percent. It could be terminated by the President when unemployment fell again below 5 percent.

This formula would have taken effect at the point, in each of our three postwar recessions, when it became clear beyond doubt that a serious recession was upon us. Those are the only times when the requirements of the formula would have been met.

I ask unanimous consent to have printed in the RECORD a section-by-section summary of the bill.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the summary will be printed in the RECORD.

The bill (S. 3471) to implement the Employment Act of 1946 by providing standby authority to prevent or lessen the impact of economic recessions through the liberalization and acceleration of certain programs administered by the Federal Government, introduced by Mr. CLARK (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Banking and Currency.

The summary presented by Mr. CLARK is as follows:

SECTION-BY-SECTION SUMMARY OF STANDBY ANTIRECESSION ACT OF 1960

Section 1 is the short title of the bill.

Section 2 is a statement of policy and purpose.

The Congress declares that future recessions can be avoided, or their impact lessened, if remedial action is taken promptly when unemployment data clearly reveals the beginning of a recession;

That Federal agencies, State governments, and their subdivisions and instrumentalities shall make advance plans which can be put into effect promptly at the outset of a recession; and

That authority for Federal action should be enacted in advance so that it will become automatically available when a recession begins.

Section 3 provides for automatic "triggering" of the provisions of the act:

The President shall declare the existence of an emergency period of program acceleration whenever unemployment, seasonally adjusted, (1) is more than 5 percent of the labor force; and (2) has increased during each of 6 consecutive months.

The President shall terminate the period when unemployment has again fallen below 5 percent and he determines that the need for the program acceleration no longer exists.

Section 4 authorizes $1 billion for community facility loans during any emergency periods of program acceleration.

The loans shall be made by the Community Facilities Administration for any type of public works construction sponsored by States, their political subdivisions, other public bodies, and non-profit hospitals.

The loans shall be at 2 percent, with a maximum maturity of 50 years.

Before approving a loan, the administrator, must find that—

The financing is not otherwise available on equally favorable terms.

The project will represent a net increase above the current level of capital expenditures of the applicant and would not be undertaken without such assistance within a reasonable period of time.

Construction will be started within a reasonably short period after the loan is granted (with priority to projects that can be started within 90 days).

The administrator will obtain his funds by borrowing from the Treasury, the interest rate to be the average interest rate paid by the United States on all interest-bearing obligations (i.e., the college housing formula). Appropriations to CFA are authorized in such sums as, together with interest and principal payments by the borrowers to CFA, will enable CFA to make payments on its obligations to the Treasury.

Provisions of the Bacon-Davis Act are applied to this program.

Section 5 authorizes a $1 billion emergency housing program during any emergency period of program acceleration.

FNMA is authorized to commit $1 billion to purchase FHA-insured or VA-guaranteed mortgages of $13,500 or less. This program corresponds to the emergency housing act enacted during the 1958 recession.

Section 6 authorizes acceleration of $1 billion in Federal or federally aided public works during any emergency period of program acceleration.

The President is authorized to transfer unobligated appropriations balances of any departments or agencies to other departments or agencies which are prepared to accelerate their construction programs. Such transfers shall be limited to $1 billion and shall be reported to Congress within 30 days.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. MONRONEY:

Article entitled "My Mother, Eleanor Roosevelt," written by James Roosevelt and published in the May issue of Good Housekeeping magazine.

By Mr. JAVITS:

Letter written by him, addressed to Hon. Robert Kopple, New York World's Fair 1964 Corp., New York, N.Y., relating to plans for the 1964 World's Fair.

EISENHOWER REPLACEMENT OF CONSUMER CHAMPION CONNOLE WITH MAN WHO ADMITTEDLY KNOWS NOTHING ABOUT POWER INDUSTRY

Mr. PROXMIRE. Mr. President, President Eisenhower's failure to reappoint William R. Connole to the Federal Power Commission has resulted in widespread criticism, not only from representatives of the gas-consuming public, but also from those who desire to have regulation by an independent agency amount to more than Federal support of an industry point of view. Public utilities consultants, the trade magazine for the oil and gas industry, and others who are concerned professionally with the Federal Power Commission are unanimous, so far as I know, in acclaiming Mr. Connole's ability, integrity, and understanding of the complicated intricacies of the oil and gas business. As the trade weekly Petroleum Week put it, in quoting an industry representative, "He is smart. He does his homework. When he takes a stand on a case, you can argue his theory, but seldom his knowledge of the case."

In the March 25 issue of the same magazine it was stated:

Connole is in line for reappointment, but the White House reportedly has received protests. Connole has been a target of criticism from gas industry officials, who look on him as a spokesman for 'consumer interests' and a proponent of stringent regulation. Friends of the Commissioner dismiss reports about protests against his reappointment, however; they say Eisenhower must back up his original decision to name Connole with another 5-year term or face political embarrassment. Also, they question whether Vice President NIXON, obviously the Republican nominee for President this fall, would want to inherit a furor which might be raised during the campaign were Connole not again named.

The "political embarrassment" that this industry magazine predicts certainly is beginning to make itself felt. From all over the country, a barrage of criticism of the President's decision not to reappoint Mr. Connole is flooding in. Professors of law and administration, editorial writers for leading metropolitan papers, the mayors of some of the Nation's biggest cities, and a number of State public utilities commissions, have issued strongly worded protests.

Critics of the decision have charged that pressure from the oil and gas industry, irritated by Mr. Connole's frequent and knowledgeable dissents in gas-rate cases, perhaps funneled through the Republican National Committee, was responsible for the decision to dump Mr. Connole. They also point out that it appears to be administration policy to go along with a philosophy of nonregulation, expressed through and by the very governmental agencies created and designed to regulate.

At his press conference last week, the President was asked to comment on why he decided not to reappoint Mr. Connole. His reply was both curt and, in view of the 5 hard years of dedicated public service Mr. Connole had put in on the Federal Power Commission since his appointment by President Eisenhower, distinctly ungracious. The President merely said, with what some reporters described as obvious irritation:

I thought I could find a better man, that's all.

Well, Mr. President, today we have before us evidence as to what the President regards as a man better able to fulfill the great task of independently regulating a basic industry so as to protect the rights of the consumer.

The President has announced the appointment of Mr. Thomas James Donegan to replace William Connole. Without in any way meaning to impugn the character or abilities of Mr. Donegan, I would simply call attention to the contrast between Mr. Connole, who certainly has become one of the best informed experts in the country in this complex specialized field of power regulation, and the better man the President has picked to replace Mr. Connole. This morning the New York Times reported:

If Thomas James Donegan, whom the President appointed to the Federal Power Commission today, has any special qualification for his new job, even Mr. Donegan does not know what it is.

"I've never had anything to do with utilities outside of paying my gas bill," he said.

I presume this makes Mr. Donegan a consumer, like tens of millions of the rest of us. But certainly it does not make him qualified for the exceedingly complex and vitally important regulatory position to which he has been appointed. But Mr. Donegan is the one whom the President of the United States believes is the better man to shoulder the enormous responsibilities of regulating the gas industry in the public interest.

Mr. President, I ask unanimous consent to speak for 2 additional minutes on this matter.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. PROXMIRE. Mr. President, Mr. Hagerty, the President's press secretary, has said that the President believes that these appointments should not represent anyone, that they should not represent either the consumers or the industry, but should take a broad national viewpoint. This at least has a surface plausibility; but it seems to me that anyone who has studied the regulatory agencies must recognize that the regulated industries can put tremendous pressures on those who regulate them, and that unless those who do the regulating have an adequate background and basis for their assignments, through experience, education, training, and understanding, it is extremely difficult for them to resist the industry point of view.

Therefore, Mr. President, I believe that to appoint to such commissions persons who have no background, training, or experience, and who admit that they have had none, is bound to result in a

situation in which the regulated industries will have more power than they have ever had before.

I believe this decision by the President of the United States is an exceedingly serious one, and I believe that the people of the Nation should be aware of its seriousness.

We have talked repeatedly about inflation, and I am sure the President is very sincere in his desire to combat inflation. But here is a specific instance in which, by appointing to this Commission one who is not qualified to determine the rates for the gas industry, there is sure to develop a situation in which inflation, at least in this industry, is certain to be more severe than it has been in the past; and the fact is that in the last 6 years the cost of gas has increased seven times as rapidly as has the cost of all other items which enter into the cost of living.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a splendid article written by Richard Strout, and published in the Christian Science Monitor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Apr. 28, 1960]

CONNOLE OUSTER DRAWS FIRE—FPC DISSENTER: EXIT, BANG

(By Richard L. Strout)

WASHINGTON.—Before the 1960 election is over, the country is going to hear a good deal about William B. Connole. That, at least, is the present prospect.

Federal Power Commissioner Connole's 5-year term expires June 22, and President Eisenhower curtly told reporters April 27 that he would not reappoint him. With evident irritation, Mr. Eisenhower said that he could get a better man. He did not elaborate.

Rumors of the President's action have brought protests from the following groups:

A committee of mayors, including Robert F. Wagner, of New York, and Richardson Dilworth, of Philadelphia, representing the U.S. Mayors' Committee on Natural Gas Legislation.

State regulatory commissioners from New England, California, and Tennessee.

DISSENTER TWICE UPHELD

Unanimous endorsement of Mr. Connole from the Great Lakes Conference of Railroad and Utilities Commisisoners, representing 10 States and the District of Columbia.

Professors of administrative law and regulation at Columbia, Harvard, Pennsylvania, and Yale, who said in a joint letter they were shocked at the President's decision.

Editorials from the New York Times, St. Louis Post-Dispatch, Washington Post and Times Herald.

Various Democratic Senators and Congressmen.

The reason for the administration's action has not been explained so far.

Mr. Connole has occupied a conspicuous role in the FPC as a lone dissenter, and as such has been twice upheld by the U.S. Supreme Court.

Supporters of Mr. Connole describe him as a friend of the consumer. Senator WILLIAM PROXMIRE, Democrat, of Wisconsin, says he is one who favors stricter control of the gas and oil industries than does Eisenhower.

Thus another chapter is written in the stormy history of the Federal regulatory commissions.

These are described by some as the "fourth branch of government." Although rarely understood by the public, these powerful agencies act as policemen, protecting the consumers' interest and holding an intermediate middle ground between separated legislative and executive authority.

Favors accepted by individual commissioners from industries they were supposed to regulate have brought a recent succession of resignations and quasi-scandals. President Eisenhower now has appointed or reappointed virtually all the Commissioners who serve, like Mr. Connole, terms of about 5 years.

The Connole case appears to go back to a clash of viewpoint over how far Federal regulation should go over the powerful gas and oil industry.

When Congress passed the Natural Gas Act, a majority of the FPC argued that it did not require regulation of prices charged by natural-gas producers. Mr. Connole was the lone dissenter.

In 1954 the Supreme Court interpreted the law, upholding Mr. Connole and slapping down the other four Commissioners.

The FPC hesitated. On June 22, 1959, the Supreme Court again upheld Mr. Connole, unanimously applying scathing criticism to the FPC, saying it allowed an abuse of its discretion in failing to crack down on a gas company.

An article by Fortune magazine last September quoted an unnamed high official as saying that four of the five FPC Commissioners did not believe in continued regulation of independent gas producers. If so, Fortune commented, these four should resign. Ironically, instead of that, Mr. Connole, the man who has held out for regulation, is being retired.

DIFFERENCE FOCUSED

These general facts should be understood regarding the powerful regulatory commissions:

Operating quietly in the background, they inevitably take on the coloration of the White House by the process of appointment. Mr. Eisenhower's former adviser, Sherman Adams, was influential in many appointments.

Mr. Eisenhower has strongly favored less, rather than more, Federal interference in private business—an issue embedded in the question of Federal regulation of natural gas, oil, and power.

Gas and oil interests are powerfully entrenched in Congress, where top Democratic leaders of Senate and House come from Texas.

Lacking votes to change the Natural Gas Act, opponents of Federal regulation find the next line of defense in the rulings of the FPC, even though these may be interpreted as contrary to the meaning of the law by the Supreme Court.

Mr. Connole was general counsel and chief legal officer of the Connecticut Public Utilities Commission for 5 years. Politically an independent, he was supported for the FPC by Senator PRESCOTT BUSH, Republican, of Connecticut.

CRITICAL QUOTES

Connecticut's other Senator, a Democrat—THOMAS J. DODD—issued a statement praising Mr. Connole and declaring praising the opposition to him should be smoked out.

The trade magazine, Petroleum Week, on March 25 reported that Mr. Connole was under attack by gas-industry officials, who regarded him as a spokesman for consumer interests and in favor of stringent regulation.

The magazine Electrical World, on April 11, reported that the Commissioner is under attack by natural-gas producers.

The New York Times editorially calls the move a poor way to inspire effective performance.

Mr. Connole was one of three Commissioners visited privately by Thomas G. Corcoran, attorney in a pending gas case. The White House says this did not influence Mr. Eisenhower's decision, which was taken before disclosure of the visit.

A House subcommittee is investigating the Corcoran visit and may broaden the inquiry to include Mr. Connole's status.

Mr. Connole, meanwhile, expressed bewilderment. In a statement here he said, "I have never known the reason for this decision nor who made it."

Mr. PROXMIRE. I also ask unanimous consent to have printed in the RECORD a thoughtful and well written editorial which explains very clearly why the move to get rid of Mr. Connole is a deplorable one, based on a deplorable decision. The editorial was published in the St. Louis Post-Dispatch.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch]

WRONG MAN TO DROP

The decision to drop William R. Connole from the Federal Power Commission is a sorry commentary on the Eisenhower administration and on its conception of the FPC. Mr. Connole, a Connecticut political independent, was one of the FPC members who had an ex parte talk with Thomas G. Corcoran, a gas company representative. Otherwise, Mr. Connole not only has a good record on the FPC, but also has a record of defending consumer interests that is almost solitary.

One example of his dedication to the public was the Catco case. A combine of oil companies sought a rate almost 5 cents a thousand cubic feet higher than rates which a pipeline had previously paid for natural gas from submerged Gulf of Mexico fields. The FPC eventually granted the rate with only Mr. Connole dissenting. Last year the Supreme Court upheld his minority view, warning of exploitation at the expense of the consumer.

The lines about Mr. Connole's reappointment were clearly drawn. He had won the enmity of gas producers and the support of consumer groups. Moreover, members of regulatory commissions in six New England States urged President Eisenhower to reappoint him as the most preeminently qualified person in New England in the field of regulation.

How could the administration seek to drop a strong man from a weak Commission? The answer is that the administration has had anything but a strong attitude toward regulation of natural gas. It supported bills to deprive the FPC of regulatory power over independent gas producers. The FPC itself tried to evade such regulation until the Supreme Court ordered it to get busy. Recently, the administration has seen nothing improper in disclosures of friendly ex parte contacts with gas industry men by FPC members, or the use by three Commissioners of a pipeline company plane.

The dubious sense of public ethics displayed there is bad enough, but the dubious sense of public interest displayed in the Connole case is more dangerous to the consuming public which the FPC is supposed to protect. If anyone deserves to be dropped from the FPC, it is not William Connole.

THE UNITED NATIONS AND US

Mr. WILEY. Mr. President, in the May issue of Eagle, a publication of the great Eagle organization, of which I am fortunate to be a member, there appeared a very fine article by Representative CLEMENT J. ZABLOCKI, who represents the Fourth Congressional District in Wisconsin. As many folks have said, he is a

good Democrat; and I am very happy to call him friend.

The article relates to his sojourn at the United Nations, when he was one of the representatives of this country. It recalls memories of the time when it was my good fortune to represent this country, in the final days of the Truman administration, and also in the opening days of the Eisenhower administration.

It is really too bad that we have not yet decided to have printed in the RECORD, appropriate photographs, such as those which appear in connection with the article.

I am happy to request that this article be printed in the RECORD, because it is really worth reading.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Eagle magazine, May 1960]

THE U.N. AND US

(By CLEMENT J. ZABLOCKI, U.S. Representative, Fourth Congressional District, Wisconsin)

When Acting Secretary of State Douglas Dillon called to ask me to serve as U.S. representative to the 14th session of the United Nations' General Assembly, I must admit I greeted the invitation with mixed emotions.

I was looking forward to enjoying the fall with my family in Wisconsin and did not relish spending 3 months in New York after Congress adjourned. At the same time I was honored to have been selected for this special assignment. It would give me an opportunity to learn more about the operations of the United Nations. For this reason I accepted.

On September 15, the day on which the 1st session of the 86th Congress ended after an all-night meeting, I headed for New York and the United Nations: a controversial organization to say the least.

Over the years, I came in contact with some people who looked upon the U.N. with grave suspicion—even with disdain. Others, however, spoke highly about the constructive work of the U.N. and of its specialized agencies.

Between these conflicting opinions some facts spoke for themselves. U.N. membership has continued to grow and the area of its activities has expanded. The aspirations of the newly independent and the underdeveloped nations have centered upon it. In an uncertain and strife-torn world, the U.N. has enjoyed growing prestige and has gained many supporters who see in it the hope of mankind.

Upon arrival in New York I was briefed on the nature of my duties, assigned an office and issued a stack of "position papers," outlining our Government's stand on issues before the United Nations.

My workday started early each morning. I answered mail, studied position papers, reviewed instructions from the State Department and dispatches from U.S. diplomatic posts abroad, worked on drafts of speeches, and conferred with my advisers. Two or three times a week, the entire delegation would meet with Ambassador Lodge to discuss issues being debated in the General Assembly, to review U.S. policy, and to recommend charges.

Meetings of my committee and the plenary session of the General Assembly began at 10:30 a.m. and generally continued until 6 p.m. Occasionally, evening and Saturday sessions were thrown in for good measure.

Organizationwise, the United Nations is composed of six principal organs: the Security Council, the Economic and Social Council, the Trusteeship Council, the General Assembly, the Secretariat, and the International Court of Justice.

The three councils have limited membership (11, 18, and 14, respectively), meet throughout the year, and have primary jurisdiction over their fields. The United States has a permanent representative serving in each council.

The United Nations Secretariat occupies the largest of the three major buildings at U.N. headquarters in New York. Its personnel has been recruited from among the nations of 63 member states. This permanent staff of the United Nations organization works under the direction of the Secretary-General, elected by the General Assembly upon the recommendations of the Security Council. The current Secretary-General is Dag Hammarskjold of Sweden.

The General Assembly is the only organ in which all 82 member states of the U.N. are represented. Every member state is allowed to have up to five representatives in the General Assembly and as many alternates as desired, but casts only one vote. The U.S. delegation is composed of five delegates and five alternates. Each member acts as an "instructed" delegate, carrying out policies of the President of the United States without reference to personal convictions.

The General Assembly usually meets once a year, from mid-September to mid-December. It reviews the operations of the three councils, the work of the Secretariat and the International Court, and the activities of the specialized agencies of the U.N. Further, it approves the U.N. budget and allocates its cost among member states. However the General Assembly lacks one important power possessed by other legislatures: It cannot compel compliance with its resolutions. It can only "suggest," "advise," "urge," and "call for."

At the beginning of each session, the General Assembly adopts its agenda and assigns the various items to the six regular committees and one special political committee. Each committee deals with a specific field as follows: The first committee, political and security matters; second, economic and financial matters; third, social, humanitarian, and cultural matters; fourth, trusteeship matters; fifth, administrative and budgetary matters; and sixth, legal matters. All 82 member states of the United Nations are represented in each of the seven committees.

After an issue has been decided by a committee, the committee's recommendations, embodied in a draft resolution, are voted upon by the General Assembly convened in a plenary session. Since every member state is represented in each committee, as well as in the plenary, the votes in the plenary tend to follow the vote pattern established in the committee.

I was assigned to represent the United States in the fourth committee, which handled trusteeship matters. I soon discovered the committee was divided into two camps—the so-called colonial powers on the one hand, and the anticolonial forces on the other. In the emotionally charged atmosphere which accompanied the discussion of virtually every issue considered by the committee, there was often complete absence of any middle ground—at least in the eyes of representatives of many of the newly independent nations who fought actively for their point of view and seemed to live by the rule: "If you're not with us, you're agin' us."

The work of the fourth committee sharply affects approximately 100 million people who live in 9 trust territories and 48 non-self-governing territories—most of them in Africa. The committee's agenda and discussions revolve around one of the most distinctive trends of our age: the explosive drive toward independence and economic development in the underdeveloped countries of the world. The protagonists are the impassioned spokesmen for the dependent peoples and for the newly independent nations, craftily supported, for selfish ends, by the Communist bloc. The frequently unwilling antagonists are former colonial powers and their allies.

For its first order of business, the committee faced the complicated task of working out the arrangements and conditions for a plebiscite in the Cameroons under British administration. In effect, the committee's decision would determine the future of the people of the Cameroons—when, and how, and under what conditions they would attain full self-government. For its second item, the committee took up the question of southwest Africa—with its attendant issues of apartheid, repression of the natives by the Government of the Union of South Africa, and the continuing refusal of the Union to acknowledge United Nations supervision and responsibility for the welfare of the people of the territory of southwest Africa. A review of social, educational, economic, and even political developments in all the trust territories, and in the non-self-governing territories followed. For its last item, the committee turned to the troublesome, longstanding frontier dispute between Somaliland and Ethiopia.

Most of the work of the fourth committee centered on developments and conditions of Africa. To many of us in the United States, Africa is a distant land of deserts and tropical forests, of big-game hunters, primitive native tribes, violence and terrorism, strange cults, and mystery.

All of these things do exist in Africa—but there is far more to Africa than this. Africa today is experiencing a tremendous transformation—what some observers have called the "freedom explosion." From the coast of Tripoli to Cape Town, from the Atlantic to the Indian Ocean, a single drive seems to permeate the thoughts and actions of the African peoples: The drive for national identity and independence. In this drive, the nationalist forces are rapidly ridding the continent of the trappings of the old colonial systems.

Today Africa is represented in the United Nations by nine independent states. Within the next decade, 25 more may join the ranks of sovereign African nations. This trend, under the "one nation, one vote" rule, promises to give Africa an important voice in the affairs of the United Nations.

Further, it is in Africa that the contest between communism and democracy has reached a decisive stage. Communist effort to fill the vacuum created by the withdrawal of the Western European powers poses one of the grave threats to future peace and security. These are the reasons why, to many observers, Africa has become the emerging continent which may play a determining role in the outcome of the struggle between communism and freedom.

It is interesting to note some of the characteristics of the men and women who represent the free nations of Africa and many other newly independent states in the United Nations. A large number have been educated in the colleges and universities of Europe and of America. Most are dedicated, articulate leaders of the nationalistic independence movements in their homelands. They are, by and large, sensitive and proud people, extremely anticolonial. Many can cite the writings of our own Founding Fathers, the philosophy of Lincoln, Woodrow Wilson's principle of self-determination, and Roosevelt's Atlantic Charter in support of their convictions. Some show strong dedication to the forms of Western democracy—without possibly fully understanding their inner meaning, evolution, and shortcomings. In matters of national independence and economic development, they often tend to rush headlong, without having made sure that the people they represent can walk.

What is of concern to all of us is that, in their compulsion to drive out the influence of Western colonial powers, some of these men and women appear oblivious to the dangers inherent in the new colonialism and imperialism of the Communist system. On the negative side, I must also mention some other contradictions. Struggling in the name of democracy, some adopt methods devised by totalitarian systems. Bitterly resenting what they condemn as the "white man's discrimination," they are not above discriminating themselves—not only against whites, but also against other indigenous groups. Bristling against intolerance, they are often impatient—even intolerant—of policies and considerations which do not conform to their plans and expectations.

In short, they are neither angels nor demons—but humans, with many of the virtues, and some of the shortcomings, of the average human being.

This fact was pointed up in an amusing incident that occurred in the fourth committee.

Returning to the conference room for an afternoon session, members of the fourth committee were taken aback by an outburst from the delegate from one of the newly independent nations. His chair was missing, and the delegate was outraged. He had been insulted and discriminated against. He and his country had been humiliated, he asserted, and he insisted on a public apology.

It turned out that, while holding a lunch-hour conference in the committee room, a few of the delegates moved some of the chairs around—and failed to return the chair of the complaining delegate to its proper place. Most people would have made no fuss about it. Yet this particular delegate stopped the meeting and insisted on a public apology, feeling that his pride and his country's honor were at stake.

I could not attempt to summarize the multitude of problems considered by the 14th General Assembly. They ranged from the preparation of a declaration on the rights of the child, to the condemnation of Communist violation of human rights in Hungary and Tibet, and the refusal to admit Red China to the U.N.; from the adoption of principles regarding primary education in the wild reaches of Africa, to proposals regarding the establishment of a common market for Latin America, agrarian reform, and far-reaching programs of technical assistance to the underdeveloped countries; from discussions about the improvement of the International School at the U.N. headquarters to the investigation of border violations in Laos, continuation of the U.N. emergency force in the Near East, and provision of relief and rehabilitation to refugees.

Unfortunately, many newspapers, in reporting U.N. affairs, tend, to turn a phrase, "to accentuate the negative, and eliminate the positive." Certainly much has been written about the failure of the U.N. to cope with Communist subjugation of the peoples of Eastern Europe, and to establish the reign of peace and justice in the world. By the same token, I wonder to what extent the average newspaper reader is acquainted with the constructive work being done by the U.N.

All too often, the United Nations is blamed for the shortcomings of its individual members. The one-sided critics of the U.N. should realize that any organization is only as good as its members—and that this principle applies especially to such a voluntary organization as the United Nations, composed of sovereign nations, each extremely jealous of its rights and privileges. In essence, these critics expect the impossible. They blame the United Nations for not doing its job—while they insist that the United Nations cannot be given the tools with which to do it. It is like expecting to mow an acre of lawn—after you have locked up the power mower.

The United Nations is far from perfect—but, by the same token, it has done a better job with the tools at its disposal than most critics will admit. In a world divided by communism, and experiencing the resurgence of nationalism and an unparalleled drive for independence, the United Nations has tried to transcend political boundaries and to promote the attainment of objectives dear to all men of good will: peace with justice, and a better life for those masses who exist in the midst of poverty, disease, and ignorance. Its record needs no apology.

POLAND'S CONSTITUTION DAY

Mr. MUSKIE. Mr. President, today, May 3, is Poland's Constitution Day, and for 20 years the U.S. Congress has taken special note of the significance of Poland's May 3 Constitution of 1791.

In doing so, we are reminding the people of Poland that Americans have not forgotten the sincere aspiration which the people of Poland have to be free and independent.

Secondly, May 3 provides an opportunity for those of us who live under more favorable circumstances to review and place in perspective the great contributions which Poland has made to the development of Western Civilization.

As many of my colleagues in the Senate realize, it was my privilege to be in Poland briefly in October of last year, and to visit the small village from which my father emigrated to America 57 years ago. I thus had a unique opportunity to visualize the vast difference in the life of ordinary people in Poland, as contrasted with the atmosphere of freedom which permeates our own society, and which I am afraid we tend to take for granted most of the time.

For this very reason, May 3 has a special meaning for me today. I think this is also an appropriate time to call to the attention of the Senate that 1960 marks the 100th anniversary of the birth of one of the greatest Poles—Ignace Jan Paderewski. It has been my great privilege to serve as the chairman of the Paderewski Centennial and to pay tribute on more than one occasion to this great artist, humanitarian, patriot, and statesman, who was equally beloved in America, where he lived for many years, and in Poland, where he is still remembered as Poland's greatest 20th-century statesman.

Mr. President, I ask unanimous consent to have printed in the RECORD, materials which summarize Poland's contribution to the development of Western Civilization; a brief tribute to Frederic Chopin, since this is the year we observe the 150th anniversary of the birth of Poland's foremost composer; a tribute to Ignace Jan Paderewski; and, in addition, a statement in tribute to the Polish people by the distinguished Senator from Missouri [Mr. SYMINGTON].

There being no objection, the material was ordered to be printed in the RECORD, as follows:

POLAND'S MILLENNIUM

Today, Poland stands on the threshold of its millennium.

Over 7 million Americans of Polish origin, under the guidance of the Polish American Congress, have already begun preparatory work to commemorate a great event that took place in their ancestral land nearly 1,000 years ago.

In 966, Poland accepted Christianity and irrevocably joined her destiny with Western Civilization and Latin culture.

This epochal date in the history of Poland and Western Europe, however, does not signify the beginning of Polish statehood. For at least three generations antedating Poland's first historic rule, Mieszko, various Slav tribes living in the great river basins of the Oder, Warta, and Vistula were being consolidated into one nation under the leadership of the Polanie, with ancient Gniezno as the nucleus of the new state.

Thus, with baptism in 966, Poland entered the family of Christian nations of the West, as an already well organized and established state.

TRAGIC AND MAGNIFICENT

Poland's history, often described as tragic and magnificent, is little known, in the English-speaking world. We only know in a rather cursory fashion, that the Poles were magnificent in defending Christendom against the onslaughts of the barbarian East; in creating the first commonwealth of nations in Europe; in contributing to American freedom through the services of Kosciuszko, Pulaski, and countless Polish immigrants.

We know, too, that this majestic panorama of heroic, civic virtue and political wisdom is interspersed with many tragedies, due largely to geographic position, predatory neighbors, and many errors in internal affairs—errors from which no nation has ever wholly escaped.

This general, and rather hazy knowledge, however, precludes proper evaluation of the role this truly great nation played in the history of Europe and of Latin culture, which, in its final analysis is our most precious heritage.

TWO EXPLANATIONS

Why is it that this country, which from the 14th to the 18th centuries was one of the great powers of Europe, is so little known to us?

The British historian, Prof. Geoffrey Baraclough, gives us an illuminating answer to this question in his "History in a Changing World" (Oxford, 1955), wherein he states that he realized with consternation that his university studies left him ignorant of Eastern European history, save at a few points where it caught the limelight as a consequence of diplomatic relations with the West. He states further that he did not feel an "imperative need to know anything (about East European countries) unless their activities happened to impinge on German history."

The American scholar, Prof. Robert P. Byrnes, is even more eloquent, pointing out in his "Biography on American Publications on East-Central Europe, 1945–57" (Indiana University Press) that it is entirely wrong to ignore east-central Europe or to treat it as a satellite area of the Soviet Union, and that it is a grave mistake to put a heavy emphasis upon east-central Europe since 1945, while earlier periods, particularly important for the proper understanding of paramount issues are ignored.

LIGHT FROM THE PAST

It is not enough to commemorate the civic magnificence of the May 3 constitution. It would behoove us to know at least the highlights which, for over six centuries of national existence, led Poland to the promulgation of the principles of freedom and social justice in the constitution of 1791.

The Polish heritage of civic rights reaches back to the 12th century, when the Royal

Council evolved into the senate of the Royal Republic. By the 15th century, the parliamentary system reached such high standards of development that the creation of a House of Representatives, or the Sejm was possible under the act of Nieszawa in 1454.

Still earlier, Polish jurisprudence promulgated the law of Neminem Capivabimus (1430), very similar to the English habeas corpus which has been codified in 1679.

The first Polish Constitution, limiting the power of the king, had been enacted in 1505, during a parliamentary session in Radom. It states that hereinafter and forever nothing will be decided by us (the king) or our successors without concurrence of the counselors and deputies * * * or the Senate and the House of Representatives (Sejm).

SOCIAL AND POLITICAL PHILOSOPHY

Sixteenth century Poland gave us outstanding political and legal thinkers, like Andrzej Frycz-Modrzejewski (1503–72), Andrzej Grzymala Goslicki (1533–1607), better known in Western Europe as Laurentius Grimaldus Goslicius, and many others.

Goslicki's treatise, "De Optimo Senatore," is of special interest to us, since it exerted considerable influence on liberal thinking in England, and, in some measure, in America.

The original edition of this remarkable treatise had been published in Latin, in Venice, in 1586. The Columbia University Library, and the Newberry Library in Chicago are in possession of copies of the original edition. Here, in the Library of Congress, we have a copy of a later English edition of 1733, published under the title of "The Accomplished Senator."

CONFISCATIONS IN ENGLAND

The first English translation of Goslicki's "De Optimo Senatore" under the title of "The Excellent Senator," was published in 1598 and had been promptly confiscated in England by the power bloc under the reign of Elizabeth. Nine years later, the treatise appearing again in English, met the same fate under the watchful agents of the Stuarts. The third translation made by William Oldisworth in 1733 was also confiscated in England.

AHEAD OF HIS TIMES

Why was it confiscated three times?

Because Goslicki proclaimed—and please bear in mind, he did this 190 years before the Declaration of Independence:

"Sometimes a people, provoked and irritated by the tyranny and usurpation of their king, justly take upon themselves the undoubted right of vindicating their own liberties; and by a well-formed conspiracy, or by open arms, shake off the yoke, drive out their lords and masters, and take the government entirely into their own hands."

De Optimo Senatore sets forth four fundamental principles, which read like the pronouncements of a modern sociopolitical thinker:

1. There must be laws which are greater than an individual—including those who rule the state.

2. Such laws must be founded upon the basis of Christian faith.

3. There must be mediation between conflicting points of view.

4. Both the nation and the individual derive their true purpose and dignity from Christian principles—and without them must perish.

"The King," states Goslicki, "can do no public act of government without the advice and authority of the state.

"The King of Poland, in the administration of his government, is obliged to make law the sole guide and rule of his conduct. He cannot govern according to his own will or pleasure, nor make war or peace without the advice and consent of the senate."

KNOWN TO BELLARMAINE AND SIDNEY

This was written by a Pole and accepted in Poland as a fundamental principle of politics in the 16th century, when France, Germany, Italy, Spain, Russia, were to remain under absolutism for centuries to come.

The modern character of Goslicki's concepts of social philosophy are reflected in the following statements:

"It is better in framing law to aim them rather at the preventing than suppressing evil.

"In my opinion, all our counsel and wisdom ought first to be employed in bringing men to justice rather than to execution."

Goslicki's precepts survived all attempts to destroy them, especially in the England of those times. They were incorporated into the May 3 Constitution of Poland, and influenced constitutional movements in other countries.

They were known, as is historically ascertained, to Robert Cardinal Bellarmaine, to Blackstone, Rousseau, Locke, and Algernon Sidney. Thomas Jefferson learned them from Cardinal Bellarmaine and Sidney.

POLAND MUST BE FREE

Such is the political and sociological heritage of Poland, which must now suffer under the yoke of the barbaric and tyrannical forces of the Euro-Asian East.

This heritage of political wisdom and civic virtue proclaims to the world the right and the will of the Poles to be again free and independent.

What can we do to help Poland today?

Let us bear in mind, that despite Communist pressures and renewed efforts to re-Stalinize the hated system of government—the situation in Poland, due exclusively to the unbending will of the Poles, faithful in allegiance to the Western Civilization, is, and will remain, fluid.

We must grasp every opportunity to convince the Poles that we are their friends, that their lot is not indifferent to us, that their cause stirs our hearts.

Poland needs economic help—let us extend it to her in order to help the Poles attain a higher standard of living. Credits for the purchase of urgently needed machinery for production of consumer goods should be granted the Poles with the same willingness and generosity with which we helped other nations of Western Europe. For Poland belongs to Europe, not to the Eastern Empire of the Soviet Union.

The Poles urgently need external security. Let us give it to them by alleviating their fear of renewed German expansionism.

The Poles desire more cultural exchanges with the West, let us help them in the realization of this aim by grants for student-and-professor-scientists-exchanges.

The Poles hunger for more of the modern knowledge evolving in the West—let us help them in this field.

We already have millions of dollars in counterpart funds in Warsaw, deposited in zlotys, as payments for American farm surpluses.

Why not use this money for permanent structures that would symbolize American friendship, cooperation, and willingness to help?

Why not built a modern and fully equipped library in ancient Krakow to commemorate the 600th anniversary of the Jagellonian University, the Alma Mater of Copernicus?

Why not rebuild the royal castle in Warsaw as a symbol of Poland's glorious past and a promise of a better future?

Through these projects we would let the Poles know that we have not forgotten them, that their liberation and return to the Western family of nations lies within the scope of our policy.

FREDERIC CHOPIN

While the observance of Poland's May 3 Constitution is primarily a tribute to the remarkable contribution of the Poles toward the development and evolution of political philosophy of freedom, based on law and order of a true democracy, we should also remember Polish participation in the enrichment of our arts and sciences.

Poland gave us many great scientists, writers, and artists. Throughout this year we observe the 150th anniversary of the birth of her foremost composer, Frederic Chopin, who was born on February 22, 1810, in a small Polish village of Zelazowa Wola, near Warsaw.

George J. Olszewski, of New York, in a glowing tribute to Chopin writes as follows:

"In his youth Chopin was forced into exile by the Russians because of the revolutionary character of his music. Some 20 years before his birth Poland was partitioned by Russia, Prussia, and Austria, and at the time of his birth, was dominated by occupying forces of these three powers as it is dominated today by the Communists.

"Chopin found safe haven in Paris, where he continued to live and to compose in the freedom which France has traditionally extended to the persecuted of all nations. In exile Chopin was kept informed by family and friends of the dire plight of his native land. Throughout his life an urn of Polish earth remained in Chopin's room to remind him of his origin. He breathed into his music the undying love of an exile for his homeland.

"This Polish son was not only an ardent and intense patriot but was God's chosen musical spokesman for a Poland ravaged by occupation forces. He devoted his life to the perpetuation of the spirit of freedom, liberty, and independence. For more than a century the voice of this patriot has inspired and guided his tortured nation through the pangs and ignominies of bloodshed and brutal occupation. His voice was the voice of music. It was the undying voice of Frederic Francois Chopin.

"Despite the racking pain of pulmonary disorders and financial difficulties, Chopin's genius and intense patriotism gave him no respite from the unceasing demands of creative inspiration. Although the oppressors used every means at their disposal to destroy Polish culture and decimate the race, Chopin's music spoke for Poland when that nation had no audible spokesman in the civilized Christian world. His entire life was devoted to the preservation of Polish nationality and ideals.

"Throughout the intense 39 years of his life, the voice of Chopin's music rose as a hymn of liberty. It swept from his tiny cell on the island of Majorca in the Mediterranean. It spread throughout France, England, and all of Continental Europe. It penetrated the most remote corners of his native land to plague the oppressors.

"The occupation forces sought to suppress the compelling, arousing voice of Chopin's music. The Germans forbade its playing; the Russians crashed his piano into the streets of Warsaw. But the gangled crashing of Chopin's piano became transmuted into the noble strains of the Revolutionary Etude itself. What a supreme weapon. The voice of Chopin could not be silenced, for music was the weapon beyond compare. The oppressors could not grasp it; they could not silence it; they could not tear it from the hearts of a people seeking liberty.

"Throughout the years this vital weapon has retained its mystic potency. During World War I, and again when pagan hordes invaded Poland in World War II, it was the music of Chopin which majestically sounded the call to battle from the Warsaw radio and triumphantly led the resistance.

Throughout the bitter struggle which followed, Polish sons and daughters were inspired to untold feats of heroism. They rose from prisons and concentration camps; from hidden caves and dugouts in the woods; from the sewers, rubble, and ruins of Polish cities. They struck a last blow for Polish independence to the penetrating, commanding, and inspiring themes of the Polonaise Militaire. Chopin's music symbolized the united response of a nation which resisted the onslaughts of its oppressor.

"What were the dominating influences which molded such a significant Polish spirit into Chopin's music? How did this frail genius succeed in portraying the vital spirit of a nation in chains? What were the driving forces of his soul? Perhaps the answer can be found in an examination of the era in which Chopin grew up in Poland.

"It may be recalled that the 19th century in Europe was an era of political and intellectual ferment. The success of the American and French Revolutions in the last quarter of the 18th century had aroused a new spirit of nationalism which swept across Europe, influencing not only the political life of the Continent but also literature, art, and music.

"Poland by this time had gone through the agonies of three partitions between Russia, Prussia, and Austria. By the Treaty of Tilsit of 1807, however, the Duchy of Warsaw had been created by Napoleon, whose star was then sweeping Europe. With his defeat and retreat from Moscow in 1812, the Duchy of Warsaw perished. In a vain attempt to win the Poles to her side, Russia set up the so-called Congress Kingdom in Poland in 1815, under a Russian constitution. Warsaw was its capital. Diametrically opposed to the liberal principles of the Polish Constitution of May 3, 1795, however, this final act brought about a wave of intense nationalism and rebellion throughout Poland. It culminated in the ill-fated Polish uprising of 1831, so brutally suppressed by the Russians. The end was not far off. The year 1831 marked the occupation of Poland by the Russians and the complete extinction of Poland as an independent political entity. In 1832 the Congress Kingdom of Poland was declared to be an integral part of the Russian Empire.

"These events were but a part of long series of attempts to subjugate the Poles. The policy of the occupation powers was the decimation of the Polish race and the extinction of Polish thought and culture. In 1832, for instance, 50,000 volumes of the library of the Society of Friends of Knowledge, founded by the Polish historian, Tadeusz Czacki, and several contemporaries, was carried off to St. Petersburg (now Leningrad).

"Polish literature had by this time entered the so-called third period or era of romanticism. It had been ushered in by the appearance of the great Polish poet, Mickiewicz, in 1822, who together with his contemporaries, Slowacki and Krasinski, formed the triumvirate of Polish thought of the period.

"Chopin was the only world-renowned Polish composer of this era who reflected the new thought and spirit of romanticism in Poland. His development was marked by a militant spirit in his music and the evolution of new and daring styles and revolutionary techniques of his compositions. This won for him the wrath of the diehards of his day, the admiration of the concertgoers, and the undying devotion of the Polish masses.

"Chopin's music was, therefore, the poetic echo of the era. His subtle, passionate, at times violent themes became the basis of his claim to lasting musical fame. Throughout his compositions the simple folk rhythms of the Polish countryside, as well as the more subtle dances of the Warsaw salons, are heard. The rhythms of the mazurka, the krakowiak, the polonaise, and of ancient Polish songs abound in Chopin's music. He gave them a dignity and hitherto unknown majesty. It was his great creative genius which enabled him to weave into his compositions a pattern which expressed the nationalistic longings of his sorrowful nation.

"The militant nationalistic spirit is but one facet of the genius of Chopin. He speaks not only for the physically and spiritually oppressed of his own nation but for all humanity. His music carries a message of spiritual tranquillity to the oppressed of all nations, for its appeal is varied—to some it may be emotional or spiritual, to others artistic and intellectual. All agree, however, on its benign influence, for the power of Chopin's compositions stems from the very foundation of music which is an expression of life itself. It stems from the forces of creation and the depths of the human soul. His music lives in the breath of the wind, in the murmur of the forests, and in the flow of the rivers. It lies in the very blood of our veins reflecting every sensation of joy, grief, sorrow, happiness, anguish, delusion, and ecstasy which grips the heart and soul of man. The melodies of Chopin's music flow unbroken across the starry pathway of the sky. They flow unbroken above the range of human speech and sweep the entire universe.

"Chopin's music shall live on through the endless eons of time, its voice shall carry his message to countless unborn generations. As the heroes of the past have fought for their precious ideals and inherent rights, may Chopin's clarion message inspire the generations of the future.

"Let us recall the words of another heroic Pole. Speaking at the opening ceremonies of the Chopin Centenary Festival in Poland in 1910, the great Ignace Paderewski said:

" 'Here, at this moment, there rises amid us, above us, the radiant spirit of one who was. What light, what valor, what energy were his. What strength of endeavor he showed in the midst of suffering. Through trouble and affliction, through heartache, through creative pain, he marked to his country's glory the burning trace of his existence. By a bloodless fight on the plains of peace, he assured the victory of Polish thought.

" 'Blessed be the past, the great, the sacred past, which brought him forth.' "

Chopin was in exile at the time of the insurrection in Poland in 1831. Its failure crushed his spirit and the works of this period reflect his complete dejection and heartrending anguish. The distinguished French essayist, Camille Ballaigue, expressed this most beautifully in his splendid sketch of the great virtuoso: "The heart of his nation beat in his breast. I know of no other musician who was a greater patriot than he. He is a Pole, nothing but a Pole, and from that devastated, murdered country his music rises like its immortal soul. A soul melancholy and mournful, such as we hear in his ballads and nocturnes."

Many countries can boast of composers whose works are cherished by their countrymen, and whose art has become a precious part of their cultural heritage. But there does not seem to be one composer whose work enjoys the same unique distinction as Chopin's does in Poland. For Poles, Chopin's music is truly unique, and he is one of their most beloved immortals.

Although primarily a spokesman of the Polish people, Chopin became a brother to all mankind through the genius of his music. There is perhaps no other composer whose works have been so universally accepted and admired.

While fundamentally rooted in and reflecting the spirit of the Polish Nation, Chopin's music transcended national boundaries and became a part of our universal heritage.

Chopin never returned to Poland. He died in exile on October 17 in 1849. After his death, his heart was returned to the country of his birth and enshrined in the pillar of the Church of Holy Cross in Warsaw where it remains today.

IGNACE JAN PADEREWSKI

This year's observance of Poland's May 3 Constitution coincides with the hundredth anniversary of the birth of one of the greatest Poles of all times, Ignace Jan Paderewski.

Paderewski, great artist, humanitarian and statesman, immortal interpreter of Chopin and composer in his own right, beloved in America and in Poland, does not belong exclusively to his native land. By virtue of his greatness as an artist, a humanitarian, and a statesman who fought for freedom and equality among nations, this genius represents humanity's best aims and endeavors.

Paderewski was born on November 6, 1860, at Kurylowka, Poland. When still a child he started his musical studies. At the age of 12 he entered the Warsaw Conservatory and afterward continued his studies in Berlin and Vienna. Paderewski's career as a virtuoso began with his great concert in Paris on March 3, 1888. After that concert he was given the nickname, the "Lion of Paris." Following his successes in London he arrived in the United States where he gave concerts all over the country and the American press of 1891 was full of enthusiastic reports on his concerts. He was acclaimed by the American public as the "king of pianists."

In the next few years, Paderewski toured almost the whole world and was acknowledged as an artist of the highest degree. He was also recognized as a very talented composer. His opera "Manru" was played at the Metropolitan Opera House in New York.

George J. Olszewski, of New York, in a glowing tribute to Paderewski writes as follows:

"At the beginning of the First World War, I. J. Paderewski gave up his artistic vocation and set himself the task of laboring for the liberation of his native Poland. He did much to enlist world support for the restoration of Poland as a member of the community of nations.

"The simple words of Paderewski on the lecture platform endeared him to Americans everywhere. Through his dominating personality and the eloquence of his speeches, Paderewski coordinated the work of Polish-Americans who formed the central committee of assistance to aid the resurrecting Poland. As honorary member of the Polish National Committee, and as the friend of President Woodrow Wilson and his adviser, Colonel House, Paderewski exercised increasing influence in the political circles of Washington on behalf of Poland. It was largely through his efforts that the 13th of Wilson's 14 points was devoted to the restoration of a free and independent Poland.

"Unofficial ambassador of a liberty-loving oppressed people, Paderewski received official recognition from our Department of State on many occasions. Paderewski represented the Polish people at Washington during 1917 and 1918; he assisted in organizing the Polish Republic in 1918 and 1919. Paderewski was president of the Polish Delegation to the Paris Peace Conference in 1919 and together with Romain Dmowski signed the peace treaty by which Poland regained her independence. He was the first Polish delegate to the Council of Ambassadors at the League of Nations in 1920. In addition Paderewski was at one time Minister of Foreign Affairs for Poland, president of the Council of Ministers of the Republic of Poland and, at the time of his death, chairman of the National Council of the Republic of Poland.

"In 1922, he went back to his artistic vocation and again as a virtuoso he astonished the world, especially as a performer of compositions of another great Pole—Chopin.

During many years he gave opportunity to millions of listeners almost everywhere on the globe to admire his music. He made friends everywhere, especially in the United States where he had many friends among outstanding Americans.

"Despite his advanced years and poor state of health, Paderewski had returned to his 'second country,' the United States, less than a year before his death to continue his lifelong battle for the freedom and independence of his beloved Poland, once again overrun in World War II by her traditional aggressors, Germany and Russia.

"Living in retirement in Switzerland at the time of the invasion and subsequent partitioning of Poland between the Nazis and Soviets in September 1939, Paderewski instinctively knew that, for his country as well as for any nation cherishing its freedom, there could be neither peace nor hope, nor justice in abject submission of the minds of free men to the dictatorial philosophies of Poland's aggressors. Paderewski knew that one-half of the world could not live in freedom and independence, while the other half lived in ideological enslavement.

"Within the furthermost recesses of his creative mind, Paderewski heard the clanking chains of an enslaved Poland and the stirring challenge of the majestic call to battle of Chopin's Polonaise Militaire. And, idealist that he was, Paderewski answered the call to battle just as he had in the past, particularly during World War I in the midst of a brilliant artistic career.

"Now aged and weary, but spiritually valiant, Paderewski undertook the strenuous voyage to return to the United States, arriving here on November 6, 1940, his 80th birthday. Despite the advice of his physician, Paderewski toured extensively to encourage and invoke needed aid for his distressed homeland. But this heroic figure was not to know peace in this world. While attending a meeting of Polish veterans, to which he desired to give the great impetus of his genius and personality, Paderewski was brought down by an attack of pneumonia which took his life.

"Paderewski died as nobly as he fought—girded for battle against oppression. To the last, he prayed and fought for the freedom and independence of his native land. On his deathbed, Paderewski's last words were the same battle cry uttered by other Polish sons throughout the long years of Poland's oppressive occupation: 'Polska powstanie—Poland will rise again.'

"The honors bestowed upon Paderewski as a statesman were innumerable: Honorary degrees, for his superior individual accomplishments, by the universities of the United States and Europe; decorations and awards, for his services in the cause of world peace, by the Governments of Poland, Belgium, France, Great Britain, Italy, and the United States; laurels and acclamations for his superior artistic achievements from the luminaries of the musical world, the theater, and the press.

"To Paderewski, however, the most significant of all honors would have been the homage of the humble who, by the thousands, filed past his bier as he lay in state in St. Patrick's Cathedral in New York City, the red and white flag of his homeland tenderly enfolding his last mortal remains while a guard of honor of Polish veterans proudly stood all-night vigil.

"For the first time in 25 years, the Most Reverend Francis J. Spellman, Archbishop of New York, delivered the eulogy during the solemn pontifical requiem mass. Thousands of Paderewski's admirers from all walks of life—they knew no class distinction—lined the route of the military funeral cortege as it slowly wound its way through crowded New York streets to the measured rhythm of Chopin's Funeral March. All paused in silent tribute to the passing of the immortal Pole.

"In the Nation's Capital, representatives of the diplomatic corps and of our own Government, and thousands of those who loved him, paid their final respects as the body of Paderewski lay in state at the Polish Embassy. The highest tribute of the United States was bestowed upon Paderewski by the late President Franklin D. Roosevelt, who authorized Paderewski's burial in Arlington National Cemetery.

"Now reposing in the quiet, green hills overlooking the Capital of the Nation he loved so well, this heroic Pole rests in hallowed peace until such time as his body can be returned to the free and independent Poland of Paderewski's dreams.

"Sumner Welles, the Secretary of State at the time of Paderewski's death, writing on Paderewski, said that the spirit of Paderewski remained and that his influence, character, and genius will live forever as an inspiration for all those who struggle for the highest ideals of humanity, that the American Nation is proud to have him among its friends, that great Pole, who among his other merits was instrumental for better understanding between the Polish and American people, and for strengthening the links of friendship between the two nations.

"Today, in the midst of this strife-torn world, when world peace is threatened by Communist aggression, let us recall the stirring tribute paid by the House of Representatives 19 years ago to the memory of Ignace Jan Paderewski.

"On July 9, 1941, House Resolution 269 of the 1st session of the 77th Congress, adopted by unanimous consent of the House, paid tribute to Paderewski in the following words:

"'*Resolved*, That the House of Representatives of the United States of America has learned with profound sorrow of the death of Ignace Jan Paderewski, Chairman of the National Council of the Republic of Poland, former President of the Council of Ministers of Poland, and world renowned pianist; a foremost champion of freedom and democratic ideals, restorer of Polish independence, spiritual leader and champion of the oppressed,

"'*Resolved*, That the House of Representatives sympathizes with the millions of Poles throughout the world on the loss of this outstanding leader of Polish freedom and independence who effected superlative gains in his own patriotic endeavors, who pleaded for the afflicted of all nations, and who manifested the greatest humanitarianism to the point of self-deprivation.'

"This expression of sentiment was communicated to the Polish Ambassador at Washington by our Secretary of State.

"On the same day that the resolution was adopted by the House of Representatives, the following eulogy was delivered on the floor of the House:

"'On June 29, the world learned with profound sorrow of the death of a foremost statesman, humanitarian, idealist, and artist, Ignace Jan Paderewski. He was a man who was idealistic in his beliefs of democratic principles of freedom and independence; a man loved by all liberty-loving men and women throughout the world. Paderewski sacrificed his life, his genius, and his wealth to aid the oppressed. Despite his fame as the world's first pianist, Paderewski was as simple and humble in his contacts with all men as any truly great man must be to win the love and affection of his compatriots. Paderewski will be remembered as a genius of the piano ranking with Liszt and Rubinstein, bringing joy and peace to the hearts of millions through his superb mastery of the piano and his interpretation of the music of his compatriot, Frederic Francois Chopin. Long before the critics recognized his genius, Paderewski contended that his greatest success was here in the United States where the American people recognized his artistry and held him in high esteem.'

"'Despite the worldly honors conferred upon him, Paderewski's greatest happiness came in contributing his time, his talents, and his resources to the needy of his own and other lands. To the American people, whom Paderewski held in high esteem, he stands as a symbol of liberty. Paderewski will take his place in history with Pulaski and Kosciuszko, other Polish heroes who aided the United States so nobly in its own fight for freedom and independence. Paderewski's faith and courage will long remain in the hearts of Poland's sons.'

"Let us recall the inspiring message of Paderewski in which he said, 'The vision of a free and independent Poland has always been the lodestar of my existence. Its realization is the greatest aim of my life.'

"Let us ponder deeply upon the last words of this immortal Pole who gasped with his dying breath—Polaska powstanie—Poland will rise again."

STATEMENT BY SENATOR SYMINGTON

Today is the 169th anniversary of the democratic Constitution of the great nation of Poland.

It is appropriate, on this day, to remind ourselves of the mighty contributions of the Polish people to the culture of Western civilization; and of what the many million Americans of Polish ancestry have done for us, as they built their homes and futures in America's soil.

Once again, the anniversary of the May 3 Constitution is observed while Poland is under dictatorial rule.

Nonetheless, the spirit of creative freedom burns in the Polish people. Fine literature is being written in Poland today; music and religious devotion are still the heritage of the people. The years of Communist rule have not diminished, but increased Poland's dedication to the enrichment of the mind and spirit.

These, and other indications, show that the spirit of freedom still burns brightly; and for our part, we must do what we can to hold out the alternative of freedom to all people behind the Iron Curtain.

In this connection, Mr. President, I would like to repeat some of the recommendations I made last August for improving the flow of information to countries within the Soviet orbit:

First, there should be intensification of our radio broadcasting behind the Iron Curtain, our presentation of the truth about America.

We should be able to broadcast long enough, loud enough, and on enough channels to break through Communist jamming efforts.

We should not raise false hopes in the hearts of people—but we should keep constantly before them the difference between their life now, and the life they could have under freedom.

Second, we should increase personal contacts between Communist and free world peoples—through travel, letters, and exchange programs.

The young Americans serving as guides at the Moscow Fair have reported that their own personal views and experiences about life in the United States are a most effective counter to Communist propaganda.

Third, there should be better preparation of our foreign service people for jobs abroad. We cannot get over our message to another land or person if our representatives do not know the language. They cannot be effective unless they understand the culture and customs of the country in question.

Far too many of our representatives abroad are not properly equipped for their job. It was for this reason that I proposed

the establishment of a Foreign Service Academy, to train the free world advocates of a lasting peace so they could present their message with maximum effort.

Finally, there should be a much more effective use of religion as an antidote to communism.

Eighty percent of the people held in bondage behind the Iron Curtain are Christians.

A large percentage of them are devout; and therefore, when their beliefs rub against the atheistic policies of their Communist rulers, friction is automatic.

We have not yet made full use of our creeds and religious convictions as a weapon in this cold war. Through broadcasts, we could do much more in emphasizing the strength of our faith.

These broadcasts should stress the dignity of man under God, along with other religious ideals incompatible with Communist doctrine.

Why not, for example, translate and dramatize some of the outstanding religious broadcasts we hear on our own networks every Sunday.

I present these opportunities and suggest how we might use them. At this point, however, let me make it clear that I do not suggest stirring up any revolution.

But we do want to spread the truth, for there is a good chance that this truth will spread dissatisfaction, and thereby force some relaxation of Russian rule, in terms of more understanding and therefore more good will.

As we observe this anniversary, let us also commemorate the birth of the two great musician-patriots of the Polish people—Frederic Chopin, born 150 years ago near Warsaw; and Ignace Paderewski, born 100 years ago in Kurylowka.

Mr. JOHNSON of Texas. Mr. President, I should like to join in commemorating Poland's Constitution Day. For a thousand years this Nation has recorded its imprint on the culture of Western civilization, and always its message has been on behalf of independence. It is indeed ironic that a people with a heritage such as this should now be subjected to the domination of a dictatorship which works to negate these basic beliefs.

From the contributions which Poles have made to our own Nation, we know that they will not indefinitely allow themselves to be subjected to a yoke of tyranny. It is my fervent hope that the day is not far off when they will again breathe free air.

Mr. President, one of the most touching stories I have ever read was written by the distinguished junior Senator from Maine [Mr. MUSKIE] following his visit to Poland last year on a tour for a committee of the Senate. I wish every Member of the Senate and every good American could read this paper by the Senator from Maine. I ask unanimous consent to have the privilege of including it in the RECORD at this point.

There being no objection, the newsletter was ordered to be printed in the RECORD, as follows:

NEWSLETTER NO. 12 FROM THE OFFICE OF SENATOR EDMUND S. MUSKIE

As I record this I am sitting at my desk at home, relaxed and thoroughly enjoying the American way of life after 35 days away from it. It has been good for me personally to be exposed to the people and the customs and the intellectual, political, and economic climate of the Soviet Union. The experience highlighted those values which make America such a wonderful place in which to live and intensified my appreciation of them. I hope, and believe, that the experience will be of real value in connection with my duties as a U.S. Senator.

By fortuitous circumstances, Clayton LaVerdiere, of the Waterville Morning Sentinel, arranged with Jane to use excerpts from my letters to her as a report to the citizens of Maine on my travels. I hope they proved of interest. They could not possibly constitute a comprehensive report of all of new experiences and impressions. In particular, I avoided detailed discussion relative to our primary mission, that of evaluating the status and pace of hydroelectric power developments in the U.S.S.R. There is much material to be digested and analyzed in proper perspective before the subcommittee, and its staff will state firm conclusions or consider recommendations. There is no question, however, as to the very considerable momentum which the Soviet Union has developed in this field.

My letters to Jane did not touch upon my 2 days in Poland, it being obvious that I would reach home before any letters which I might write from Warsaw. Yesterday, October 26, for example, my fourth day at home, Jane received a letter which I wrote in Leningrad on October 15. Airmail has not yet caught up with the jet age. Apparently, also, it takes a little longer for mail to pierce the Iron Curtain.

As you know, my father was born in Poland. He left it 59 years ago at the age of 17 in search of freedom and opportunity. He found both, not only for himself, but also for his children, and for that we will be eternally grateful. At the same time, he always spoke to us warmly of his homeland, its loveliness and the scenes of his childhood.

Remote as the possibility seemed, I wanted to find the village where he was born, in order that I might trod in his name the soil to which he never found it possible to return in his lifetime. I found it—a tiny rural village called Jasionowka, 20-odd miles north of Bialystok, not too far from the Russian border, at what was described to me by Deputy Foreign Minister Winiewicz as the saddest part of Poland.

To reach it, Frank and Mrs. Jones, of the American Embassy, and I drove 75 miles northeasterly from Warsaw. The main roads in Poland are excellent and we made good time—thoroughly enjoying the flat but pleasant and attractive countryside and the mild and sunny autumn day. As we approached the village, we passed, of all coincidences, a lake with a familiar name, Augusta. At this point I became profoundly moved, as I considered in a matter of minutes my eyes would see fields, streams, and trees, and possibly even faces, that my father's eyes had seen last more than half a century before.

We had left the main road and were driving over a narrow, cobbled country road. As we topped a slight rise, there came into view in the distance a large white building, somewhat shabby, but clinging to the shreds of an ancient dignity which I instinctively felt must be the manor house of a nobleman's estate which my grandfather had managed at the turn of the century. And so it proved to be, now converted to a state farm with a new barn, some battered older buildings, ruins of others, and a small duck pond which may have been a favorite spot for children in my father's day. A short distance beyond, the pitiful, unpainted, weather-beaten homes of the villagers were clustered about a broad square, dominated by the stately white church which my father attended.

In sharp contrast to the Soviet Union, the Poles are devout in their belief in God and extremely conscientious in discharging their religious duties. It was heart warming to see them swarming to the church on Sunday morning, walking, on bicycles, or in spotless wagons behind their horses. Their extremely difficult economic and political circumstances seem simply to strengthen their faith in God's purposes.

With little more than an hour at my disposal, my first objective was to find some trace of my father's family. We proceeded to the local presidium and almost immediately located a friendly girl who recalled an old lady bearing the family name. She escorted us to a drab little house on one of the side streets. We knocked on the door and entered. In a dark little cubbyhole of a kitchen, I met the widow of my father's brother, tiny and stooped under the weight of almost 80 years. With her was my father's niece, herself a widow with a young child, her husband killed in the war. Having grasped the almost incomprehensible fact of my identity, my cousin quickly showed me pictures of my father and my mother which he had sent her long years ago and letters he had written. They did not know of his death and accepted his silence over the past 3 years as just another of the burdens which filled their daily lives. The sister my father left behind is also dead, leaving three sons, who were away at work and unavailable during my visit. I met the wife of one of them, whose first question related to the possibility of coming to America.

At this point, the local grapevine had spread the word and the street in front of the little house swarmed with villagers. They were obviously delighted to welcome me and wanted to know all about me and my family. A surveillance team had picked us up on the border of Bialystok Province and followed us. The villagers were highly amused when these two representatives of the State police rather shamefacedly refused my invitation to pose for pictures, which I said I wanted to show the Deputy Foreign Minister when I met him that afternoon.

It is difficult to comprehend the economic circumstances of the people in that little village—the bareness of their lives. They have no meat; they stand in line for bread. Their diet appears to consist of potatoes and cabbage. The monthly wage is roughly the equivalent of $10 to $20. Their personal possessions are almost unbelievable meager. This is indeed the saddest part of Poland. But for my father's dream of freedom and opportunity this would be my life—the life of my children.

And what of the people who live this life? They have courage. They have their belief, and their faith in God. They value friendship, and love, and family ties, and derive such happiness as they know from these. Sadly, however, they have no hope that their lot will be improved, and the result is a deep apathy which stifles ambition and interest in the public issues which will shape their future.

Poland is a country in an almost hopeless political and economic dilemma. Its people historically have cherished independence and freedom and love of country above all else. Geographically, today, they find themselves in such proximity to the Russian colossus that like the turtle they are forced to withdraw into the shell or their obvious security alliances. Were they free to do otherwise, their hearts and their traditions would take them elsewhere.

Economically, following the war, the Russians in their own interests, developed an industrial complex in Poland, notably steel and textiles, which make the country almost irrevocably committed to the Soviet Union for the necessary raw materials. It must rely upon coal and agriculture for the exports to balance its international payment, and its agricultural lands are fragmentized into small holdings which are committed to ancient unmechanized methods and practices which fall far short of the production necessary to meet domestic needs and export requirements. These current difficulties,

which I have probably oversimplified for sake of brevity, plus centuries of living in the crossroads of war in Eastern Europe, have made my father's village what it is today.

The past and the present have created a far different, more comfortable and better world for me than they have for my cousins.

Must this be?

What does the future hold?

We speak constantly of a just peace. We pray for it. And what would a just peace mean to my cousins? And there are many, many more millions in the world, living in circumstances no better, and indeed, far worse than they.

Before I left the village, I visited the cemetery in search of my grandparents' graves. There was no trace. As is so often the case in Europe, they are probably at rest two or three layers deep. People have lived, died, for many, many centuries in this part of the world—some with their grinding misery and their fleeting happiness—some with flaming hopes, and others with forlorn hopelessness; some with lives of abundance and others with lives of emptiness.

Europe is an ancient civilization. We are an outgrowth of it, and, out of this deep past, its lessons and experience as well as its aspirations, we seek the promise of a brighter future for all mankind. Can we find it? May God will it so.

As we drove away from the village, I caught a last glimpse of the white church, gleaming as it shed its shabbiness in the sunlight and the distance. Suddenly and hauntingly, I felt myself to be the second generation bearer of the dream of freedom and opportunity which prompted my father to leave his home behind him.

Mr. MUSKIE. I thank the Senator from Texas.

Mr. HARTKE. Mr. President, this year marks the 150th anniversary of the birth of Frederic Chopin. It also is the 100th anniversary of the birth of Ignace Jan Paderewski, artist, humanitarian and statesman.

Both of these men, as we know, were Poles. They represent the good and glory of this land of Poland.

Today, however, Poland is under the yoke of Communist oppression and tyranny. Because of its great past and because so many of its sons and daughters have migrated to America, Poland looks today for moral support and guidance from our own blessed land.

This is constitution day for the defunct Polish Republic. Were this democratic government still functioning, it would be the Polish equivalent of July 4. We who are charged with the maintenance of freedom in this country and who are so embued with this program should pause today to look toward a once-free and once-proud land to relearn the lesson of eternal vigilance and to wish the Polish people well with the hope that some day they will again be free if that is their determination.

Mr. PROXMIRE. Mr. President, today is an important national holiday of the Polish Nation. The Polish Parliament adopted the liberal Constitution of 1791. This constitution was greatly influenced by the liberal movements in America, England, and France and included the principle that all power in civil society is derived by the will of the people.

Mr. President, I ask unanimous consent that a letter I have received from Mr. Charles Burke, Washington representative of the Polish American Congress, which outlines the importance of this anniversary and its special significance in this year, be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

POLISH AMERICAN CONGRESS, INC.,
Washington, D.C., April 15, 1960.

Hon. WILLIAM PROXMIRE,
Senate Office Building,
Washington, D.C.

MY DEAR SENATOR PROXMIRE: Cognizant of your interest in the cause of freedom for the nations of Europe enslaved by international communism we respectfully take the liberty of reminding you of the approach of the date of May 3, Poland's Constitution Day, the equivalent of our Fourth of July.

For the past 20 years, the U.S. Congress has been solemnizing Poland's May 3 Constitution of 1791 with a twofold purpose: (1) To remind the Polish people that Americans have not forgotten their pledge to help Poland restore her freedom and independence and to facilitate her return to the Western family of nations; (2) to review and place in proper perspective Poland's contribution in the development of Western civilization and culture.

These annual observances in the august Halls of our Congress have a tremendously beneficial impact on the hopes and aspirations of the Polish people who, through no fault of their own, have been forced to endure Soviet oppression and to live in a twilight zone between the darkness of spiritual and physical tyranny from the East, and, as yet, the unsteadily flickering rays of encouragement and moral and economic aid from the West.

In spite of the fact that an ill-boding process of re-Stalinization is in progress in Poland, the situation there is, and will remain fluid due to anti-Communist resistance of the Polish people.

For this reason the 1960 observance of Poland's May 3 Constitution by the U.S. Congress could be of special importance to the Poles.

I am taking the liberty of reminding you that this year marks the 100th anniversary of the birth of one of the greatest Poles, Ignace Jan Paderewski, a great artist and humanitarian, patriot, and statesman, beloved in America and Poland, who was born on November 6, 1860, at Kurylowka in Poland—that this year marks the 150th anniversary of the birth of the foremost Polish composer Frederic Chopin who was born on February 22, 1810, at Zelazowa Wola in Poland and also—that the Americans of Polish origin under the guidance of the Polish American Congress have begun preparatory work to commemorate Poland's millenium which in 966 accepted Christianity and irrevocably joined her destiny with Western civilization and Latin culture.

The Polish American Congress representing 7 million Americans of Polish ancestry expresses its fervent hope that you will see fit to participate in the discussions scheduled to take place on the floor of both Houses of the Congress on the 3d day of May and that you will add your powerful support to this renewed expression of America's sympathy for the Polish nation and its relentless struggle for freedom and independence.

Respectfully yours,

CHARLES BURKE,
Washington Representative, Polish American Congress.

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the RECORD, on this the 169th anniversary of Poland's Constitution Day, a statement which I have prepared on Poland's fight for freedom.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

POLAND'S CONSTITUTION DAY

(Statement by Senator BEALL of Maryland)

On May 3 we observe Poland's Constitution Day. It was on this day, in 1791, that Poland established her democratic Constitution. This is Poland's Fourth of July. We solemnize this day in the two Houses of Congress with a twofold purpose: (1) to remind the Polish people that Americans have not forgotten their pledge to help Poland restore her freedom and independence and to facilitate her return to the Western family of nations; (2) to review and place in perspective Poland's contribution in the development of Western civilization and culture.

These observances have a beneficial impact on the hopes of the Polish people who, through no fault of their own, have been forced to endure Soviet oppression and to live in a twilight zone between the darkness of spiritual and physical tyranny from the East and the flickering rays of encouragement and aid from the West. Despite the intense process of Stalinization in Poland, the great rank and file of the Polish people remain firm in their anti-Communist resistance.

In the year 966, Poland accepted Christianity and irrevocably joined her destiny with Western civilization and culture. Poland's history, often described as tragic and magnificent, is little known to most of us. We know in a rather cursory fashion that the Poles were magnificent in defending Christendom against the onslaughts of the barbaric East—in creating the first commonwealth of nations in Europe—in contributing to American freedom through the services of Kosciuszko, Pulaski and countless Polish immigrants.

The Polish heritage of civic rights reaches back to the 12th century, when the Royal Council evolved into the Senate of the Royal Republic. By the 15th century, the parliamentary system reached such high standards of development that the creation of a house of representatives was possible.

Poland, in the 16th century, gave us outstanding political and legal thinkers, like Goslicki. Goslicki's treatise, "De Opitimo Senatore," is of special interest to us, since it exerted considerable influence on liberal thinking in England, and, in some measure, in America.

"De Opitimo Senatore" sets forth four fundamental principles, which read like the pronouncements of a modern sociopolitical thinker:

1. There must be laws which are greater than an individual, including those who rule the state.

2. Such laws must be founded upon the basis of Christian faith.

3. There must be mediation between conflicting points of view.

4. Both the nation and the individual derive their true purpose and dignity from Christian principles—and without them must perish.

"The King of Poland," states Goslicki, "in the administration of his Government, is obliged to make laws the sole guide and rule of his conduct. He cannot govern according to his own will or pleasure, nor make war or peace without the advice and consent of the Senate."

This was written by a Pole and accepted in Poland as a fundamental principle of politics in the 16th century, when France, Germany, Italy, Spain, Russia were to remain under absolutism for centuries to come.

Such is the political and sociological heritage of Poland, which must now suffer under the yoke of the barbaric and tyrannical forces. This heritage of political wisdom and civic virtue proclaims to the world the

right and the will of the Poles to be again free and independent.

What can we do to help Poland today? Let us bear in mind, that despite Communist pressures and renewed efforts to re-Stalinize the hated system of government—the situation in Poland, due exclusively to the unbending will of the Poles, faithful in allegiance to the Western civilization, is, and will remain fluid.

We must grasp every opportunity to convince the Poles that we are their friends, that their lot is not indifferent to us, that their cause stirs our hearts.

I cannot close this statement without mentioning the wealth of culture which Poland has added to Western civilization. Some Polish names are quite familiar to us—Kosciuszko and Pulaski, military giants of our early American days, of course, but in addition, there are the names of the great music composers and pianists, Chopin and Paderewski, whose music is familiar to every American child and adult. We owe Poland much, not only as leaders in the American Revolution, but as contributors to the culture of our land.

Mr. KEATING. Mr. President, May 3, the anniversary of the Polish Constitution of 1791, is celebrated as a national holiday by all freedom-loving people. This constitution is commemorated because it was a great step forward toward democracy in a time when absolute monarchy was still the prevalent form of government. It symbolizes the Polish devotion to the concepts of self-government, human rights, and liberty which we hold so dear in this country.

Unfortunately, although the Constitution of 1791 was avidly acclaimed by the Poles, it had no opportunity to bring the promises it held to fruition. The ruler of Imperial Russia at that time, Catherine the Great, was fearful of the implications of the new Polish Constitution for monarchical regimes. Moreover, she wished to annex part of Poland herself. An invasion was launched, and although the Polish Army fought valiantly, Poland was conquered and partitioned among Russia, Prussia, and Austria.

Today Poland is once again under foreign domination. Its Communist rulers prevent the exercise of basic individual liberties which are the essence of democracy. Instead of celebrating May 3 the Communists have proclaimed as their national holiday July 22, the anniversary of the so-called liberation of Poland by Soviet troops at the end of the Second World War. Unfortunately, the Nazi tyranny was removed only to be replaced by the tyranny of the Soviet Union. The national holiday proclaimed by the Communists represents a step backward, not forward, in the long struggle of the Polish people for freedom.

On this Polish Constitution Day, we in America send our heartfelt best wishes to the people of Poland who are suffering under the yoke of Communist rule. Moreover, we take this opportunity to express our gratitude to the thousands of Americans of Polish descent who have enriched this country with their vigor, courage, patriotism, and talent. Let us all hope that the spirit of the Constitution of 1791 will reign supreme in Poland once again.

It is particularly significant to recall, as we celebrate Poland's Constitution Day, that this year of 1960 marks the 100th anniversary of the birth of one of the greatest men that Poland has given to the world, Ignace Jan Paderewski. This outstanding artist and humanitarian, patriot, and statesman, known and beloved in America and throughout the world, no less than in his native land, was born on November 6, 1860. Belonging, as well, to the world, is the foremost Polish composer, Frederic Chopin, whose 150th anniversary of birth is celebrated this year.

Mr. SCOTT. Mr. President, it is a source of great pride to me that the American people, who celebrate their own national holidays in peace and harmony, do not fail to call attention to the national days of people in other parts of the world who must look back upon times in the past when they were free.

Polish Constitution Day is one of those national events which Americans of all walks of life observe in honor of the freedom-loving people who are now under the yoke of international communism.

We call attention to Poland's Constitution of May 3, 1791, not only because it was the Polish people's great step toward freedom and sovereignty, but also because we in the United States are indebted to some of the great Polish thinkers of centuries ago.

For instance, Andrzej Grzymala Goslicki published in 1586 a remarkable treatise entitled "De Opitimo Senatore," which had an important influence on the movements of freedom that came many years later. A copy which was published in English in 1733 is now in the Library of Congress.

One paragraph is especially significant. He wrote:

> Sometimes a people, provoked and irritated by the tyranny and usurpation of their king, justly take upon themselves the undoubted right of vindicating their own liberties; and by a well-formed conspiracy, or by open arms, shake off the yoke, drive out their lords and masters, and take the government entirely into their own hands.

Note the similarity in philosophy to our own Declaration of Independence of 190 years later

The Eisenhower administration has taken every opportunity to give aid and encouragement to the Polish people and to nurture the traditionally close ties we have had with the Poles throughout history.

Last year the United States entered two agreements whereby we agreed to sell to Poland some $56 million worth of surplus agricultural commodities and polio vaccine.

Other economic agreements with Poland signed in 1957 and 1958 have brought important benefits to the people of Poland. Shipments of grains and raw cotton have contributed to their material well-being. More than $1 million in credits extended under the 1957 agreement was used for the purchase of polio vaccine. This vaccine, in addition to privately donated American supplies, was used to immunize about 3 million Polish children. Shipments of other items, such as dried milk, citrus fruit, pharmaceuticals, medical equipment, and food processing machinery have contributed directly to an improvement in Polish diets and medical care.

We believe that the Polish people recognize by these efforts that the United States is very much aware of their needs and that we have not forgotten the great contributions that they have made to world culture.

I am especially happy on Polish Constitution Day to send greetings to the 7 million Americans of Polish origin and the Polish American Congress. They can be assured that all Americans look forward to the day when Poland will return fully into the circle of free and sovereign nations.

Mr. CASE of New Jersey. Mr. President, today millions of Americans of Polish ancestry are observing Poland's Constitution Day, the 169th anniversary of the adoption of Poland's Constitution of 1791. It is highly appropriate that we here in the U.S. Senate take note of this occasion.

This country has an enormous debt to the great Polish leaders, such as Kosciuszko and Pulaski, who contributed so much to our own achievement of independence. But beyond that, it is part of our national heritage of freedom to share the concern of those who, like the brave people of Poland, are seeking to regain their freedom and independence.

Poland has contributed enormously to the civilization and cultural heritage of the West. We need only remind ourselves that this year marks the 100th anniversary of the birth of the beloved Ignace Jan Paderewski and the 150th anniversary of the birth of Poland's inspired composer, Frederic Chopin. Indeed, Americans of Polish ancestry are now preparing to observe the 1,000th anniversary of Poland's acceptance of Christianity in the year 966, by which that nation linked her destiny with Western civilization.

We in Congress must continually remain alert to ways in which our country can let the Polish people know that we have not forgotten them and to ways in which we can aid in their reattainment of full freedom and independence.

Mr. LAUSCHE. Mr. President, May 3 is the 169th anniversary of the adoption of Poland's Constitution. For the past 20 years, Polish-Americans and our citizenry have memorialized this day with a twofold purpose. First, to reassure the Polish people that Americans have not forgotten their pledge to help Poland reach its freedom again and to facilitate the Polish nation's return to the Western family of nations, and second, to review and place in proper perspective Poland's contribution in the development of Western civilization and culture.

This year's observance takes particular significance since the Poles are observing the 100th anniversary of the birth of one of the greatest Poles, Ignace Jan Paderewski, a great artist and humanitarian, patriot and statesmen, beloved in America and Poland, whose life remains an inspiration to all.

Also, this year marks the 150th anniversary of the birth of the foremost Polish composer, Frederic Chopin. It has

been said of Chopin's music: "Chopin's music shall live on through the endless eons of time, its voice shall carry his message to countless unborn generations. As the heroes of the past have fought for their precious ideals and inherent rights, may Chopin's clarion message inspire the generations of the future." Truly, the heart of the Polish nation beat in Chopin's breast. Out of the devastated, captured country, his music rises like a nation's immortal soul. Chopin's love of freedom and liberty translated into his music, transcends national boundaries and has become a part of our universal heritage.

More than 7 million Americans of Polish origin, under the guidance of the Polish American Congress, have already begun preparatory work to commemorate a great event that took place in their ancestral land nearly 1,000 years ago. It was in 966 that Poland accepted Christianity and irrevocably joined her destiny with Western civilization and Latin culture. Prior to that date, at least three generations of various Slav tribes living in the great river basins of the Oder, Warta, and Vistula were being consolidated into one nation under the leadership of Polanie, with ancient Gniezno as the nucleus of the new state. Thus, the Poles entered the family of Christian nations of the West in 966 with an already well-organized and established state.

Polish history is crowned with many magnificent contributions to Western civilization. The Poles fought magnificently in defending Christendom against the onslaughts of the barbarian East; they created the first commonwealth of nations in Europe; and they contributed to our own American freedom through the services of Kosciuszko, Pulaski, and countless Polish immigrants.

It was a Polish writer, Andrzej Grzymala Goslicki, in 1586, more than 190 years before our Declaration of Independence, who said:

> Sometimes a people, provoked and irritated by the tyranny and usurpation of their king, justly take upon themselves the undoubted right of vindicating their own liberties; and by a well-formed conspiracy, or by open arms, shake off the yoke, drive out their lords and masters, and take the government entirely into their own hands.

This same writer in his masterpiece "De Opitimo Senatore," set forth four fundamental principles which read like the pronouncements of a modern sociopolitical thinker:

First. There must be laws which are greater than an individual—including those who rule the state.

Second. Such laws must be founded upon the basis of Christian faith.

Third. There must be mediation between conflicting points of view.

Fourth. Both the nation and the individual derive their true purpose and dignity from Christian principles and without them must perish.

It is surprising to recall that this was written by a Pole and accepted in Poland as fundamental political principles in the 16th century when France, Germany, Italy, Spain, and Russia were to remain under absolutism for centuries to come.

It is pathetic and appalling that with such a political and sociological heritage, Poland must continue to suffer under the yoke of the tyrannical forces of communism. Americans must continue to grasp every opportunity to reassure the Polish nation that we are their friends, that their lot is not indifferent to us, and that their cause stirs our hearts.

Let us also reassure the Poles as they observe Constitution Day that the liberation of their nation and its return to the Western family of nations remains an objective of American foreign policy.

We, of America, join with our friends of Poland in a firm determination and affirmation that Poland—land of Copernicus and Madame Curie, of Chopin and Paderewski, of Casimir the Great and John Sobieski, of Kosciusko and Pulaski, shall, when Communist rule is overthrown attain her unalterable dream of liberty, and again take her rightful place among the free nations of the world.

Mr. CURTIS. Mr. President, we, as representatives of a great and free Nation, must never forget the profound responsibility we accept as citizens of a land symbolizing the ideals for which men not free strive the world over. Our charity toward the less fortunate cannot be sated by the giving of material things alone.

Today we rise in tribute to the anniversary of Poland's Constitution Day. We honor our Polish-American citizens who sense so deeply the blessings of a free land. I hope that our observance will bring inspiration to Poles who long for these blessings—I hope we may help to reassure men who love liberty that the yoke of oppression need not ever be eternal. To the people of Poland, a nation enriched by eminence in the arts and spiritual endeavor, and the seat of one of the earliest representative governments, we reaffirm our warm friendship.

Mr. BUSH. Mr. President, May 3 marks the 169th anniversary of the proclamation of the Polish Constitution of 1791. Among the principal features of this constitution were: First, the principle of the sovereignty of the nation; second, the proclamation of a division in legislative authority; third, the acceptance of the principle of religious toleration; and fourth, the elimination of class distinction. This Constitution was a major step forward for democracy and constitutional procedures and marked a distinct break with medieval thought and practices.

Today, with Poland under Communist domination, this constitution remains as a symbol of Polish hopes for eventual liberation and the emergence of a regenerated free nation. The feeling of national unity brought about by the promulgation of the constitution has persisted over the years. The constitution, together with the great spiritual strength of the Polish people, provides the basis for the hope of a future rejuvenated Poland as a full member of the free world community. The adversity which the Polish people have endured in recent decades has only whetted their aspirations for independence and sovereignty.

Mr. President, historic documents are often the best expressions of ideas conceived and formulated by men of vision and foresight. Such documents embody not only the ideals of the men who write them, but they also portray the character and the temper of the nation in which they originate. Our Declaration of Independence and our Constitution mirror our national character. So, too, Poland's Constitution of 1791 mirrors the characteristics of the Polish people. That document, with its broad and liberal provisions, ushered in a new era for Poland. Today, 169 years after its drafting, that constitution still retains its place in the hearts of the Polish people, and its ideals still live.

In commemorating Poland's Constitution Day, we in effect, pay tribute to all those brave Poles who made untold sacrifices for the realization of those inspiring ideals—freedom, liberty, and independence.

Mr. BRIDGES. Mr. President, today we recognize and honor a flame kindled on May 3, 1791, which many have attempted to extinguish through the years, but which still burns brightly. On that day a freedom-loving people adopted the first Constitution for Poland.

Since the birth of that document, forces of oppression have harassed, subjugated and enslaved the Polish people for over a century and a half. But the same fidelity to ideals which has characterized America remains in modern Poland and with her people everywhere.

The Polish Constitution was the result of ideological conceptions and principles which the people gained from several sources and was to a great extent an adaption of the English, French, and American Constitutions. It was acclaimed with enthusiasm by the Poles as a great stride toward liberty and one of the greatest achievements in Polish history. It occasioned celebrations throughout the country. Expressions of approval and gratitude from the people indicated their widespread elation and appreciation.

But the duration of the Polish Constitution of 1791 was short. Catherine the Great of Imperial Russia ordered her armies to invade Poland in April 1792, with instructions to destroy by force the new constitution and annex a part of Poland for herself. Betrayed by the Prussians who failed to render promised aid, Poland suffered defeat, and on September 23, 1793, was partitioned. The Polish Constitution of 1791 came to an end, but its precepts lived on.

The ideals set forth in that historic document have been evident on many occasions since. They were realized in the regeneration of Poland in 1918, only to be subjugated again at the beginning of World War II.

Today Poland is once more under the heel of Russia. They are held as the pawns of a government satellite. This new oppression is stronger and more humiliating than they have experienced in the past. The Soviet Union seeks to enslave not only Polish bodies, but their minds as well.

Despite the best efforts of their Communist rulers, nationalism, religion and

love of personal liberty characterize the Polish people today as in 1791. The same spirit which has always refused to accept defeat in the past is still present. The free world has great admiration for this determination and the lessons to be learned from Poland's history of brutality, degradation, and courage.

Emblazoned on our memory is the betrayal of the brave Polish forces in the Warsaw uprising and the fight which Poland continued to wage outside her own frontiers. They aided the British in the Dunkirk evacuation and fought valiantly in Italy. We shall never forget the Communist murder of 15,000 Polish officers in Katyn Forest during World War II.

The observance of Poland's Constitution Day this year is of particular significance. The year 1960 marks the 100th anniversary of the birth of one of the greatest Poles, Ignace Jan Paderewski. Known primarily by Americans for his incomparable piano artistry, he was also a humanitarian and eloquent statesman. His love for America was returned by our country, and he is buried in Arlington National Cemetery.

We also observe this year the 150th anniversary of the famous composer, Frederic Chopin, who, with other Poles, has contributed so much to the arts and sciences.

Over 7 million Americans of Polish origin are preparing for commemoration of Poland's millennium. In 966, nearly 1,000 years ago, Poland accepted Christianity, and today it is the religion to which the Polish people turn for hope and comfort as they await the day of liberation.

The dedication of the Poles to the cause of freedom has greatly influenced America's history. In 1691, when the Virginia House of Burgesses attempted to deny the right to vote to anyone but Englishmen, it was the Polish settlers in Jamestown who were instrumental in getting a reversal of this decision. From that day to now Poles and their descendants in America have made outstanding contributions to our culture and democracy.

In my native New Hampshire we are privileged to have many citizens of Polish ancestry. Their daily participation in our community life plays a vital role in the enrichment of our great State and Nation. I take pride in joining with descendants and friends of Poland everywhere in commemorating this day.

Poland has become a symbol in the cause for humanity and freedom. I am sure we all share the sentiment so aptly expressed in the Polish national anthem, "Poland Is Not Lost Forever, While Our Lives Remain."

Mr. WILLIAMS of New Jersey. Mr. President, the U.S. Congress is joining today with those who are observing Poland's Constitution Day. The anniversary of the constitution, proclaimed on May 3, 1791, is indeed of significance to us in this Nation and all who respect the cause of freedom in any nation.

To contemporary Europe of 1791, the proclamation of the most liberal constitution of May 3 demonstrated the resoluteness and political courage of nobility of Poland, who offered equal opportunities to its citizens in administrative, judicial, and political freedom and an absolute religious tolerance. Overnight the country was changed from a chaotic system of a confused king with a confused government into an orderly limited monarchy within a framework of a responsible parliament and ministerial government, under a very liberal constitution.

The courageous spirit in which the constitution was generated alarmed the absolutism of Russia, who saw at their doorstep a ghost of democracy; it moved promptly to crush to the ground the spirit of liberty and of equality, the spirit of a free humanity, the spirit of a new Poland which Russia's Catherine the Great saw as menacing its own system of unlimited suppression. Swiftly moved massive armies of Russia; hundreds of thousands of their soldiers ignorant that they were against a system that was to be a salvation to themselves, covered Poland across a wide frontier. Their crushing numerical superiority, however, was checked resolutely by Polish patriots; led by Kosciuszko they started to inflict serious casualties to Russians, and their few first battles were highly successful.

Like so many of his compatriots, Kosciuszko hastened to help defend the youthful Republic of the United States; volunteering in the year of American Declaration of Independence, in 1776, he distinguished himself very soon in campaigns of New York and at Yorktown. He was recognized as a brilliant artillerist by George Washington, who made him his adjutant, and extended to Kosciusko his deep and lasting friendship. For his devotion to the cause of American independence, his gallantry and his courage in many actions, he was awarded, with the thanks of the U.S. Congress, the rank of the general and the privilege of American citizenship.

In the crisis facing his native Poland, Kosciusko sped home and took the lead of patriotic forces. In the ensuing battles he displayed brilliant tactics and a great personal courage. He was then an American general, for the Government of Poland recognized and confirmed his American rank; it is significant, therefore, that he furthered the spirit of the constitution of May 3 by his famous Krakow manifest, offering a full liberty from servitude to the peasantry, an act of tremendous historical significance.

The defeat affected by overwhelming forces of Russia, the Great Massacre of Warsaw, the long and oppressive tyranny of Muscovites, the bloody period of Russian tyranny failed to erase the spirit of freedom, the spirit of Poland. The battlecry of Polish legions "For your freedom and ours" was heard on countless battlefields of the world. This Polish passion for freedom was marked on the battlefields of Austerlitz and of Yena, on the island of San Domingo and in Madagascar, in Italy, and under Moscow. In many uprisings and battles this cry "For your freedom and ours" was heard in the years of our generation in Dunkirk and in Monte Cassino, in Normandy, and on the Rhine, and it was marked by trails of thousands of planes that flew to Berlin, to Warsaw, to Hamburg, Koln, Ploesti, and Tunisia. And these sons of Poland fought arm in arm with their American brothers in arms, and on their battleflags the famous words "For your freedom and ours" became soaked by the blood shed commonly. And when they fell, their blood was not wasted, for it awakened the world to the dangers of tyrannical dictatorship. And the spirit of fighting Poland became, as proclaimed by our late President Roosevelt, the inspiration of the world.

But those who did the inspiring were not rewarded with the fruits of victory for which over 6 million Poles perished on the battlefields, in the gas chambers, and concentration camps of Germany's Third Reich and in Russia. In spite of their sacrifices, and the almost total destruction of the country, the citizens of Poland still suffer want of basic commodities, shortage of political and economic independence, shortage of housing, shortage of food, shortage of medicine, and of hospitals.

This situation became unbearable to many friends of Poland, who sought constructive ways to render assistance to the people of Poland in the most effective and appropriate way. In an effort to provide an immediate help, especially in the field of the critically needed hospital facilities for children, an idea was born to build and donate a contemporary, well appointed, well equipped hospital to offer expert medical care to children, to provide well appointed research facilities, to provide adequate facilities for training of future Polish doctors, to create an integrated pediatric center for several hundred beds, to build one of the largest facilities of its kind in Europe. This center is to play a vital role not only to Poland, but to the United States of America and the rest of the world. The exchange of research and scientific observation between the center and its counterpart institutes in the United States, rotating system of professorship, and mutual exchange of students would have significant consequences in the future fight against diseases affecting children and youngsters.

To help with the execution of this idea a committee was formed, of which I am one of the first charter members. The necessary legislation in the U.S. Congress, supported by a great number of distinguished Americans, professional organizations, and the Polish American Congress, was enacted thanks to efforts of many Members of Congress, and especially Congressman ZABLOCKI in the House, and Senator HUMPHREY in the Foreign Relations Committee of the Senate. Last year the Mutual Security Act was amended, giving the President of the United States authority to render assistance to the committee in our effort to provide and donate the Children's Hospital for the University of Krakow in Poland.

The city of Krakow, which still remembers Kosciusko and his historical act of liberation of Polish peasantry, shall soon witness another act of American-Polish cooperation, an act signifying

enduring friendship between people of the United States and Poland, the manifestation of an abiding interest of the United States in the welfare of children of Poland. We hope that within the next few months a groundbreaking for the pediatric center will take place in the historical city of Krakow, directly on the grounds of the nearby fort where many Poles gave their lives during the Kosciusko uprising. We hope that the completed hospital will assert to the world the everlasting traditions of the brotherhood of people of Poland and of the United States, whose sons frequently fought and died together on the fields of American Revolutionary War and on those fields, where went the soldiers of Poland in their pursuing dreams of Polish liberty, for "your freedom and ours." We hope that the completed and functioning hospital will be the very best, the most dynamic evidence of the truly humanitarian policy of the United States and our friendship to Poland, a lasting monument to those who gave their lives for our common cause, and the most penetrating voice of a true America—America of peace, America of good will to people of good will.

Mr. President, I ask unanimous consent that a letter from the Polish American Congress, Inc., signed by Charles Rozmarek, president, dated June 3, 1959, be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

POLISH AMERICAN CONGRESS, INC.,
Chicago, Ill., June 3, 1959.

Mr. W. O. BIERNACKI-PORAY,
Secretary, Committee for the American Research Hospital for Children in Poland; care of Mr. Marian Czarnecki, Chief Assistant to Hon. Clement J. Zablocki, House Office Building, Washington, D.C.

DEAR MR. BIERNACKI-PORAY: The Polish American Congress, representing over 7 million Americans of Polish ancestry wholeheartedly supports the project of American Research Hospital for Children in Krakow.

We believe that this project belongs within the framework of the Mutual Security Act. It would be a lasting symbol of the humanitarian policy of the United States toward Poland and other enslaved nations; it would immeasurably strengthen the bond of traditional friendship and understanding between the American and the Polish nations; and it would provide not only medical care for Polish children still suffering sicknesses and miseries of the postwar period of that unhappy land, but would also evolve into a much needed medical research center for the doctors of Poland.

We urgently appeal to the House and the Senate Foreign Relations Committee to favorably consider and accept this provision within the Mutual Security Act.

Sincerely yours,

CHARLES ROZMAREK,
President, Polish American Congress, Inc.

TRIBUTES TO SENATOR MURRAY

Mr. GOLDWATER. Mr. President, last week when the distinguished majority whip, the Senator from Montana [Mr. MANSFIELD] announced the decision of our colleague, the senior Senator from Montana [Mr. MURRAY], not to be a candidate for election, I was prevented from joining with my brother Senators in paying a proper and due respect to him. I wish to rectify that unfortunate absence at this time for I feel a deep sense of gratitude to this able and distinguished man from the West.

Years before it became my good fortune to join this august body, I knew Senator MURRAY. On several occasions during the years immediately following World War II, I came to Washington to testify on matters of concern to my State, our Indians, our water, and problems which are close to and identified with the West. On each of these times Senator MURRAY displayed an intimate knowledge of and interest in the problems. He has maintained that same posture as far as western legislation has been concerned during his entire service in the Senate.

To intimate by this statement that his departure will only be a loss to the West would be wrong, for when he leaves this body the United States will lose a devoted public servant whose mark will stay with us forever. I join my colleagues in wishing for him a long and happy life spent in the leisure he has so well earned.

Mr. BIBLE. Mr. President, the decision of our beloved colleague, Senator MURRAY, to retire at the end of his present term this year is the cause for sincere regret among those of us who know him so well.

As chairman of the Senate Interior and Insular Affairs Committee, Senator MURRAY has rendered a distinct service to the Nation in general, and to those great reclamation States of the West in particular. His breadth of understanding, his patience, and his cooperation have stamped him as an outstanding chairman and an unrelenting champion of those who foster the conservation and preservation of our natural resources.

Among the most exciting chapters in the drama of American history have been unfolded during the quarter of a century that Senator MURRAY has served in this body.

A liberal in deed as well as in word, JIM MURRAY became an articulate spokesman for the needs of the people in the early days of Franklin D. Roosevelt's New Deal.

His progressive views have been continually directed toward the fulfillment of legislation aimed at elevating the living standards of the rank and file citizens.

During my 5½ years in the Senate, Mr. President, I have had the privilege of serving on Chairman MURRAY'S Interior and Insular Affairs Committee, and whatever I have gained in fuller knowledge of problems of mining, land, reclamation, and water development has been due, in large measure, to his wise counsel and profound judgment.

In this moment of tribute, I join with Senator MURRAY'S legion of friends who wish for him many happy years in his well-earned retirement.

Mr. CARROLL. Mr. President, I was out of the city at the time of the decision of the distinguished senior Senator from Montana [Mr. MURRAY] not to become a candidate for reelection to the Senate.

I rise to express my sincere and deep regret. I know that no man among us has more abundantly earned retirement and rest from 25 years of dedicated and arduous labor. But at the same time it is difficult for me to imagine this Chamber without the presence and inspiration of JIM MURRAY.

This is my fourth year on the Senate Interior and Insular Affairs Committee, and it has always been with great personal pride that I have been able to go back to my people in Colorado and tell them of "my chairman."

Although the members of my family have long been friends of the Murray family, I prefer to think of JIM MURRAY as "my chairman."

In the years to come, as JIM MURRAY'S name becomes indelibly engraved in the history books of this Nation, and as he counsels our Government as a distinguished elder statesman, I will be proud to say, "He was my chairman."

I hope in the coming years we shall not lose the benefit of JIM MURRAY'S vast and profound wisdom and experience in public affairs.

I have heard much said of JIM MURRAY'S enormous contributions in the past 25 years to the development of the West and the Nation. But I want to assure JIM MURRAY that we shall need him just as much in the future. As deserved as his retirement is, this country cannot afford to be cut off abruptly from his vast knowledge and experience.

We will expect JIM MURRAY, at a more leisurely and reflective pace, to continue to lend us his guidance in the great issues with which his name has become so historically identified:

Conservation and development of water, minerals, land, and power; improvement of our educational system; protection of the consumer and the worker; help to veterans and development of this country's territories and possessions.

I have known, respected, and revered JIM MURRAY for many years. He has labored for the people of the United States since 1934 with a tireless devotion that few men in the Congress can match.

He has represented not only the people of Montana, but the people of this country, with integrity, with courage, with love of his fellow man, and with high honor.

We of the West especially owe a debt to JIM MURRAY that could never be repaid. Projects developed under his guiding hand have reclaimed much of the semiarid West. Water flows, needed foods grow, and power generates where in many places in the West was desolation, thanks to the foresight and determination of JIM MURRAY.

The people of the Great Plains, the Rocky Mountains, the Pacific Northwest, the Southwest, live better lives in more fruitful communities because of JIM MURRAY'S selfless interest in developing the West.

I rise also to pay tribute to JIM MURRAY for the generous service he has rendered the people of my State of Colorado, which has benefited from many projects guided by him through the Senate.

I hope that God will spare him for many years to come that we may continue to have his wise counsel on the Colorado projects still in process.

God bless you, Senator JIM MURRAY, and give you and your family many more years of happiness and good health.

Mr. CLARK. Mr. President, I should like to join my good friend from Colorado [Mr. CARROLL] in the eloquent tribute he has just paid to the distinguished senior Senator from Montana [Mr. MURRAY]. Unfortunately, it was impossible for me to be on the floor the other day when our colleagues joined in congratulating our distinguished colleague on his long and faithful and useful services in this body.

Unfortunately, I came to know Senator MURRAY only a short time ago, when I first came to the Senate; but during the last year and a half we have served together on the Committee on Labor and Public Welfare, and I have had an opportunity to gain his friendship, I hope, and to extend mine to him, and to perceive the very able, effective, and efficient manner in which he conducted his activities, not only as chairman of the Education Subcommittee of the Committee on Labor and Public Welfare, but in every other regard.

May Senator MURRAY live long, and may he come back frequently to visit us in this body, which will be the poorer without him.

Mr. HAYDEN. Mr. President, when announcement was made Thursday last that our colleague, JAMES E. MURRAY, senior Senator from Montana, does not plan to stand for reelection, I was necessarily absent from the floor; and I therefore wish at this time to say what I would have said then had I been present.

More than a quarter of a century ago JIM MURRAY, seasoned in judgment, faithful to the hopes and aspirations of Montana and the West, and fired with understanding of and compassion for the social and economic problems of the so-called little man, arrived in Washington as a freshman Senator.

He came equipped with the virtues of prudence, industry, and courage, armed to do battle for those things in which he believed.

Soon his colleagues of that day—and there are only three of us left in the Senate—came to know him as the "Fighting Irishman" from Butte. He never picked a fight just for the sake of fighting, but he never ran away from a fight when the principles he embraced were endangered.

Much of the beneficial labor, health, and social security, and welfare legislation of the past quarter of a century bears the imprint of his fine legal mind and humanitarianism.

This "fighting Irishman" from Montana was also always in the forefront in the sponsorship and successful struggles for irrigation, reclamation, and power projects and programs that gird our Nation to make it economically strong and able to defend itself against military aggression.

The Senate is richer from JIM MURRAY having served in it, and it will be poorer when this towering figure of a man retires for the rest he has so well earned.

GOVERNMENT AND THE MIND OF AMERICA—ADDRESS BY MAURICE H. STANS

Mr. GOLDWATER. Mr. President, one of the most thought-provoking speeches it has been my pleasure to hear was delivered last Saturday evening, April 30, by Mr. Maurice Stans, the Director of the Bureau of the Budget, on the occasion of the George Washington dinner, held annually by the American Good Government Society.

Mr. President, we in the Congress, it seems to me, pay too little heed to the damage which we are doing to the future of our country by the needless billions we blithely vote for this project or that project. Our Republic can be destroyed just as certainly and as completely by fiscal irresponsibility as it can by the weapons of war the Soviets might loose against us. It has always seemed to me that the oath of office we take to defend the Constitution against enemies, foreign and domestic, should be brought to mind before each vote is cast. To pile up more debt on the staggering one we already have is to do violence to that which we have sworn to protect. When we realize that our total debt, c.o.d.'s, and future obligations now total nearly $750 billion and that there does not seem to be any inclination to put a serious halt to the building up of that figure, we can have occasion to fear that the Soviets intentions may have progressed further than we think. So that my colleagues may have an opportunity to study these figures, I ask unanimous consent that this speech be printed in the body of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GOVERNMENT AND THE MIND OF AMERICA

(Address of Maurice H. Stans, Director of the Bureau of the Budget, before the George Washington Dinner, American Good Government Society, Sheraton Park Hotel, Washington, D.C.)

Tonight we venture far back into American history—to the first inauguration of President Washington—searching for meanings to illuminate our own times and decisions. Through such illumination, we seek the perspective that will find common purpose in our beginnings, our progress, and our future as a nation.

We do this because we sense better than any generation that has preceded ours, the rhythm of transition, the quickening pulse of history, and the vast strides of modern man across the leagues of time and environment. And who can blame us if we are a little breathless as we realize that in the span of a century and three-quarters we have traveled from the simplest colonial society to the complex civilization and the world leadership which is ours?

YEARS 1789–1960—MUCH IN COMMON

But for all the differences that set 1789 apart from 1960, we still can find many similarities.

For President Washington, it was a time of beginnings, and despite all that has transpired we too are concerned with beginnings. His task was to set a new and weak Nation safely on its course. Ours is to pilot a great and highly principled Nation safely through the dangers of a nuclear-age, space-age world, and inspire it to understand equally well its opportunities and its responsibilities.

There are similarities, too, in the issues which faced Washington and his Congress and those which we have with us today. One of their first tasks was to establish the public credit of the United States. Another was to liquidate the Nation's debt. A third was to provide for defense. A fourth was to establish a fair system of taxation. And a fifth was to work out a place for America in the family of nations.

Those were the priorities confronting our first President. In 1960 the setting is much different and the orders of magnitude are vastly changed, but the challenges are very familiar: How to preserve the Government's credit, how to handle and reduce our public debt, how much of our resources to allocate to defense, what kind of tax structure will best serve the needs of government and our private enterprise system, and how best to win and hold the confidence of a troubled world in the ideals and values to which we have dedicated ourselves.

Today, in the era of $80 billion budgets and a national debt of nearly $290 billion, it will pay us to listen for just a moment to these timeless thoughts from Washington's Farewell Address:

"As a very important source of strength and security, cherish the public credit. One method of preserving it is to use it as sparingly as possible, avoiding occasions of expense by cultivating peace, but remembering also that timely disbursements to prepare for danger frequently prevent much greater disbursements to repel it; avoiding likewise the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions in time of peace to discharge the debts which unavoidable wars have occasioned, not ungenerously throwing upon posterity the burden which we ourselves ought to bear."

Now, anyone may ask, why are those counsels still valid, after nearly two centuries in which such vast changes have come to pass? It's because we know that our political values cannot be separated from our economic values, that there can be no order in a society which ignores economic realities, and that history is filled with horrible examples of once-great nations and empires whose political and moral decay pushed them into economic bankruptcy. A sound economy will not guarantee a great nation, but there can be no hope for greatness without it.

All this was in the mind of the President whose memory we honor tonight. But what is in the mind of America in this era of titanic government? Does economic responsibility have as much meaning for us as it did for the men who built the foundations of all this greatness that we see about us? Is it possible that while we were building shrines to the father of our country we were rejecting the advice he so profoundly gave us?

I am not suggesting that we return to the Federal budget which Alexander Hamilton presented to the Congress in 1791, calling for total appropriations of $740,232.14⅔. But I do think there is something striking in the fact that the total expenses of the Federal Government in its first 150 years amounted to $157 billion—and we now spend more than that in 2 years under our present budget.

And consider this: If every process and action of the Federal Government were to stop right now, and if we went right on collecting taxes at present levels, it would be 10 years before we could pay off what we now owe in interest-bearing debt and in obligations for past services.

As a nation we followed Washington's advice for nearly 150 years through war and peace, boom and recession, and over the generations we gained in national vigor and stature. But in the last several decades we have turned away from this basic view of the fiscal role of government—and particularly of the responsibility of the Federal Government. In the space of 30 years our

budgets have grown 25-fold, and the consequences are reflected in the public debt on the books of the Treasury and in commitments in unfulfilled laws. For the most part, this is irrevocable, but the trend is not, if we but face it. We have not, I hope, revoked the obligation of a democratic society to criticize itself, to reappraise what it stands for, and to formulate priorities to govern our public business in these years and decades of test and challenge.

But something has been happening to our state of mind, and if it continues it will inflict us with almost permanent fiscal problems. I have in mind two great delusions which have grown up in these recent decades:

The first delusion is our fascination with the crash technique for solving our national problems. This viewpoint persuades us that money will buy anything. All we need to do is to go in for tremendous expenditures and we will be guaranteed prompt and decisive results. And, of course, the more we spend, the faster we will solve everything.

You know how this leads to illusions—

That for just a few more quick billions we can buy a faultless national defense.

That for some additional fast billions we can mass produce an ideal educational system throughout the Nation.

That billions of dollars are the whole answer to being "first" in every development in outer space.

That a few hurried billions from the taxpayer are all that stand between us and victory over sickness, disease, and all the worries of living.

So the illusions pile up, one on top of the other. Put them together and you see a state of mind that regards compulsive spending as the 20th century panacea.

Quite apart from the question of whether governmental action on the basis of hysteria may cause more to be done than need be, the crash approach generates all the built-in waste of overlapping, duplication, poor estimating, excessive costs, production before the engineering is complete, obsolescence before we get what we're after, and all the rest that spells haste, waste, and confusion.

The second great delusion stems from a local mistaken idea as to the limitless resources of the Federal Government. The idea seems to be prevalent that the people in a local community should not be expected to cope with their own problems of schools, or sewage treatment, or housing, or streets, because the Government in Washington stands ready to do it for them—with some other fellow's money. What this notion has done to foster the expansion of the Federal Government and to downgrade the stature and responsibility of local governments can only be imagined. This thinking is undoubtedly a throwback to the depression of the thirties, but it is now ingrained in mental attitudes. We seem to overlook completely the fact that when the Federal Government takes on the problems of local governments it isn't "somebody else" who pays, but each one of us. It's our mortgage, our debt, our taxes, and we will pay them just as surely as we would if we took the responsibilities on our shoulders in our communities.

These two great delusions have brought about the national state of mind which has led Federal fiscal policy to its present straits. During the past few decades we have justified the tremendous increase in public spending on grounds of emergencies of one kind or another—overcoming a depression, fighting wars, or reacting to changes in the temperature of the cold war. Now the slogan is "Keeping Up With the Khrushchevs." Under one umbrella or another we find it easy to rationalize the upward thrust of spending.

THE TASKS AHEAD

We know that tremendous exertions face us in the coming decade. The cold war shows a few signs of diminishing, but none to allow us to relax. Our tax structure is very near the high-water mark in its absorption of national income. Our national debt goes up and up, and its carrying costs take 11 cents of every dollar of taxes. Our farm problem resists constructive solution. Our urban centers are staggered by the cultural and economic implications of population growth and movement. Labor and management together face the gigantic responsibility of accommodating technology to an expanding labor force. And the persistent danger of inflation is a sobering warning in the face of all the exuberance that goes with our present material prosperity.

This is no time for a holiday mood. The tasks that confront us are prodigious, and that is the only word to describe the effort we must make. As we try to apply the lessons and the perspective of our history to the problems of today, four major economic concerns stand out.

First, Mr. Khrushchev has laid down a new challenge. He tells us the Soviets have chosen the economic battlefield rather than the military. He has pledged all of the energies of the Soviet system in his drive to make us a second-class economic power. He says he will prove that capitalism and our free democracy are obsolete and he predicts that his system will bury ours. To be proved right, he would have to have our help in weakening the strength and stability of the American dollar in the world.

Next, our continuing unfavorable balance of payments, which ran about $4 billion in 1959, has elements of danger. Whether or not those dangers develop depends on how we maintain the world's confidence in us—in our ability to manage our fiscal affairs and to maintain a strong dollar. We have become the world's banker, with large balances of short-term credits. If we run a poor bank—if we don't manage our finances tightly—we can lose that confidence, and the results can be serious to our gold supply and to our money and our national vitality.

Third, so-called compensatory fiscal policy has not worked as it was supposed to work. Whenever we have a downspin we accelerate Government spending and borrowing, to pull ourselves out; but when equilibrium is restored we seem—up to now, at least—to lack the fortitude to cut back spending in order to pay off what we've borrowed to tide us through the emergency. If we continue along this line our national debt is bound to go in one direction—up and up.

And fourth, the sinister shadow of inflation is always stalking us. The fact that we have held it off so well in the last few years is not a reason for relaxing, because the danger persists. United Nations figures show that 29 out of 67 free countries—nearly half—have had price increases of 50 percent or more in the last 10 years. Think what this has meant in the loss of values of savings, insurance, pensions—in suffering and loss of opportunity.

These four economic hazards mean that we need to do some soul searching. Do we now recognize two equal aspects of national security—military and economic? Are we as strong and secure against economic attack as we are militarily? Can we risk the perils of flirting with inflation? Can we continue to demand of government more than we are willing to pay for in taxes? Can we delude ourselves any longer with the notion that if money comes from Washington someone else provides it? Can we fight with full strength under a tax burden that cramps initiative and a vast public debt which grows and grows?

One thing is clear—to meet Mr. K. head on we need to marshal our full strength and resources, and to employ them wisely and well. The glowing visions of the 1960's will not be won without effort and hard decisions, even sacrifices.

BUDGETS OF THE FUTURE

Now let's get down to cases.

Where is the Federal budget headed in the coming decade? I can tell you this, as a statistical fact and not a prediction: If we continue the trend of the past several decades for just another 10 years we will have budget expenditures of $160 billion by 1970. Impossible? So it seems. Yet it is not a bit more fantastic than the increases we have already scored, from $3 billion in 1930 to $9 billion in 1940, to $40 billion in 1950, to almost $80 billion in 1960.

I hope that this trend will not carry us to $160 billion budgets within the coming 10 years. But I can tell you that we are most certainly headed for $100 billion or $120 billion budgets—or more—in a few years unless we change our ways.

I can demonstrate this by citing three shocking facts that every American should be aware of.

Fact No. 1 is that our present national debt of $290 billion is far from all we owe for the past. This is just the interest-bearing current debt. To really understand what we owe, you have to add in some other things. For example, benefits which we have promised to veterans and their dependents will cost $300 billion in the years ahead. On top of that, unfinanced Government liabilities for military and civil service retirement plans already come to nearly $60 billion more.

And along with all this, the Federal Government is piling up c.o.d.'s for future redemption at an astounding pace. Our commitments for highway improvements, for public housing, for civil public works, and for subsidies, run into the tens of billions. In fact, when we put these commitments together with the huge unspent balances of appropriations in the defense program, the total comes out to nearly $98 billion of c.o.d.'s.

Now, the $290 billion of public debt, plus over $350 billion of future obligations for past services, plus $98 billion in c.o.d.'s, adds to the almost unbelievable total of nearly $750 billion. That is what I like to refer to as the Federal Government's mortgage on America's future, on ourselves and on our children, beyond the regular annual costs of defense, welfare, and commerce. I hope it shocks you as it shocked me when I began to add up the figures.

Fact No. 2 is this: Even if this session of the Congress doesn't add any new programs or increases to the President's budget, the level of Federal spending is going to go up. The reason is that there are built-in increases in existing programs which are now producing a continuing upward push on expenditures. The catalog of built-in increases covers such programs as outer space, civil aviation, public works, merchant shipping, urban renewal, science education, medical research, public assistance, loans to underdeveloped countries, and veterans' pensions. The farm program may become even more costly as time goes on, unless we find a solution that helps the farmer and frees him from controls at the same time.

For 1961 alone, these built-in increases come to over $2 billion. That's why this budget is up over 1960. And looking ahead to 1962, there are already built-in increases of more than a billion dollars more. Of course, there are few built-in decreases, since Government programs, once started, develop their own immunity to revision or curtailment. A year ago the President in his budget message nominated 18 programs as being ripe for revision in order to reduce future expenditures. Only three received attention by the Congress, and those with the net result of increasing future expenditures by about $9 billion, rather than decreasing them.

Fact No. 3 is that pressures for new spending programs are increasing in intensity. In part, this is a reflection of the pressures

in an expanding, growing economy—population increases, urbanization, the thrust of technology. And yet as we are confronted by new priorities we have to face the fact that the budget is so saddled with yesterday's priorities that it has lost most of the flexibility needed to put aside the old and take up the new.

A table in the CONGRESSIONAL RECORD showed that in the last session of the Congress alone, 20 major spending bills in the Senate along with another 20 introduced in the House, for new programs, priced out at roughly $300 billion over an average period of 5 years. While there is some duplication among them, if these and other bills were passed as their sponsors want them, they would add $50 billion or $60 billion a year to our present spending—while on the other hand there are bills to reduce taxes by $5 billion to $10 billion a year.

It's because of proposals like these that we hear that our current budget is austere and reactionary, that it doesn't express confidence in the capacity of America to grow and support increasing public expenditures. We are still being told that we can spend ourselves into prosperity. We are told that balanced budgets are unduly conservative and that the times call for bolder thinking.

My answer is that for responsible fiscal policy there is no acceptable alternative but conservatism. Anything else boils down to speculation; and in plainer language that means gambling with the country's fiscal strength, which is essential to its security. This still leaves ample room to be dynamic, to take up new ideas, to move ahead as we can afford to do so.

LOOKING AHEAD

Now, I have sketched some alarming facts about our fiscal situation. Can we dig ourselves out of this trouble and set ourselves once again on the road to fiscal responsibility? It isn't too late. Let me show you why.

Federal spending and tax receipts now are running at a rate of about 16 percent of our gross national product of $500 billion. Assuming normal growth in our economy, the gross national product could reach about $750 billion by 1970, just 10 short years from now. If we held the index of Federal taxes right where it is at 16 percent of the rising gross national product, this would produce a revenue level by 1970 of $120 billion.

What's going to happen to that national income, that potential increase of $40 billion? Are we going to sit back and let Parkinson's second law take its natural course—which is that government expenditures rise to meet income? That would mean that the Federal Government would be spending $120 billion in 1970. Or should we exercise restraint in spending and use some of that $40-billion increase for debt reduction, following the advice of President Washington? Or is it better to transfer a goodly part of it back to the taxpayers in the form of tax reduction so that it can be spent within the area of private choice? Or, finally, will we shirk these hard decisions, and try to make the journey through the 1960's without guideposts, without priorities, without any feeling of responsibility? If we do, we may well wake up in 1970 and find that our expenditures are well above $120 million and we are still piling up debt.

We must not go on without facing these issues. The trends which I have described show vividly how far we have strayed from the conception of the Federal Government as a device for providing the people with services which they could not as well provide for themselves. We have allowed our Government to grow into the world's largest credit supermarket, catering to the wants and urges of organized lobbies and pressure groups. All you have to do is to go through the budget and make up your own list of subsidies, grants-in-aid, loans, guarantees, and special services, and stack them up against what you consider to be the urgent needs of our times. I think you will agree with me that we have a multitude of aims, a variety of goals, and an extreme shortage of real priorities to guide public policy. And one weakness above all is a carelessness about economic common sense.

This is a situation that spells danger in a democratic society.

THE REAL SECURITY GAP

We can do Mr. Khrushchev no bigger favor than to undermine the economic framework which holds the real balance of power in the contest between the East and the West. An increasing supply of capital and the freedom to make use of it are the necessary conditions to an expanding economy under the private enterprise system. Inflation, excessive taxes, an exorbitant public debt, irresponsible spending, habitual deficits, prolonged labor-management disputes, and pressure-group government are illustrations of how we wear down the energies of our economy instead of enhancing its capacity to prove Mr. Khrushchev mistaken in his estimates of our endurance. These are the factors which can lead to the real security gap.

Let me put some questions to you:

Is it wrong to believe in a balanced budget?

Is it wrong to think that the Federal Government should live within its income, especially in times of prosperity?

Is it wrong to resist the infinite demands of special groups for special favors from the Federal Government?

Is it wrong to plan on applying something each good year to the reduction of our staggering public debt?

Is it wrong to ask that a new look be taken at some of the subsidies that have grown untouchable with the passing years?

Is it wrong to believe that private enterprise can do a better job of fostering economic growth than government spending?

I think it is plain that we have a resolute enemy abroad. But here in our own midst we have enemies, too—and I call them the "four horsemen of economic destruction":

Compulsive spending, which has helped multiply the Federal budget by 25 in just 30 years.

Cancerous taxation, that erodes incentive.

Government by credit card, that piles up unending accumulations of debt.

And the final destroyer, inflation, which if allowed to ride unchecked would wipe out the values of savings, pensions, and insurance.

These enemies, if we don't control them, can destroy our national vigor much easier than it would succumb to Soviet attack.

GOVERNMENT AND THE CITIZEN

More and more frequently in recent months letters have come to me from troubled citizens, worried and anxious about the mortgage we are piling up and the onrushing pace of government spending. Even though the polls show by wide margins that the American people believe in fiscal responsibility in the Federal Government, all too many of these letters express a feeling of individual hopelessness, a sense of being trapped, a bewilderment as to what any one individual can possibly do to stem the tide of events.

Here we see striking evidence of how our whole society has changed. How can it be that free and otherwise articulate citizens feel discouraged about even raising their voices against the current trends? I wonder if the individual citizen in a free democracy has possibly become so hemmed in by organized bigness that he feels he must march in step, with the end result that he no longer has a personality, a political dignity, of his own? If that can be possible, then we have indeed paid a stiff price for the material achievements upon which we set such store.

This is certainly a real and present danger as long as we take for granted an overprotective state, an infinite authority in government to tax and borrow and spend, and so much bigness in everything we do that the individual dwindles down to a mere vital statistic.

Realism alone tells us that government will continue to be a large factor in our affairs, and that some growth in government is to be expected along with growth in every other aspect of our economy. The task we face is to define the orbit of government, to rethink our system of priorities for public expenditure, to seek and achieve progress without sacrificing the standards of prudence and fiscal responsibility which spell stability and solvency in our public business. These are the building materials for good government and a solid, enduring future. If we take the right steps now to put our affairs in good order, and give our serious attention to how we would really choose to employ our growing income, we can find the way to provide both necessary and desirable services through government without risking fiscal and economic catastrophe. Surely, this is a challenge we cannot resist.

Perhaps it is clear to you now why I chose as my topic "Government and the Mind of America." These two go together. We must see to it that it is the mind of America that shapes our Government, rather than Government shaping the mind of America.

This is your cause. It isn't going to be won by a speech tonight, nor by complaints about high taxes. It can only be won in the mind of America, inspired by a resolution to think deeply and often about the legacy that we possess and the responsibility that rests on our generation. It will be won when the voice of America rises over the noise of a busy, preoccupied society and demands consistent adherence to the standards of disciplined, responsible government that were first spelled out by our founders.

And perhaps then, in the words of George Washington, we will make it possible for history to say, "had this day been wanting, the world had never seen the last stage of perfection to which human nature is capable of attaining."

MAY 1960—NEW YORK STATE SENIOR CITIZENS MONTH

Mr. KEATING. Mr. President, it is my understanding that tomorrow Secretary Flemming of the Department of Health, Education, and Welfare is to testify before the Ways and Means Committee and will at this time present the administration's voluntary health insurance for the aged plan.

I have been in touch with the Secretary, and am familiar with the considerable hard work which he has done in this important area. Knowing something of the position which he and others in the administration have taken on this timely and vital issue, I am quite certain that the bill which will be proposed by the administration will resemble the voluntary health insurance for the aged bill, S. 3350, which has been introduced by several Senators, and of which I am a cosponsor. In this regard, I recently wrote a letter to the editor of the New York Times, which was today published in this newspaper, outlining the major premises of S. 3350, which I feel also will and should be embodied in the administration's proposal. I will not reiterate these several premises at

this time. In the interest of time, Mr. President, I ask unanimous consent that the letter to which I refer be printed at this point in my remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TO PROVIDE CARE FOR AGED—OBJECTIVES OF BILL FOR VOLUNTARY HEALTH INSURANCE DISCUSSED

To the EDITOR OF THE NEW YORK TIMES:

A number of letters have recently appeared in this column commenting on the merits of S. 3350, the voluntary health insurance for the aged bill introduced by eight Senators, including Senator JAVITS and myself.

While I am completely in sympathy with the overall objectives of the widely discussed Forand bill, I believe that our bill has a number of features which make it an especially equitable and realistic approach to the health needs of the aged.

It is voluntary.

It covers all of the low-income aged—not just those under social security. (This is certainly a woeful defect of the Forand bill.)

The "benefit package" envisioned stresses services which are very essential to persons over 65, such as nursing home and doctor's office care.

It is operated primarily by the States, thus avoiding a further incursion of federalization in a field in which the States can and should have the basic responsibility. (This also permits each State to provide for and adjust to medical care facilities and needs within its borders.)

COMBINING LEGISLATION

I am of the opinion that the basic concepts encompassed in S. 3350 are consistent with the dignity and self-respect of the aged while at the same time conforming with what I feel should be the structure and scope of the activities of our Federal Government, and of the governments of the several States.

S. 3350 is by no means a finished product. It is imperative that in the coming weeks Congress combine all of the best features of the several pending health insurance for the aged plans in order to develop an effective and workable program in this area.

The need for legislation is clearly established. Congress must now get down to the all-important business of framing the best possible bill to provide for the health and medical needs of the aged.

KENNETH B. KEATING,
U.S. Senate Committee on the Judiciary.
WASHINGTON, *April 29, 1960.*

Mr. KEATING. Mr. President, I also invite attention today to the fact that the State of New York has declared May of 1960 to be Senior Citizens Month. This is an extremely appropriate designation for it is in May of 1960 that the major decisions and action must be taken on needed legislation keyed to the special health and medical needs of America's senior citizens I hope we can celebrate Senior Citizens Month by devoting our efforts to the all-important business of framing effective and realistic health insurance for the aged legislation. I hope that a majority of my colleagues in the Congress will similarly dedicate themselves during New York State's Senior Citizens Month.

Mr. President, I ask unanimous consent that the proclamation by Gov. Nelson A. Rockefeller, designating May 1960 as Senior Citizens Month, be printed at this point in the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION BY GOV. NELSON ROCKEFELLER, OF NEW YORK

Today there are 1,529,000 persons over 65 years of age in the State of New York.

The progress of our State rests firmly on the past and present contributions of these older men and women. It is our responsibility to see that they continue to have the opportunity to remain active and productive as long as they are able, and receive adequate care when they are ill or incapacitated.

New York State has promoted both study and action on the many-sided problems of the aging. We have reason for pride in the provisions that have been made for education and recreation, employment, health, and housing to mention but a few. We recognize that much remains to be done.

Now, therefore, I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim the month of May 1960 as Senior Citizens Month in the State of New York, and call on public and private agencies and citizens in this State to dedicate themselves anew to a proper concern for the needs, the well-being, and happiness of our older people.

NATIONAL RADIO MONTH

Mr. CARLSON. Mr. President, the month of May has been designated as National Radio Month. Radio Month provides a fitting occasion to give recognition to the 4,000 stations and tens of thousands of faithful employees of one of the Nation's most public-spirited industries.

The theme this year is "Radio: The Heartbeat of Main Street." The theme signifies the blending of concern in the interests of the people and the stations that serve them.

Today there are more than 155 million radios in use in the United States; 97 out of every 100 homes in the Nation have radios. Americans are seldom more than an arm's length from a radio set no matter where they are—at home, in a car, at the beach. About 39 million cars are equipped with radios.

Today there are more than 4,000 radio stations on the air in the United States, an increase of 228 since last year. Their programs of information and entertainment reach the remotest areas of the country and the humblest of homes.

Our people demand their news as it happens, their baseball and other athletics as they are played; and we are also indebted to the radio for constructive educational and religious programs.

Mr. President, it is most appropriate that the U.S. Senate take recognition of the outstanding service performed by the radio stations of our Nation.

CONGRESSIONAL ACTION ON PROPOSED LEGISLATION—MESSAGE FROM THE PRESIDENT (H. DOC. NO. 385)

Mr. JOHNSON of Texas. Mr. President, the President has transmitted to the Congress today a message recommending action on certain legislative matters within the jurisdiction of several of the standing committees of the Senate.

I am informed the message is now being read in the House, and I therefore ask unanimous consent that the Presiding Officer lay it before the Senate, that it be printed in the RECORD without its being read, that it be referred to the Committee on Foreign Relations, and that a copy thereof be referred to each of the following committees; namely, Agriculture and Forestry, Judiciary, Finance, Public Works, Government Operations, Labor and Public Welfare, Banking and Currency, Interior and Insular Affairs, and Appropriations.

The PRESIDING OFFICER (Mr. MUSKIE in the chair). Is there objection to the request of the Senator from Texas? The Chair hears none, and it is so ordered.

The message from the President is as follows:

To the Congress of the United States:

Of this, presumably the last congressional session during my term of office, 4 months have gone by. Thus far the one major accomplishment is enactment of civil rights legislation. Although Congress rejected certain of my recommendations in this area—those relating to equality of job opportunity and assistance to States attempting to desegregate their schools—the new civil rights measure is another important step toward the attainment of the ideal of equal rights before the law for every citizen.

With only 2 months apparently left in the session, we still have a great deal to get done for America. I stress this now because, first, the time grows short in which to legislate prudently and wisely, without undue haste; and, second, too great a preoccupation with the events of an election year could seriously impede constructive effort. With the Congress controlled by one party and the executive branch by the other, these difficulties could become severe.

We should jointly resolve that the shortness of time and political rivalries will not be allowed to prevent us from serving the American people effectively. Matters are still pending that are vital to the health of our economy and to the Nation's security and world peace; none of us can afford to electioneer at the expense of these. Nor can we yield to the temptation to neglect projects that we know are essential to good government but possess little popular appeal, and at the same time overemphasize others in the hope of benefit to one party or the other, or individuals therein.

Relating these considerations to a few of the programs still pending, I refer, first, to our vital mutual security effort.

During most of our Nation's history, our growth was strongly influenced by two unique conditions. First, for more than a century and a half two great oceans protected us from the violent struggles of the Old World. Although in recent years we became engaged in two global wars, our relative isolation gave us months in which to assemble, train, and equip our forces deliberately

and unmolested. Second, from the very beginning, our Nation's rapid expansion was encouraged by commercial and financial assistance from the nations of Europe. These countries provided us with valuable skills and the capital needed to accelerate the development of our resources, industries, and commerce.

These conditions have radically changed. America emerged from World War II as the mightiest nation in a free world, that in the main, was exhausted and crippled. Soon thereafter we came to realize that new weapons of great power, speed, and range had markedly reduced the value of our ocean shield. Our homeland, in any future major war, would be a prime target, and our warning time against surprise attack would be minutes, not months. Our security cannot now be achieved by methods and a level of effort believed adequate only a few years ago.

In a world, moreover, in which an aggressive ideology drives ceaselessly to destroy human freedom, it is now the United States to which aspiring free peoples, particularly in underdeveloped areas, must look, as America once did to others, for the technical knowledge and financial assistance needed to help them strengthen their economies and protect their independence.

Such changes as these gave rise to our mutual security program, one of the most necessary and successful enterprises America has undertaken throughout her history. Started more than a decade ago, the program helped to save Greece, forestalled economic collapse in Turkey and Western Europe, supported the countries of the SEATO Alliance, sustained the strength and independence of South Korea and the Republic of China, and made real progress, in underdeveloped nations on five continents, in combating disease, poverty and suffering, and thus has strengthened the resistance of those areas to Communist penetration, propaganda and subversion. Clear it is that the mutual security program provides the surest path by which America can lead to and sustain a durable peace with justice.

Such a program serves the Nation at large rather than any particular locality, section, or group. Only with difficulty, therefore, can its great rewards be measured by individual communities and citizens. It inevitably follows that in the annual contests over the public use of tax revenues, there is a tendency to bypass the needs of this vital security program in favor of domestic projects that, urged by special groups, achieve a measure of support far greater than their overall value to the Nation warrants. Understandable this tendency is, but I deem it a great disservice to America to indulge it. The security of our country obviously demands that our mutual security program be carried forward at an adequate level.

I have asked new appropriations of $4.175 billion for this program for the 1961 fiscal year. Nearly half of this—a sum one-twentieth of our own defense budget—is to assist the military forces of the free world, comprising 5 million soldiers, 2,200 combatant ships, and 30,000 aircraft. I need not remind the Congress of the low cost at which this force for freedom is sustained as compared to the cost of an aircraft carrier, a squadron of jet bombers, or an Army or Marine Corps division in our own defense structure.

Of the other parts of the program, one-third is for economic assistance required to help sustain these large forces abroad. The remainder consists of loans, technical assistance and grants to help underdeveloped nations. These are the funds that spell the difference between hopeless stagnation and progress for hundress of millions of people who, with us, believe in freedom.

Congressional approval of these funds for mutual security will profoundly benefit our people. To our allies and to others with whom we discuss the great issues of our times, it will signify that a united America has not wearied in the discharge of its responsibilities, and that we are unshakable in our determination to attain a world order in which men are free to pursue their goals in peace. And I emphasize once again that, as we strive to build the kind of world in which America believes, our adversaries are not all included in the single word "communism." They are distress and privation as well, and also the desperation of peoples when they realize that, lacking outside help, they struggle in vain to better their lives. Widespread chaos and misery cannot provide a world climate in which our free Republic can prosper and remain secure. There is for America no higher purpose or greater need than to measure up to her world leadership responsibilities.

I am keenly aware of the contention that, because of an adverse balance of payments and because of certain failures in administration, America should curtail these mutual security efforts. We must, and do, strive for greater efficiency. Likewise, we do have a problem with balance of payments, but the way to meet this is by positive actions which expand exports. Neither difficulty can be met by withdrawing from our responsibilities for world leadership and from partnership in the protection of freedom. We need—in our own interests—greater human progress and economic growth throughout the world. We cannot achieve these by an assault either on mutual security or on liberal trade policies.

I congratulate the Congress for its actions thus far on the funds for mutual security in the authorizing legislation, and I reaffirm the imperative necessity of providing the appropriations that the authorization would allow.

Next is agriculture, a subject on which I have commented repeatedly to the Congress.

In no domestic area do we have a more obvious need for corrective action. We cannot wonder that the patience of our farmers wears thin. By force of law the Government's surplus holdings, especially of wheat, continually increase. These overhang the market, depress prices, and impose an ever more onerous burden upon all citizens, our farmers particularly. I have offered many recommendations for attacking the problem through bipartisan action. Action there has been on occasion but, in respect to wheat especially, far less than needed or of a kind that would make our farmers' present troubles grow worse.

In an effort to break the legislative stalemate I recently advised the Congress that, within broad guidelines which I suggested, I would approve any constructive farm bill that the Congress might enact. There is as yet no agreement on the part of the two Houses of Congress on a constructive approach.

Meanwhile farmers grow more concerned about their future, and our people generally become increasingly unhappy as their Government expends a thousand of their tax dollars every minute on the self-defeating wheat program. Lately I have noted, with deep concern, a growing disposition in certain congressional quarters to favor proposals long ago rejected as unworkable, and which would obviously go beyond even the very broad limits I outlined almost 3 months ago.

I regret also the continuing tendency to rely, in agriculture, upon Federal controls, which inevitably create interference with the lives of our farm people. I still believe that America's farmers prefer, as certainly I do, the development of legislation which will promote progress for them toward economic equality and permit them the maximum freedom.

Surely it is time, in the interest of all Americans, for the Congress to face up to the admittedly difficult problems of agriculture. It is constructive results that farmers want and need. Indeed, I believe that all America is looking for this kind of action before this session adjourns.

Also badly needed is extension of the Sugar Act, soon to expire. At stake are an assured and stable supply of sugar for our people at reasonable prices and removal of the uncertainties now facing this industry. A 4-year extension of the present program, modified to give the President authority to adjust quotas in order to assure America of an adequate sugar supply, is needed to give farmers and processors the time to plan. Appropriate recommendations are before the Congress. The interests of America require that legislation be enacted before the Congress adjourns.

I have repeatedly stated the need for legislation in other important areas. Some of these measures are of a kind that, at the expense of responsible government, tend to be shunted aside in an election year.

First is the urgent need of Federal courts for enough judges to hear the greatly increased number of cases being filed each year. Regardless of expediency, justice calls for prompt action.

The Judicial Conference of the United States has recommended the creation of approximately 40 new judgeships. This recommendation is supported by the administration and by virtually every important professional organization concerned with the administration of the courts.

We who advocate equal justice under law have a duty to make it effective. In certain districts injured people must wait over 4 years for justice or compromise their rights; innocent people who are defrauded are made a laughingstock because the delay in the courts deprives

them of an effective remedy; justice is denied the weak because they cannot finance the delay necessary to be heard. Further neglect of this need is heartless. For all our people, I most earnestly urge swift action on the pending measure to increase the number of judgeships.

Next I refer to my request of last June to remove the statutory prohibition against the Treasury's paying more than 4¼ percent interest on Treasury bonds which are due more than 5 years after issuance.

The American people have a great deal at stake in this legislation, for failure to remove this interest rate restriction can have many serious consequences, including the forcing of a new upturn in living costs. The Treasury, under this restriction, continually faces the prospect of having to manage the Government's $290 billion debt in ways that would unavoidably increase the upward pressures on prices and on the interest rate for the consumer credit so important to millions of our citizens.

Again, I stress the need for prompt removal of this harmful restriction.

We also owe it to America to provide adequate new revenues for the highway trust fund, as my proposal for a gasoline tax increase would do, so that we may keep our very important highway program on schedule; and fiscal responsibility dictates that we not fail to raise postal rates and thus end the heavy drain on general revenues for postal services which Congress has said by law should be self-sustaining. Our other revenue proposals—notably, extension of certain excise taxes and an added tax on aviation fuel—also need to be approved.

Additionally, as I recently emphasized by special message to the Congress, we have compelling reasons to liberalize our immigration law during the course of this session. I remind the Congress, also, that this is World Refugee Year. Our country was one of those sponsoring this move in the United Nations. In harmony with the spirit of this resolution, and in keeping with America's tradition of leadership in humanitarian causes, we should press forward, in this session, with the refugee legislation I have recommended to the Congress.

I add two proposals of special importance to future Presidents of the United States. First is provision of Presidential office space. The Congress has met its own space requirements and those of the Supreme Court. Requirements for modern office facilities for the President, his staff and the news media assigned to the White House are no less necessary and urgent. Second, the need to carry forward Presidential powers to reorganize the executive branch is acute, in the interest of efficiency and economy in this huge Government. Both of these authorizations are clearly essential. I again urge their approval before this session adjourns.

I refer now to a number of programs of intense interest to millions of our people—programs intended to initiate or enlarge benefits for various groups or sections of the Nation. Such projects require objective analysis and a nicety of decision so that on the one hand there will be no neglect of essential Federal responsibility and on the other hand no surrender to the election year temptation to overspend and overreach. Responsibility respecting these will do credit to both parties but, more important, will benefit our people.

A comparison of 1952 and 1961 Federal expenditures shows the pace of the Federal advance in matters of this kind. Likewise it discloses the pressing need for prudence both as regards the level of these expenditures and the extent of Federal involvement in the problems of individual citizens. For labor, welfare, and veterans' programs, including payments from trust funds, cash payments to individuals were $11.7 billion in 1952. The comparable figure in the 1961 budget is $26.4 billion. Thus there has been a 125-percent increase in these programs during a period in which the population increased by 16 percent. This growth in payments far exceeds any increases required to match the 12-percent rise in living costs during this period.

Among such matters still pending I would mention, first, school construction legislation. Long ago the administration asked Congress to approve a sound program to help colleges and universities and elementary and secondary schools meet their pressing construction needs. I have stressed that any such Federal assistance should be provided only to meet genuine need, and that it must preserve for the States, local communities, and educational institutions their traditional responsibilities for education. The administration's debt service plan for elementary and secondary schools, and its comparable plan for institutions of higher learning, both before the Congress for over a year, conform to these standards.

By these programs we would help to construct 75,000 additional elementary and secondary classrooms at a Federal cost, over the next 20 to 30 years, of $2.2 billion, and at a Federal cost of $500 million we would help build higher education facilities costing in the aggregate some $2 billion. The financing for the initiation of these programs is included in my 1961 budget.

It will be deeply disappointing if the Congress should fail to authorize such programs, and no less disappointing if, instead, programs that basically conflict with these standards should be passed.

Area redevelopment legislation also needs priority attention. I have long urged legislation authorizing loans and technical assistance to help areas afflicted with long-term, substantial unemployment resulting from technological changes. The purpose is to diversify these economies and thereby create new sources of private employment. With important local efforts to provide new jobs already under way, Federal help must be of a kind that strengthens and supplements rather than displaces or discourages those efforts.

I think it is basic that we reject the various schemes that would perpetuate insecurity by making distressed areas dependent upon the uncertainties of continued Federal subsidies, or that would pour Federal dollars into areas where distress has been temporary and which are competent to meet their problems themselves. Moreover, it will injure, not help, the chronically affected areas if funds and loan advantages are indiscriminately broadcast to other areas that do not urgently require such assistance.

The only way this difficult problem can be sensibly solved is through healthy Government-community cooperation that creates self-sustaining local economies. It cannot be solved by a dispiriting and misplaced benevolence on the part of the distant Central Government. The people who need this help are hopefully looking for truly constructive action this session. For this purpose I have recommended a Federal program amounting to $53 million, to be expended for loans and technical assistance.

The Secretary of Health, Education, and Welfare will present this week a new program which will enable older people truly in need of help to meet the calamity of catastrophic illness. This program will take full advantage of, and support, the progress that has been made by private efforts; it will recognize the traditional Federal-State relations in various fields of assistance; and, additionally, it will not do violence to the private relationships that must continue to characterize the rendering of health care services.

Behind this program is a meticulous and thoughtful weighing of many alternatives. I believe the Congress will find this proposal of great value to our people most in need of medical protection in their later years. I urge this program in place of compulsory schemes which over a period of years would blight America's unexcelled medical standards and leave unaided large numbers of citizens we are striving to help.

The Fair Labor Standards Act likewise needs attention before these next 60 days elapse.

For several years I have urged expansion of coverage under this act to include approximately 3 million additional wage earners. This is the most urgently needed change in this law, and I hope that the Congress will not fail to provide it.

The Secretary of Labor recently presented the Congress with information indicating that the minimum wage could be increased moderately without disruptive effects upon the economy. On the other hand we should, as responsible officials, stand firmly against an excessive increase which could cause unemployment and severe repercussions in many industries and areas of our country. It is of great importance to the well-being of the American people that we govern our actions in this area by economic facts rather than by political or social prejudice.

Nor, I believe, should we close this session without enacting various long-pending measures, mostly in the field of conservation—each of them important to all our people, but particularly to our citizens out west.

Among these measures I refer as examples to preservation of our priceless seashore areas, establishment of the Arctic Wildlife Range, permission to western communities to expand into public land areas, research assistance to

the coal industry, and the Fryingpan-Arkansas and San Luis projects. Approval of these and similar pending bills will help to round out the program of natural resources development—now at a record level—which I presented last January in my budget message. We also need a solution of the Indian heirship problem and to give the people of Guam and the Virgin Island a voice in the Congress.

As a general but most important consideration, I point again to the need of restraint in new authorizations for Federal spending. Our Federal accounts should balance with enough left over for a reasonable payment on the public debt, on which we are already paying for interest alone more than $9 billion per year. Proposals now before congressional committees would, if approved, raise our annual spending by tens of billions of dollars in 1961 and would disrupt Federal budgets over the next 5 years by many scores of billions.

For America's sake, we must resist the temptation, this year or any year, to overspend the taxpayer's hard-earned dollars and overcentralize responsibilities in the Federal Government. If we fail in this, we will weaken our hope of ever controlling Federal extravagance and will indefinitely postpone debt retirement and tax relief. At the same time we will debase our currency, invite the resurgence of inflationary forces, undermine local and State responsibility, and thus erode away America's strength at home and in the world. We should avoid preemption of State and local functions and take genuine national need rather than glittering desirability as our guide in Federal expenditures.

Most taxpayers, I believe, are becoming more and more aware of the results of laws that, though sometimes carrying a surface appeal, far too often add unjustifiably to the tax burdens of the individual.

Finally, I repeat my hope that in the brief span remaining before adjournment the executive branch and the 86th Congress can work constructively together in the interest of America and avoid schism and stalemate. The measures I have mentioned, and many others also calling for action this session, must go forward if we are to keep faith with our countrymen. Let us remember, as congressional deliberations proceed, that both the Nation and the world are looking on.

With sound progress as our object, we can accomplish much despite the shortness of time left in this session. Working together responsibly, we shall surely make America a stronger and better Nation; and, so working, we shall brighten the cause of freedom and peace everywhere on earth.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 3, 1960.*

FORTHCOMING VISIT TO WEST VIRGINIA BY SENATOR JOHNSON OF TEXAS

Mr. BYRD of West Virginia. Mr. President, on Saturday, May 7, our majority leader will address a Jefferson-Jackson Day dinner in Clarksburg, W. Va. West Virginians are looking forward to the visit of Senator LYNDON B. JOHNSON. This will be only his second visit to West Virginia, his first visit having been to Welch in the campaign of 1958, at which time he addressed a Democratic gathering in behalf of Senator RANDOLPH and me. The people of my State have not had the opportunity to see and talk with Senator JOHNSON, but they are very much aware of his tremendous ability as a leader and his excellent record in the Senate.

Senator JOHNSON was chosen by the unanimous consent of all Democratic Senators to act as our majority leader. He has shouldered this responsibility in an eminently capable way. His record of accomplishments makes him a distinctly deserving contender for the Democratic presidential nomination, even though he has not actively sought the nomination. His responsibility as our majority leader has precluded his participation in presidential primaries. Had he engaged in such participation, it would have necessitated his being away from the Senate much of the time, and he would have thereby failed to fulfill his responsibilities to his Senate colleagues and he would have been remiss in his duty to the Democratic Party and to the Nation. Senator JOHNSON has chosen to stay at his post of duty and to continue to write an exemplary and unequaled record of performance. In so doing, he has demonstrated the kind of leadership our Nation needs and deserves.

Mr. President, I wish to include the CONGRESSIONAL RECORD a splendid editorial written by Mr. Randal Strother, editor of the Clarksburg Exponent. Mr. Strother ably writes of the accomplishments of our majority leader and of the appeal he has to those people throughout the country who want a man of stature in the White House and who believed that if this country is to remain a first-rate power among world powers it must have a first rate, strong, and effective Chief Executive.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Clarksburg Exponent, Apr. 29, 1960]

SENATOR JOHNSON TO HELP HARRISON COUNTY DEMOCRATS RAISE FUNDS

When Majority Leader LYNDON B. JOHNSON of the U.S. Senate comes to Clarksburg May 7 to help the Harrison County Democratic Executive Committee with a fund-raising campaign, it will be a gathering for all Democrats. No particular person will be favored at the meeting, U.S. Senator HUBERT H. HUMPHREY will be present, and FRANKLIN D. ROOSEVELT, JR. will be on hand to represent Senator JOHN F. (JACK) KENNEDY, who was invited but will be unable to be here because of another speaking engagement.

In all, 10 U.S. Senators will be present, including our own U.S. Senators JENNINGS RANDOLPH and ROBERT C. BYRD. All will be recognized at the banquet, thus no one may be charged with preprimary political activity in favor of any one candidate.

Coming as it does almost on the eve of the West Virginia Democratic primary, the May 7 Democratic rally will have tremendous political significance, and State candidates will be here in large numbers to boost their own candidates.

While the gathering here will be for fund-raising purposes only and Senator JOHNSON has been committed since last fall to give the address, we feel that our readers want to know something about the high caliber of the man who will be the May 7 speaker.

Gould Lincoln, author of "The Political Mill," wrote a column April 9 in the Washington Star under the caption, "Johnson Might Unify Party." We feel that our readers, especially our Democratic readers, will want to read Mr. Lincoln's comments concerning the Democratic majority leader. Those comments follow:

While Senator JOHN F. KENNEDY of Massachusetts and Senator HUBERT HUMPHREY of Minnesota have held the center of the stage with their campaigning for presidential preference and delegates in Wisconsin's hectic primary, another potential Democratic nominee for President has been sawing wood right here in Washington—Senator LYNDON JOHNSON of Texas. He has not been out shaking hands, kissing babies or buttonholing party workers. He has been engaged in the business for which he was elected to the Senate and elected to majority leadership of that body. And he has been remarkably successful. If and when he becomes a candidate for the Democratic presidential nomination, Senator JOHNSON will be able to offer a record of accomplishment as party leader. He will stand out as the man who was able to get three civil rights measures through the Senate—the first such measures in 82 years—the Civil Rights Act of 1957, the civil rights bill of 1960, and a constitutional amendment doing away with the poll tax.

The civil rights bill of 1960—like the Civil Rights Act of 1957—will not please the extremists of Senator JOHNSON's own party. Nevertheless the measure, designed as it is to assure the right of many Negroes to register and vote, who in the past have been denied that right in many southern localities—is a valuable step. Unless all signs fail, it will be accepted as amended by the Senate when it reaches the House, and then will be approved by President Eisenhower. Further, the enactment of this measure conceivably could remove civil rights as a division issue, so far as the Democrats are concerned, in the coming presidential campaign. It has given the liberal wing of the party something to cheer about and at the same time has not offended too greatly the Democrats of the South. Of course, the Democratic Party can still tear itself wide open over this issue if it wishes, and it may do so unless the calmer heads exercise control at the coming Democratic National Convention.

It is to the great body of moderates that Senator JOHNSON and his record will appeal when it comes to the selection of a presidential nominee. His work as leader of the Senate has been constantly an effort to bring the Democratic Party together. He became Democratic leader in 1953, after the party had suffered it first national defeat in 20 years, when the Democrats were badly split and four of the States of the old South had cast their votes for a Republican President—Mr. Eisenhower. Mr. JOHNSON began immediately to get the party, in Congress and out, to act in harmony. Two years later, the Democrats took over control of the Congress. The party failed, however, to win the presidency in 1956 because it was harshly divided. It can fail again to elect a President next fall if the more radical elements continue to campaign and to divide the party as they have done in the last two national elections. Indeed, it goes almost without saying that the Republicans, admittedly a minority party today, can only win when the Democrats split badly.

The Johnson chance of a presidential nomination, therefore, depends on whether the Johnson record, which has been progressive

though not radical, is more acceptable to the party's national convention than the attractive personality of youthful Senator KENNEDY (who also has a record of accomplishment in his senatorial duties) or than the intellectual gifts of Adlai Stevenson, twice defeated for President but still considered a strong probability for the party's nomination. The argument used against a Johnson nomination is that he hails from the South and that the North would not accept him. That, however, has not been demonstrated, despite the harsh outcries of Democratic National Chairman Paul M. Butler. Further, the country does not appear to be in a radical mood. A Kennedy nomination might divide the Democratic Party seriously over the religious issue. A Stevenson nomination would be an affront to many Democrats who voted for Mr. Eisenhower and against Mr. Stevenson in 1952 and 1956.

It is Senator JOHNSON'S knowledge of government and his ability to get things done that give him appeal. These qualifications would add to his stature as a President, should he be elected. That he would be a strong and effective Chief Executive, once in the White House, is generally admitted, even by some of those who oppose the Texan.

The late President Franklin D. Roosevelt's ability to hold the Democratic Party together was demonstrated again and again during his 12 years in the White House—to which he was four times elected. He held the Democrats of the North, West, and South when it came time to go to the polls. He took over the Negro vote, which had been largely Republican, the labor vote, and the farm vote in great numbers. The radical elements in those groups of voters oppose Senator JOHNSON. But how many Democrats really could find a valid reason for voting against the Texas Senator if he were the party's standard bearer? When Senator JOHNSON was in the House of Representatives, he stood stanchly with President Roosevelt and many of his New Deal proposals.

Largely due to the leadership and insistence of Senator JOHNSON, the Senate today is in far better shape for an early adjournment so far as its legislative and financial programs are concerned. Already the Senate has passed five appropriation bills, three regular and two supplemental bills. Among the measures it has put through are a clean elections bill, a school construction bill, two proposed amendments to the Constitution—one to do away with poll taxes and the other to give the citizens of the District of Columbia the vote for President and Vice President and for the election of Delegates in Congress. Admittedly, much remains to be done—but there are 3 months to do it in.

THE TOUCH OF THE MASTER'S HAND

Mr. BYRD of West Virginia. Mr. President, when Leonardo de Vinci resolved to paint the "Last Supper," he threw all his energies into the work. He labored early and late. No pains were spared by him. He pondered devoutly those pages of the New Testament which record the first sacramental feast, in order that he might do his best to realize and reproduce the memorable scene. At length his task was done. Having given the finishing stroke, he invited a few confidential friends to a private inspection. They gazed attentively and various remarks were made. An observation from one of them, however, led, as will be seen, to unexpected results. He spoke with great admiration of a golden chalice represented as being on the table at which our Lord and His disciples sat. Its shape, color, size, were all that could be desired. "That," explained the critic, "is the most beautiful object in the picture." Hearing what was said, the artist took up a brush, and dipping it in black paint, deliberately smeared it over the whole canvas. He soon explained it. "If," said he "what you tell me is true, then my picture is a failure, for I meant my Master's face to be the chief and most beautiful object."

All are artists. Each of us is painting a good or bad picture. It is the picture of life. Too often, alas. Men make inferior things the most conspicuous objects on the canvas of their daily history, bestowing rich colors and careful handicraft upon trifles. But the Saviour should be the grand center of our souls, and should have our chief and first attention.

Mr. President, Myra Brooks Welch, in her poem, "The Touch of the Master's Hand," recognizes the magnificent change that comes into the lives of all who take up the cross of Him who said, "I, if I be lifted up from the earth, will draw all men unto Me."

THE TOUCH OF THE MASTER'S HAND

'Twas battered and scarred, and the auctioneer
Thought it scarcely worth his while
To waste much time on the old violin,
But held it up with a smile:
"What am I bidden, good folks," he cried.
"Who'll start the bidding for me?"
"A dollar, a dollar;" then "Two," "Only two?
Two dollars, and who'll make it three?
Three dollars, once; three dollars, twice;
Going for three—" But no,
From the room, far back, a gray-haired man
Came forward and picked up the bow.
Then, wiping the dust from the old violin,
And tightening up the loose strings,
He played a melody pure and sweet
As a caroling angel sings.

The music ceased, and the auctioneer,
With a voice that was soft and low,
Said: "What am I bid for the old violin?"
And he held it up with the bow.
"A thousand dollars, and who'll make it two?
Two thousand! And who'll make it three?
Three thousand, once, three thousand, twice,
And going, and gone," said he.
The people cheered, but some of them cried,
"We do not quite understand
What changed its worth?" Swift came the reply:
"The touch of a master's hand."

And many a man with life out of tune,
And battered and scarred with sin,
Is auctioned cheap to the thoughtless crowd,
Much like the old violin.
A "mess of pottage," a glass of wine;
A game—and he travels on.
He is "going" once, and "going" twice,
He's "going" and almost "gone."
But the Master comes, and the foolish crowd
Never can quite understand
The worth of a soul and the change that's wrought
By the touch of the Master's hand.

THE DOUGLAS AMENDMENT TO THE FOREIGN AID AUTHORIZATION BILL

Mr. HOLLAND. Mr. President, many Members of the Senate, of whom I was one, were deeply disturbed, during the course of the debate on the Mutual Security Act, by the adoption of an amendment by our distinguished colleague, the Senator from Illinois [Mr. DOUGLAS], which we thought proposed to inject into important foreign policy certain objectives, considerations, and political thinking which we believed would do great violence to our overall international policy in the field of foreign aid.

I am interested to see that Mr. Arthur Krock, the distinguished columnist of the New York Times, seems to have been equally disturbed by the adoption of the Douglas amendment and by the refusal of the Senate yesterday, by a very narrow vote, to modify and moderate its previous action by adopting another amendment proposed by the distinguished Senator from Arkansas [Mr. FULBRIGHT].

Mr. President, I ask at this time that the entire column of today's Times, by Mr. Arthur Krock, distinguished columnist and scholar in the fields of government and of international affairs, be inserted in my remarks as a part of my statement.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, May 3, 1960]

AN UNSOUND BASIS FOR FOREIGN POLICY

(By Arthur Krock)

WASHINGTON, May 2.—The statements made by Senator Fulbright, supported by Senator Cooper and Under Secretary of State Dillon, in his unsuccessful effort to induce the Senate to modify a foreign-aid bill amendment by Senator Douglas that it previously had approved, merit the serious consideration of all citizens who don't want to see foreign policy shaped—as much domestic policy is—by pressures of ethnic and religious groups in this country.

"This amendment," in FULBRIGHT'S accurate description, "contemplates that the President is to use the Mutual Security [foreign aid] Act as a club to force the United Arab Republic to open the Suez Canal to Israeli shipping." Like many other proposals of like origin, its objective is admirable but its method assures the defeat of the objective. And when the area involved has produced, as FULBRIGHT pointed out, "probably the most delicate international situation * * * in the world today," that defect is of utmost gravity.

The following extracts from the plea by the chairman of the Committee on Foreign Relations that the Senate reverse its action go straight to the point:

"The principal reason this amendment was offered was not because of the overwhelming good of the United States, but because of the existence of a pressure group in the United States which seeks to inject the Arab-Israeli dispute into domestic politics. This amendment and the recent economic coercion to prevent the loading of an Arab ship in New York are part of a pattern which I find disastrous in the functioning of our constitutional system. One hundred eighty million Americans find their foreign policy being whipsawed by an irresponsible maritime union and by a minority pressure group." In elaboration FULBRIGHT offered these arguments:

The New York union boycott and the Douglas amendment are attempts to integrate into American politics "the feuds and emotions that are part of the political conflicts of foreign nations to avoid which this Nation was created."

The formulation and conduct of sound American foreign policy is being more and more compromised by these multiplying attempts.

In this instance the immediate effects have been reprisals by the U.A.R. which demonstrate that the steps taken here do not advance, but on the contrary impede, progress

toward an amicable settlement of the Arab boycott of Israeli ships desiring to pass through the Suez Canal.

Repeating these points, Under Secretary Dillon today also factually refuted one of the reasons given for the Douglas amendment. This reason was that the U.A.R. has denied canal passage to American ships and any others which merely have called at Israeli ports. That, Dillon informed the Senate, is simply not true.

Senator COOPER'S observations were particularly impressive because, as he informed his colleagues, he has first been inclined to support the Douglas amendment as a move which might "forward the principle of freedom of navigation in international waterways and, inferentially, in the Suez Canal. But upon reflection I decided that (the amendment) would be harmful to these very purposes. His principal conclusion, he said, is that the amendment "would be viewed solely as an effort by the American Congress to put pressure on another country through our aid program," a charge the Soviet Union has long been making "with a great hue and cry" and has induced "some free countries unfortunately to believe it." And the greatest individual sufferer, in Cooper's judgment, would be Israel itself.

From this point of departure, the Kentucky Senator, justly celebrated as progressive, made an analysis of the whole problem of foreign aid that was particularly authoritative for the reason that, as an Ambassador to India and a legislator, he has studied the project from both sides. "If the program is to survive," he said, "it demands reorganization by the executive branch and by Congress. It is not as effectively used as it should be. It must be given continuity, like the Marshall plan. And for the secondary projects into which a great amount of aid is channeled there should be substituted primary ones, especially agricultural, in consultation with the World Bank and the United Nations."

A very large crop of political courage and common sense from just two Senators and one Under Secretary of State.

Mr. HOLLAND. Mr. President, without seeking to elaborate at great length, I will read simply the first paragraph from Mr. Krock's column, which reads as follows:

The statements made by Senator Fulbright, supported by Senator Cooper and Under Secretary of State Dillon, in his unsuccessful effort to induce the Senate to modify a foreign aid bill amendment by Senator Douglas that it previously had approved, merit the serious consideration of all citizens who don't want to see foreign policy shaped—as much domestic policy is—by pressures of ethnic and religious groups in this country.

Then the last short paragraph of the column, which reads as follows:

A very large crop of political courage and commonsense from just two Senators and one Under Secretary of State.

In his column, Mr. Arthur Krock cites with approval and quotes clearly, lucidly, and with complete truth, much of the argument of the distinguished chairman of the Foreign Relations Committee of the Senate [Mr. FULBRIGHT], and much of the argument of the distinguished former Ambassador to India, now the Senator from Kentucky. He also quotes, with approval, some of the points made by Under Secretary Dillon in his communication to the Senate which was printed in the debate of yesterday.

Mr. President, I am glad indeed that from this source immediate attention is called to what I think was a grave mistake on the part of the majority of the Senate. I hope all Senators will read carefully the column of Mr. Krock.

ENEMY ASSETS

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the RECORD a statement prepared by me opposing return of enemy assets and a letter which I have received from William B. Macomber, Jr., Assistant Secretary of State and an editorial from the St. Louis Post-Dispatch on the subject of return.

There being no objection, the statement and material was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HENNINGS

After the hostilities of World War II had finally ceased, the United States and 17 Allies joined in a further unprecedented spirit of cooperation to reach a solution on the reparation problem. Germany had in monetary figures alone inflicted about $300 billion worth of war damage on the Allies. Realizing that Germany would never respond in full reparation for the ravages inflicted and to avoid an impractical reparation program such as the program which had failed so miserably after World War I, the Allies jointly concentrated on marshaling what was available in physical and intangible assets for ultimate distribution and imposed upon themselves limitations as to any other immediate reparation claims from Germany. The Allied plan, crystallized as the Paris Agreement on Reparation, embodied one integral feature of great importance—no German assets were to be returned to German control or German ownership.

This was not done in a spirit of vengeance against Germany but to assure that all participating Allies would retain what was available in assets for joint reparation accounts and to avoid another complete German default in reparation such as occurred after World War I. This was certainly a modest and humane approach to the problem of reparations and, doubtless, is one of the major reasons for the economic and social recovery of the free Germans of West Germany. Had the United States and the 17 other nations who signed the reparations agreement sought full or even greater partial restitution from Germany, the German nation and the German people would still be utterly defeated and would still be paying for their aggressive acts.

During World War II, the United States had legally seized and vested enemy property worth about $390 million. Through appreciation, its estimated value rose to over $650 million while held in American hands. Congress incorporated into legislation the obligation of the Paris agreement not to return this vested property by specific language in the War Claims Act of 1948. It has devoted some assets to the relief of American military and civilian personnel who had suffered at the hands of the enemy in prisoner-of-war camps. On other occasions, Congress has further disposed of these assets by way of awards to American citizens who went into hiding or were interned in the Philippines, awards to religious organizations in the Philippines to reimburse them for supplies they used for relief of Americans during the war and for damages suffered to the organizations' schools and hospitals.

This Allied policy of retaining vested assets moved forward two more steps in 1951 and 1952. An Allied high commission law recognized and gave binding effect to these transfers of German property, and the German Federal Republic in the Bonn Convention not only agreed to this law but further pledged that it would compensate its own nationals for their loss of property through the vesting action of the Allied Powers. These provisions were again carried forward and approved in the Paris protocol of 1954 which was approved by the U.S. Senate.

Every Allied Power has adhered to the agreed policy on retention of enemy assets in lieu of reparations, but Germany has never implemented its agreement to compensate the former owners of the property involved.

The Allies have in good faith relied on the irrevocability of the reparation agreement and policies; Germany already having faltered in her obligation next asked the return of these vested properties.

In February of 1959, I asked the State Department for a report on the position of the other Allied signatories to the Paris agreement as to the proposals being advanced in the United States for a unilateral return of the assets we hold.

I was advised on March 6, 1959, that not all the signatories had expressed themselves but was given the following information.

"In November 1954, the British and French Governments expressed their concern about S. 3423 (83d Cong.) on the ground that a return of German assets would constitute a breach of obligation under the Paris Reparation Agreement and would create difficulties for other signatories.

"Subsequently, the Netherlands and Norwegian Governments advised the U.S. Government of their concurrence with the British and French views. The Government of the Netherlands also, in a separate and later message, expressed similar concern with respect to the administration bill (S. 2227) submitted to the 84th Congress.

"On July 31, 1957, the White House announced the U.S. Government's intention to seek a solution of the vested assets and American war damage claims problems which would permit the payment of American war damage claims against Germany and an equitable monetary return to the former owners of vested assets. In December 1957, the British and French Governments, in referring to this White House statement, drew the attention of the U.S. Government to the concern which such a proposal would cause to the signatories of the Paris Reparation Agreement. Both governments, however, reserved their positions on this matter pending the receipt of fuller information as to the actual content of any legislative proposal which might be put forward by the U.S. Government."

In 1957 the Dutch Government expressed its interest in the U.S. proposal and requested that publicity be given to the U.S. view that such a return should not be regarded as a precedent with respect to other allied countries. In 1958 the Czech Government expressed the view that a release of vested assets "in favor of the German Federal Republic" and "irrespective of the circumstances that it omits the German Democratic Republic, would be contrary to the obligation assumed by the Government of the United States of America that German enemy assets shall not be returned to German ownership or shall not again come under German control."

I also asked the State Department what further action had been taken by the Federal Republic of Germany in furtherance of their agreement under the Bonn Settlement Convention to compensate the owners of the property seized during World War II by the United States and its Allies.

When the Subcommittee on Trading With the Enemy held hearings on April 4, 5, and 6, 1957, the State Department reported that a draft law for the final settlement of losses caused by the war was then being dealt with by the legislative bodies of the Republic.

The Department's letter to me in March of 1959 reported this progress only. The draft legislation was promulgated on Novem-

ber 5, 1957, and entered into force on January 1, 1958. Its English title is the "General War Sequel Law."

A study of that long-awaited enactment will simply reveal that German losses and claims accruing because of a seizure in lieu of reparation, restitution, or similar purposes were reserved for some later separate regulation by law.

In other words, the Federal German Republic has still done nothing to fulfill its obligation under the Bonn Convention.

It is against all this background that we are still urged to make returns to former German and Japanese owners.

Under the fallacious guise of protecting the security of foreign investments and preserving the sanctity of private property, we are encouraged to unilaterally breach our agreement with 17 allies, ignore the claims of Americans damaged beyond repair during the war and make returns to our former German and Japanese enemies.

I am unalterably opposed to any congressional action of this nature, and I ask my colleagues to reject it as well.

Meantime, there are some other facets of the problem to which I would like to direct attention. I think we should carefully watch executive action in this field.

The State Department admits that the U.S. Government and the Federal Republic of Germany have extensively discussed the subject of the disposition of vested German assets. Originally, the present administration embraced the concept of returning German assets to the extent that it recommended legislative enactment of a limited return program to the Congress of the United States. It was somewhat ironical to then note that though the German Federal Government welcomed the limited return proposal it has expressed the hope that it would be possible to go beyond the contemplated limited return which it considered in adequate. More discussion, more study at the executive level and finally the administration advised the German Federal Government that a fuller return was not feasible. The most recent administration proposal embodies payments of war damage claims to American nationals and makes no recommendations for return.

Be that as it may, the U.S. Government is still discussing the problem with the Federal German Republic. On Chancellor Adenauer's last visit to the United States, the matter was again the subject of rather extensive discussion. As United States Senators, we are not parties to such discussions and negotiations and I was disturbed by the suggestion that a memorandum of understanding had finally been reached between President Eisenhower and Chancellor Adenauer. Though I have been assured that there is no formal memorandum of understanding and that the position of the executive department stands as it did before the last Adenauer visit, I believe the situation should be followed closely. So that the State Department's present position is a matter of record, following is the text of a letter from Assistant Secretary of State William B. Macomber, Jr., dated March 30, 1960:

DEPARTMENT OF STATE,
Washington, March 30, 1960.

The Honorable THOMAS C. HENNING, Jr.,
U.S. Senate.

DEAR SENATOR HENNINGS: I have received your letter of March 22, 1960, referring to information which was supplied by telephone on March 18 concerning an alleged memorandum of understanding between this Government and that of the Federal Republic of Germany concerning the disposition of the vested German assets in the United States.

I should like to reassure you that there is no memorandum of understanding concerning the disposition of the vested German assets. As Mr. Leahy, of my office, informed you, the Department's position continues to be that expressed in conjunction with the transmission to the Congress of the administration's legislative proposal for the settlement of World War II American war-damage claims against Germany. You will recall that my letter of July 3, 1958, to Senator EASTLAND stated that we believed that the submission of legislation concerning these claims should not be further delayed, and that such legislation would facilitate future efforts to achieve a solution to the problem of the vested German assets.

If I can be of further assistance to you, please feel free to call on me.

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary.

I have similarly been disturbed by the suggestion that the Senate of the United States might shortly be put in a position of advising and consenting to a treaty which would be a back-door scheme for returning property back to former enemy owners. I should like to draw your attention to an editorial from the St. Louis Post-Dispatch, April 15, 1960, which should serve to alert us to our responsibilities as the Senate proceeds to consider further agreement as to the disposition of certain Austrian property in the United States which was taken under control by the Office of Alien Property during World War II. The effect of this treaty should be scrutinized with the greatest of care and caution to assure that we do not allow by indirection that which we have not yet resolved directly.

"[From the St. Louis Post-Dispatch, Apr. 15, 1960]

"BACK-DOOR GIFT TO NAZIS?

"Senator SMATHERS wisely has asked the Senate to delay approval of an agreement with Austria for the return of $5,151,519 in seized enemy assets. While Austria we regard as a Hitler-occupied ally rather than as a former enemy, SMATHERS fears that the agreement is a 'back-door' scheme for getting German property back to the Germans.

"While the agreement was negotiated by the State Department on January 30, 1959, it was not transmitted to the Senate for almost a year. This and other circumstances arouse suspicion that it may be the preliminary to another effort for the return of German assets. It was agreed that, in lieu of reparations, the United States would retain such assets to meet American war claims.

"This policy has again been reasserted by the House. And the Senate should back this up, if necessary. The German Government is obligated to make good losses of its citizens through wartime seizures. It hardly is in the best interests of the United States to provide a belated windfall for former Nazi enemies."

In this highly charged atmosphere surrounding the entire issue of disposition of our vested assets, it was gratifying to see the House move forward and present a long overdue plan for paying war damage claims to our American nationals. The Senate should wholeheartedly embrace this concept. The Senate should also stand firm in its opposition to any unilateral action on the part of the United States which would return assets to our former enemies.

EFFICACY, SAFETY, AND TOXICITY OF DRUGS

Mr. DIRKSEN. Mr. President, on Monday, May 2, I stated on the Senate floor that I had written the chairman of the Senate Antitrust and Monopoly Subcommittee, Mr. ESTES KEFAUVER, urging that the subcommittee hold an executive session to discuss if the subcommittee should hold an executive session on the issue of conflicting medical testimony on the efficacy, safety, and toxicity of a particular drug and further to set forth certain guidelines and limitations so that the subcommittee does not expose itself to sharp criticism for venturing into a field which bears no direct relationship to the general cause of pricing, administered prices, monopoly, concentration, and so forth. I noted that I regard this matter a highly delicate issue, first, because it is doubtful whether the Judiciary Committee has jurisdiction over matters of this kind; secondly, because of the possible impact on the faith of the consuming public in a particular drug; and third, because of the possible impact on faith in physicians who may prescribe such a drug.

Mr. President, the hearing on Tuesday morning, May 3, was held, and Dr. Samuel Loube, a specialist in diabetes, proceeded to testify. It is interesting to note that Dr. Loube, in answer to a question from Chairman KEFAUVER, stated that he, Dr. Loube, felt that airing in an open hearing the efficacy, toxicity, and safety of a particular drug, was harmful, since it could be misinterpreted by the public and could effect physician-patient relationship. He explained more fully his reasons for discussing such matters in an open session. Since this morning's hearings I have received a copy of a letter sent to Chairman ESTES KEFAUVER from Dr. James M. Moss, of Alexandria, Va., a specialist in diabetes. He states as follows, and I ask unanimous consent to have the letter printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MAY 2, 1960.

The Honorable ESTES KEFAUVER,
Chairman of the Judicial Subcommittee on Antitrust and Monopoly Legislation, Senate Office Building, Washington, D.C.

DEAR SENATOR KEFAUVER: Anything that your committee can do to provide the American people with better drugs for less money will improve the health of the country. If a reduction in the price of drugs results in a deceleration of scientific advancement it is obvious that we cannot afford the cheaper price. Your committee has pointed out some areas in which a change in policy might result in a reduction in the cost of various drugs. A committee of the American Medical Association has been studying this problem. Perhaps the work of your committee will stimulate more rapid progress.

In the past week the careless testimony of one of your witnesses has created undue anxiety among patients with diabetes. I refer to the statements of Dr. Henry Dalger, of New York City, on April 26, 1960. He was quoted in the newspapers as saying that chlorpropamide (Diabinese) is a dangerous drug and that it should not have been released for prescription sale. In the following 3 days I had six patients come in holding the newspaper clippings and demanding to know why I would give them such a dangerous drug. After a long discussion with each patient, I have been able to restore his confidence in my judgment. However, these patients will always be apprehensive about taking chlorpropamide.

There are some patients who have become so worried that they have discontinued the

drug and do not plan to return to the physician who prescribed "such a dangerous medicine" for them. If these patients will promptly consult another physician and continue on proper treatment, I do not mind that they no longer come to see me. However, I do mind that some of them have lost confidence in all physicians and will seek no treatment until they have become seriously ill. Because of the slow excretion of chlorpropamide, there will be no apparent change for the first few days after the patients stop their treatment. Then the blood sugar will slowly start to rise and the degenerative complications of diabetes will progress at a faster rate. In many of these patients the symptoms will be mild enough that they may go for several years before they are forced to consult another physician. By that time they will have developed irreversible changes in their blood vessels, eyes, kidneys, and nerves. Following a prolonged period of inadequate diabetic control, patients become invalids in spite of the most careful treatment by the best physicians in the world.

Senator KEFAUVER, you are the one person who will be directly responsible for the irreversible deterioration of the health of these unfortunate victims of a chronic disease. You had the power and the responsibility to stop the testimony and turn the problem over to the Food and Drug Administration when a controversial medical issue was brought up. If you felt that continuation of that line of investigation was necessary in order for you to write proper legislation, you should have made it a closed hearing. The fact that you have used incorrect figures to justify statements of excess profits is a matter to be settled by the auditors and the lawyers, but the fact that you have allowed incorrect figures to be used in an effort to show that one drug is better than another, or that one pharmaceutical company is more honest than another, is a matter to be decided by physicians. In allowing the public discussion of such matters you have not only achieved your goal of discrediting the ethics of one of the leading pharmaceutical firms, but at the same time you have brought suffering to the very people that you were trying to help. I hope that you will have to face these people in later years and realize that your committee contributed to the more rapid decline in their health.

In the past 4 years my associates and I have treated 290 patients with talbutamide (Orinase), and 128 patients with chlorpropamide. I feel that I am qualified to judge each drug impartially and from firsthand experience. We have had no significant toxic reactions to either of these drugs, and many patients have been helped by both. If talbutamide were the perfect drug we would still be using it on all of our patients. If chlopropamide were a dangerous drug we would not use it on any patient. There are some patients who respond much better to chlorpropamide than to talbutamide. The only person in the position to make this decision is the physician who has examined the patient and who has studied the literature containing the reports of the experiences of other physicians. Once the family physician has decided upon the proper course of treatment for any individual patient, his efforts should not be sabotaged by the careless statements of some headline seeker. Each physician is aware that he must weigh the advantages against the disadvantages in every medicine that he uses. Even aspirin can sometimes cause death. We all try to give our patients the same medicine that we would take under similar conditions.

Over the years physicians learn how to evaluate the statements made by other physicians. There are some who adhere very carefully to the facts and make no statements that they cannot prove. There are others who become careless with figures in an effort to prove their point. Dr. Dalger is one of the leaders in this latter group. He is frequently involved in controversy with other members of the American Diabetic Association as to the best method of treating patients. This adds interest and new ideas to the discussions at the meetings of this group and helps all of us to reevaluate our own treatment methods. Such discussions cannot be understood by people who lack this basic knowledge of physiology, pharmacology, and pathology. If such discussions were carried on in public forums, they would create undue anxiety and unnecessary suffering by innocent people.

Senator KEFAUVER, it is probably too late to correct this error. Testimony by other, more experienced, physicians to the effect that chlorpropamide is a safe and useful drug did not have the dramatic news appeal that Dr. Dalger's testimony had and was not printed in the papers. This phase of the investigation should be discontinued before further harm is done to our population of 1.5 million diabetics. In your investigations of other drugs you should confine yourself to the business side of the pharmaceutical industry, and leave the Food and Drug Administration to look into the safety and efficacy of all drugs.

Sincerely yours,

JAMES M. MOSS, M.D., F.A.C.P.,
Director of the Diabetic Clinic, Georgetown University Hospital, Washington, D.C.; Past President, Diabetic Association of District of Columbia.

Mr. DIRKSEN. Mr. President, both Dr. Loube and Dr. Moss, and the State medical societies of Illinois, Michigan, Tennessee, and Wisconsin, plus the head of the North Dakota School of Medicine, all agreed that medical debates on the efficacy, safety, and toxicity of any particular drug should not be discussed in open session.

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

PROGRAM OF ASSISTANCE TO CORRECT INEQUITIES IN CONSTRUCTION OF FISHING VESSELS—CONFERENCE REPORT

Mr. MAGNUSON. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill—H.R. 5421—to provide a program of assistance to correct inequities in the construction of fishing vessels and to enable the fishing industry of the United States to regain a favorable economic status, and for other purposes. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The legislative clerk read the report, as follows:

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 5421) to provide a program of assistance to correct inequities in the construction of fishing vessels and to enable the fishing industry of the United States to regain a favorable economic status, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

In lieu of the matter proposed to be inserted by the Senate amendment insert the following: That in order to assist certain depressed segments of the fishing industry the Secretary of the Interior is hereby authorized to pay in accordance with this Act a subsidy for the construction of fishing vessels in the shipyards of the United States.

SEC. 2. Any citizen of the United States may apply to the Secretary for a construction subsidy to aid in construction of a new fishing vessel in accordance with this Act. No such application shall be approved by the Secretary unless he determined that (1) the plans and specifications for the fishing vessel are suitable for use in the fishery in which that vessel will operate and suitable for use by the United States for National Defense or military purposes in time of war or National emergency, (2) that the applicant possesses the ability, experience, resources, and other qualifications necessary to enable him to operate and maintain the proposed new fishing vessel, (3) will aid in the development of the United States fisheries under conditions that the Secretary considers to be in the public interest, (4) that the vessel, except under force majeure will deliver its full catch to a port of the United States, (5) that the applicant will employ on the vessel only citizens of the United States or aliens legally domiciled in the United States, (6) the vessel will be documented under the laws of the United States, and (7) such other conditions as the Secretary may consider to be in the public interest.

SEC. 3. If the Secretary, in the exercise of his discretion, determines that the granting of a subsidy applied for is reasonably calculated to carry out the purposes of this Act, he may approve such application and enter into a contract or contracts with the applicant which will provide for payment by the United States of a construction subsidy in accordance with the purposes and provisions of this Act and in accordance with any other conditions or limitations which may be prescribed by the Secretary.

SEC. 4. A construction subsidy shall be granted under this Act only to assist in the construction of a fishing vessel to be operated in (1) a fishery suffering injury from which escape clause relief has been recommended by the Tariff Commission under the Trade Agreements Assistance Act of 1951, as amended (65 Stat. 74), but where such relief has been or is hereafter denied under section 7(c) of such Act; (2) a fishery found by the Secretary to be injured or threatened with injury by reason of increased imports, either actual or relative, of a fish or shellfish product, not the subject of a trade agreement tariff concession, which is like or directly competitive with the fishery's product; or (3) a fishery found by the Secretary to be injured or threatened with injury by reason of increased imports, either actual or relative, of a fish or shellfish product that is provided for in the Free List of the Tariff Act of 1930, whether or not the subject of a trade agreement tariff concession.

SEC. 5. The construction subsidy which the Secretary may pay with respect to any fishing vessel under this Act shall be an amount equal to the difference, as determined by the Maritime Administrator, between the cost of constructing such vessel in a shipyard in the United States based upon the lowest responsible domestic bid for the construction of such vessel and the estimated cost, as determined by the Maritime Administrator, of constructing such vessel under similar plans and specifications in a foreign shipbuilding center which is determined by the Maritime Administrator to furnish a fair and representative example for the determination of the estimated total cost of constructing a vessel of the type proposed to be constructed, but in no event shall the subsidy exceed 33⅓ per centum of the cost of constructing such vessel in a shipyard in the United States based upon the lowest responsible domestic bid excluding the cost of any features incor-

porated in the vessel for national defense uses, which shall be paid by the Department of Defense in addition to the subsidy. For the purposes of this section, the Maritime Administrator shall determine, and certify to the Secretary, the lowest responsible domestic bid.

SEC. 6. Any fishing vessel for which a construction subsidy is paid under this Act shall be constructed under the supervision of the Maritime Administrator. The Maritime Administrator shall submit the plans and specifications for the proposed vessel to the Department of Defense for examination thereof and suggestions for such changes therein as may be deemed necessary or proper in order that such vessel shall be suitable for economical and speedy conversion into a naval or military auxiliary or otherwise suitable for the use of the United States Government in time of war or national emergency. If the Secretary of Defense approves such plans and specifications as submitted, or as modified, in accordance with the provisions of this subsection, he shall certify such approval to the Administrator. No construction subsidy shall be paid by the Secretary under this Act unless all contracts between the applicant for such subsidy and the shipbuilder who is to construct such vessel contain such provisions with respect to the construction of the vessel as the Maritime Administrator determines necessary to protect the interests of the United States.

SEC. 7. All construction with respect to which a construction subsidy is granted under this Act shall be performed in a shipyard in the United States as a result of competitive bidding, after due advertising, with the rights reserved in the applicant, and in the Maritime Administrator, to disapprove any or all bids. In all such construction the shipbuilder, subcontractor, material men, and suppliers shall use, so far as practicable, only articles, materials, and supplies of the growth, production, and manufacture of the United States as defined in paragraph K of section 401 of the Tariff Act of 1930. No shipbuilder shall be deemed a responsible builder unless he possesses the experience, ability, financial resources, equipment, and other qualifications necessary properly to perform the proposed contract. The submitted bid shall be accompanied by all detailed estimates on which it is based, and the Maritime Administrator may require that the builder or any subcontractor submit any other pertinent data relating to such bids.

SEC. 8. (a) Every contract executed by the Secretary pursuant to section 3 of this Act shall provide that in the event the United States shall, through purchase or requisition, acquire ownership of any fishing vessel on which a construction subsidy was paid, the owner shall be paid therefor the value thereof, but in no event shall such payment exceed the actual depreciated construction cost thereof (together with the actual depreciated cost of capital improvements thereon) less the depreciated amount of construction subsidy theretofore paid incident to the construction of such vessel, or the fair and reasonable scrap value of such vessel as determined by the Maritime Administrator, whichever is the greater. Such determination shall be final. In computing the depreciated value of such vessel, depreciation shall be computed on each vessel on the schedule accepted or adopted by the Internal Revenue Service for income tax purposes.

(b) The provisions of section 2 and subsection (a) of this section relating to the requisition or the acquisition of ownership by the United States shall run with the title of each fishing vessel and be binding on all owners thereof.

SEC. 9. If any fishing vessel is operated during its useful life, as determined by the Secretary, in any fishery other than the particular fishery for which it was designed the owner of such vessel shall repay to the Secretary, in accordance with such terms and conditions as the Secretary shall prescribe, an amount which bears the same proportion to the total construction subsidy paid under this Act with respect to such vessel as the proportion that the number of years during which such vessel was not operated in the fishery for which it was designed bears to the total useful life of such vessel as determined by the Secretary for the purposes of this section. Obligations under this provision shall run with the title to the vessel.

SEC. 10. The Secretary shall make such rules and regulations as may be necessary to carry out the purposes of this Act.

SEC. 11. As used in this Act the terms—

(1) "Secretary" means the Secretary of the Interior,

(2) "fishing vessel" means any vessel designed to be used in catching fish, processing or transporting fish loaded on the high seas, or any vessel outfitted for such activity,

(3) "citizen of the United States" includes a corporation, partnership, or association if it is a citizen of the United States within the meaning of section 2 of the Shipping Act, 1916, as amended,

(4) "construction" includes designing, inspecting, outfitting, and equipping, and

(5) "Maritime Administrator" means the Maritime Administrator in the Department of Commerce.

SEC. 12. There is authorized to be appropriated the sum of not more than $2,500,000 annually to carry out the purposes of this Act.

SEC. 13. No application for a subsidy for the construction of a fishing vessel may be accepted by the Secretary after the day which is three years after the date of enactment of this Act.

And the Senate agree to the same.

WARREN G MAGNUSON,
JOHN O. PASTORE,
CLAIR ENGLE,
JOHN MARSHALL BUTLER,
HUGH SCOTT,
Managers on the Part of the Senate.

HERBERT C. BONNER,
GEORGE P. MILLER,
THOR C. TOLLEFSON,
WILLIAM K. VAN PELT,
Managers on the Part of the House.

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. MAGNUSON. Mr. President, the conference agreed to the Senate amendments that would require the vessels be suitable for defense purposes, aid in developing the U.S. fisheries, deliver their catch to U.S. ports, employ citizens and be documented under U.S. laws.

The conference agreed to an amendment limiting the bill to fisheries for which escape clause relief had been recommended but had been denied under the Trade Agreements Assistance Act, or to fisheries that meet that criteria.

The conference agreed to the Senate amendment excluding the cost of defense features from the 33⅓ percent construction subsidy, and to require that they be paid by the Department of Defense rather than Interior.

Conferees agreed to the Senate amendment requiring plans for the vessels to be submitted to Defense for approval.

The House authorized $1 million to be appropriated annually. The Senate $5 million. The conference $2,500,000.

The House provided the authority of the bill would expire 3 years from the date of the act. The Senate amendment provided no application for construction could be accepted after 3 years from the effective date. The conference accepted the Senate amendment.

Other amendments were technical to make section references correct.

I call the attention of the minority leader to the fact that this is the bill which the Senator from Massachusetts [Mr. SALTONSTALL], the Senator from California [Mr. KUCHEL], and the majority leader discussed last Friday, but at that time we did not have the papers from the House.

Mr. DIRKSEN. Mr. President, is this a unanimous report?

Mr. MAGNUSON. Yes; a unanimous report of the conferees of both Houses.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

AUTHORIZATION OF APPROPRIATIONS FOR THE NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of Calendar 1333, House bill 10809, the authorization bill for the National Aeronautics and Space Administration.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (H.R. 10809) to authorize appropriations to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate resumed the consideration of the bill.

Mr. JOHNSON of Texas. Mr. President, as chairman of the Committee on Aeronautical and Space Sciences, I should like to make a brief statement concerning the bill now under consideration. This bill, H.R. 10809, as proposed to be amended, authorizes the appropriation of $970 million for the National Aeronautics and Space Administration for fiscal year 1961.

Copies of the bill and of the comprehensive committee report are on the desks of the Senators.

The bill differs from the House-passed version in that $50 million additional has been recommended, and I am happy to say unanimously recommended, by the NASA Authorization Subcommittee and unanimously approved by the full committee.

In taking this action the committee has once again shown its characteristic bipartisan sense of responsibility toward our Nation's space programs.

Before proceeding further I should like to commend the able and distinguished subcommittee chairman, the junior Senator from Mississippi [Mr. STENNIS] and the other dedicated subcommittee members, Senators YOUNG, DODD, CANNON,

MARGARET CHASE SMITH, and MARTIN, for their tireless efforts in developing this bill.

The work of the committee again shows its diligent, thorough, and profound examination into the matter of America's space programs. Its work in this field is exemplary. There is no room for division when it comes to our space efforts.

The Senator from Mississippi will shortly discuss the bill in some detail. Therefore, I shall confine my remarks to the principal amendment made by the Senate—the additional authorization of $50 million for NASA's research and development programs.

This additional authorization of $50 million will provide our space program with needed elbow room. Our scientists and technicians have done wonders with the funds provided thus far, but we cannot expect them to perform miracles. Even in the space age, there is still no substitute for money.

In addition to assuring the ability to meet unexpected difficulties and to exploit scientific breakthroughs, the additional authorization will help assure the safety of the people involved in the space program. I am thinking chiefly of the seven gallant astronauts, at least one of whom is expected to circle the earth some time next year.

The committee feels, and I am sure the Senate will concur, that a reasonable cushion is needed for emergencies, so that America's space program will not be slowed down for lack of a full commitment of America's strength and resources.

We cannot gamble with our security or with the safety of our personnel.

Although our space program is still in its infancy, we can count many rewarding experiments during the last year, and especially during the last 2 months. And we will attempt another notable "first" this week, when we shall attempt to orbit a communications satellite, under Project Echo, on Thursday, May 5.

We have freely published and disclosed to the world data transmitted to earth from our television infrared weather observation satellite Tiros which was launched April 1.

We have disclosed to the world information concerning our solar satellite Pioneer V, launched March 11, which is now more than 7 million miles from earth. Our scientists hope that this satellite will maintain radio contact with earth for at least another year, and have recently revised the maximum distance of such radio contact from 50 million miles to an incredible 100 million miles.

The first experimental navigation satellite Transit is now circling the earth. It was launched April 13.

The Echo launching this week may, if successful, be the first step in a long-range program to develop the use of satellites to provide truly global communication.

These recent launchings show excellent progress. We can all be justly proud. But we cannot afford to coast or be complacent about our successes. There is still much to be done.

Though we have slipped somewhat in the past in our planned programs for space explorations, it is still our objective to be preeminent in this field.

Long-range objectives have been set by our National Space Agency. In what NASA calls its 10-year program, space exploration will call for somewhat more than $1 billion in fiscal year 1962 and upward of $1½ billion annually within the next 5 years.

This year we will be working toward the launching of an advanced lunar impact vehicle, and it is hoped that the first manned ballistic flight under Project Mercury will take place later this year.

Our continued work on superboosters such as the Saturn program will lead to soft landings on the moon and exploration of nearby planets. Just this past Friday, all eight engines of the Saturn were fired in a brief, but noteworthy, static test that produced 1,300,000 pounds of thrust.

These programs must move forward.

The committee has shown its awareness of this. It has reported a bill which provides realistic support of our civilian space programs. It is a bill we all can be justly proud of. It demonstrates our profound awareness and unanimous support of our nonmilitary space explorations—explorations which we intend to share with the world for the benefit of all mankind.

For the next century, men will be as deeply impelled toward space exploration as the men of the 15th, 16th, 17th, and 18th centuries were to explore the Western Hemisphere.

We must assure that there will be no financial roadblocks on our path to the stars.

Mr. President, the Committee on Aeronautical and Space Sciences recommend that the bill as reported be given favorable consideration.

I wish to conclude by saying that the tedious and detailed work performed by the subcommittee under the very able and brilliant leadership of one of the most beloved Members of this body, Mr. STENNIS, should be well received by all Members of the Senate, and I know will be properly appreciated.

Mr. STENNIS. Mr. President, proceeding to a presentation of the bill, and thanking the Senator from Texas on behalf of our entire subcommittee for his very generous remarks, I propose to discuss somewhat in detail the program these authorizations cover, with some reference to the future years of operation of these programs.

First I wish especially to thank the members of the subcommittee who attended the hearings and attended the markup of the bill and went through the entire testimony and presented a unanimous report to the full committee, which report was adopted unanimously by the full committee.

I think it proper also to thank the Senator from Washington [Mr. MAGNUSON], who not only is a member of the full committee but is also the chairman of the subcommittee of the Committee on Appropriations which will handle the appropriations involved, for participating in the subcommittee hearings.

Mr. MAGNUSON. I wish to add to what the Senator from Texas has said about the fine work which was done by the subcommittee headed by the Senator from Mississippi [Mr. STENNIS] on this very important and very complex and technical matter.

I believe the Senate has before it an authorization bill which can be fully justified in the Appropriations Subcommittee which will consider very carefully this important matter. I wish we had a 10-year program also for depth, or oceanography. However, that is another subject, and will be taken up separately later.

Mr. STENNIS. I shall now proceed to discuss the bill on its merits, and shall make repeated references to the committee report, which is complete and detailed. The authorization consists of $915 million in regular authorizations and $55 million in emergency authorizations.

The regular authorizations, in terms of the NASA appropriations, are as follows:

Salaries and expenses, $170,760,000.

Research and development, $621,453,000.

Construction and equipment, $122,787,000.

The emergency authorizations consist of $50 million for research and development and $5 million for construction and equipment.

There appears to be some confusion about the amounts requested by the executive branch for authorization and appropriation; I would like to clarify the situation, if I may.

The authorization bill passed by the House, on the basis of the administration's request, provided specific authorizations of $915 million plus additional "Construction and equipment" authorization of $5 million. Thus, the House bill authorized $920 million, even though the House report referred only to the $915 million of regular authorizations.

The appropriation requests submitted to the Congress to date amount to $915 million.

Thus, the bill now before the Senate provides $50 million of additional authorization over the amounts officially requested by the administration and approved by the House.

It is always unusual for a congressional committee to authorize or appropriate more than the amount requested by the executive branch. Yet, this is what the Authorization Subcommittee, of which I have the honor to serve as chairman, recommended unanimously. This recommendation was also unanimously endorsed by the Space Committee as a whole.

I shall take a few minutes to explain why all the members of the committee felt the need to authorize the appropriation of more money than had been officially requested by the executive branch.

The President's budget, submitted to the Congress on January 18, actually requested the appropriation of $802 mil-

lion for the National Aeronautics and Space Administration for fiscal year 1961. A few days earlier, however, the President had directed the Administrator of the National Aeronautics and Space Administration to make a study of the possible need for additional funds for the balance of fiscal year 1960 and for fiscal 1961 to accelerate the superbooster program for which NASA had been given technical and management responsibility.

Such a study was made and, on February 8, formal budget amendments were transmitted to the Congress, increasing the NASA budget request from $802 million to $915 million.

This $113 million added to the NASA budget request consisted of $90 million additional for the Saturn 1½-million-pound thrust booster program, $8 million for the development of a high energy engine for use in the second stage of the Saturn vehicle and $15 million for the development of the 1½-million-pound thrust single-chambered engine development program—more commonly referred to as the Nova concept.

It has been agreed by all responsible authorities that the Russians have had a major advantage over the United States in possessing rockets of far greater thrust than our own. The current Soviet rocket boosters are estimated to have a thrust of between 700,000 and 800,000 pounds—approximately double the thrust of our existing Atlas boosters.

The implications of the Soviets' greater thrust capabilities were described to our committee by Dr. Glennan, the Administrator of the National Aeronautics and Space Administration, as follows:

> This disparity in thrust enables the Soviet Union to undertake very difficult space missions, some of which are completely denied to us today. It is reasonable to assume that the Russians can move more rapidly from concept, to drawing board, to the construction and launching of payloads because they are not limited by the weight restrictions we are experiencing.
>
> I suspect, as I have said in previous testimony before the Congress, that they can avoid the time-consuming business of miniaturization, optimum-packaging, and other weight-saving practices. Moreover, their ability to carry heavy payloads improves the probability of success in any particular experiment because they have adequate weight-carrying margins to permit the employment of redundancy or duplication in many elements of their guidance, control, and communications subsystems.
>
> Urgent and, I believe, effective efforts are being made, both by NASA and by the Department of Defense, to develop a family of launch vehicle systems that will correct this imbalance. This activity is basic to our continuing progress in both military and nonmilitary space experimentation.

While the question may well be raised why it took so long for the executive branch to recognize the urgent need for the earliest possible development of high thrust rocket boosters and of reliable and effective launch vehicles systems incorporating such boosters, I believe we would all agree that the amendments to the NASA budget are certainly "better late than never." While I will discuss the space booster program later in these remarks, I may state at this point that there is no question concerning the necessity and the desirability of the additional funds called for in the budget amendments of February 8.

In view of the significant increase involved in these budget amendments, a general impression may have been given that the budget request now provides all the funds which the Space Agency believed it required to carry out its responsibilities for its part of the national space program.

I must report, however, that when our subcommittee made a detailed examination of the manner in which the 1961 budget for NASA was prepared, a number of disquieting facts emerged. This matter is covered in some detail on pages 1 through 9 of the committee report which is before the Senate. I should like to outline some of the key facts, since they are fundamental to understanding why the committee unanimously recommended providing an additional authorization of $50 million for research and development purposes.

For fiscal year 1960, Congress authorized the appropriation to the National Aeronautics and Space Administration of $530,300,000 and has actually appropriated to date $523,575,000. These amounts do not include the Saturn program, which was funded for the current fiscal year by the Department of Defense.

At the time the authorizations and appropriations were made for 1960, it was recognized by both the executive branch and Congress that we were making downpayments on programs that would increase in cost in subsequent years.

In reporting the authorization bill for 1960, this committee quoted the following statement made by Dr. Glennan when he testified on February 19, 1959:

> I should probably add the comment that, in my opinion, this is the last time that, at least in the foreseeable future, NASA will be requesting a budget of one-half billion dollars. If anything, the level of our space effort today is minimal if we are to reach our goals as promptly as we must. In these early stages of organizing, and planning, and beginning our programs, however, there are definite limits to the sums of money we can usefully spend.
>
> Today, we are making the downpayments on programs that, inevitably, will cost very much more in the years ahead.
>
> These are the facts that must be considered now. The cost of our space programs will continue, year after year, and it will increase, year by year.

Despite this frank statement, the Bureau of the Budget attempted to impose a ceiling of $550 million upon the NASA budget for fiscal year 1961. Any such figure would have required cutting back on most of the projects which were being started with 1960 funds and which obviously required additional sums in subsequent years to continue their momentum. Dr. Glennan testified that he could not believe the ceiling that the Bureau of the Budget wanted him to accept and refused to accept it.

While NASA successfully rejected this $550 million unofficial budget ceiling, there is little question that it reflected the attitude of the Bureau of the Budget in reviewing the space program for 1961. It is almost incomprehensible how anyone with any knowledge of the nature of the space program could have seriously suggested consideration at this time of such an obviously inadequate amount.

I now call attention to page 3 of the committee report, which contains the chronology prepared by NASA of the preparation of the fiscal year 1961 budget estimates. It will be noted that the entries for October 20, 1959, and December 11, 1959, read as follows:

> October 20, 1959: Administrator was informed by the President that the Development Operations Division of the Army Ballistic Missile Agency, along with responsibility for the Saturn project, would be transferred to NASA. The Department of Defense estimate of $140 million for Saturn was to be included in the amount requested for NASA. On the basis of further budgetary review and the additional resources expected to become available to NASA with the transfer of the ABMA Development Operations Division, the Administrator suggested to the President the possibility of a $75 million reduction in the original NASA estimate of $783,300,000.
>
> December 11, 1959: Bureau of the Budget approved a sum of $802 million for inclusion in the President's budget with the understanding that the sum included $175,873,000 ($140 million for the Saturn project) not included in the NASA original estimate submission to cover the pending transfer of the ABMA Development Operating Division to the NASA.

On the basis of the NASA summary, the committee drew the following conclusions:

1. NASA's detailed budget estimates for fiscal year 1961, submitted after 6 months of continuing review in the field and at NASA Headquarters, totaled $1,048,300,000.

2. The official estimates total $915 million—a reduction of $133,300,000 or approximately 13 percent.

3. Seventy-five million dollars of this reduction in NASA's budget is stated to have been suggested by the NASA Administrator. However, no formal amendment was ever submitted to the Budget Bureau nor was this overall $75 million reduction ever spelled out in terms of programs, projects or even major appropriation accounts.

4. The possibility of a $75 million cut was based on the assumption that NASA could make unspecified savings in its program as a result of the transfer of the ABMA Development Operations Division. However, NASA was actually informed by the Bureau of the Budget that the $802 million approved budget allowance must cover $35,873,000 of personnel and other costs for the ABMA Development Operations Division outside of the Saturn project. Dr. Glennan has admitted that he did not have full knowledge of these costs at the time he agreed to accept the $140 million estimate for Saturn. Absorption of this unanticipated $35,873,000 of additional costs ($20,797,000 for salaries and expenses, $7,076,000 for research and development and $8 million for construction and equipment) required cutting back on other NASA programs.

5. Research and development bore the brunt of the reductions made in the detailed NASA budget estimates. These estimates

totaled $751,765,000 and were cut to $621,453,000—a reduction of $130,312,000, or more than 17 percent.

Frankly, the committee was surprised to find that such a large cut had been made in the NASA budget request. It was recognized, however, that this cut might not be so severe as it seemed if the original request had contained considerable fat or if the final NASA budget contained a cushion to ease the impact of unexpected costs or events. We found, however, that the NASA budget, as approved by the Bureau of the Budget, did not contain any such cushion.

In reporting the NASA authorization act for fiscal year 1960 this committee made the following statement:

It is hardly necessary to point out that the space program is still in its infancy and can be expected to grow significantly in cost and scope in the years ahead. As a corollary, it must be anticipated that the plans for, and estimated costs of, various individual research and development programs will be subject to continuing change. It is not possible to make precise forecasts for programs in which we are going beyond existing scientific knowledge.

The events of the past year with respect to a single program—Project Mercury—have demonstrated all too clearly the problem of estimating the costs of our new and urgent space programs. In order to get the facts on the record, I asked Dr. Glennan the following question:

Last year you made the following statement to this committee:

"The 1960 cost of Project Mercury is $70 million, and before we have completed this first U.S. effort to put man into space, the bill will have exceeded $200 million."

According to your budget justification book, the research and development costs of Project Mercury during fiscal year 1960 are now estimated at more than $87 million and the construction and equipment costs of the Mercury project net are estimated at $17,750,000. On this basis, the 1960 costs of Project Mercury are $105 million compared with the $70 million you estimated last year.

Similarly, Mr. Johnson, General Counsel of NASA, stated in a speech on December 10 that the total costs of the Mercury project over a 4-year period are likely to run around $350 million. This is almost double your estimate made at the beginning of the year.

Could you tell us in some detail what factors have been responsible for this significant increase in the estimated cost of the Mercury project?

Dr. Glennan acknowledged that the total cost of the Mercury program was now estimated at $344,500,000 and gave the following detailed answer in explanation of this drastic increase in estimated cost:

At the time of the $200 million estimate in February 1959, Project Mercury had been under way for only 5 months. A whole new area of technology was to be explored for the first time; there were no precedents or experience factors to go on in projecting the total program cost. Cost projections were made on what, at that time, seemed a realistic basis. Since that time, experience has dictated that the scope of the project be increased to insure accomplishment of the original program objectives in the safest possible manner. As a result of this increase in scope, the total number of Mercury capsules on order has been increased from 12 to 24; the number of Atlas boosters has been increased from 10 to 15; and the total number of flights with full-scale capsules has been increased from 27 to 33.

Contractor costs have been appreciably higher than contractor estimates. These costs increases, of course, show up directly in increased overall project cost.

Because of the urgency of Project Mercury, concurrent system development and production has been undertaken. When problems such as critical localized reentry heating have shown up during development tests, expensive changes have of necessity been made in the production capsule design. In addition to changes arising from the capsule development program, a considerable number of changes in capsule construction have been made to enhance system reliability and pilot safety.

At the time of the 1959 estimate, it was assumed that a considerable amount of effort now being contracted out would have been performed in-house by civil service personnel. In particular, the presently planned contractor flight preparation and network operations efforts had not been envisioned at that time. Personnel ceilings and increase in the scope of the program have necessitated a large contractor effort in these areas.

A firm basis for estimating the network construction costs did not exist until the summer of 1959, when first contractor estimates were received on the cost of this effort. In February 1959, the magnitude of the worldwide network construction was not apparent. In the 5 months between October 1958 and February 1959, it had not been possible, with the personnel available, to attack both the flight system and network problems. The flight system was, of course, tackled first and it was not until later in 1959 that the network problem could be given adequate attention. The cost estimates for the network are now some 56 percent higher than originally.

On behalf of the committee, I then asked Dr. Glennan:

In view of the significant underestimation of the cost of Project Mercury last year, what assurance is there that the 1961 costs of the space program are not also underestimated?

His reply was as follows:

There can never be any assurance, in an R. & D. program, that the accomplishment targets will be reached within the fiscal year timespan and dollar limitation estimated. However, 15 months of operation in a brand-new field have given us some experience and, therefore, some better ability to judge the cost elements and requirements involved in our program.

Finally, I asked him whether the NASA budget for 1961 included any allowance for possible cost increases. Dr. Glennan's response was that:

Known overrun conditions and estimated contract costs are, of course, included but no surcharge or percentage loading to establish a contingency fund has been included in our fiscal year 1961 estimates.

A little later in the hearings we asked Dr. Glennan specifically whether he had made any effort to secure executive branch approval of additional funds for backup vehicles or to provide a greater degree of reliability for planned experiments. His answer was as follows:

During the budget formulation process the total budget request originally presented by the NASA was reduced by amounts which have been indicated earlier. In the process of readjusting the program to accommodate these reductions, the number of vehicles that had been proposed for procurement was reduced, and in this sense the degree of flexibility in assigning vehicles to spacecraft was reduced. However, specific request for funding of backup vehicles was not presented in the original program and was therefore not considered in the budget formulation process.

As passed by the House, H.R. 10809 authorized the appropriation for fiscal year 1961 of the exact amounts requested by the executive branch: namely, $915 million in specific authorizations plus authority for additional "Construction and equipment" appropriations of $5 million. It was apparent from the NASA testimony before this committee, however, that little or no provision has been made in the 1961 estimates for contingencies, cost increases, or unplanned program modifications. Yet, the experience with Project Mercury clearly demonstrates the great expense involved in making necessary changes to assure safety of personnel and system reliability.

It was the judgment of the committee that changes of this magnitude cannot be accomplished by reprogramming alone without adverse effect on other elements of the space program.

Therefore, Mr. President, in order to assure that neither the space program nor the safety of personnel is jeopardized by lack of funds, the committee has amended H.R. 10809 to provide an additional $50 million of emergency authorization for research and development. The conditions under which this additional authorization may be used are set forth specifically in the bill, as follows:

SEC. 3. The sum authorized by section 1(d) for emergency "Research and development" shall be available for expenditure to defray the cost of research and development activities which the Administrator has determined to be urgently required in the national interest to exploit technological or scientific breakthroughs, to assure safety of personnel, to fund required research and development program changes, to meet unusual cost variations in research and development activities, and for the other purposes of section 1(b). No portion of such sum may be obligated for expenditure or expended to defray the cost of research and development activities until the Administrator or his designee has transmitted to the Committee on Science and Astronautics of the House of Representatives and to the Committee on Aeronautical and Space Sciences of the Senate a written report containing a full and complete statement concerning (1) the nature of the research or development item or activity, (2) the cost thereof, and (3) the reason why the research or development item or activity is necessary in the national interest.

In some respects, this is very similar to the situation that has prevailed for quite a few years in the Department of Defense. In each of the military construction appropriations, we have provided the Secretary of each of the military departments with a given amount of blanket authority to proceed with construction made necessary by changes in mission, new weapons developments, new and unforeseen research and developments requirements or improved pro-

duction schedules, when such action was necessary in the interest of national security.

Mr. President, many illustrations could be given of the actual operation of such a plan over the years. But certainly it can be summarized by saying that it has proven entirely satisfactory, and has proven over and over again actually to be needed. The $50 million of additional authorization is mainly to take care of possible breakthroughs or to cover misfortunes or disappointments which may occur, and the many, many other uncertainties which can beset any highly experimental program, particularly in a new field such as that of the space program.

Similarly, in the research and development area itself, the Department of Defense for some years has been provided with a specific research and development emergency fund, plus additional transfer authority. For 1960, for example, the Department of Defense emergency fund amounted to $150 million, and the emergency fund transfer authority amounted to an additional $150 million. I may add that these amounts do not include a still further $150 million authorized by the Congress to be transferred whenever necessary to accelerate strategic or tactical missile programs.

It is interesting to note that Dr. York, Director of Defense Research and Engineering, recently made the following comment with regard to the Department of Defense emergency fund:

> I am very strongly in favor of the emergency fund and find it extremely useful as a means for introducing new things quickly—by that I mean quickly compared to the time it takes in the usual budget cycle—and without having too great a reprograming situation, which is also desirable. Reprograming is useful and necessary at times, but, if carried to extremes, it merely creates havoc and uncertainty everywhere. The emergency fund has been an extremely useful means for introducing new research, development, sometimes test programs, quickly.

I should like to make one thing clear about the additional $50 million authorization for NASA research and development. This authority could be used in either of two ways: First, It would authorize additional appropriations of up to $50 million to be made during the current session of the Congress; and second, it would enable quick action to be taken on any supplemental appropriation request of up to $50 million that might be submitted early in the next session of Congress, if the authorization is not used during the current session.

Mr. President, again let me point out that this authorization is not an appropriation. This authorization will run during the entire fiscal year 1961. The Congress will have the final "say" as to how much money will actually go into the program. But, if any additional funds are needed, most likely they will be needed about next January. This amendment to the authorization bill will make it unnecessary to repeat this authorization process, and will make it possible for the request for additional funds, if any are needed, to be presented without delay, and in a very clear way, to the Appropriations Committees.

Mr. President, I ask unanimous consent that the committee amendments be considered and agreed to en bloc, and that the bill as thus amended be regarded for the purpose of amendment as original text. The Chair understands, I am sure, as does the Senate, that such action will not preclude amendments being offered to the bill.

The PRESIDING OFFICER. That is correct.

Without objection, the request of the Senator from Mississippi is agreed to.

Mr. STENNIS. I thank the Chair.

The committee amendments, agreed to en bloc, are as follows:

On page 1, line 5, after the word "of", strike out "$915,000,000" and insert "$970,000,000"; on page 2, line 11, after the word "Space", insert "Flight"; in line 21, after "(7)", strike out "NASA Huntsville Facility" and insert "George C. Marshall Space Flight Center"; on page 3, after line 9, insert a new subsection, as follows:

"(d) For emergency 'Research and development' in accordance with the provisions of section 3, $50,000,000."

After line 11, insert a new subsection, as follows:

"(e) For emergency 'Construction and equipment', in accordance with the provisions of section 4, $5,000,000."

At the beginning of line 14, strike out "(d)" and insert "(f)"; on page 4, at the beginning of line 4, strike out "(e)" and insert "(g)"; at the beginning of line 8, strike out "(f)" and insert "(h)"; in line 10, after the word "consultations", strike out "and any emergency"; at the beginning of line 11, strike out "expense" and insert "expenses"; after line 21, strike out:

"SEC. 3. Any amount, not to exceed $5,000,000, of the funds appropriated for 'Construction and equipment' pursuant to this Act, may be used to construct, expand, or modify laboratories and other installations, if found by the Administrator to be necessary because of changes in the national program of aeronautical and space activities or new scientific or engineering developments and if the Administrator determines that deferral until the next authorization Act would be inconsistent with the interest of the Nation in aeronautical and space activities, and in connection therewith to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities and equipment: *Provided*, That upon reaching a final decision to implement, the Administrator or his designee shall notify the Committee on Science and Astronautics of the House of Representatives and the Committee on Aeronautical and Space Sciences of the Senate of the cost of such construction, expansion, or modification including those real estate actions pertaining thereto: *Provided further*, That no such funds shall be used for construction, expansion, or modification, if authorization for such construction, expansion, or modification has been previously denied by the Congress, and additional appropriations are hereby authorized for purposes of this section in the amount of $5,000,000."

And, in lieu thereof, insert:

"SEC. 3. The sum authorized by section 1(d) for emergency 'Research and development' shall be available for expenditure to defray the cost of research and development activities which the Administrator has determined to be urgently required in the national interest to exploit technological or scientific breakthroughs, to assure safety of personnel, to fund required research and development program changes, to meet unusual cost variations in research and development activities, and for the other purposes of section 1(b). No portion of such sum may be obligated for expenditure or expended to defray the cost of research and development activities until the Administrator or his designee has transmitted to the Committee on Science and Astronautics of the House of Representatives and to the Committee on Aeronautical and Space Sciences of the Senate a written report containing a full and complete statement concerning (1) the nature of the research or development item or activity, (2) the cost thereof, and (3) the reason why the research or development item or activity is necessary in the national interest."

And on page 6, after line 16, strike out:

"SEC. 4. That paragraph 203(b)(2) of the National Aeronautics and Space Act of 1958, as amended (42 U.S.C. 2473(b)(2)), is amended by striking out 'ten' and inserting in lieu thereof 'thirteen,' and by striking out 'two hundred and sixty' and inserting in lieu thereof 'two hundred and ninety.'"

And, in lieu thereof, insert:

"SEC. 4. The sum authorized by section 1(e) for emergency 'Construction and equipment', and any amount, not to exceed $5,000,000 of the funds appropriated pursuant to subsection 1(c) hereof, shall be available for expenditure to construct, expand or modify laboratories and other installations if (1) the Administrator determines such action to be necessary because of changes in the national program of aeronautical and space activities or new scientific or engineering developments and (2) he determines that deferral of such action until the enactment of the next authorization Act would be inconsistent with the interest of the Nation in aeronautical and space activities. The funds so made available may be expended to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment. No portion of such sums may be obligated for expenditure or expended to construct, expand, or modify laboratories and other installations until the Administrator or his designee has transmitted to the Committee on Science and Astronautics of the House of Representatives and to the Committee on Aeronautical and Space Sciences of the Senate a written report containing a full and complete statement concerning (1) the nature of such construction, expansion, or modification, (2) the cost thereof, including the cost of any real estate action pertaining thereo, and (3) the reason why such construction, expansion, or modification is necessary in the national interest. No such funds may be used for any construction, expansion, or modification if authorization for such construction, expansion, or modification previously has been denied by the Congress."

Mr. STENNIS. Mr. President, the authorizations provided by this bill are shown on page 14 of the committee report. The regular authorizations total $915 million, and are divided by appropriation title as follows:

Salaries and expenses, $170,760,000.

Research and development, $621,543,000.

Construction and equipment, $122,787,000.

Emergency authorizations provided by the bill total $55 million. This consists of $50 million for research and development—which I have already discussed—and $5 million for construction and equipment. The $5 million additional

authority for construction and equipment is already in the bill as passed by the House, and represents continuation of similar authority granted in last year's NASA authorization bill.

Mr. President, I should now like to discuss briefly the regular authorizations of $915 million in terms of each of the three NASA appropriation accounts.

SALARIES AND EXPENSES

The salaries and expenses appropriation covers the day-to-day noncapital costs—except for supplies, equipment, repairs, alterations, minor construction and other contractual services funded under the research and development appropriation—involved in operating and maintaining the NASA research and development centers and other activities operated by NASA with Government personnel.

The fiscal year 1961 estimate for salaries and expenses is $170,760,000. This represents an increase of $79,360,000, or 87 percent, over the fiscal year 1960 appropriation of $91,400,000, and is almost double the fiscal year 1959 appropriation of $86,286,300.

Acquisition by NASA, effective July 1, 1960, of the George C. Marshall Space Center, at Huntsville, Ala., accounts for $58,086,000 of the $79,360,000 increase in salaries and expenses over those for the fiscal year 1960. Approximately two-thirds of the remaining increase is attributable to the expanding scope of operations at the Goddard Space Flight Center, near the city of Washington.

Wages and salaries in fiscal year 1961 are estimated at $128,625,000, while Government retirement contributions are estimated at $7,618,500. Thus, salaries and retirement contributions account for 80 percent of the total salaries and expenses estimate. The remaining 20 percent is devoted to typical expenses involved in operating Government installations, with one notable exception. The 1961 estimate includes $15,314,400 for rental of data reduction equipment, over six times the $2,428,400 devoted to this purpose in fiscal year 1960.

Total NASA personnel are estimated to increase from 10,086, as of June 30, 1960, to 16,373, as of June 30, 1961. No change in employment level is planned at NASA Headquarters, the Langley Research Center, Ames Research Center, Lewis Research Center, or the Flight Research Center. Because of increasing workloads, it is planned to add personnel at the remaining NASA installation.

The Wallops Station expects to launch, track, telemeter, and recover a substantially greater number of satellites and space probes during the coming fiscal year. To accomplish this, its complement is planned to be increased from 225 to 300.

During the first 6 months of fiscal year 1961, personnel assigned to the Goddard Space Flight Center at Greenbelt, Md., but currently operating from scattered locations, will be moved to new quarters in Greenbelt, Md. During the fiscal year 1961, it is planned to increase total Goddard personnel from 1,214 to 2,000 to carry out the increasing workloads associated with its assigned responsibilities for developing and testing the payloads and structural design of satellites, sounding rockets, and Project Mercury.

While NASA has full technical and management responsibility over the Marshall Space Flight Center at the present time, the formal Army-NASA transfer plan contemplates that the personnel of the Development Operations Division of ABMA will transfer from the Army to NASA as of July 1, 1960. It was decided to make the transfer fully effective on the first day of the new fiscal year in order to avoid the numerous management and fiscal problems that would be involved if a switch were made during the course of a fiscal year.

To facilitate the changeover from Army to NASA payrolls and procedures, NASA expects to have a cadre of 100 key people at Huntsville as of June 30, 1960. This number will increase to 5,500 by the end of fiscal year 1961.

Small increases are contemplated of personnel assigned to NASA's Western Operations Office, the Atlantic Missile Range Operations Office, and the Pacific Missile Range Operations Office.

The number of NASA employees and the distribution of salaries and expenses appropriation, by installation, in fiscal years 1959, 1960, and projected for 1961, are shown in a table on page 16 of the committee report. I ask unanimous consent, Mr. President, that this table be incorporated in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Installation	Number of employees at end of fiscal year			Salaries and expenses—Appropriations		
	1959 actual	1960 estimated	1961 estimated	1959 actual	1960 actual	1961 requested
NASA Headquarters	428	683	683	$5,538,860	$7,549,300	$9,890,000
Langley Center	3,297	3,220	3,220	30,568,970	27,445,500	29,295,000
Ames Center	1,478	1,440	1,440	16,299,035	14,257,050	15,244,000
Lewis Center	2,783	2,736	2,736	27,215,227	24,840,200	25,724,000
Flight Center	336	416	416	3,154,208	3,038,150	3,679,000
Goddard Center	782	1,214	2,000	2,021,100	11,802,270	25,084,000
Wallops Station	171	225	300	1,356,820	1,700,100	2,678,000
Marshall Center		100	5,500		227,000	58,313,000
Western Office	7	32	46	94,815	338,930	515,500
Atlantic Missile Range Office	4	20	26	20,000	201,500	278,000
Pacific Missile Range Office			6			59,500
Wright Office				17,265		
Total	9,286	10,086	16,373	86,286,300	91,400,000	170,760,000

RESEARCH AND DEVELOPMENT

Mr. STENNIS. The "Research and development" appropriation provides the funds required for contractual research, development, operations, technical services, repairs, alterations, and minor construction, and for supplies, materials and equipment necessary for the conduct and support of aeronautical and space research and development activities of the National Aeronautics and Space Administration.

As mentioned earlier in my remarks, the committee has recommended authorization of the $621,453,000 requested by the executive branch for "Research and development" for fiscal year 1961, as well as providing an additional emergency authorization of $50 million as previously mentioned. This compares with $332,550,000 provided for research and development in fiscal year 1960.

I might state we had a duplicate of this Tiros I satellite in the old Supreme Court Chamber several weeks ago. I hope all Senators, as well as other interested persons, had an opportunity to see the marvelous instruments, including the two cameras, in the satellite. The two television cameras in the satellite are still functioning.

A summary of the research and development program for 1961 compared with that for 1960 is contained on page 24 of the committee report. Mr. President, I ask unanimous consent to place that table in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD.

National Aeronautics and Space Administration summary of research and development programs for fiscal years 1960 and 1961

Program	Fiscal year 1960	Fiscal year 1961
A. Aeronautical and space research:		
Support of NASA plant	$22,732,100	$51,345,000
Research grants and contracts	4,971,530	10,000,000
B. Scientific investigations in space:		
Sounding rockets	9,411,000	8,000,000
Scientific satellites	23,813,000	41,700,000
Lunar and planetary exploration	42,590,000	45,000,000
C. Satellite applications:		
Meteorology	7,930,000	20,700,000
Communications	3,170,000	5,600,000
D. Manned space flight	87,120,370	107,750,000
E. Vehicle systems technology	5,187,000	21,200,000
F. Space propulsion technology:		
Solid rockets	3,785,000	2,800,000
Liquid rockets	29,578,000	63,000,000
Nuclear systems technology	6,000,000	10,000,000
Space power technology	4,814,000	8,000,000
G. Vehicle development:		
Scout	2,800,000	
Delta	13,300,000	12,500,000
Vega	4,000,000	
Centaur	36,250,000	47,000,000
Saturn	1,500,000	134,308,000
Vehicle procurement (Agena)	7,360,000	
H. Supporting activities (tracking and data acquisition and transmission)	16,238,000	32,550,000
Total	332,550,000	621,453,000

Mr. STENNIS. Mr. President, I do not intend to take the time for a detailed discussion of the various programs comprising the $621,453,000 re-

quested for fiscal year 1961, since they are discussed in considerable detail on pages 23 through 56 of the committee report. However, I would like to discuss these programs briefly, since we are dealing with a large sum of money.

Senators will notice that the first item covered by the table on page 23, "support of NASA plant," calls for $51,345,000, more than double the amount provided in fiscal year 1960. The largest single factor in this increase has been the transfer of the Von Braun team from the Army to NASA, which accounts for almost $19 million of the increase over 1960. The other factors responsible for the remainder of the increase in this item are outlined on page 27 of the committee report.

The next item is that of "research grants and contracts," for which $10 million is requested in 1961. This is double the amount provided in the current fiscal year.

This increase is considered necessary in order to enable the growing space program to utilize, through the medium of research grants or contracts, the services of scientific personnel in the Nation's leading universities, and other nongovernmental research establishments. In this way we are able to get help from some of the Nation's most eminent scientists in the solution of existing urgent problems in aeronautical and space technology and in conducting the long range fundamental research investigations that provide the knowledge upon which future programs must be based.

This procedure of research grants and contracts not only gives the Government a direct return for its money, but also provides a valuable byproduct of stimulating scientific work in the various universities and research centers involved.

It is not possible, of course, to pinpoint in advance the specific contracts that will be issued with these funds. The Space Committee monitors this area carefully, however, and you will find on pages 382 through 455, of the committee hearings a list of all research and development contracts of over $50,000 that have been awarded by the National Aeronautics and Space Administration since its inception.

Under the general heading of "Scientific Investigation in Space," we have three specific research and development programs; namely, "sounding rockets," "scientific satellites," and "lunar and planetary exploration." In the aggregate, a total of $94,700,000 is provided for these programs in 1961, compared with $75,814,000 in fiscal year 1960.

Sounding rockets provide a relatively inexpensive means of exploring the earth's atmosphere up to a height of about 4,000 miles. The funds requested for 1961 will permit continuation of the sounding rocket program at a level of about 100 rockets per year.

On page 34 of the committee report is found a table summarizing the satellite missions to be performed with vehicles and payloads covered by the funds requested for fiscal year 1961. Similarly, the program for lunar and planetary exploration is discussed on pages 34 through 36 of the committee report and the program for the next several years is shown on the chart on page 36.

I must confess that a matter-of-fact committee report does not really portray the excitement and drama involved in these programs. For example, the first line of the chart on page 35 of the committee report simply refers to a Thor-Able vehicle to be launched in the third quarter of fiscal year 1960 for "interplanetary environment and communications tests." This is the coldly scientific way of referring to our solar satellite, Pioneer V, which was successfully launched on March 11. At the present time, this 90-pound sphere is over 7 million miles from the earth and is traveling at a speed of well over 7,000 miles per hour. Just last week we read the incredible story of how a malfunction was detected in the satellite's "telebit" unit, which gathers information from other equipment in the satellite in order to send it back to earth. This malfunction was diagnosed while the satellite was streaking through space 5½ million miles from earth and it was repaired, in effect, by devising a new code for translating the data which took this flaw in the telebit unit into account. As a result, Pioneer V is still successfully transmitting information back to earth from the unprecedented distance of over 6 million miles away.

During the next few weeks, it is planned to send a signal to Pioneer V to turn on its 150-watt transmitter. If this is successful, our scientists expect to continue receiving data from Pioneer V until it reaches some 50 million miles from earth. In the meantime, with every day that passes, Pioneer V is providing us with important scientific information concerning the feasibility of long-range space communications, which is an indispensable step toward ultimately sending men into outer space.

Under the heading of "satellite applications," we find two programs for which funds are being requested for fiscal year 1961. These are: meteorology, $20,700,000; and communications, $5,600,000.

I regret that time does not permit detailed discussion of the meteorology program, because this is unquestionably one area which could provide us with a significant payoff for the time and money invested.

We have all seen the pictures that have been sent back by our Tiros I satellite, which was successfully launched on April 1. The two television cameras in this satellite are still functioning and are adding greatly to our knowledge of cloud formations and movements. There is no question but that meteorological satellites will add greatly to our ability to forecast the weather and ultimately to a degree to control it. It is almost impossible to put a price tag on the benefits that could arise from such efforts.

Those benefits will include the actual saving of lives as a result of advance notice as to the probability of storms; and the saving of untold millions of dollars, in the opinion of the Senator from Mississippi, in connection with the planting, harvesting, cultivation, and protection of agricultural crops. This is the forerunner of truly great things to come.

Senators will note that $5,600,000 is being requested to develop communications satellites and operating techniques. One dramatic experiment in this program is planned to be launched on May 5—that is just 2 days away, Mr. President—when a 100-foot diameter inflatable satellite will be placed into a circular orbit around the earth.

May I say that the Senator from Mississippi has not had as much of an opportunity as he would like to visit the laboratories where the work is being done on the model to prepare for these launchings. But after going into these laboratories, and seeing the work being done with reference to the Tiros, which was later sent up, and on Pioneer V, it is very convincing to see the men actually working on those satellites, much as mechanics work on an automobile engine in a garage, and have them explain some aspects of it, and look at the work with a little understanding—at least the Senator from Mississippi did—and with some doubt. However, a few months later, when the vehicle was successfully launched, as was forecast, and when later we saw in the newspapers clear pictures obtained by these cameras in the model that one saw, which scientists testify are of value, it was a very, very convincing experience. It makes one realize that we are in a new and different age, and that these events are matters of reality; that the instruments are being made to perform with predictable certainty; that they are actually making contributions in our everyday lives.

One of these cameras has taken pictures which have been successfully sent to earth, with each picture covering more than 800 square miles. This shows the possibilities that could flow from several satellites in space at the same time. All of them together could provide us with a continuously changing picture of the entire earth, showing atmospheric conditions at any given moment around the world; the air movements, the cloud movements, and the weather conditions which could develop.

We read about such matters in the reports. We see the programs set out in cold type in bills. We appropriate money for the programs. When we see the satellite launched and then see the actual pictures it successfully sends back, it is very convincing. Then we realize fully the practical import of these programs.

In this connection I should like to pay tribute to the distinguished chairman of our committee. On April 15, 1960, the Senator from Texas [Mr. JOHNSON] urged that the entire world be notified as quickly as possible of the exact launching date of the Project Echo communication satellite, in order to demonstrate the sincerity of our desire to foster international cooperation in the peaceful uses of outer space. This suggestion was adopted by NASA, and the announcement was made on April 21 that the Project Echo satellite would be

launched on May 5. I would invite attention to the fact that the exchange of correspondence between the majority leader and the Administrator of NASA can be found on page 8953 of the CONGRESSIONAL RECORD of April 29.

With reference to the import of such measures in international affairs, in the opinion of the Senator from Mississippi it is impossible to make a calculation of the good which can come from such steps.

The next major item is that of "manned space flight," better known as Project Mercury. The 1961 budget includes $107,750,000 for this, compared with $87 million in fiscal year 1960. It is planned to send one of the astronauts on a ballistic flight in the Mercury capsule in the fall of this year. That does not mean he is going into orbit. If all goes as planned in Project Mercury, the first man will be placed in orbit late in calendar year 1961.

In the interest of saving time, I shall forgo further explanation of the other research and development programs contemplated under this bill, with the exception of the Saturn project. I believe Senators will find that the other items are covered in considerable detail by the committee report.

With respect to Saturn, I should like to invite attention particularly to pages 9 through 13 of the committee report. Senators will note that NASA's fiscal year 1961 budget allots a total of $230 million to the Saturn program. Of this, $134 million is in research and development, while the remainder is in the areas of salaries and expenses, and construction and equipment. This total of $230 million is $90 million greater than the original allowance of $140 million contained in the NASA budget that was submitted to the Congress in January.

The Saturn program was given the highest national priority, in the form of a DX priority rating, in January 1960, when the decision was made to accelerate the program.

In this connection, I should like to review some of the events that preceded this decision.

In January 1958, the Preparedness Investigating Subcommittee unanimously recommended 17 points with regard to our defense and missile programs. One of these points was that we should start work at once on the development of a rocket motor with a 1-million-pound thrust.

Mr. President, I think I should digress a moment to recall the drama and the forcefulness of the testimony of General Medaris on that point. Late in the calendar year 1957, as I recall, General Medaris gave some very dramatic testimony in closed session, in which he pled for a rocket with a million-pound thrust. It was the most impressive testimony I heard before the Preparedness Investigating Subcommittee, following the ascent of Sputnik No. 1. I think his testimony did a great deal to spur the program which followed.

In July 1958, work was finally begun on the 1½-million-pound-thrust rocket engine, now known as the Saturn.

On October 21, 1959, the President decided to transfer the Von Braun team, along with responsibility for the Saturn project, from the Department of Defense to the National Aeronautics and Space Administration.

In November, an agreement was signed between the Department of Defense and NASA, giving NASA clear-cut responsibility for technical direction of the Saturn project, pending formal transfer of Saturn and the Von Braun team. Significantly, this agreement specified—

> The fiscal year 1960 funding of the project shall be continued at current levels unless revised by agreement between the Department of Defense and NASA.

When I visited Huntsville, Ala., early in December of last year and talked to Dr. von Braun and General Medaris, I was disturbed to find that the Saturn project was not getting the funding necessary to assure acceleration of this vital program.

On December 17, the distinguished chairman of the Senate Aeronautical and Space Sciences Committee made a speech to the Aero Club of Washington in which he stated:

> The dismal story of drift, delay, and dilution in the Saturn program is not over yet. While next year's budget requests on this project have not been officially submitted, those directly responsible for the Saturn program have already made if clear that the program will need at least $100 million more than the administration proposes to request.
>
> To me this is deeply disturbing. Clearly, the impression that we must win the race for space has not penetrated certain Washington levels.
>
> If the Russians should decide to stop where they are, the Saturn project might one day permit us to catch up. It is not likely that we will be so accommodated. The present schedule assures us of only one thing—that we will continue to stay behind.
>
> Our difficulties are not technical. Technical delays would be disappointing, but understandable. It is not our technology that has failed. Our leadership has failed.

The majority leader concluded this speech by laying out a seven-point course of action, the fourth point being, "We must provide the essential funds and priorities necessary to accomplish the objectives."

Both Dr. Glennan and Dr. von Braun have testified that the $230 million now allotted to the Saturn program in the 1961 budget will fully meet foreseeable needs. Furthermore, they have stated that this funding level will permit the first operational Saturn to be fired in the first half of 1964, approximately 1 year earlier than would have been possible under the Saturn schedule associated with the budget submitted to the Congress in January. In view of the importance of overcoming the Soviet lead in thrust, this gain of 1 year in the availability of the Saturn is particularly gratifying. It should be made clear, however, that the new schedule for Saturn is still 6 months behind what could have been achieved if Dr. von Braun's recommendations as to Saturn priority and funding had been followed last year.

In other words, the Saturn schedule involved in the original budget submitted to the Congress in January 1960 was actually 1½ years behind the schedule recommended by Dr. von Braun and endorsed last fall by Roy Johnson, then Director of the Advanced Research Projects Agency. The budget amendments submitted to the Congress on February 8, 1960, advanced the operational date of Saturn by 1 year, but it was no longer possible to retire the remaining 6 months of lost time.

CONSTRUCTION AND EQUIPMENT

I turn briefly now to the "construction and equipment" title, for which $122,787,000 is requested in fiscal year 1961. This is a 45 percent increase over the $84,625,000 provided for this purpose in fiscal year 1960.

The Saturn program alone accounts for almost half of the increase in the total amount requested for construction and equipment in 1961. At the Marshall Space Flight Center at Huntsville, Ala., $26,750,000 is required for facilities needed for the Saturn program. This includes: $10,800,000 for a Saturn static test facility; $4,400,000 for construction of a central laboratory and office facility; $600,000 for a dynamic test facility; $650,000 for the construction of a pressure test cell; $2,500,000 for the construction of an extension to the assembly building; $1,137,000 for an addition to the structures and mechanics laboratory; $1,948,000 for completion of the guidance and control building; $215,000 for an addition to the fabrication laboratory; and $4,500,000 for construction and instrumentation of additional facilities for the systems analysis and reliability laboratory.

Dr. von Braun has stated that these facilities are all needed if the Saturn program is to be successfully kept on the newly accelerated schedule.

Also associated with the Saturn program is the $27,750,000 requested for construction at the Atlantic Missile Range, Cape Canaveral, Fla. The major item involved is $21 million required for a new Saturn launching complex at Cape Canaveral. This new launching complex is necessary to meet the Saturn schedule, since it will be necessary to check out two Saturn vehicles at the same time in order to meet the firing schedules.

Equally important, however, is the fact that the Saturn will contain a fuel load of 750,000 pounds. If this should explode on launch, it would have a blast effect equivalent to that of 75,000 pounds of dynamite. It is estimated that any such explosion would cause such severe damage to the launching pad and associated facilities that approximately 1 year would be required for repairs.

If this were to happen, and we had only one launching pad capable of handling the Saturn, such an accident would stop the Saturn program dead in its tracks. For this reason a second, completely independent backup launch complex, is considered necessary to support the Saturn program.

I assure the Senate that the committee went fully into these matters, because with all the missile ranges we have on the Pacific coast, in New Mexico, and in Florida, and with the many launching pads they have, as well as some minor ones elsewhere, we certainly would not authorize expenditure of these large sums of money if it could have been

avoided, and if there were any way to accomplish the ends needed with what we had. But for the reasons I have already given, it was deemed absolutely necessary, notwithstanding what seems to be a duplication on its face, to authorize the proposed expenditures. We found that there was an absolute additional need, and therefore we included these items in the program.

The other construction items involved at the Atlantic Missile Range are: $2,250,000 for completion of the first Saturn launching complex, and $300,000 for construction of a safety escape mechanism for the Saturn launching complex. In this connection, I point out that the Saturn service tower is approximately as high as a 30-story building. This creates a critical personnel safety condition if fire should break out with a fueled vehicle on the pad. Some 30 persons would have to be evacuated from the five upper service levels. Since the base of the tower would probably be ablaze, it might not be possible to use the service elevators. As a result, the escape mechanism will consist of an enclosed tube containing descending platforms which will quickly bring the men down toward the base of the tower and then slide them onto conveyer belts which will hustle them away from the tower itself. While this escape mechanism does not involve a large cost, it does illustrate the unusual nature of some of the problems that have to be faced and solved in dealing with large thrust engines.

As I have stated, I have not had much opportunity to visit many of these places. I have never seen an actual launching, but I have seen what is called a static firing, which gives an idea of the tremendous thrust involved. Also, it is very impressive to have an explanation on the inner workings of some of the very delicate mechanisms that go with these tremendous rockets. I remember one valve that was pointed out, not much larger than a man's hand. On one side it was subjected to the very highest temperatures, involving many thousands of degrees of heat, and on the other side the temperature was down to what I would call almost absolute zero. Nevertheless, that valve had to function within a thousandth of a second of accuracy as to timing, and thus shut off fuel. Otherwise the entire project would go astray, and would be held for naught. In the case of some of the instruments, the requirement for accuracy compares with that of the finest Swiss watch, and at the same time they carry far more power than a thousand locomotives hitched together.

That partially explains some of the problems and costs of these far-reaching programs.

The other construction items at the Atlantic Missile Range are $2,500,000 for a liquid hydrogen fueling system; $1,400,000 for construction of a staging building, and $300,000 for constructing an addition to the existing engineering and laboratory building.

The other major construction item involves $27,750,000 for equipment and instrumentation for tracking facilities. This involves $15 million for completing and augmenting the Project Mercury network of 16 tracking stations; $8 million for the deep space tracking network, and $4,750,000 for satellite electronic and optical tracking—the so-called minitrack net.

The items I have discussed account for over two-thirds of the funds requested for construction and equipment. I will not take the time to discuss the remaining construction and equipment items in detail, since they are covered thoroughly in the committee report.

Since the other construction items involve a good deal of technical equipment and construction of unique facilities, it is difficult to state with assurance whether the costs are too high, too low, or exactly right. The committee was convinced, however, that a careful job had been done in estimating the construction and equipment costs and, therefore, recommends approval of the exact amounts requested in the expectation that any variations for individual projects will balance out for the program as a whole.

OTHER PROVISIONS OF H.R. 10809

In addition to providing the $50 million emergency authorization for research and development, the committee has made only one other substantive amendment to the House bill. This has been to delete section 4 of the bill, which would have increased from 260 to 290 the number of excepted positions authorized for NASA. This refers to those scientific, engineering, and administrative positions authorized to draw salaries in excess of $14,000 a year. This section would also have increased from 10 to 13 the number of those positions which could be paid salaries of up to $21,000 a year.

The committee went into this matter in considerable detail and Senators will find a complete discussion of all the facts involved on pages 16 through 23 of the committee report. The testimony indicated that the request for an increased number of excepted positions was brought about largely because of the increase in NASA's responsibilities associated with the transfer of the Von Braun team from the Department of Defense to NASA. Submission of the request was approved by both the Bureau of the Budget and the Director of the Civil Service Commission, and one of the three new $21,000 positions was to be given to Dr. von Braun, who now receives $19,000 per year.

On the basis of the testimony presented by the NASA witnesses, and in view of the strong endorsement by the Chairman of the Civil Service Commission, the NASA Authorization Subcommittee unanimously recommended approval of the House provision increasing the number of NASA excepted positions.

Mindful of the fact that any change in the number of excepted NASA positions would be of interest to the Senate Committee on Post Office and Civil Service, the committee chairman was informed of the action contemplated by this committee with respect to these positions. On April 22, the chairman of the Committee on Post Office and Civil Service sent a letter to the committee urging that the proposed authorization be deleted, since that committee had started hearings on Federal pay legislation on April 28 and the chairman felt that action on the NASA request might prejudice the ability of the Post Office and Civil Service Committee to adjust all Federal salaries equitably.

The committee believes that a valid case has been made for authorizing 30 additional top-level positions to NASA in order to assure that it can attract and hold the high-caliber personnel needed to plan and execute the civilian space program. However, in view of the request of the chairman of the Committee on Post Office and Civil Service, the provision in question has been deleted from the bill in order to permit that committee to consider NASA's requirements in connection with the total personnel picture of the Federal Government. In view of the importance of this matter, it is hoped that necessary action will be taken promptly.

The other language changes in the bill before you represent perfecting amendments only and do not change the substance of the House bill in any way.

There is one new provision in the bill which the committee has endorsed and which probably should be mentioned for the sake of completeness. New language has been included to authorize the Administrator of NASA to use up to $20,000 of the appropriations for salaries and expenses or research and development to meet the costs of scientific consultations or other extraordinary expenses. This authority is similar to comparable authority that has been granted to virtually every other Government agency, which NASA, as a new agency, has not previously possessed.

In conclusion, Mr. President, I wish to express my sincere appreciation to the other members of the subcommittee for their cooperation and diligence in considering and handling this bill. I refer to the Senator from Maine [Mrs. SMITH]—I believe Mrs. SMITH was present at every sitting of our subcommittee and took part in the hearings and deliberations and of course in the write-up—the Senator from Ohio [Mr. YOUNG], the Senator from Iowa [Mr. MARTIN], the Senator from Connecticut [Mr. DODD], and the Senator from Nevada [Mr. CANNON].

In fact, we had very fine attendance by all the committee members who were able to be in attendance at that time. The bill represents and reflects their considered judgment and opinion and their work. Mrs. SMITH especially, with her characteristic energy and diligence and very fine and practical approach to these problems, gave very fine attention to the hearings and the writeup of the bill. I see she is on the floor, and I hope she will have some remarks to make concerning this highly important program, with such far-reaching applications and implications to our future. So, Mr. President, the Committee on Aeronautics and Space Sciences recommends that the bill be given favorable consideration as reported.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. STENNIS. I am very glad to yield to the Senator from Ohio.

Mr. LAUSCHE. What amount was appropriated or authorized last year, if there was one authorization for the functions comprehended by the present bill?

Mr. STENNIS. I covered those figures in my remarks, but I shall be glad to review them for the Senator from Ohio. Last year we had in the bill, in round numbers, $530 million. This year we have $915 million in the bill, with an emergency authorization of $50 million, to be applied only in the field of research and development, and an emergency authorization of $5 million for construction and equipment.

The expansion of the program is not as large as these figures alone indicate, because the figures for 1961 include the taking over of the Army Ballistic Missile Agency, which is the so-called Von Braun team, which covers about $230 million of the figures I have already mentioned. The rest of that increase is covered by new programs and expansion associated with the next step-up in the present programs.

Mr. LAUSCHE. Then the total authorization will be $915 million, as compared with $530 million in 1960. Is that correct?

Mr. STENNIS. Those figures are correct, except that to the $915 million there would have to be added $55 million.

Mr. LAUSCHE. That would mean that the increase is about $440 million, if we include the $55 million?

Mr. STENNIS. Yes; but to make an actual comparison we would have to subtract the $230 million cost of the Saturn program, which has been running under another department of the Government, which would leave, in round figures, about a $200 million actual increase in the program.

Mr. LAUSCHE. The Von Braun function in the Army was turned over to the civilian space agency about 3 or 4 months ago, as I understand.

Mr. STENNIS. That is correct. The paper work has been going on, but the money part will be effective only at the beginning of the forthcoming fiscal year, July 1, 1960. So that means it will be reflected in the 1961 budget for the space administration program, whereas now it is reflected in the budget of the Department of Defense.

Mr. LAUSCHE. The committee, having in mind the progress made by the Soviets in developing propulsion engines, feels that this increase in adequate to cope with the problem confronting us in that field. Is that correct?

Mr. STENNIS. That was our judgment; except that to the budget figure we have added permissive authority in the form of an authorization in the field of research and development alone of $50 million, to take care of a breakthrough or emergency or breakage or bad luck or explosions or loss of equipment. There is similar emergency authority of $5 million for construction and equipment. We feel with that program, as outlined in the bill, there will be adequate funds as a practical matter, and also to take care of emergencies.

Mr. LAUSCHE. I thank the Senator.

Mr. STENNIS. The Senator has put his finger on the essential parts of this program by his questions.

Mr. LAUSCHE. The reason I asked the questions is that there are many citizens who are concerned about the disparity which is alleged to exist between our position and that of the Soviets in developing these high-thrust engines. The committee is of the opinion that the amount recommended can be intelligently and prudently spent and will cope with the problem confronting us. Is that correct?

Mr. STENNIS. Yes; the Senator has correctly stated the situation. I think the answer is yes. If I may do so, I should like to quote from page 11 of our report, which reflects the testimony given by Dr. von Braun himself on that very point:

> Senator STENNIS. Well, I think the key question now is, will this $230 million that is requested for your 1961 budget meet your requirements?
>
> Dr. VON BRAUN. Yes, sir.
>
> Senator STENNIS. That is the main question.
>
> Dr. VON BRAUN. Yes, sir, it does.
>
> Senator STENNIS. You think it will?
>
> Dr. VON BRAUN. I do, yes, sir.

So I have answered the Senator's question with Dr. von Braun's own words.

Mr. LAUSCHE. I thank the Senator.

Mr. STENNIS. Unless there are further questions, Mr. President, I yield the floor.

Mrs. SMITH. Mr. President, as the ranking minority member of the NASA Authorization Committee, I would like to associate myself with the remarks made by the very distinguished chairman of the subcommittee, the Senator from Mississippi [Mr. STENNIS], as well as with those made earlier by the outstanding chairman of the full committee, the Senator from Texas [Mr. JOHNSON].

I consider it a great privilege to be able to work with these gentlemen, as well as with the other members of the Space Committee. One mark of their leadership is the fact that at no time has partisan politics ever entered into any of the discussions of the committee. I am proud to say that the committee has been unanimous in applying only one test to the space programs it has considered, namely, "Is it in the national interest?" I am also happy to say that the fine committee staff has diligently applied the same standard in assisting the committee members.

In view of the very comprehensive discussion by the subcommittee chairman of the details of the bill, I do not propose to discuss any of the details further at this point. I would like, however, to discuss briefly two aspects of the committee's action on the bill which I believe should be emphasized.

First, I should like to make it clear that the committee's deletion of the provision of the bill that would have authorized 30 additional "excepted" positions for NASA in no way reflects any doubt as to the desirability of providing these positions. In this connection, the committee report specifically states:

> The committee believes that a valid case has been made for authorizing 30 additional top-level positions to NASA in order to assure that it can attract and hold the high-caliber personnel needed to plan and execute the civilian space program.

Since I believe strongly in following orderly procedures, I have concurred in the committee's decision to defer action on this matter in order to give the Committee on Post Office and Civil Service a reasonable opportunity to consider NASA's requirements in connection with the total personnel picture of the Federal Government as a whole. I think it is significant that the Chairman of the Civil Service Commission made the following statements in his letter to the subcommittee chairman, which is contained on page 21 of the committee report:

> In theory development of salary plans for an improved Government-wide method of salary determination for high-level executive and technical positions in the executive branch should avoid both interim and piecemeal approaches. We recognize, however, that urgent needs cannot always await general solutions. In our judgment, NASA presents such a case. The administration initially supported an immediate and major exception to existing limitations in order to assure proper leadership for the new national space program. The National Aeronautics and Space Act, as finally enacted, provided 260 excepted positions. NASA's present request for 30 additional excepted positions appears to be a modest and thoroughly defensible extension in view of the President's recent decisions to enlarge substantially the NASA responsibilities in development of superboosters and to transfer to NASA the Army space team under Dr. von Braun.
>
> An additional 30 NASA excepted positions will not compromise or restrict current efforts to find Government-wide solutions to many problems in the area of salary administration. As a result, we support NASA's request for the proposed legislation under the present circumstances.

Now I shall turn briefly to the $50 million additional authorization for research and development recommended by the committee. I support this action without reservation, since the space program is clearly one area in which unwise skimping could easily prove to be "penny wise and pound foolish." Nevertheless, I serve notice that this action must not be regarded as a precedent under which the executive branch can expect to submit budgets for the space program that are only marginally adequate, in the anticipation that Congress will provide additional authorizations and appropriations.

We all recognize that it is difficult to budget accurately for research and development programs—and the programs of the National Aeronautics and Space Administration involve research and development of the most advanced type. Nevertheless, we have every right to expect the principles of good administration and good budgeting to be applied by NASA. Certainly it is difficult to understand how anticipated savings of $75 million can evaporate and turn out to be

increased costs of almost $36 million, as outlined on page 5 of the committee report.

I am sure I reflect the sentiment of the entire Space Committee when I say that we expect to continue to examine all NASA estimates and requests very carefully to assure—if I may use a slang expression—that the buck is not being passed to Congress.

Before concluding my remarks, I wish to speak about the notable successes of the United States in the space and missile fields during the past 2 months. I want to place the status of our position in a more accurate perspective than has heretofore been the public impression.

We all agree that we must not let our guard down. We all agree that we must not reach the point of complete satisfaction with the state of our national defense and our national security—to the point where we do not strive for improvement or to the point where we become complacent and overconfident.

So we constantly and continually alert ourselves to any possible weaknesses we may have, and to the strength and threats of our enemies, or our potential enemies, such as Russia and Red China.

But sometimes some of us in our zeal to avoid complacency lose a little perspective, and we incline to talk too much about our weaknesses, and too much about the strength of our enemy and talk too little of our own strength.

There seems to be a trend to emphasize all Russians achievements such as sputnik and her shot to the moon and to minimize all of our achievements. For example, compare the headlines on the Russian space and missile achievements with the relative lack of news prominence given to such achievements as our own during the past 6 weeks.

Look at our Pioneer V, our Tiros I, our Transit I–B—all within an amazingly short time. Yet compare the news prominence given these American achievements with the tremendous news prominence given Russia's sputnik and her shot to the moon.

This, I say, is selling America short. But let me make myself clear in making that statement. I do not say that it is deliberately selling America short. Instead I say that it is unconsciously selling America short. It is an unconscious result of our striving to remain alert and to avoid complacency and overconfidence.

But anything carried to an extreme is dangerous; and this is an illustration of a dangerous extremism of minimizing our own achievements and emphasizing the achievements of our enemy. That kind of psychological attitude ominously borders on defeatism which could be destructive to our country.

Let us be realistic about Russia's strength and achievements. The Russians, admittedly, have a major advantage in having rockets with almost twice the thrust of the rockets available in the United States. This means that they can send greater payloads into space and will continue to be able to do so until we have rocket boosters of greater thrust.

But having recognized and acknowledged Russia's achievement and strength, let us be fair with ourselves and our country and do the same thing for the United States.

In recognition of this fact, highest national priority has been given to the Saturn program, which will provide a huge rocket booster having 1½ million pounds of thrust. This is almost twice as great as the thrust of existing Soviet boosters, and is about four times as great as the thrust of our existing Atlas and Titan missiles.

While the Soviets will undoubtedly continue to increase the thrust of their rockets, it is the opinion of our experts that the Saturn will give us a booster whose thrust will equal or exceed that which the Soviets will have available during the same time period—approximately 4 years from now.

This does not mean that this Nation is resigned to permitting the Soviets to enjoy a lead in the space race until 1964. While the greater thrust capability of the Soviets gives them an advantage, American ingenuity and scientific know-how in the field of miniaturization have enabled us to achieve outstanding results with the presently available rocket boosters.

Now let us look at our three magnificent achievements in the past 6 weeks—at Pioneer V, at Tiros I, and at Transit I–B. Make no mistake about it—we have outdone Russia considerably on these three. At least the world has not received any Russian claims of matching these achievements—and we can well be certain that Russia would shout it to the world if she had anything to match our Pioneer V, Tiros I, and Transit I–B. There is no hesitation about bragging on the part of Khrushchev.

PIONEER V

On March 11, the United States successfully launched a solar satellite, Pioneer V, to the remote regions of outer space. Today, Pioneer V is more than 7 million miles from the Earth and is traveling at a speed of over 7,000 miles per hour from the Earth. The radios on the satellite are still in perfect communication with the Earth and are establishing a record for long-distance communication with every passing mile.

Pioneer V is expected to reach its maximum distance from the Earth in September 1962, when it will be 183 million miles away. It will then approach the Earth again, as both Pioneer V and the Earth orbit around the Sun, and will come within 15.6 million miles of the Earth in April 1966. We expect Pioneer V to remain in orbit around the Sun indefinitely, a permanent U.S. planetoid in the heavens.

Our scientists tell us that they hope to retain radio communication with Pioneer V until it gets some 50 million miles away from the earth, and perhaps up to 100 million miles away. This satellite is providing the United States, and the world as a whole, with important scientific information with regard to the feasibility of long-range space communications, and is also providing a new method of measuring astronomical distances.

TIROS I

On April 1, the United States successfully launched the Tiros I into an almost perfectly circular orbit approximately 450 miles above the earth. This 270-pound meteorological satellite is considered to be the most elaborate electronics package yet sent into orbit around the earth. It contains two miniature cameras, video-tape recorders, transmitters, solar cells, and rechargeable battery power supplies, plus control and communications equipment.

Tiros I is currently circling the earth every 99 minutes, at a speed of some 18,000 miles an hour. This global weatherman detected a hurricane moving toward Australia. Tiros has transmitted thousands of pictures back to the earth, and will transmit many thousands more before its useful life is ended.

Dr. Harry Wexler, Chief Scientist of the Weather Bureau, has stated that weather satellites "promise probably to be the biggest means of improving weather forecasts that have developed for generations."

TRANSIT I–B

On April 13, the United States successfully placed into orbit the first experimental navigation satellite, called Transit I–B. This 265-pound satellite contains radio transmitters which are sendings signals on four widely separated frequencies.

While experimental in nature, Transit I–B is a vital step in the development of an operational system of navigational satellites. Four such satellites, operating in different orbits, could provide a foolproof system of air and sea navigation. Not only would this help avoid disaster based on navigation errors, but it will have tremendous military significance in achieving the accuracy of our Polaris submarines, which are becoming an increasingly important part of our deterrent forces.

We have every right to be proud of these notable successes in the space race. Not only have they provided the scientists of the world with important information, but they have also had a measurably impact on world opinion, which should offset some of the advantage gained by the Russians from their earlier space successes.

I think it is about time that we stopped selling America short, and that we started boosting America just as much as Mr. Khrushchev boosts Russia.

What I am saying has been said far better by an eminent journalist and columnist, Roscoe Drummond, whose objectivity and nonpartisanship are above suspicion. He said it so well in his article of April 6, 1960, and May 1, 1960, that I ask unanimous consent that those articles be printed at this point in the RECORD, as a part of my remarks. I call these articles not only to the attention of the Members of this body, but also to the attention of all other Americans, so they may have the benefit of an appraisal that is free of partisan bias—

an appraisal that is made by a meticulously accurate journalist who weighs very carefully and very thoughtfully every word he writes, who has no ax to grind, and who is not a presidential candidate seeking to make the state of our defense a campaign issue.

The PRESIDING OFFICER (Mr. McCARTHY in the chair). Is there objection?

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Apr. 6, 1960]

OUTER SPACE BOX SCORE—NO LONGER IS ONE SIDED

(By Roscoe Drummond)

Now that U.S. Pioneer V is continuing to send back its reports more than 3 million miles toward the sun and U.S. Tiros I is orbiting the earth observing the weather and transmitting its photographs, this is a good time to ask: How do we now stand with the Soviets in the race to outer space?

The factual answer, I think, is this:

In significant scientific results the U.S. space program is clearly outdistancing the Russians.

In spectacular firsts—first sputnik, first lunik, first to photograph the unseen side of the moon, first to hit the moon, first to send an animal into space and retrieve it safely—the Soviet record is preeminent.

U.S. space projects are beginning to move more rapidly. More launchings are coming soon and in the development of rocket thrust, where the Soviets have been far in the lead, the new Saturn launching vehicle, capable of 1½-million-pounds thrust, can be ready in 1963, ahead of schedule, if Congress approves the funds.

Alongside the Soviet spectacular first, the United States is achieving some outstanding scientific firsts.

Tiros I, weighing 270 pounds and containing 2 long-range cameras and equipment capable of receiving instructions and transmitting data to ground stations, is the world's first weather eye in space. It circles the earth about every 90 minutes at an altitude averaging 450 miles. This is a marvelous, though elementary beginning. The next weather satellite will contain greatly improved instruments. The time will come when the weather forecaster will no longer be the butt of jokes because of his mistakes. When man can predict the weather scientifically, he may well be able to control it.

Pioneer V is another scientific first. It now appears probable that we shall be able to talk to it and get information back even when it is 50 million miles away. We are getting data on the temperature inside and outside of the satellite as it continues on its orbit toward the sun. It is also sending valuable information on the magnetic fields in outer space.

Altogether the United States has now launched 15 earth satellites of which 6 are still in orbit. The Soviets have successfully launched three, all of them much heavier than ours, of which one is still in orbit.

The United States has successfully launched four deep space probes. Two of them—Pioneer IV and V—substantially achieved their orbits. The Soviets have successfully launched three. Each achieved its principal objective, one orbiting the moon and another hitting the moon.

As to failures, ours have been publicized. The Soviets have kept theirs secret.

There are three reasons why our space program has lagged in spectacular firsts—and that adjective, spectacular, is used in admiration, not in criticism.

We were late in starting and we started timidly.

We tied our space program to the military missile program and when we found that militarily we did not need as powerful a launching thrust for the Atlas as first believed because we developed much lighter-weight nuclear warheads, then there was no military reason for developing the kind of rocket best suited to explorations of outer space. We didn't develop it. The Soviets did.

For too long the administration tended to look at outer space through the wrong end of the telescope and hence failed to see, until the Soviets were well in the lead, that Moscow would garner incalculable prestige if we allowed them to leap to the front in space exploration. We failed to see early enough that by being first in outer space the Soviets were advancing the cause of communism by demonstrating Soviet superiority on a very visible and dramatic front.

The scientific knowledge we are now gathering from outer space is becoming impressive. More dramatic achievements are in the making. We expect to put a man into nearby outer space this year and we are making solid headway in developing a rocket with a thrust of 6 to 20 million pounds, capable of putting a man on the moon.

No longer is the box score on space one sided.

[From the Washington Post, May 1, 1960]

DEFENSE PHYSIOLOGY—UNCLE SAM STILL HAS THE MUSCLE

(By Roscoe Drummond)

The administration has expounded its defense program so badly and its critics have attacked it so persistently that many Americans may be led to believe that the United States is perilously vulnerable.

We aren't, unless an enemy wants to take massive destruction in reply.

An earlier column pointed out that while it may be militarily sound for the Soviets to rely primarily on the intercontinental missile because they have no oversea bases, it is militarily sound for the United States at this stage to rely primarily on the manned bomber. One reason is that we do have oversea bases from which bombers and intermediate missiles can be used.

I am not arguing that we couldn't or shouldn't strengthen our military posture. My own conviction is that our greatest danger is from limited, nonnuclear aggression and that our greatest weakness is in our lack of limited war, nonnuclear capability.

But what I want to report in this column is that, as far as all-out war is concerned, there is no deterrent gap in American military strength today. If we keep it that way, we're all right.

Here is a rounded picture of what the experts call the mix of our deterrent power, and, without relying on any classified information, I am putting the facts just as concretely as possible since generalities will not convince anybody and certainly not deter the Soviets. The strategic striking forces of the United States are these:

More than 2,000 long-range strategic bombers—greatly outnumbering Soviet aircraft of comparable capability. This force is highly trained, completely equipped and ready, and maintained in varying stages of alert, including a large number on 15-minute ground alert and a small number actually airborne at all times. Each of these bombers can deliver the destructive potential of several ICBM's.

Two wings of tactical bombers, each with nuclear capability, deployed on many bases strategically located in advanced positions around the world.

Fourteen aircraft carriers, several of which are deployed about the periphery of the Soviet Union. From these floating air bases, which are virtually invulnerable to ballistic missile attack because of their shifting positions, nuclear strikes can be made into almost any area of the Communist bloc. The aircraft in these carriers alone outnumber the heavy bombers in the Soviet Union.

An operational ICBM squadron equipped with Snark, a 5,500-mile, air-breathing missile with a very large warhead.

Two cruisers and five submarines equipped with the Regulus I, surface-to-surface weapon.

Four operational squadrons equipped with a mix of Matador and Mace missiles, any one of which exceeds the total explosive power expended against all Axis military targets in Europe during World War II.

Sixty intermediate range ballistic missiles—the Thor—in the hands of the Allied forces in the United Kingdom.

All of this, it seems to me, spells superiority over Soviet striking power today. They are producing more long-range missiles than the United States. But our superior strength in manned bombers and intermediate missiles gives us time to perfect improved second-generation missiles before going into full production.

WE MUST PROCEED WITH GREATEST URGENCY IN THIS AGE OF CHALLENGE IN EXPLORATION OF OUTER SPACE

Mr. YOUNG of Ohio. Mr. President, as a member of the NASA Authorization Subcommittee, I should like to urge the Members of the Senate to vote for the passage of the bill as reported by the committee.

Mr. President, last year, in considering the NASA authorization bill for fiscal year 1960, I stated that I had voted for full financial support for America's exploration of outer space, because it was necessary to establish as soon as possible the leadership of our Nation in this new age of challenge.

Throughout the succeeding year, I have proceeded to study and work on the continuing problems confronting us in connection with the space program. I find my position today, as a member of the subcommittee which has considered the NASA authorization for the fiscal year 1961, is the same as that of last year. I believe we still must do whatever is necessary to be done in order to adopt a forward-looking national policy for the control and use of outer space, not only for the welfare of our own Nation, but also for the welfare of the other nations of the world.

On the basis of the extensive hearings held on this year's bill covering the NASA programs, I believe we can definitely state that we are moving forward. Certainly our recent successes with Pioneer V, which has broken all long-distance communication records for a space probe; with Tiros I, the world's first successful meteorological satellite, with its spectacular pictures of cloud cover; and with Transit I–B, the navigational satellite, which, although not as yet operational, has far-reaching implications for civilian use in aircraft and ships, are indications of the intent of our Nation to establish its leadership in space.

At the same time, we still have much to do. We still are not up to the Soviet Union in thrust capability, and this gives the Soviets a tremendous advantage. The Senator from Mississippi [Mr. STENNIS] has already quoted Dr. Glennan's testimony on the importance of thrust. However, the committee has been as-

sured that development of our high-thrust engine—the Saturn—is now progressing rapidly. It will be noticed, Mr. President, that the Saturn program now has a DX priority rating, the highest priority rating that can be given a Government program, and that the pending bill would authorize $230 million for this program in the fiscal year 1961.

Dr. Glennan, Administrator of NASA, stated before the committee that he doubted that the Soviet Union will exceed us in thrust capability after 1964, the date now set for the Saturn to become operational. I questioned him on what evidence he possessed to make that statement, and he admitted that was simply a reasonable guess on his part. He stated that he believed that once we had the Saturn operational, the question of weight-lifting capability would not be as important as it is today.

Dr. von Braun was also questioned closely by the committee in this connection. It was his position that we were confronted with an opponent, the Soviet Union, who has a peacetime economy on a wartime footing; and he thought that in some areas the United States was not taking Khrushchev and the other leaders of the Soviet Union with sufficient seriousness. Dr. von Braun indicated, however, that the bill now before the Congress would provide, in his judgment, sufficient means to carry out the Saturn program. While the funds in this bill will cut one year from the Saturn development schedule, unfortunately there is no way to make up the additional 6 months' time that was lost by the failure of the Department of Defense to give the Saturn program necessary priority and funding, last year.

Again, I respectfully urge Senators to vote for the passage of House bill 10809, as reported by the committee; and I trust that the bill will not receive even one negative vote.

Mr. DODD. Mr. President, the distinguished majority leader, the Senator from Texas [Mr. JOHNSON], and the able junior Senator from Mississippi [Mr. STENNIS], who was chairman of our subcommittee, had discussed in considerable detail the provisions of H.R. 10809, as amended. However, as a member of the NASA Authorization Subcommittee, I should like to comment briefly in emphasis of what they have said.

Unfortunately, I was disabled by illness for 2 months and was not able to be present when our subcommittee, under the chairmanship of the Senator from Mississippi [Mr. STENNIS], considered this bill. However, I know the record, because I have read it, and I heartily agree with the subcommittee recommendation and the full committee recommendation.

I believe strongly that American scientific genius in the space field should not be unduly circumscribed by tight monetary consideration when scientific breakthroughs are occurring almost daily.

We have all been aware, particularly in the last several months, of the numerous colossal feats our scientists have achieved in space activities. As a result of these successful achievements, a great amount of new knowledge has been acquired which must be further implemented.

America has the scientific know-how, the desire, and the ability to go ahead, but these attributes alone, without sufficient monetary backup, are as useless as an automobile without gasoline.

We are making stupendous strides in rapidly closing the gap over the space exploits made by the Soviet Union. We must forge ahead of them. I am, therefore, particularly pleased that our subcommittee and the whole committee unanimously agreed and recommended that an additional $50 million be authorized for the national aeronautics and space agency.

It is entirely probable that this year or the first part of next year we will send a man into space. Every precaution for his safety and that of those who follow him must be taken.

For man to dominate the environment from earth to infinity involves not only scientific problems of immense magnitude, but also there must be available ample money to make this possible. With the Senate's support of this bill, we can assure the scientific community that this money will be available.

Mr. MARTIN. Mr. President, I have been privileged to be a member of the subcommittee which heard the testimony on H.R. 10809—the NASA authorization for fiscal year 1961, and I wish to pay particular tribute to the very able chairman of the subcommittee, my good friend, the Senator from Mississippi [Mr. STENNIS], as well as the extremely capable chairman of the full committee, my good friend the Senator from Texas [Mr. JOHNSON]. I also invite to the attention of the Senate the splendid work done on the Committee on Aeronautical and Space Sciences by the Senator from Maine [Mrs. SMITH], the senior minority member of the NASA Authorization Subcommittee.

The bill has been well analyzed by the Senator from Mississippi [Mr. STENNIS] and I am in strong agreement with his statement.

There are two points which I wish to touch on briefly. The first relates to military space programs. I had the honor to serve on the military affairs committee of the other body for a number of years prior to my election to the Senate. Consequently, I have maintained a continuous and keen interest in our military posture, and particularly in the growing technological developments which have so drastically changed the face of warfare since I first entered officers' training camp in Leon Springs, Tex., in 1917.

I know of very few people who feel that space will not have a profound effect on military operations. Because of the interrelationship between the military and civilian aspects of space, the subcommittee took testimony covering the key military aspects of space. It is certainly necessary to be aware of the many military projects in this area in order to obtain a real understanding of our total space effort. It is indeed a substantial effort. We would all agree, I am sure, that we must continue to develop our capabilities in this new field so that we can stay strong and maintain the freedoms that we so dearly love.

On page 78 of the committee report will be found a table which summarizes the funds provided for major military space subsystems. For fiscal year 1961 this amounts to $471 million, and this does not include money proposed to be spent in related areas, such as space medical facilities or the operation of the Atlantic and Pacific missile ranges. All in all, our total space budget for the coming year is well in excess of a billion and a half dollars, which is certainly a substantial effort.

The second point I wish to discuss is the importance of working with other nations in this great new area of space exploration. Unshackled by vested interests and past history, space provides a new environment that offers a wonderful opportunity to take steps that can lead to a more lasting peace.

We certainly have no monopoly on brainpower in this country, and there are literally many thousands of brilliant and eager scientists all around the world who are anxious to make contributions in this field. I am happy to say that the National Aeronautics and Space Administration has a very active Office of International Programs. As a result, and working through the State Department, the United States is successfully reaching agreements with an increasing number of nations for increased participation in space programs.

For example, we have just recently concluded agreements with Mexico, Australia, and Spain for the construction of tracking stations for our project Mercury in those countries.

Understanding was reached recently with a delegation from the Italian Space Committee whereby we will furnish them with rocket payloads to be fired during International Rocket Week in September.

Canada is busily designing and building a satellite payload to be lifted into orbit by one of our Scout boosters. There are many others in various stages of negotiation.

While these agreements clearly do not have the dramatic impact of hitting the moon, I think we should not underestimate the long-range value of this cooperative approach. For here may lie one of the few remaining pathways that can lead us toward greater international understanding that is so fundamental to reaching a permanent peace.

I firmly believe we must keep ourselves so strong that no possible enemy would dare to attack us. It is only in this way that we can maintain our free institutions and it is only in this way that we can be in the position to invite the cooperation which can lead to the peace we are seeking. In other words, it is important to give attention to the key military aspects of space and also to the reaching of agreements with other nations for increased cooperative participation in space programs which can lead us to the greater international understanding that is so fundamental to reaching a permanent peace.

As a final word, I wish to emphasize again my wholehearted support to the bill before us, and to urge my colleagues on both sides of the aisle to give it favorable consideration.

TRIBUTE TO WILLIAM J. MONTAGUE

Mr. BRIDGES. Mr. President, newspapermen generally enjoy the opportunity of contacting many thousands of people during the course of their careers and of developing close friends wherever they pursue their profession. One of the newspapermen who enjoyed such opportunities and friendship was a distinguished New Englander, William J. Montague, general manager of the Manchester Union Leader at Manchester, N.H.

The many thousands of friends Bill Montague developed during his 42 years in the publishing business were saddened a few days ago when he suddenly passed on. Bill was a likeable and trustworthy person whose personality and ability were recognized early in his career, and he went on to become one of the leading advertising men in the New England region.

I believe that his life is best summed up in an editorial published on April 19 by the Manchester Union Leader, written by the publisher, William Loeb.

Mr. President, I ask unanimous consent that this editorial be made part of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WILLIAM J. MONTAGUE, 1896–1960

The outstanding characteristics of William J. Montague, who was general manager of this newspaper until he died suddenly Monday morning, were loyalty and conscientiousness.

In an age where disloyalty to God, country, home, and business is frequent, Bill Montague gave loyalty with every drop of his blood.

In an age which is characterized by evasion of responsibility and goofing off from the lowest job in the land to the highest, Bill Montague was everlastingly devoted to a conscientious performance of his duties. No effort was too great to see that things came out just right.

The mediocre, the average, the passing never satisfied him.

Bill Montague was one of the great New England newspapermen of his day.

Because of his innate modesty and avoidance of the limelight, he failed to receive in his lifetime the recognition that was due him.

He was not a back-slapper, a glad-hander or a seeker after personal publicity.

In an age where favorable publicity is supposed to be the equivalent of action and a good performance, Bill Montague preferred to produce results, rather than to talk about them.

In his dealings with people he always sought to be fair and just.

By any true standards, this was a good man.

His loyalty, his friendship, and his devotion to duty will cause him to be deeply missed by all of us at this newspaper.

To this particular writer, who had been associated with Bill Montague for 18 years, the loss is intensely severe.

In an age when insincerity and sham are the order of the day, this was a man in whom one could believe. Looking back, it is fair to say that this modest man was a great man.

Before that ultimate and final bar of justice to which, in the end we must all appeal, we believe that Bill Montague's virtues and his values will receive everlasting approval.

THE PRESIDENT FORBEARS

Mr. MARTIN. Mr. President, I have had the privilege recently to read a very timely article entitled "The President Forbears," which has been published in Iowa newspapers and has been widely praised. The author of this article is Dr. Kirk H. Porter, of the State University of Iowa. I subscribe wholeheartedly to the views so well expressed by him.

Dr. Porter is a very distinguished professor emeritus of political science at the State University of Iowa. He is a graduate of the University of Michigan, received his doctorate degree at the University of Chicago, joined the State University of Iowa faculty in 1919, was promoted to head of the political science department in 1940, and has served in that capacity almost 20 years. It has been my privilege to know him from the time of my return to the University of Iowa in 1921. Throughout the years I have known Kirk Porter, I have considered him one of the best qualified leaders of our Nation in the field of political science. He has won a wide reputation for effective leadership and guidance of his students and faculty members.

In order to make his article, "The President Forbears," available to all Members of Congress, I ask unanimous consent that it be printed in the body of the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PRESIDENT FORBEARS

It is probable that no President in all our history was subjected to as much abuse, insult, and vilification as was George Washington. His critics knew no bounds, and heaped invective and foul aspersions upon him to a degree that can hardly be imagined today. Abraham Lincoln got the same treatment, perhaps even worse. And other Presidents have had to take their share. It is not my purpose to make out that President Eisenhower has had to take anything like the personal abuse that was heaped upon those other two great men. What I wish to show is that he has established a most remarkable record for patience, silence, and forbearance.

His restraint has been self-imposed. No law, and certainly no precedent, not even political expediency could have caused him to keep silent. He went into office committed to the idea that it was not proper for the President to disparage or publicly assail the other branches of the Government. Nor would he single out individual Congressmen or other officeholders and publicly criticise them for what they had done or had not done. This was in very marked contrast to the practice of former Presidents. It is not a question of whether the President has a right to criticize Congressmen individually, or whether he should or should not do it. The striking fact is that he himself decided that he would not do it. He did not think it proper for the President to question the motives and purposes of responsible officers in the other branches of the Government. This was something new. To the consternation of some leaders of his own party he refrained from attacking leaders of the opposition party, and holding them up to scorn and ridicule as his predecessors had done. To Mr. Eisenhower to do that seemed undignified and unbecoming the President of all the people. To many leaders of his own party it seemed as if the most powerful member of their own team was refusing to fight. But he considered himself something more than a member of their team. He was President of the United States, and he did not think he should use his office and his vast power to assail other men who had been elected to high office by the people of their own States, of whatever party. Other Presidents have stressed the point that they represented the whole people, not merely a party. It remained for Mr. Eisenhower to prove in this way that he really meant it.

From time to time the President has earnestly requested Congress to enact measures that he considered important. When Congress has not done so, the President has recognized their right to do as they think best. But we have witnessed the spectacle of leading Congressmen rejecting what he proposed to have them do, and then publicly assailing him for not doing what only they themselves had power to do. Apparently many people do not realize that the President has no power to make law himself. Only Congress can do that, but curiously enough people blame the President if the measures they want are not enacted. Certain Congressmen have exploited this ignorance and have heaped abuse upon the President for not doing what they know very well only they can do. This has happened in several areas but has been particularly apparent in the field of civil rights and school desegregation. Congress did not pass an act to implement the Supreme Court decision on desegregation. It was impossible for the President to do anything until Congress acted in accordance with the decision. But he has taken a torrent of abuse for not doing what he has no power to do until Congress acts. The colored people and their sympathizers have constantly been exhorted to blame him instead of Congress. Eminent men who understand this thoroughly have nevertheless contributed to the misrepresentation.

The President has not seen fit to try to make this clear to the public, for that would involve an undignified attack on Congress. The situation was dramatized at the Democratic Convention in 1956. The convention definitely rejected a platform plank endorsing the Supreme Court decision and calling for legislation to implement it. Within hours leading Democrats who had helped defeat the proposal in their own national convention were publicly condemning the President for not doing what they themselves had just refused to do. And the President said not a word. Certainly this was to go beyond the call of duty. But the President forbears.

In the field of international relations it must have been especially difficult to practice forbearance. Our dreadful troubles in Berlin, East Germany, and the captive border states grew out of most unfortunate arrangements agreed upon at Potsdam and Yalta. At the time they seemed quite promising. They turned out to be calamitous beyond imagination. President Eisenhower has been subjected to a relentless barrage of intemperate abuse from people who seem to think he ought to risk a nuclear war in order to remedy the incredible ineptitudes of his own predecessors in high office. But he has taken the attitude that when they were in office they sincerely did the best they

could as they saw it at the time. No doubt he is right. But it must be gall and wormwood to undergo abuse from some of the very men who themselves created the dreadful situation we now face in Berlin and East Germany. No sharp words or bitter taunts from the President. He gives them credit for having done their best. The President forbears.

The new State of Israel was recognized very suddenly by the United States. We were the first to recognize it. It was done by President Truman who had a perfect right to do it, wholly upon his own responsibility. One immediate effect was to inflame and enrage the whole Arab world. It was feared a holy war would engulf the Middle East. Eisenhower and Dulles had to deal with a legacy of hatred in the Arab States that may persist for generations. Alleged inconsistencies and lack of tact on the part of Mr. Dulles fade into utter insignificance compared with the fanatic rage generated by our abrupt recognition of Israel. Yet in the face of shamefully intemperate criticism of our policies in the Middle East no reference has been made to this basic source of trouble. President Eisenhower has taken the position that his predecessor had full responsibility for acting as he did and must have used his own best judgment. But he himself has taken torrents of abuse as the result of the official action of his predecessor.

Mr. Dulles was engulfed in a perfect deluge of oratory and writing that accused him of incompetence, stupidity, and bungling. I have a great stack of newspaper headlines, editorials, magazine articles, columns and news interviews all adding up to the conclusion that our country had lost the friendship and respect of all the world. The assertion that we had lost prestige occurs with monotonous regularity. These articles were written by very able men, statesmen, eminent scholars, and distinguished journalists. They seemed to be supporting a slogan: "My Country—Always Wrong." I was much impressed myself and began to fear that they were right. Our prestige, dignity, and self-respect seemed to be in shreds and tatters. The President took a trip and in most dramatic and convincing fashion proved it was not so. Our prestige was not destroyed or lost, although the army of critics in their writings and their speeches had certainly done their level best to bring just that to pass. No retorts from the White House. The President forbears.

Secretary Dulles had been mercilessly raked for having said that we had been at the brink of war. It might have been replied that even so he had a better record than his illustrious predecessors. Woodrow Wilson got to the brink of war, and fell in. Franklin Roosevelt got to the brink of war, and fell in. Harry Truman got to the brink of war, and fell. It would seem that the country might be thankful for leaders who could get to the brink of war—and get back. This could have been a devastating publicity line for political party headquarters, but the President would have none of it. He took the view that former Presidents had done their best to avoid the horrible calamity of war. He has never uttered a word reflecting upon their patriotic honesty of purpose. The President forbears.

In a number of instances Congress has authorized the expenditure of large sums of money for a given purpose, and the President has not used that money. In these situations it can be said that he has defied the Congress and refused to do what they wanted done. But let it be clear that the President has no discretion in the matter of spending money for a given purpose unless Congress itself gives him that discretion. If the act of Congress leaves him no discretion he would be obliged to carry through the project. But if he is authorized to use his own judgment then of course he is expected to spend the money or not as he sees fit.

In many cases this is a wise arrangement and works very well; but it does afford an opportunity to embarrass the President and put his integrity to a very severe test. Suppose, as in the case of proposed expenditures for this or that project in the field of national defense, the President has clearly said that he does not think it is wise or necessary. Congress authorizes the expenditure and leaves the President with discretion as to whether or not the money shall be spent. They know full well his own opinion, but nevertheless leave him with discretion. Being a man of high integrity he adheres to his own honest judgment and does not use the money. It is quite unnecessary for Congress to leave him with that measure of discretion. They have unquestioned power to require that money be spent for a specific purpose in whatever precise detail they choose to direct. Whatever discretion the President has stems straight from the act of Congress and nowhere else. They could even dictate the duties and salaries of janitors and gardeners if they chose to do so. They can also leave a very broad measure of discretion to the Executive if they choose.

This being true, my own feeling about the alleged deficiencies and lag in our national defense posture is simply this: If Congress does not act to remedy the alleged deficiencies I will be convinced that Congress does not believe they exist. It is inconceivable that Congressmen would fail to do what they truly believed was necessary to the preservation of our country. On a matter as important as this they surely would not dance a minuet with the President and dilly-dally as to who should take the next step. The constitutional power and responsibility lies squarely with them. If they do not act we can be greatly reassured for it could only mean that they themselves do not believe the dire prophecies of doom that flow constantly through the press. They are concerned with discrediting the leadership of their political opponents. This they have a perfect right to do. And the President might point that out with caustic emphasis. But the President forbears.

Within the past week Congress has rejected and turned down the Forand bill, a grandiose measure intended to provide medical care for the aged. The President disapproved of this bill and said so. But although the heavily Democratic Congress had itself rejected the bill, without even debating it, prominent Democratic leaders, particularly those who were striving to win the presidential primary contests, strongly endorsed the bill which their own party had quietly rejected without drawing public attention to it in debate. And then they criticized the President for not doing anything for the sick and the aged. The President did not say a word. He had already given his support to a much more moderate bill now in Congress. It is quite possible the Democratic Congress will not enact even his moderate bill—and then denounce him. But he will undoubtedly give them credit for doing what they think is right. The President forbears.

This sort of thing has gone on all through history. There is nothing new about it and both parties have played the game of politics this way. The one thing that is very new is Mr. Eisenhower's monumental forbearance. He is certainly not timid, nor is he confused and baffled. He knows what he wants and makes it clear. The amazing thing has been his rigid sense of propriety, his dignity, and his colossal self-restraint. The President forbears.

TWELFTH ANNIVERSARY OF THE INDEPENDENCE OF ISRAEL

Mr. BRIDGES. Mr. President, yesterday, Monday, May 2, 1960, marked the 12th anniversary of the independence of the small State of Israel. Its 12 years of independence have been marked by much conflict and stress, both internal and external, and many other problems which beset countries which are courageous enough to acquire independence and strong enough to preserve it.

Its many problems have been similar to those which this country experienced in its first two decades of independence. It is troubled by internal stresses and faces the constant threat of outside invasion and economic boycott.

In spite of the many difficulties which Israel has faced, it continues to represent democratic principles in the Middle East, and throughout these past 12 years has remained a good and dependable ally of the United States in that area. The recent visit of Prime Minister Ben-Gurion to this country further strengthened and emphasized this traditional bond of friendship between Israel and this country.

Although amazing strides have been made by this small nation in agriculture and industry, much still remains to be done to make Israel economically self-sufficient and defensively strong. However, with the same initiative, drive, and enthusiasm which it has expressed in the past, I am sure that this small state will rise above and conquer all its difficulties, both internal and external.

Mr. President, it is an honor to salute this courageous state and wish it continued independence, prosperity, and peace.

TRIBUTE TO LAURENCE F. WHITTEMORE

Mr. BRIDGES. Mr. President, Laurence F. Whittemore for the last 16 years has been the Mr. New England of that area's financial, transportation, and industrial circles. To one like myself, who has been associated with Whit over many years, including his term as tax commissioner of New Hampshire, it seems unbelievable that the Whittemore era is drawing to a close. Whit's recent retirement from the Brown Co. chairmanship brings to an end his fully active participation on the New England economic scene, but characteristic of his energy, despite failing health, he will continue some activity with the Brown Co., and will be available in a consulting capacity to other segments of the New England economy.

Whit's great success as a banker and executive stems not only from his zestful approach to problems and his capacity for hard work, but also from his warm nature, which brought forth the best efforts from his associates, and many a board meeting was saved from somnolent doldrums or useless bickering by a famous Whittemore story, because Whit is a storyteller without peer. Throughout his fabulous career, which would have

turned the heads of lesser men, Whit maintained the disarming simplicity of his native Pembroke. It was largely because of that, I think, and because of his early years as a railroad machinist, that he was equally at home with labor or management. There have been in the past, and there will be in the future, giants of New England industry and commerce, but there will never be another Laurence F. Whittemore.

Mr. President, I ask unanimous consent to have printed in the body of the RECORD an article on Mr. Whittemore's career which appeared in the Boston Herald of Monday, April 25, 1960, and an article from the Concord Monitor of April 22, 1960.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Boston Herald, Apr. 25, 1960]

BROWN CO. APPLAUDS CHAIRMAN—WHITTEMORE'S GOING ENDS NEW ENGLAND ERA

(By William F. Homer, Jr.)

Laurence F. Whittemore left the Brown Co. chairmanship and its annual meeting last week, with the tributes of stockholders ringing in his ears. The applause marked the end of a New England industrial era.

For him, it was an era of good feeling.

Perhaps no industrialist in the postwar time had the affection and esteem of so many for so long as "Whit," the top New Englander.

He was born a New Englander; he belonged here; he preached New England and he practiced it. Diminished profits of the New Hampshire paper company from its 1951 peak did nothing to temper the Whittemore zeal. Only lengthening age and lessening health did that.

SEEMS YESTERDAY

It seems like yesterday, not 1944, that the then assistant to President Edward S. French of the Boston & Maine turned from checking a list of serial numbers on the road's most recent locomotives, in a story aimed at the road's postwar prospects. The locomotives were the 4200's.

"Congratulations," the stocky, owl-visaged, twinkling-eyed Whittemore said. "You're accurate—and observant."

A simple statement. It produced good feeling.

It was such simple frankness that smoothed the progress of the former B. & M. machinist and New Hampshire tax commissioner over an unprecedented sequence of key New England posts in the next 6 years.

Faith in and knowledge of the six-State area made him the logical man for the presidency of the Federal Reserve Bank of Boston in the immediate postwar conversion period, starting in 1946.

Two years later, New England's No. 1 banker went back to working on the railroad. It was the New Haven, this time.

The 54-year-old "Whit" took the presidency of the 1,838-mile network September 1, 1948, 19 days after the Frederic C. Dumaine, Sr. interests had won control of the carrier from the regime of Howard S. Palmer. The octogenarian Dumaine, now chairman only, sat beside him proudly displaying a $1 bill that he accepted for his 2 weeks and 5 day stipend in the dual president-chairman role.

It was the same homespun Whittemore who, 2 weeks later, after a conference at Providence's Squantum Club, quietly asked an attendant at the Providence railroad station, sleepy at 11 p.m., to make a wire available to a Boston reporter anxious to meet a deadline.

"I'm Laurence Whittemore, president of the road," Whit explained, almost deferentially.

"And I'm Napoleon Bonaparte," the weary worker snapped back—"Oh, oh, gee, it is 'the' Whittemore."

Whit just chuckled.

"I guess you'll get your story filed." He was still chuckling, boarding the train.

With all this railroad-banker postwar shifting, home was still native Pembroke, N.H., "and it would be even if I were ambassador to Timbuctu."

Sixteen months later, "Buck" Dumaine was ready for the New Haven presidency and "Whit" was ready for New Hampshire's Brown Co. presidency, a company where he had been director since 1941. By 1952, he was chairman as well as president.

In that same year, the only surprising thing about the Whittemore election as president of New England Council is that it had not happened before. Probably no one got around to asking him. They were too busy waiting for a Whittemore story.

His keen economic sense and deceptively sober mien masked the skill of a reconteur to match Will Rogers. Anyone, once in earshot of the Whittemore tale of "Yankee thrift," knows that is for the ages.

[From the Concord Monitor, Apr. 22, 1960]

WHITTEMORE IS PAID TRIBUTE—UNH CREATES SCHOOL OF BUSINESS, ECONOMICS IN HIS NAME

DURHAM, April 22.—Creation of a School of Business and Economics at the University of New Hampshire, named for Laurence F. Whittemore, retiring president of the board of trustees, was announced today by the trustees.

"The Whittemore School of Business and Economics, named in honor of one of New England's best known industrialists and civic leaders, will strengthen the university's relation to the business and industry of the State and region through instruction, research, and service," the university said.

"The importance of this part of New Hampshire's economy guided the decision of the trustees to strengthen the university's present program in economics and business administration, the largest department in the College of Liberal Arts. While utilizing present personnel and physical facilities, the new school will upgrade to a more independent status the department in which about 300 students usually major.

TO SELECT DEAN

"The organizational change will take place as soon as a dean for the new school can be selected. Prof. Arthur W. Johnson, chairman of the present department, retires from his administrative duties on June 30 but will continue to teach until 1963. The school will also begin with the addition of a special professorship made possible by the contributions of alumni, parents of students, and friends through the University of New Hampshire fund.

"Mr. Whittemore, who lives in Pembroke, has been a member of the university's board of trustees for 16 years and was president of the board for 5 years until illness forced his retirement in February. He is a former tax commissioner for New Hampshire and has been assistant to the president of the Boston & Maine and Maine Central Railroads, president of the Federal Reserve Bank of Boston, president of the New Haven Railroad, and president of the Brown Co. of Berlin. Most recently he has been chairman of the board of Brown Co. His efforts on behalf of many civic and charitable causes are well known in New England.

"The new school will offer both undergraduate and graduate instruction. Whatever course changes are made will preserve a broad liberal arts education for students majoring in this area.

"The continued growth of New Hampshire's business and industrial community makes it important that the University strengthen its program for this important segment of the State's economy, matching what has long been done for the agricultural economy."

TRANSPORTATION—MODERN CONCEPTS

Mr. BRIDGES. Mr. President, a noteworthy address on modern techniques in transportation delivered before the Traffic Club of New York in New York City has been brought to my attention.

The address was delivered earlier this month by Mr. Morris Forgash, president of the United States Freight Co. This is a most interesting analysis of this country's transportation problems and an informative commentary on remedial methods.

In light of the extent of this problem, which concerns every Member of this body, I ask unanimous consent that the entire text of the address by Mr. Forgash be included in the body of the RECORD, as part of my remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TRANSPORTATION—MODERN CONCEPTS

(Address by Morris Forgash, president, United States Freight Co., before the Traffic Club of New York, New York, N.Y., April 7, 1960)

I appreciate this opportunity to talk to you for a few minutes on a subject which holds a good deal of fascination for me. You will understand that I labor under some difficulty. The announcement of this meeting states that I am to give you a "tantalizing picture." I am not sure whether the reference is to the picture of me which was emblazoned on the flyer, or to the message I am supposed to convey. In either event, I am in trouble.

If it is true, as the old adage goes, that a man is not without honor save in this country, I stand at the bar of a stern court. I am consoled by the fact that the advance billing referred to me as your "longtime" friend. I hope no one leaves here calling me his "former" friend. For my part, I know that I count many of you as my very close friends—and friends should be able to speak frankly with each other. I intend to be frank, and if I cannot tantalize you I will at least try to challenge your imagination.

You will have taken note that the title of my talk is "Transportation—Modern Concepts." A thing is modern in contrast to something that is ancient or outmoded. Surely no one will contend that transportation in this country is outmoded. With traditional American enterprise and ingenuity we year by year continue to build up massive transportation plants and facilities—to construct and improve roads—to dig channels and improve waterways. But what are we doing in the idea department to improve method and technique, to eliminate waste and duplication, to tailor transportation service and rates to the changing demands of industry? That is the field I want to explore.

There are hopeful signs that we are at last beginning to come out of our mental shells and tackle some of the problem areas in which a great deal of deferred maintenance has accrued. It is none too early if we wish to continue to be the architects of our own destiny.

Our fundamental fact ought to condition all of our thinking about transportation. The common carrier, charged with the responsibility for serving the whole public, is essential both to the economy and defense

of the Nation. Private carriage, no matter how significant it may become, or how well it may serve individual segments of the economy, can never meet the needs of the commerce of the United States or the demands of national defense.

Our choice, then, is not whether, but how we shall maintain a strong and adequate common carrier system. If common carriage cannot survive under free enterprise with private management it must be maintained by Government. There is no middle ground, for interference that usurps the functions of management will ultimately lead to control and there is no point in temporizing.

I am not trying to scare anybody with the spectre of imminent nationalization of transportation in this country, but there are certain inescapable facts that we cannot ignore. For a long time now the percentage of total intercity ton-miles of traffic handled by common carriers of all types has been dropping at a rate of about 1 percent per year. Common carriers handled only 67 percent of the total traffic volume in 1959. The position of the railroads in particular is deteriorating at a much more rapid pace than that of the other carriers, but the others have no cause for complacency.

In the decade of the 1950's the railroad share of total intercity ton-miles of traffic dropped from 56.2 percent to 44.9 percent. In the 20-year span, 1939–58, the ratio of railroad revenue to national income dropped from 5.7 to 2.7 percent. We ought to be worried about how far this trend can be projected before it passes the thin line of decision—the point where decision cannot be deferred.

Big problems always generate a lot of heat. You are familiar no doubt with the recent report of the U.S. Department of Commerce titled "Federal Transportation Policy and Program." Each man will evaluate the report in the light of his own interest, but it reaches some conclusions with which I think all will agree. One is that the responsibility is and should be with the common carriers themselves to develop service standards and rate structures which will enable them to hold their own against private and exempt transportation. Another is that we must achieve greater coordination in transportation. Regarding coordination, the report concludes that: "The best means should be left to the industry—containers, piggybacking, and fishybacking, standardization, joint bills of lading, etc."

It seems obvious to me that we cannot coordinate a system of transportation made up of a countless variety of carrying units, with specialized, special purpose equipment, requiring physical rehandling from vehicle to vehicle. By joint rates, through routes could be established but the resultant coordination would not be very efficient. This kind of coordination, always possible, has remained in the realm of probability. One of the prerequisites for successful coordination is standardization of the unit of haulage. There must be free interchange among modes of transport and this can only come about in the development of a container of one or more compatible multiples which will ride with equal facility on the rails, the highways, the waterways, and the high seas—ultimately even in the air. Our planning must be based upon economic factors and not upon an emotionalism.

Coordination is perhaps the most overworked word in transportation. The first thing we need to do is to coordinate our thinking about coordination. To me, coordination means a combination of services that complement each other, the one taking over where the other leaves off, and with each mode of transport performing that part of the through service which it is best fitted, costwise and servicewise, to perform.

Stated in the negative, coordination does not mean the mere substitution of one type of transport for another, as where a motor carrier, to complete its own transportation contract with its shippers, within its own territory, employs a railroad to pull its trailers over the rails in lieu of transporting them over the highways. Transportation will remain compartmentized under such a scheme. The benefits, if any, will flow to the carriers and not to the shippers.

Substitution is, of course, the basis of what is called Piggyback Plan I—the substituted service plan. I would be less than candid with you if I did not tell you that, whatever merits the plan may have from the standpoint of any interest involved, I do not think it is the answer to coordination of transportation.

From the time three-quarters of a century ago when produce wagons and teams were hauled aboard Long Island Railroad flatcars, down to very recent times, "piggybacking" meant simply placing the vehicles normally used by one mode of transport aboard railroad flatcars designed and used for other purposes. We are coming to the realization, based on experience, that this hit or miss method will not work.

As you know, a wide variety of equipment is used in piggyback service today. Perhaps the system still in most general use is the handling, on flatcars, of truck semitrailers on their own wheels. Under another system flanged wheels are added to the trailers or containers, for which a specially built flatcar with a center sill for a track is required. Still another system employs containers with detachable wheels or "bogies," which are sideloaded onto special flatcars with turntables. These and other systems have advantages and disadvantages. The crux of the matter is they are all different and obviously they cannot all be universally employed without a great duplication of equipment which in the end could outweigh the advantages of piggybacking altogether. We must, therefore, move toward standardization, not only of containers but of other equipment and methods.

The very complexity of our transportation system, and the differences in the characteristics of the various modes of carriage, make standardization a difficult problem. The starting point must be standardization of dimension—from that we can move to standardization of method. Progress is being made in the standardization of sizes of containers. For almost 2 years now I have had the honor of being chairman of the special subcommittee on containerization of the National Defense Transportation Association. About 8 months ago we believe we crashed the dimensional and size barrier in agreeing on a standard container 20 feet by 8 feet by 8 feet. In arriving at this conclusion we made it clear that this did not rule out the development of other compatible multiples, such as, 10 feet by 8 feet by 8 feet or even 5 feet by 4 feet by 4 feet. You will observe that all of these sizes are mathematically related to what is rapidly being accepted as the standard-size trailer for over-the-road operation, namely 40 feet by 8 feet by 8 feet. The Army is testing prototypes of the National Defense Transportation Association recommended 20 feet by 8 feet by 8 feet container.

Standardization will not come without experimentation and experience, but we can expedite the process by fixing a target. That we have done—perhaps with an excess of boldness, but at least with courage and determination. This is everybody's problem and all can help.

Despite the lack of uniformity of equipment and method, piggybacking has moved further, faster, and with more enthusiastic public acceptance, than any development on the transportation scene in modern times. In 1955, the first year in which piggybacking achieved significance, the average weekly loading of piggyback cars was 3,000. In 1959 an average of 8,000 piggyback cars was loaded each week. More than 10,000 cars were loaded in the week ended March 5, 1960. In the first half of 1959 piggyback loadings totaled 209,000 cars, an increase of 62 percent over the loadings in the first half of 1958. In its latest annual report to Congress the ICC quoted from an independent survey which showed that 20 railroads are participating in plan I piggyback, 43 in plan II, 21 in plan III, and 18 in plan IV. Since then a few railroads have entered into plan V arrangements. The statistics do not show the proportion of total piggyback loadings broken down according to the various plans.

It may be appropriate at this point to mention briefly the various plans of piggybacking that are currently in use. In addition to the substituted service represented by plan I, you know that the railroads operate plan II service, using their own trailers in lieu of traditional boxcar service. Plans III and IV are based on published tariff rates, the former covering movement of shipper-owned trailers on rail-owned flatcars and the latter covering movement of shipper-owned or controlled flatcars and trailers with the railroad supplying only the motive power. Plan V is based on a true joint rate between motor and rail, with end-to-end truck-rail service.

Equally as important as standardization is to the success of coordination through piggybacking is modernization of pricing of this totally new service. Again adverting to the Commerce Department report, I was struck by this comment and I quote:

"Common carrier rates of all kinds are rapidly becoming regulated by competition whether the common carriers like it or not—the competition of highly developed private and exempt carriers."

The shipper by private truck determines his cost per truck movement and it is affected only to a slight degree by the commodity or content of the truck. Similarly, the railroad's cost of pulling a flatcar with trailers from terminal to terminal—with all terminal handling eliminated and practically no risk of loss and damage—is almost wholly unaffected by the content of the lading.

Thus the railroads have been able to fix a charge for piggyback service, under plans III and IV, of so many dollars per flatcar movement, terminal to terminal. The plan III rate works out to 25 cents a trailer-mile or 50 cents a car-mile. Plan IV rates come to about 42 cents a car-mile. Simple and scientific. Profitable to the railroads and sensible to the shippers. Plan III and IV piggybacking eliminate the factors that complicate costing—terminal handlings, transfers, empty car mileage, freight loss and damage, investment in and maintenance of equipment. Surely the railroads can accurately determine their cost of pulling a flatcar over two steel rails from one point to another—all other costs and hazards eliminated.

Classification is one of the time-worn principles of rate-making, but it has largely lost its significance in today's highly competitive system. Such meaning as it has is now largely reflected by density of lading—how many pounds of straw hats or of nuts and bolts can you load into a container of standard cube? The space limitations of the trailers used in piggyback service—their cubic capacity—classify the freight loaded therein on the only basis that makes good sense to most shippers. Thus classification is not ignored, it is modernized.

Assuming that the railroads can accurately determine their cost for the line-haul movement of flatcars in piggyback service, and that they fix a rate on a flat basis which is just and reasonable, then we get down to the question: Who can match or better the rate, at comparable speeds, and for what distance? That is where economics will come into play in the coordination of rail, truck, and other transport services under modern

concepts of piggybacking. Wasteful, duplicative service, and unnecessary physical handling will be eliminated by the economics of the situation.

If shippers can buy transportation, performed and priced as transportation should be, the cost will make it profitable for them to leave transportation to the professionals and concentrate their energies in their own field of endeavor. The return of tonnage from private to common carriage will be beneficial to the whole transportation system. Transportation will gradually get back in balance. The railroad—in recent years symbolized as the "sick man" of transportation—will be able to cure himself without the aid of Government nostrums. A rapidly decentralizing industry will obtain a new and coordinated distribution tool—a transit pipeline combining the maneuverability, flexibility, and speed of the truck with mass-distance economy of rail and water.

In the progress that we have made to date in the field of containerization, piggybacking, and fishybacking we have only scratched the surface of the vast potential of the concept. The advantages already demonstrated, with the equipment so far in use, have permitted us to look over the horizon to even more fabulous developments. Tremendously increased speed, charges based on even larger quantities reflecting the economy of mass transport, the all-purpose container virtually eliminating empty car miles.

In the matter of speed, I have made some predictions that have raised eyebrows. I make no retractions, but of course I tied time limits to some of my suggested targets. We are moving toward them even faster than I had supposed. Looking "just around the corner" I predict we will have 50 hours service Chicago to the Pacific coast—65 hours from New York.

Reasonably priced rail piggyback service, at speeds which are entirely feasible, can hold its own with the best that can be produced for long distance over the best superhighways or in the air even in a jet age. More than that, a combined freight-passenger service, already functioning in certain places, can reduce the overall passenger deficit that inflates the freight-rate structure. Passengers have never objected to riding in the same train with baggage and express. Why should they object to riding in the same train with freight moving in containers that can be made as attractive to look at as a streamlined passenger car—especially if it insures a payload that will keep the passenger service going?

The necessity for interchangeability, and the demands for standardization which piggybacking inherently is bringing about, inevitably will lead to the all-purpose container and ultimate elimination of specialized one-purpose equipment. In that direction lies the only hope for solution of the toughest economic problem in the entire field of transportation—empty car and truck mileage.

We have come to take for granted, because it is a fact that nobody seemed able to cope with, that about 40 percent of freight-car mileage is and must continue to be empty car mileage. We have assumed that this is a natural result of the imbalance of traffic, without stopping to consider that it is not so much the traffic but the equipment that is out of balance. Trainloads of fruits and vegetables moving to the North and East—trainloads of manufactured products moving South and West—special purpose equipment that has to make a round trip with a one-way payload. This means that the freight shippers of the country have been buying a lot of roundtrip tickets to get a one-way ride.

Empty car mileage will never be entirely eliminated because some freight always will require specialized equipment that cannot be used in the return direction for anything else. But the enormous waste of carrier resources and shipper dollars can be materially reduced if we devise equipment that has the absolute maximum of utility. It is my considered opinion that an all-purpose container is capable of reducing empty car miles by at least 50 percent—a potential saving of such magnitude that we ought to be enthusiastically excited about it.

An all-purpose container that will carry everything adaptable to the ordinary box car or truck trailer, plus automobiles and liquids, or combinations thereof, is already in production. A collapsible rubber tank holding 3,000 gallons of liquid freight will fit into this container, with two automobiles in retractible ramps riding above. Take out or fold up the tank and two additional automobiles will fit into the trailer.

On the drawing board and just about to emerge is a trailer carrying the all-purpose concept even a step further. Insulated and refrigerated, this trailer will hold four large or six small automobiles. It will carry a collapsible rubber tank with 4,300 gallon liquid capacity. It will carry dry freight, perishables—or various combinations of all these items.

Obstacles to the use of this all-purpose equipment ought to be brushed aside like cobwebs because the results in terms of elimination of waste, reduction in empty haulage, encouragement to coordination, flexibility of transportation, and economy to the country outweigh all other considerations.

These new concepts which are right now knocking at the door of acceptance—as well as others which are already on the horizon of our vision—promise a new era in transportation. It is an era in which the shipping public will get a long deferred and well deserved new deal. We are on the eve of accomplishing, by initiative and enterprise, what we have long sought by policy and study—coordinated transportation based on the best elements of rail, highway, water and air carriage, in any combination.

We have too long permitted the vast potentials of our system of transport to be obscured by tradition, ignoring basic economics, content to do things in the old order because it was old and respected. In short, we have failed to use the basic tools that we have at hand—to exploit the inherent advantages of the greatest physical transportation plant on the face of the globe—and to apply new concepts in an era where the only constant is change.

I have described without too much elaboration, certainly without doing them full justice, some new concepts which I believe will revolutionize transportation in the decade of the sixties. We are standing between yesterday and tomorrow in transportation, and we cannot stand still or we will lose by attrition. We must move ahead boldly.

A POSITIVE APPROACH TO THE SOVIET CHALLENGE

Mr. BRIDGES. Mr. President, earlier this year the Honorable Wilfred J. McNeil, president of Grace Line, delivered a stirring address before the National Security Industrial Association. The occasion was the James Forrestal Memorial Award dinner, at which time the award was presented to Mr. McNeil in recognition of nearly two decades of service in the interest of this country's national security.

There is certainly no need for me to expand at this time on the selfless dedication displayed by Wilfred J. McNeil during his long service in the Department of Defense. He has earned universal respect and admiration and was surely a worthy recipient of the Forrestal award.

Mr. President, I think that Mr. McNeil's address on this particular occasion was an outstanding commentary on the defense of America. I ask unanimous consent that his speech, entitled "A Positive Approach to the Soviet Challenge," be printed as part of my remarks in the body of the RECORD, and I commend its contents to the attention of my colleagues.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A POSITIVE APPROACH TO THE SOVIET CHALLENGE

(Address by Wilfred J. McNeil)

Mr. Chairman, members of the National Security Industrial Association, and guests, it is a great honor to have been selected to receive the James Forrestal Memorial Award and I am deeply moved to have my name linked again with his.

Particularly, I appreciate an award conferred by the National Security Industrial Association, an organization, as Forrestal himself characterized it, "of American citizens who are interested in the security of the United States (and) in the security of its institutions. * * *" He would have been gratified to see how well this great association has carried forward his concept of a strong and vigorous industry-defense team.

James Forrestal was much more than just my chief for many years. He was and will always be, a constant source of inspiration to me and the epitome of the dedicated public servant. I shall forever be indebted to him for his help, his guidance, and above all, his example of devotion to duty.

James Forrestal lived intensely, and worked intensely. Every working hour was devoted to the Nation's welfare. He had an insatiable hunger for facts and constantly was on the search for new ideas.

Nor did he limit his interests and efforts to some narrow concept of his own job. Whether as Secretary of the Navy or as Secretary of Defense, he always saw his task in context with our total national security, our overall national strategy, and in relation to the whole world situation. This was the reason for his intense interest in the Russian problem—in the struggle between freedom and communism. He sensed much earlier than most of his countrymen the many-sided nature of this contest—and how the political, military, economic, and psychological aspects are interwoven. That is why he was so concerned with the problem of setting up some kind of machinery in Government to bring all facets of the problem into focus and to make possible a total national strategy for the United States. The outgrowth of this concern was the National Security Council.

Forrestal was a man who personally identified himself with his Nation's problems—and there were many grievous problems confronting the Nation when he undertook his last assignment for the American people in September 1947. Greece was fighting a Communist insurrection; Iran was being pressed by Stalin for an oil agreement; Turkey was under direct Soviet pressure; Hungary had just succumbed to the Communists, and freedom in Czechoslovakia was rapidly being undermined; Britain was virtually bankrupt; Italy was near chaos—the De Gasperi government, Italy's eighth since the liberation, was under violent political attack by the Communists; and the Yugoslavs were threatening the free territory of Trieste. In the Far East the Communists

were penetrating South China and negotiations on the unification of Korea had reached a stalemate.

In the midst of all this turmoil James Forrestal was sworn in as the first Secretary of Defense, at noon, Wednesday, September 17, 1947. It had been hoped that this ceremony could await President Truman's return from the Inter-American Defense Conference in Brazil. However, the President, on his way home on the battleship *Missouri*, was concerned by the worsening international situation and sent orders that Forrestal be sworn in as soon as possible.

Under the terms of the Unification Act, the new Military Establishment would not be operative until the day after the Secretary of Defense took office. But, James Forrestal, in his characteristic fashion, within an hour after the swearing in called the first Council meeting to discuss some of the most pressing problems facing the new defense organization.

In the relatively brief period that Secretary Forrestal headed the new Military Establishment, he left a lasting imprint of his general philosophy of organization and management. He was always open to new ideas in such matters, but strongly believed that organization cannot substitute for leadership. He felt that it was healthy for those charged with the responsibility for great decisions to have to maintain their point of view before an earnest and intelligent opposition. He recognized the need for professional specialists in Government, as well as industry, but he always insisted that "there still remains the imponderable element—which provides the synthesis for all the specialities—namely, management, which is the ability to handle people, to select leaders, and to exercise judgment."

Although Forrestal was always intent on getting the job done, he recognized that there is, in his own words, "No finality to the stream of history; no black and white decisions. The stream of history is always flowing and problems between nations never end." He often spoke of the American tendency to try to get quick and final decisions to age-old problems. How wise he was. Now, almost 15 years since the end of World War II, we are still struggling with the problem that most concerned him then—the Communist threat to freedom.

Looking back over these years, I often wonder whether we have made much progress in thinking through the full meaning of the emergence of the Soviet Union as a major power. Our thinking toward that nation, in many respects, is still unduly negative. Too often our attitude is dominated by the things we do not want them to do. We suffer from what might be called a containment psychology—not in the geographic sense of the word, but rather in the sense of trying to contain Russian growth and progress—whether it be in industry, science, education or foreign trade. At times we seem to be trying to isolate the Communists behind the Iron Curtain, and to minimize their contact with the rest of the world.

It seems to me that other avenues of approach to the problem might more fruitfully be explored. First, we must recognize that the Communists already have great resources and a rapidly advancing technology behind the Iron Curtain. There is no practical way in which we can alter this situation. It is the military power generated by these resources and technology in the hands of an antagonistic and totalitarian government that constitutes the real danger. Attempting to isolate the Soviet Union from contact with the rest of the world might well increase our danger rather than lessen it.

A fundamental change in the character of the Soviet Government would no doubt offer the best hope of alleviating the basic threat to our national security. No matter how remote this possibility may seem at times, we should do all that we can to develop an atmosphere in which there can evolve a Russian government more truly responsive to the will of the people. Agreements with dictators, no matter how well meant they may be, are always subject to sudden renunciation. Moreover, the dictator of today may be gone tomorrow and with him the support for any agreements or understandings which may have been reached.

Short of a verifiable and enforceable arms-control agreement, the United States could not with safety embark on a major disarmament program so long as the Government of the Soviet Union is in the hands of a dictatorship. It is much too easy for a totalitarian government to mask its actions and unleash a sudden attack, which, in this day and age, could virtually annihilate an unwary victim. On the other hand, it would be much more difficult for a democratically organized Russian government to undertake agression against its neighbors.

It might be argued that there is little hope that the Soviet Union will ever be converted to a free, democratic way of life—that this is a Utopian objective. Such thinking signifies a negative attitude. It reflects a lack of understanding—and a lack of faith—in the principles which have made this Nation great and which have served as a beacon of hope to all men who cherish freedom. Such a psychology is dangerous to our leadership in the world—moreover, it is not justified.

In the political and economic aspects of the contest with the Soviet Union we have every reason to be confident that ours is the wave of the future. Present trends in the Soviet Union give strong encouragement to this belief. The more educated and prosperous the Russian people become, the greater will be their demand for a voice in their own destiny, for the right of freedom of speech and movement, and for freedom in the selection of jobs.

It is not fortuitous that Khrushchev holds up the United States as a shining example of achievement toward which the Russian people should strive. He is constantly exhorting them to catch up with the United States in the output of food, clothing, and housing, and in industrial production. Our policy should be to encourage this competition, to take up this challenge and make it more difficult for the Soviet leadership to reverse this emphasis on economic well-being. The Russian people have everything to gain and we have nothing to lose in a race to see which system can do more for its people.

This point of view was most eloquently expressed by President Eisenhower in his second inaugural address just 3 years ago. He said at that time:

"We honor, no less in this divided world than in a less tormented time, the people of Russia. We do not dread, rather do we welcome, their progress in education and industry. We wish them success in their demands for more intellectual freedom, greater security before their own laws, fuller enjoyment of the rewards of their own toil. For as such things may come to pass, the more certain will be the coming of that day when our people may freely meet in friendship."

Admittedly, this is a long-range hope. In the meantime, the Soviet Union with its great resources, expanding industry and technology, and growing missile power, continues to pose the major threat to our national security. Chairman Khrushchev's recent announcement of Soviet troop reductions does not materially change the picture. Even if we give full credence to his declared intention, our danger is not likely to be any less and could possibly be more. What Khrushchev proposes is simply a Soviet version of the "new look"—the defense policy adopted by the United States more than 6 years ago.

The increasingly dangerous military situation in which the world finds itself arises—not from mere numerical strengths—but rather from the explosive progress in science and technology which is producing weapons of ever-increasing speed and destructive power. But the Soviet Union, as well as the United States, faces the same awful threat. They have every reason to be just as anxious as we are—and more so. Ironically, of all the peoples in the world, probably they and we are most in danger. In this we have a community of interest and for this reason the people of the Soviet Union and the people of the United States have the greatest stake in the achievement of a solution to this fearful dilemma.

Until the United States has succeeded in achieving with the present Soviet Government a safeguarded and enforceable arms reduction, or equally important, a system of inspection which would minimize the chances of any aggressor launching a surprise attack, we shall continue to live, in the President's words, "on the edge of disaster." For this reason, if for no other, we should all support the President in his efforts to lift the fear of war from the hearts and minds of people everywhere.

Until such time as a secure road to peace is found, we need, more than ever, a steady, stable level of effort which can be sustained through what may be years of trial and tension. In maintaining such a level of effort this great and responsible industrial organization can make a real contribution: first, by promoting a better understanding of the changing character of our military forces; and second, by helping to bring home to the American people a better understanding of the tremendous strength of this Nation.

We are opposed by a tough adversary—skilled in all the arts of propaganda and subterfuge—and we dare not be complacent. In the trying days which lie ahead negotiating from a position of strength will not be enough. We must also negotiate from a position of confidence—confidence in our military strength, in our way of life, and in the righteousness of our cause.

In the words of Abraham Lincoln spoken 100 years ago:

"Let us have faith that right makes might; and in that faith let us to the end, dare to do our duty as we understand it."

COMPLEX AIR POLLUTION PROBLEM REQUIRES INTENSIVE STUDY

Mr. KUCHEL. Mr. President, the complex problem of air pollution has given rise to mounting concern throughout our Nation as scientific observations show that the menace and curse of fumes and particles in the atmosphere are far more extensive than previously had been realized.

Accordingly, I have pointed out from time to time the desirability of using every weapon—mechanical, scientific, medical, and otherwise—available to all agencies of government in a broad campaign to track down the causes of and find remedies for the phenomenon generally known as smog.

Less than 2 years ago, the Surgeon General of the U.S. Public Health Service held a nationwide conference on this matter. Participating in discussions and presenting challenging and oftentimes alarming reports were public health and sanitation officials, leading scientists from educational institutions and the

ranks of industry, and others concerned with the welfare and safety of our people.

General agreement was expressed at the conclusion of those meetings that Public Law 159, the Air Pollution Research and Technical Assistance Act which I had the privilege of introducing in the 84th Congress, should be continued in effect indefinitely, and the ceiling on authorized Federal expenditures should be removed. While this act, originally due to expire next July 1, has been extended for an additional 4 years, the need for eliminating the terminal date and the expenditure limit has become increasingly obvious. Consequently, I have introduced in the present session Senate bill 3108, which my colleague from California and my colleagues from Pennsylvania also have cosponsored. This measure would give the Public Health Service more latitude and flexibility to carry out its role in the fight against air pollution.

Only a few days ago, another graphic reason why our scientists, engineers, and other experts need assurance of continuing Federal support and participation was contained in a thought-provoking paper presented to the meeting in Rochester, N.Y., of the American Industrial Hygiene Association.

This report shockingly revealed that a substance which causes cancer in laboratory animals is found widely in the atmosphere of every one of 103 cities where air-sampling procedures are carried out. Such a fact is far more than simply a cause for alarm. Here, indeed, an irrefutable reason why Congress must arm the Public Health Service with broader powers and sufficient moneys to pursue the investgation and research programs in which it is engaged, albeit on the presently required temporary basis.

While the five scientists conducting the project emphasized that the poison—benzpyrene—is found in metropolitan areas from coast to coast, their paper prompts much speculation about the reasons for wide variances in the measurements. For instance, concentrations per thousand cubic meters of air ranged from 0.16 in Galveston, Tex., to 61 in St. Louis, Mo. A brief glance causes many questions, such as why the percentage in Charlotte, N.C., should be nearly three times that in Baltimore, Md., and why in Glendale, Calif., it should be an amazingly low 0.8. It likewise is perplexing to find that the seasonal effect appears uniform in every city with the concentration much greater in winter than during summer, even in areas with relatively warm winter temperatures and relatively little reliance upon artificial heating.

A year ago, I told the Senate that much remained to be learned about factors involved in air pollution. This certainly is borne out by an excerpt from the report to which I refer. After citing many peculiarities of the studies, the Public Health Service scientists made the following comment:

Interest in the assessment of air concentration of benzpyrene results from its possible effects on an exposed human population. The increase in lung cancer in recent years has been attributed to extrinsic factors, such as soot and fumes of oil and coal furnaces, internal combustion engines, dust from asphalt-surfaced roads and rubber tires, and smoke from cigarettes.

In view of all that is unknown about cancer, there are many variations of opinion as to which extrinsic factor or combination of factors may play the role of prime etiological agent.

Because I hope that Congress before concluding its session this year will act favorably upon our bill to strengthen the present air pollution law, I ask unanimous consent to have printed as part of my remarks a summary statement about this challenging paper prepared by the Public Health Service, and an excellent newspaper article pointing up its more significant phases printed in the Washington Post and Times Herald.

There being no objection, the statement and article were ordered to be printed in the RECORD, as follows:

BENZO (A) PYRENE CONTENT OF THE AIR OF AMERICAN COMMUNITIES

(By Dr. Eugene Sawicki, Walter C. Elbert, Thomas R. Hauser, Francis T. Fox, and Thomas W. Stanley; delivered at the meeting of the American Industrial Hygiene Association in Rochester, N.Y., April 27, 1960)

Dr. Eugene Sawicki of the Robert A. Taft Sanitary Engineering Center, Public Health Service, today reported on measurements made of the 3, 4-benzpyrene content of the air in 103 cities and 28 rural locations in the United States. Benzpyrene is known to be carcinogenic to laboratory animals and is suspected of producing cancer in man. Dr. Sawicki reported values averaging about sixteen times greater for city areas than in the country. Much higher concentrations of benzpyrene were found during winter periods than in summer, probably because of the increased amounts of fuels used for heating in winter months. In some cities, the quantities of benzpyrene found indicate that an individual breathing such air would inhale as much benzpyrene as from smoking two or more packages of cigarettes daily.

Benzpyrene in air is of great interest to health authorities because of its possible relationship to lung cancer, a disease which has increased markedly in recent years. Statistical studies do not show any significant correlation between concentrations of benzpyrene in air and the latest available lung cancer mortality data as these vary from one city to another. It is known, however, that benzpyrene is not the sole potentially carcinogenic agent present in community air or in cigarette smoke. One additional possible explanation for the lack of correlation is that lung cancer mortality may be associated with exposures to carcinogenic agents many years ago, at which time the conditions of the air may have been different from those now being studied.

Benzpyrene is a material classified as a "polynuclear hydrocarbon," believed to come principally from the incomplete burning of fuels, waste materials, or other combustible substances. It is normally found as a constituent in many tarry materials.

[From the Washington Post, Apr. 28, 1960]

AREA AMOUNT TOPS AVERAGE—CANCER AGENT FOUND IN CITY AIR

(By Morton Mintz)

A Public Health Service scientist reported yesterday that a poison that causes cancer in laboratory animals—and is suspected as a cause of cancer in man—has been found in the air of all 103 cities included in a nationwide sampling.

The substance is benzpyrene. It can be created in the burning or distilling of any fuel, and in many industrial processes. It also may be found in tars derived from fuels.

In the first 3 months of 1959, the mean concentration was 6.6 micrograms per thousand cubic meters of air. Every surveyed city in this region exceeded that figure.

The reading in Washington was 9.3 micrograms. Samples were taken from the roof of the Municipal Center at 300 Indiana Avenue NW.

The concentration in Richmond was 45, in Roanoke 18, in Baltimore 14, and in Norfolk 8.4.

The figures were given by Eugene Sawicki, of the Robert A. Taft Sanitary Engineering Center, in Cincinnati. He addressed the American Industrial Hygiene Association in Rochester, N.Y.

In an era of rising incidence of lung cancer, he said, "the disturbing question arises as to whether many cancers are not derived from constant exposure to an unsafe atmospheric level of carcinogens." Benzpyrene is only one of the suspected cancer producers in the air and in cigarette smoke.

Benzpyrene normally attaches itself to airborne particles. Body mechanisms, can remove it from the inhaled particles, permitting cells or fluids to absorb it.

Sawicki said doses as low as 0.4 micrograms have produced skin cancer in experimental animals, that a number of researchers believe "there is no tolerable dose" of a carcinogen and that carcinogens accumulate in the body.

If inhalation of benzpyrene is a measure of exposure to lung cancer, Sawicki said, the average city dweller's exposure is 100 times greater than a rural resident's.

Air samples were collected for a full year in 9 of the 103 cities. In 4 of them the average nonsmoker inhaled more benzpyrene than the average nonsmoker inhaled in rural areas, 28 of which were also surveyed.

The cigarette smoker averages 60 micrograms of benzpyrene a year. The nonsmoker inhaled 79 in Cincinnati, 110 in Detroit, 120 in Nashville, and 150 in Birmingham. In London he took in 320.

In the rural test areas the average benzpyrene concentration per 1,000 cubic meters of air was 0.4 micrograms, a purity 16 times greater than that in the average city. On Solomons Island in Calvert County, Md., it was 0.7, or 5 percent of Baltimore's.

The city maximum was 61 in Altoona, the rural 1.9 in Pine Hill Forest, R.I. The city low was 0.11 in Helena, Mont., the rural 0.01 near Cape Blanco, Oreg.

Six 24-hour test samples were taken from each of 94 city sites during the test period—significantly, 3 cold-weather months in which benzpyrene concentrations run higher than in summer, when less fuel is used for heating. Sawicki said each site was judged representative of a city's overall atmosphere.

The researcher also said pyrene concentrations ran higher, generally, in the East and Midwest than in the West, where the abundant sunshine may be a factor.

But he said the data is inadequate to explain why the concentrations vary extremely. A PHS official here said the efficiency of burning may be the answer, or part of it, but that much more research is needed.

The range is great even among heavily industrialized cities. Here are some illustrative concentrations: St. Louis, 54; Newark, N.J., 4.5; Cleveland, 24; Pittsburgh, 5.1; Allentown, Pa., 3.4; Wheeling, W. Va., 21; Seattle, 9; Milwaukee, 8.5.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the

House had passed, without amendment, the following bills of the Senate:

S. 1328. An act for the relief of Parker E. Dragoo;

S. 1408. An act for the relief of Ronald R. Dagon and Richard J. Hensel;

S. 1410. An act for the relief of Jay R. Melville and Peter E. K. Shepherd;

S. 1466. An act for the relief of Sofia N. Sarris;

S. 2173. An act for the relief of Mrs. John Slingsby, Lena Slingsby, Alice V. Slingsby, and Harry Slingsby;

S. 2234. An act for the relief of the estate of Hilma Claxton;

S. 2309. An act for the relief of Gim Bong Wong;

S. 2333. An act for the relief of the heirs of Caroline Henkel, William Henkel (now deceased), and George Henkel (presently residing at Babb, Mont.), and for other purposes;

S. 2430. An act for the relief of certain employees of the General Services Administration; and

S. 2507. An act to relieve Joe Keller and H. E. Piper from 1958 wheat marketing penalties and loss of soil bank benefits.

The message also announced that the House had disagreed to the amendments of the Senate to the bill (H.R. 5747) to amend section 152, title 18, United States Code, with respect to the concealment of assets in contemplation of bankruptcy; asked a conference with the Senate on the disagreeing votes of the two Houses thereon, and that Mr. FORRESTER, Mr. DOWDY, and Mr. POFF were appointed managers on the part of the House at the conference.

FEDERAL PATENT POLICIES

Mr. LONG of Louisiana obtained the floor.

Mr. MANSFIELD. Mr. President, will the Senator yield for the purpose of my suggesting the absence of a quorum?

Mr. LONG of Louisiana. I yield with the understanding that my right to the floor will not be prejudiced.

Mr. MANSFIELD. With that understanding, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. LONG of Louisiana. Mr. President, last year Mr. Khrushchev told us that his nation would bury us. When he visited our Nation in the fall, he revised his statement to mean that communism would displace capitalism just as capitalism replaced feudalism some few hundreds of years ago.

Thus was given a meaning to the term "peaceful coexistence" which both sides should be able to understand. It does not represent a lasting thing. It is a mere time lag before communism overcomes capitalism or capitalism overcomes communism. Russia is the center and the prime example of one system. The United States is the center and the principal exponent of the other.

The decision, if it is to occur peaceably, will probably depend upon how well each proponent makes his system work during the next 20 years. If peaceful coexistence ends in war, then the outcome—assuming that either side survives—will depend upon the scientific and technical progress achieved by the two powers during the next 5 years.

In either event the period of decision is very brief when viewed in perspective. We here in Congress during this year and the next year will make a few decisions which may determine the outcome. Strangely enough, the deciding votes as in most controversial issues will be cast by Senators and Representatives who, at this moment, have little, if any, understanding of some of the basic issues upon which they will vote.

Yet their votes, and a rather small number of presently uncommitted votes, will probably decide whether this Nation will improve its way of doing things to assure survival and victory for our system, or remain static while defeat and destruction overtake us.

One of the changes which the survival of our system requires is a change in the patent policy of the Department of Defense.

Mr. President, for almost 2 years, the Monopoly Subcommittee of our Small Business Committee has been studying the patent policies of the departments and agencies of the Federal Government and the effect of these policies on rate of growth of our economy and on the competitive, free-enterprise system. Our study culminated in 3 full days of hearings on December 8, 9, and 10, 1959. As the chairman and only Senator present at the hearings, I would like to report my conclusions.

1. EXTENT OF TOTAL AND GOVERNMENT RESEARCH AND DEVELOPMENT

During 1959, $7.9 billion[1] of a total of $13.2 billion[2] or 60 percent of all research and development performed by industry was financed by the Federal Government through research and development and procurement contracts. Of this amount $6 billion was spent by the Defense Department alone.

This was in contrast to the comparable figure in 1953 when $1.4 billion of a total of $3.7 billion or 37 percent was performed by industrial firms for the Federal Government.

In 1957—and these are the latest figures available[3]—of all research and development conducted in the aircraft industry, 85 percent was paid for by the Government. In the electrical equipment industry the Government paid for 61 percent of all research; in electronics, 54 percent; in fabricated metal products, 38 percent; machinery (except electrical), 38 percent; scientific instruments, 30 percent; petroleum refining and extraction, 4 percent.

2. INTERRELATIONSHIP OF RESEARCH FOR DEFENSE PURPOSES AND FOR CIVILIAN USES. ADVANTAGES OF GOVERNMENT R. & D. CONTRACTS

We should recognize the close interrelationship of research for defense purposes and for civilian uses. Industrial research has produced items invaluable for use in the Defense Establishment. Equally, defense research has resulted in the creation of products and the accumulation of technology with highly profitable commercial application. Processed foods, electronic devices, and penicillin, to list only a few present-day commercial products, were all originally developed under research and development programs for defense purposes.

The disproportionate share of total industrial research and development in the largest firms foreshadows a greater concentration of economic power in the future, for the benefits derived from Government-financed research, in addition to the profits[4] resulting in the performance of research and development and procurement contracts, are literally incalculable. As already stated, technological developments and know-how, resulting largely from the use of Government funds, have a multitude of commercial applications. Technological developments in new materials—that is, synthetic rubber, aviation gasoline, plastics, and other synthetic materials, plywood, magnesium, aluminum, alloying elements; new methods—that is, in joining of metal by riveting, welding, or stretching, in heat-treating procedures, in metal spinning, in powder metallurgy, in casting, in metal spraying, and in inspection; and new products—that is, aircraft design, bombsight and navigation devices, jet propulsion, gas turbines, radar, processed foods, penicillin, and other antibiotics, DDT, electron microscope, and numerous other developments in the electronics field have made their appearance as a result of research supported in whole or in part by Government funds. The independent commercial contractor, therefore, undertaking to perform research for the Government—except AEC—receives over and above his fees, all the financial and competitive advantages of the commercial applications of inventions, research on which has been paid entirely or in part out of the public purse. This leaves his own research allotments free for concentration on other products. A specific example is provided by the American Optical Co. which is selling a new type of lightweight sunglasses with straight sidepieces designed to slip on and off easily, but to remain firmly in place when worn. A $367,000 Air Force research and development contract financed development of the glasses, originally made to be used by fliers while wearing radio headphones.[5] And this is not all, for the firms doing research for

[4] Over 90 percent of research and development contracts (in dollar terms) were on a cost plus fixed fee basis so there were no risks involved.

[5] Wall Street Journal, June 10, 1959, reprinted in the CONGRESSIONAL RECORD.

the Government in addition to enlarging their capacities from practical experience to use advanced knowledge, get an additional payoff from the byproducts of specific research projects, in the form of technical know-how, for example, in the development of less expensive production methods. Such scientific capital may be acquired wholly or in part at Government expense. An important competitive advantage thus accrues to the contractor.

The role of research and development in our national defense is, of course, a vital one. A good look at those things orbiting in the heavens is sufficient demonstration. The American people, through their Government, are making sacrifices measured at $8 to $9 billion a year to bring scientific knowledge into being.

What is happening to this knowledge, and to the inventions and discoveries resulting from it?

Are they being used efficiently to bring about a better life and greater security to the American people and to mankind?

Or have those in positions of public trust—whether through stupidity or insincerity—betrayed the interest of the American people?

3. GOVERNMENT PATENT POLICIES

There is no one Government patent policy. Various Federal agencies and departments have sharply varying policies with regard to taking title to patentable inventions made under research and development contracts with private organizations. The law requires that the Government take title to all inventions resulting from Government-financed research, as in the case of the Atomic Energy Commission, National Aeronautics and Space Administration, and the Department of Agriculture. Congress created this policy by statute. Other policies go to the extreme of automatically giving away all commercial rights to the firm doing research, as in the case of the Department of Defense, the Post Office Department, and the National Science Foundation. This type of policy has been adopted wherever administrative discretion was permitted.

There appears to be a conflict of philosophy between the law and its administration. In those instances where the law is silent, as in the patent policies of the Department of Defense where most of the money is spent—discretion has always been exercised contrary to the congressional philosophy as expressed in the Atomic Energy Act, the National Aeronautics and Space Act, and other legislation where by act of Congress a patent policy has been laid down. The current policy of the Department of Defense, the largest spending agency of the Federal Government, is to require for itself only a nonexclusive, worldwide, irrevocable, royalty-free license under patented inventions developed through Government-financed research, leaving exclusive commercial rights in the hands of the contractors themselves.

While the issuance of a patent, of course, does not guarantee the commercial value of the inventions covered, this much, at least, is clear: a large number of inventions have resulted from Department of Defense-financed projects, the commercial rights to at least, 6,788 remaining in private hands as of 1956. These are inventions which research and development contractors, after careful screening by competent counsel, believed to be patentable and of sufficient commercial utility to be worth the expense of patent processing. With the rising trend of Government expenditures for research and development, the number of such inventions is bound to be larger in the future.

We should really not be surprised to find the Department of Defense policies to be what they are, for those who were responsible for these policies came from and usually went back to big business. This has been true whether we have had a Democrat or a Republican in the White House. Such names as Gates, McElroy, Wilson, Lovett, and Forrestal are known to all of us. The policies would appear to be a somewhat natural result of the normal thinking of a big businessman on loan from industry.

For a private concern to make large profits is certainly within the concept of our American ideals. On the other hand, it is certainly not within the concept of our ideals for the Government deliberately to create and finance a monopoly so that the public will have to pay higher prices and willing businessmen will be excluded from very profitable industries. For public officials to create such policies should be a good reason for retiring them to private life.

Some policies are also the result of extreme pressure put on the Government at times of national emergency. During World War II, the Office of Scientific Research and Development [6] used a short-form contract with private businesses which gave to the Government title to discoveries resulting from public funds. Being a time of war, however, with our country locked in a life and death struggle with the totalitarian powers, the Government found itself over the proverbial barrel. Business firms, in many cases, refused to perform research and development vital to our defense effort and to our very existence unless they got all rights to the work they did, even though the Government paid for it. The Government surrendered and started using the so-called long-form contract, which gave all commercial rights to the contractors working in the war effort. This amounted to the Government's granting some firms a monopoly in certain fields and could well be described as a more extreme form of extortion. No previous patents or proprietary rights were involved at all.

Another example of extreme pressure being put on the Government is in the case of the cancer chemotherapy program of the Department of Health, Education, and Welfare. Cancer is the second most serious killer in the United States. Great pain often accompanies this dread disease. Our Government and other private organizations have embarked on a research program to alleviate the suffering which results from cancer and to try to conquer it. Yet the drug companies refused to cooperate with the U.S. Government in a cancer program unless they received exclusive rights to everything they discovered with public funds [7] even though the traditional policy of the Department of Health, Education, and Welfare is to dedicate to the public every invention and discovery resulting from expenditure of public funds.

4. STANDARDS OF JUDGMENT

By what standards should patent policies be judged desirable or undesirable? These standards can be suggested in simple form by the following sets of questions:

First. Does the policy tend to accelerate the rate of scientific achievement?

Second. Does the policy encourage economic growth? Does it direct adequate, but not excessive, resources to research and development activity, basic research in particular, and to the productive process? In other words, does it promote efficiency in the economic system, providing the consumer with the goods and services he requires at the lowest possible prices?

Third. Does the policy tend to promote and maintain a competitive society? Or does it tend to promote monopoly, setting up a system of private control?

Fourth. Does the policy promote social and economic justice?

The subcommittee's original purpose was to investigate Government patent policies from the point of view of the latter two standards. We were anxious to determine the effect of the policies on our competitive system and small business. During the course of our investigation, however, we discovered a situation which went far beyond the problems of competition and small business, but concerned our very national existence. We can survive monopoly and high prices. We have done so in the past 7 years. But we cannot afford to sit back complacently and suffer the consequences of frozen scientific knowledge and the hoarding of invaluable technical information which are the natural result of the Defense Department's patent policies. It is this subject which I find so disturbing.

For this reason I intend to discuss the first two standards in this speech and to speak at a later time on the economic and social aspects of the problem. In all cases, my conclusion demands the same answer.

5. REVIEW OF POLICIES

A. Patent policy, scientific progress, economic efficiency, and growth:

The first two standards of judgment we set up to judge our patent policies relate to whether the policies tended to promote or impede our scientific achievement and growth in our national output.

---

[6] "Atomic Energy Act of 1946," hearings before Special Committee on Atomic Energy, U.S. Senate, 79th Cong., on S. 1717, 1946, pt. 3, pp. 332–333.

[7] "Hearings on Patent Policies of Departments and Agencies of the Federal Government," before the Monopoly Subcommittee of the Select Committee on Small Business, Dec. 8, 9, and 10, 1959, testimony of Parke Banta, General Counsel of HEW, pp. 355–364.

As might be expected, there is a divergence of opinion on this subject in the testimony and statements supplied to our committee. Some asserted that the policy of giving away all commercial rights to Government-financed inventions promotes growth, economic efficiency, and general welfare, while others advanced the opposing view.

The position of the Department of Defense, the chief proponent of this giveaway program, is that first, it is necessary to give exclusive commercial rights to a private firm to insure that the Government-financed invention is produced for civilian consumption; second, that putting an invention into the public domain, by making it available to anyone, will discourage investment; third, that the rate of increase in productivity and national output would be retarded; and fourth, that if exclusive commercial rights are not given to the contractor the cost of the contract to the Defense Department would increase and some firms would be reluctant to take the contracts.

Let us see if these points are justified.

First. The argument that a patent monopoly is necessary to bring about the production of civilian products is contrary to the facts. An examination of the industrial sector of our economy shows that food and beverage processing, tobacco and furniture manufacturers, transportation, housing, automobiles, and those commodities which account for the largest part of consumers' expenditures, lie outside the patent field.

Products and markets are developed all the time in fields where there is no patent protection, and the required outlays are made partly because producers must keep up with their innovating competitors if they want to stay in business, partly because they believe that the natural headstart which their own innovation gives them over their competitors will allow them to recover the expenses of developing the products and markets. If there is a demand for a product, businessmen will produce it—patent or no patent.

The lack of exclusive rights has not discouraged the entry of firms into color film processing. Another case in point comes from the manufacture of block-making machinery. Within 4 years after the entry of an antitrust judgment in the case of the United States against Besser Manufacturing Company et al., a total of 13 licenses were issued for the manufacture of this machinery. The price fell from the prejudgment price of $53,000 per machine to $32,000, a 40 percent decrease in price. These 13 new companies did not seem to be deterred by a lack of patent protection.

For a final example, consider the result of the consent judgment of January 1956 withdrawing patent protection from IBM: [8]

> Many companies, both large and small, availed themselves of the rights granted under the provisions of the judgment. In 1957, for example, IBM granted 83 licenses under the judgment; and in 1958, it granted 31 judgment licenses and furnished technical information under the judgment to 31 applicants in response to 137 different requests. There are today numerous small firms manufacturing tabulating cards and at least two firms manufacturing presses on which such cards are made.

As of last summer, at least 15 companies were producing machines which were competitive with those of IBM, and these included such established companies as RCA and Burroughs Corp., as well as newcomers such as Epsco Corp. Now, how has competition affected the operations of IBM? Its profits for the first 6 months of 1959 were up 27 percent over the first half of the preceding year, and this is because of the rapid expansion of new markets for the machines developed by IBM and its competitors.

> Data processing machines now track and guide rockets and earth satellites, operate giant lathes and milling machines in the manufacture of intricate metal parts for jet engines, track the location and contents of railroad freight cars, and prepare bills for the customers of the largest public utility companies.
>
> Competition in this industry, created in part by the consent judgment, has apparently forced down the prices. IBM reduced its prices an average of 15 percent in January 1955 and its competitors are now advertising that they will undersell IBM. In short, the public, the new competitors, as well as IBM itself, have benefited from the newly created competition in this industry.[9]

Second. The argument that putting an invention into the public domain will discourage investment and hence exploitation of Government-sponsored inventions is really an extension of the previous argument and is even less in accord with reality. An examination of the records of the Tennessee Valley Authority, the Department of Agriculture, and the Department of Health, Education, and Welfare will disclose that businesses do take licenses and produce items for the civilian market even though there are no exclusive commercial rights. A good example is the patent on the development of frozen orange juice concentrate which was developed cooperatively with the Department of Agriculture and the Florida Citrus Commission at a cost to each of about $70,000 [10] and which now has wide use. This development has returned to the farmer in the 1958–59 season alone around $120 million for oranges which are now processed in frozen orange concentrate. There are, I believe, more than 50 small businesses producing the orange concentrate today.

The Aerosol bomb is another good example of a publicly developed and publicly owned invention which has been put to great use by industry. The Aerosol spray principle has been used on everything from furniture polish to shaving lather. Licenses for the production of fertilizers and insecticides have been secured and have been exploited.

On the other hand, allowing private firms to keep patent rights gives no assurance that an invention will be exploited. The biggest companies, those that get over 96 percent of Government research and development dollars, have used or are about to use only 50.6 percent of all the patents held by them. The corresponding figure for smaller companies, which get less than 4 percent of Government R. & D. dollars, is 75.5 percent.[11] For industry as a whole, the overall average estimate of used patents would be 52.2 percent.[12]

All concrete specific evidence that I have been able to uncover leads to these conclusions: (a) it is not necessary to give exclusive commercial rights to one firm to insure that a particular item is offered to the public. (b) That dedicating an invention to the public does not by any means discourage investment. This is in direction contradiction of the contentions of the Department of Defense. Why is it that examples showing the contrary are not found? This is certainly worth considering. (c) The argument that the rate of growth will be retarded if the Government takes title to Government-sponsored inventions, is a conclusion flowing from the previous two arguments that a patent monopoly is necessary to bring certain products into production. Since these two arguments have been shown to be without merit, the conclusion shares the same fate.

In fact, I shall show that the effect would be just the opposite; that the rate of growth of our national output and of our scientific achievement could actually be accelerated by adopting patent policies similar to those of the AEC for the whole Government. The reason rests on the fundamental fact that the diffusion of scientific knowledge throughout our society is a prerequisite for scientific and economic progress and a rise in general productivity. Is scientific information readily available to all sectors of our economy at present? The American Society of Mechanical Engineers does not seem to think so.[13] They have become so alarmed at the lag in applying science that they have started a major study of the problem. The president of the society, Mr. Warren, a vice president of the General Electric Co., characterized the delays in the dissemination of scientific knowledge as dangerous, and said they constitute our greatest single handicap in competing with the Soviet Union. "There is no real evidence that Russian science is seriously outpacing ours," Mr. Warren said, "but it may well be true that the Russians are putting their scientific progress to work faster than we are." Mr. Fenton B. Turck, who is heading this study, estimated that half of the billions of dollars poured into American scientific research was wasted because "the flow of scientific findings to industry now runs like molasses." He said that the timelag, long recognized, was caused by a combination of stupidity, resistance to change, and—mark this—vested interests. "Reduction of the present timelag," Mr. Turck said,

"is the cheapest and easiest way to advance our status, both from the defense standpoint and in an effort to improve our competitive position in the economic world." He emphasized that the dangerous timelag applied to military research and development as well as to production of consumer goods, and that the gap can be narrowed in weapons development.

Mr. President, I am led to conclude that the present policies of the Department of Defense and the National Science Foundation are serious impediments to the creation and dissemination of new knowledge.

These policies are retarding the rate of our scientific advance and are undermining the very security of our country.

Why is this so?

First of all, by giving away all commercial rights to Government-financed inventions, the Government itself is offering commercial incentives for putting more resources into applied scientific research as against basic scientific research. Here is another example of contradictory policies of the Government. On the one hand, the Government is discouraging the allocation of scarce resources to basic research by offering commercial incentives to go into applied research. On the other hand, the chief function of the National Science Foundation is to encourage basic scientific research to discover new scientific principles.

Secondly—and this is the crucial point—the policy of giving away to private firms the patent rights to Government-financed inventions and discoveries tends to erect walls between scientists and to prevent a free interchange of information. Given its present patent policies, the Defense Department's $6 billion of research and development contracts are actually providing incentives to industry to withhold scientific and technical knowledge.

James M. Jagger, personnel director of Arthur D. Little, Inc., a well-known research and development concern, describes the conflicting attitudes in industry of scientists and management.[14]

If a breakthrough is made in industry, the company wants to keep it from the competition, but the scientist wants it published. He's interested in the recognition of his peers and colleagues, not profits.

According to the Wall Street Journal,[15] most companies require that all their researchers' writings be cleared with management before publication; and competitive situations or patent problems occasionally delay or prevent publication. The same article quotes a scientist who hit upon a new idea in the physics of glass forming, which was a definite advance of the art, but the company was not willing to let it out.[16]

In our technological era, a scientist absolutely must have available vast stores of information. How can a scientist working on a rocket design make the best use of his time if he cannot learn the latest information on fuels or the present state of development of metals from which he can construct the rocket?[17] How frequently does the scientist cut short his investigation of the findings of other scientists because the information is not readily available to him? How frequently does he have to duplicate effort? It is estimated that from 30 percent to 85 percent of valuable scientific time is wasted because of duplication of effort.[18] A large part of this can be ascribed to the tendency of private enterprise to withhold scientific and technological data until it can be exploited or patented.[19]

The Atomic Energy Commission policy, on the other hand, has insured the most rapid dissemination of all discoveries. There is no incentive to keep them secret.[20]

As Senators probably know by this time, the Administrator of the National Aeronautics and Space Administration is eager to change that agency's patent policies to give its Administrator more discretion in retaining or giving away rights to the results of research sponsored by the public. We know what can happen to the public interest when an administrator has greater discretion.

One of the objectives of our space program as set forth in the National Aeronautics and Space Act of 1958 is "to avoid unnecessary duplication of effort, facilities and equipment." [21]

NASA's presently expressed desire to change its patent policies, then, will bring about those very conditions which Congress expressly sought to avoid.

Let me read from the statement of one of the witnesses at our hearing:

How does the mode of control over research and the disposition of new knowledge affect the efficiency of research effort? For this problem it is useful to estimate the research efficiency of men who operate under two different orientations: First, those who act on behalf of the whole society in their work. In that case, the research criterion is knowledge as an end in itself. The men so guided are not limited in the scope of their search for new knowledge by the particular requirements of any one unit or section of society.

Another possible orientation in research is activity on behalf of the interest of, say, a particular firm. In that case the special defined interests of the firm, as against the other firms, must be a guiding criterion. These different vantage points affect the scope of inquiry, the readiness to publish research findings, and the ability of investigators to cooperate freely with other men doing parallel and related work in other laboratories or institutions. Who will be freer to explore the frontiers of knowledge? Who will more readily publish and circulate new knowledge? Who will be more daring in the application of knowledge to new designs—the men who act on behalf of the restricted goals of a single firm, or those who act on behalf of the goals of a whole society?

In my opinion, it is the men who are empowered to act on behalf of the wider interest who will be least encumbered, and thereby more efficient, in the conduct of inquiry.[22]

Mr. President, the Soviet industrial sector is growing at an average annual rate of about 7 percent. I have seen some contest made of this figure, but recently I was impressed when Douglas Dillon said it was 8 percent. The American economy has in recent years been developing at a disappointingly slow rate. Even before the latest recession set in, the Federal Reserve index of industrial production had risen by only a total of 7 percent in the 4 years from 1953 to 1957.[23] The present patent policy of the Defense Department contributes to this result in that it erects barriers between investigators, encourages them to keep new knowledge secret, and impedes the flow of knowledge, resulting in a retardation in the rate of our economic growth, and a weakening of our position.

By contrast, the field of atomic energy is one of the very few areas in which the United States has been and is still preeminent. It is in this area that the public through its Government acquires all rights in inventions and discoveries. It is in this area that the Government acquires rights in the scientific and technological data to use them as it sees fit. It is in this field that the Government has avoided the granting of special privileges and preferred positions to contractors.

Research today is characterized by a very fine division of labor, both within firms and among firms. Scientists and engineers in private firms try to acquire the latest discoveries as rapidly as possible, especially those in the public domain. They read journals and go to conferences. They go to great lengths to acquire new knowledge, drawing knowledge from the common pool. But how about adding to the pool?

One of our witnesses described the difference with a concrete example of a "very major laboratory" in this country. He found that this firm had the most elaborate facilities—special bibliographic services and library facilities—to extract scientific information from hundreds of journals. They did this to save a lead-time of only 2 weeks in the publicly available abstract service. To save 2 weeks, it paid to operate a rather large and expensive facility.

On the other hand, the outgo of knowledge from this firm was quite different. Taking the data of the last 5 years of the papers published in the scientific literature by employees of the laboratory, the investigator found that there was a period of 3 to 5 years that intervened between the private circulation of these research reports inside the

[23] This is only a 4-year period, using 1953 as a base.

firm and the public availability of these reports. In summary, it paid this firm to make a large outlay to gain 2 weeks in the "intake" of knowledge, but there was a 3- to 5-year period for knowledge to get out—and plenty of it never did get out.

Why is this to the disadvantage of the public?

The fruits of research of one firm are often external economies to other firms, allowing them to become more efficient, to adopt new processes and techniques, to use new materials. To the extent that the results of research do not flow rapidly into our industrial system, the public is deprived of the full benefits of that for which it is paying. The present system encourages such a situation in that many companies engaging in research keep their research findings secret until the new knowledge is put to practical use and the results are patented.

This kind of behavior is perfectly reasonable for a private firm desiring to maintain or increase its market position. But it is not to the benefit of either the U.S. Government or society as a whole. There is no reason why the Government should promote such a situation by its policies.

Fourth. Let us now examine the argument that if exclusive commercial rights are not given to the contractor, the cost of the contract to the Defense Department and other agencies would increase and some firms would be reluctant to take the contracts.

Whether the cost of research and development contracts would increase is difficult to say. Inquiry at the AEC indicates that it does not pay any more for comparable research and development than the Department of Defense, even though the patent policies differ. There is no place to add such an additional consideration into the cost part of the contract and it would not affect the fixed fee. Most of the contracts are of this type.

The Aerojet witness at our hearings stated that it would probably not cost the Government any more,[24] and a small company witness agreed.[25] The Lockheed witness disagreed and stated that it probably would cost more.[26] Both witnesses would have a financial stake in keeping the patent rights. Under court room rules of evidence, as the distinguished junior Senator from Mississippi [Mr. STENNIS], a great former judge, well knows, the Aerojet statement could be held admissible as an admission while the Lockheed statement could be ruled out as a mere self-serving statement. But let us accept both statements for the sake of argument.

None of these companies would have refused to accept a research and development contract if the Government had insisted on retaining all rights, according to the witnesses.

This is to be expected. The tremendous advantages of Government research and development contracts, already discussed, cannot be ignored. What would be the alternative for a company like Aerojet whose business is 100 percent with the Government? Or Lockheed whose business is 45 percent with the Government? The answer is obvious.

But coming back to costs for a moment, even if there is an increase in costs—and I doubt that there would be—we should be prepared to pay it.

Every system has a cost. The present system has a cost. It may not show up in the cost of Government expenditures on research and development, but it certainly does show up in the cost of the lower rate of diffusion of inventions and the higher prices associated with exclusive commercial rights. These are real costs.

Another real cost to society is described by one of our witnesses:

> It must also be remembered that the granting of patent rights involves a wastage of whatever resources competitors use to "invent around" the patent in order to enable them to compete with patents in the same market. Too, it is not uncommon for patentees to devote considerable resources to the quest for patentable alternative solutions, even inferior ones, in the hope of "fencing in" the original patent.

I do not know whether the Senator from Tennessee [Mr. GORE] has had a chance to look into this "fencing in" problem, but when he does he will find it to be a very interesting subject.

The term "fencing in" as used in this context, means inventive effort for the purpose of obtaining patents on all possible alternatives of an existing patented invention just in order to "block" a possible competitor from "inventing around" that patent, or securing an improvement patent on competing machines to prevent them from reaching an improved stage. An interesting example of this type of activity can be found in the TNEC hearings, pages 387 to 395. In this case, the Hartford-Empire Co. developed and patented—as company policy—any machine which could possibly be used in the manufacture of glass containers. Although they did not plan to use the patented machines themselves, they wanted to make it impossible for persons to use even less economical methods to bypass the Hartford machines. This company also secured patents on devices which were merely improvements on devices covered by someone else's patents, thus stifling improvements on the part of everyone else.

The purpose in developing these later processes was not to promote the progress of science and useful arts, but merely to increase the tribute the public would have to pay the Hartford-Empire Co.

As our witness pointed out:

> It hardly becomes a National Government interested in promoting progress and growth to aid and abet in these resource-wasting activities by granting patent rights to firms performing research for it, especially when nothing is obtained that might offset these drawbacks.[27]

In view of the scarcity of imaginative scientists and the abundance of unsolved problems, how can we justify—from a national point of view—the use of scarce research resources for seeking alternative solutions to problems which have already been satisfactorily solved?

When so many inventions and discoveries which could be of great benefit to our people—to all people—are waiting to be made, how can we justify the assignment of a research force to search for inventions that are not intended for use at all—but merely to erect barriers to possible competition? This is especially unjustified when the public is paying for wasted effort, the only purpose of which is to make the public pay a still higher price for something that the public has already paid for twice—first for the discovery, second for the cost of maintaining the private patent monopoly. Such wastage of resources is an important cost which certainly cannot be underestimated.

Finally, we should not forget the cost to the public resulting from well-known past abuses of the patent privileges both in terms of growth and national defense. Many of the firms who had been guilty of the worst kind of patent abuses in the past are now among the most favored major Government research and development contractors.[28] The granting of patent rights by the Government to these firms continues to expose the public to the various potential abuses without providing us with any compensating advantages.

What about the argument that some firms would be reluctant to take a Government research and development contract? This need hardly detain us, for this is an irrelevant consideration. Some firms will be reluctant to take a Government contract for any number of reasons. The important point is that there are competent firms willing to do the work. To this the Department of Agriculture, the Department of Health, Education, and Welfare, the Atomic Energy Commission, and the National Aeronautics and Space Administration testified. This is the relevant consideration. The more greedy and less patriotic will get in line when they discover that others will take their place if all Government research and development work is placed on the same basis.

Frequently I have to ask myself, "Whom do these Government agencies represent? Do they represent 180 million Americans, or do they represent particular business interests?"

I was shocked when the representatives of Department of Defense without hesitation stated before our committee that they have no interest at all in the possible effects of their policies on the public as consumers.

Mr. President, the employees of the Defense Department are the employees of all the people of this country. All the people pay their salaries. When a license is secured, when a very valuable right is given away, the Government employees at the Department of Defense do it on behalf of all the American people. Yet they prefer to take the attitude

[24] Op. cit., pp. 78–79, 91.
[25] Op. cit., pp. 24–26.

[28] G.E., for example: "Economic and Political Aspects of International Cartels," a study made for the Subcommittee on War Mobilization of the Committee on Military Affairs, U.S. Senate, pp. 12–13. (This book is filled with examples.)

that rights valuable to the public are valueless insofar as they exceed the requirements of the one Department. The responsibilities of that Department are especially great because of the vast resources which have been entrusted to them by our citizens.

Businessmen, former procurement officers, research technicians, and present personnel of the executive branch of the Government, who share my conclusions, keep making a point which deserves mention here. When these very corporations who seek contracts to do research for the Government employ their own scientific and technical staffs, they require an ironclad contract to assure them that all patent rights will belong to the employers. In other words, when the scientist takes his job for the contractor, he agrees to turn over to his employer all proprietary rights resulting from his work.

Any board of directors would probably fire its management officers if they failed to protect the company's interest in such valuable discoveries as those for which the company has paid. If the contractor hires subcontractors, in most instances the company will itself require that the subcontractors must turn proprietary rights over to the prime contractor. Inasmuch as the prime contractor is himself an employee of the U.S. Government, what justification could he have for objecting to the same conditions of employment which he requires of all those who work for him? In this instance, the same condition of employment would be the requirement that patent rights and other proprietary rights to "know-how" resulting from the Government contract should reside in the Government which pays the bills.

Admiral Rickover made to me the further point that, even though scientists and engineers who work for Government contractors realize that, in the last analysis, they are, in fact, working for the U.S. Government, in its quest for survival, the fact that their salary is received through a contractor does not diminish their zeal to provide this Government with the discoveries and secrets which could be so important to the survival of our people, as well as to the improvement of human conditions around the world. The interest and incentive of the average scientist or engineer employed by Government contractors are not really different from those that motivate the men employed directly by the Government.

Nothing in this speech should be interpreted as an attack upon the existing private patent system which exists in favor of persons who do their own inventing at their own expense. The policy I am advocating is merely that the Government, in dealing with private corporations, should conduct itself in much the same fashion as the fashion in which those corporations would act if they were in the position of the Government and were dealing for their own account. Recently, I discussed this subject matter with an executive of one of America's largest companies, who had acquired familiarity with the problem during his wartime service with the Government. He was familiar with both sides of the coin. When pressed for his personal opinion, his answer contained what I regard as the inescapable logic of an honest businessman. "If the Government pays for the research," he said, "then the rights should belong to the Government."

If we were to attempt to calculate on the high side what the ultimate cost to the consumer could be, taking into consideration the extremely high prices which can be charged by those who have legalized monopolies, enjoying patent protection over long periods of time, the figure would stagger the imagination.

The value of these patent rights and other proprietary rights associated with Government research and development contracts is difficult to compute. Generally speaking, however, advocates of research contend that the only way money can be lost is to do the research on a small scale. It is contended that when research is done on a large scale, the researcher will always find enough to justify the expenditure. Sometimes he fails to find what he is looking for, but discovers something far more valuable. On that basis, it would seem fair to conclude that the patent and proprietary rights to Government-financed research would be worth as much as the Federal expenditure itself. It should be a very safe guess to estimate that the commercial patent rights resulting from Government-financed research would at least exceed one-half of the amount the Government pays to have the research and development done. On this basis, it would appear that we are probably giving away annually, at least $3 billion worth of patent and proprietary rights.

The point of the matter is that these patent and proprietary rights for commercial application of Government-financed research are matters which some of our Federal administrators would desire to fritter away, on the theory that they are of no interest to the Defense Department or other Departments of Government. Yet, these rights properly belong to the Government. Over a 20-year period, this giveaway program could well cost the American consumers more than $100 billion.

It hardly behooves officials of this Government to take the attitude that property rights, so valuable or so costly, depending upon the point of view of the person who is getting or the person who is paying, can be given away because the interests of a single Department of the Government have been protected.

7. SUMMARY AND RECOMMENDATIONS

Mr. President, I have given this problem considerable thought. I must confess that I find very little merit in the policies of the National Science Foundation, the Post Office Department, and the Department of Defense. I have found their proponents entirely unconvincing. Their arguments sound like mere rationalizations for the maintenance of established vested interests. Their disregard for the public interest—the interest of all of us—is no less than shocking.

We cannot afford the fantastic waste of resources. This can cost us our national existence; and congressional action is needed now, during this session.

Since this subject, with its many ramifications, cuts across the activities of many committees: the Armed Services, Small Business, Atomic Energy, Space and Judiciary Committees, and since this is a subject of great importance, perhaps it should be handled by a special committee.

For my part, I should like to recommend the establishment of a special temporary committee to study the effects of Government patent policies on our scientific, technical, and economic progress and on the structure of our economy. This is a congressional duty, and we cannot ignore it in good conscience.

I should like to commend the Atomic Energy Commission for withstanding the pressure put on it to change its policy.

The National Aeronautics and Space Administration has been placed in hands which seek to capitulate to the vested interests. It is now trying to change its policy, so as to have it conform with that of the Department of Defense. The given reason is that many firms do business with the Defense Department, as well as with NASA, and it is unfair to treat them differently with respect to patent rights. NASA feels that it is, therefore, necessary to change its policy.

Why NASA should feel this way is beyond my comprehension. Why not change the Department of Defense policy to conform to that of the National Aeronautics and Space Administration? Better still, why not have a uniform governmental policy similar to that of the Atomic Energy Commission? This is the direction in which we should be going. From the standpoint of social and economic justice, it is the only logical direction. From the standpoint of growth, efficiency, the maintenance of a competitive society, and the defense of our country, it is essential that we stop this giveaway program. To this end, I submit an amendment, which I hope the committee will be able to accept, to move in just that direction. The amendment is designed to carry into effect such a policy, and to provide for its administration in the public interest, as well as to provide a new stimulus to invention and discovery which we need at this time.

In an article in the Sunday Star of January 10, it was stated that NASA is faced "by a threat of a 'sitdown' by industry," and that "a number of companies, large and small, have adopted specific or general rules against doing business with NASA."

According to the Washington Daily News of January 14:

> Aircraft and missile companies * * * backed by a bevy of patent lawyers have banded together to demand repeal of the patent section of the act.
>
> They have even threatened to boycott the National Aeronautics and Space Administration by refusing to sign contracts with it unless these patent restrictions are lifted.

The leader of this boycott appears to be the General Electric Co., one of the largest manufacturing concerns in the world. This very company within the past year came running to the Government, urging it to erect tariff walls to keep out competition, so it could charge higher prices with impunity.

Incidentally, a short time later it had to lower prices considerably to meet the competition. It was forced to find more efficient ways to manufacture electrical machinery. Can anyone say that the public interest has suffered because of these lower prices?

Why is this giant company afraid to compete? Why does it need the power of government to exclude competition? Are not its huge size and great market power sufficient to keep it ahead of its competitors? How does GE's attitude square with the idea that large companies do not need patents?

Since the General Electric Co. is very anxious to have title to inventions resulting from space contracts, let us examine its past patent record. And what do we find?

First, as a result of a patent pooling arrangement between General Electric and the Krupp Co., of Germany, tungsten carbide, which had been selling in the United States, in 1927–28, at $50 a pound, rose promptly to a maximum price of $453 a pound, or an increase of more than 800 percent. During most of the thirties, the price range was from $225 to $453—against a $50 previous price—and in 1940 the maximum price was still $205 per pound—which would appear to be at least four times the cost of production. In April 1942, after an indictment under the antitrust laws, the price ranged from $27 to $45 a pound. The cost of production was $8 a pound. Imagine, something that cost $8 a pound, is being sold, under a monopolistic agreement with the Krupp group, at $453 a pound, against a cost of $8 a pound—50 times the cost of production, until the Justice Department broke it up. The effect of the high price was evidently to discourage the development of tungsten-carbide technology.[29]

Second, under international patent cartel agreements in the thirties, the American market for electric light bulbs was reserved for GE and Westinghouse. Protected from foreign competition, these companies downgraded the quality of electric light bulbs to make them burn out faster in order to increase their business. This was done without informing the consumers and without giving the public an opportunity to choose between more efficient and more durable bulbs.[30] According to computations by the Department of Justice from figures supplied by the General Electric Co., from 1935 through 1939, GE's net profit on incandescent lamps varied from 64 percent to 88 percent of total costs of manufacture—which is a very high profit—and from 33 percent to 47 percent of the net worth of the company's lamp-producing investment.[31]

Mr. President, I wonder how many persons who broke their backs climbing stepladders in order to change bulbs, and exposing themselves to the danger of being electrocuted, knew that they had to change the bulbs because of the international cartel into which General Electric had entered? Chances are the people would file suits to recover the cost of medical services incurred as a result of their broken backs if they knew they would not have had to climb ladders to change bulbs and take the risk of being electrocuted if General Electric had not, against the law, entered into an arrangement which I think even a majority of big businesses would find it difficult to approve.

These are only two of dozens of examples available in the public record where the General Electric Company engaged in cartel arrangements allocating world markets,[32] engaging in policies to preserve and strengthen its market position by discouraging research on the part of other companies,[33] exerting pressure through its control of the American market for incandescent lamps in an effort to obtain control of another company's processes for fluorescent lighting.[34]

To maintain that such activities resulting from patent monopolies promote progress of the arts and sciences would strain one's capacity for belief.

The General Electric Company is also the principal firm of a group of five against whom a Federal grand jury recently brought criminal antitrust charges of rigged and collusive bidding in sales to Government and private industry.[35]

Apparently they only want to do it on their own terms. Deceiving and defrauding the public are not new activities for this company. I am told this same great company has been subject to more prosecutions under the antitrust laws than has any other corporation in America.

Mr. President, I bear no animosity toward the General Electric Company. I have selected this company because it is at present spearheading the drive for greater patent advantages at public expense, and because it provides an enlightening case study of the anti-social uses of patents by the very large companies.

I doubt very much that this company—and that goes for most other companies—would carry out its threat to sever business relations with the Government. I am convinced that if the Government had a firm policy against private patents on all Government research and development contracts, there would not have been any threats or boycotts and we would not have any threat of a big business sitdown.

The boycotts and threats result from the hope that persons who would like to yield to improper pressures will thereby find an excuse to do so.

Suppose this company actually refused to do business with the U.S. Government. There is a good possibility that General Electric's overwhelming dominance would not last very long. In addition, a great number of scientists now working for GE would find employment in firms which have demonstrated a greater interest in our national welfare.

Mr. President, let us not surrender to this pressure. The U.S. Government is not weak and powerless. Its resources are enormous. The American people know where their interests lie, and if only given the facts, will make the right decisions.

Space technology, directly and indirectly, will have enormous impact upon the structure of industry, upon the volume and variety of consumer goods, upon our total national output. At present we can hardly imagine the possible impact upon our lives: where and how we shall live, the kind of work we shall do, and how we shall spend our leisure time.

Although we can hardly comprehend the promise of the space age, we can recognize that the effects will be great.

Mr. President, the question for all of us is who shall control and who shall reap the fruits of our growing capacity to shape our future and our fate? Shall it be the special narrow interests of private firms as against other firms? Or shall it be the people through their Government, ever cognizant of national capabilities and national needs, acting on behalf of the goals of our whole society?

During the delivery of Mr. LONG's speech the following colloquies occurred:

Mr. GORE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield. Mr. President, I ask unanimous consent that all colloquy and other interruptions during my speech may be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER (Mr. MCCARTHY in the chair). Without objection, it is so ordered.

Mr. GORE. As the Senator from Louisiana has so ably pointed out, not only is the knowledge and experience acquired at Government expense, but for the most part it is acquired with a guaranteed profit.

Mr. LONG of Louisiana. That is correct. I believe about 90 percent of the dollar volume of the research and development contracts are cost-plus-fixed-fee contracts. In other words, any businessman who has any knowledge of his business could not possibly be excused for losing money on a contract, because all his costs are covered, and, in addition, he is guaranteed a profit.

Mr. GORE. Calculated in that cost are salaries of the officers and officials who devote their time to the project, or at least such portion of their time that they devote to Government contracts.

Mr. LONG of Louisiana. It includes a great deal more than that. It includes also the kind of ads that the Lockheed Corp. ran in Time magazine for many years. It told all the world, including the Russians, that it intended to develop the Polaris missile, for example. I think that was a mistake, to be bragging about what it intended to do 5 years later. It is much better to produce the weapon first and then to brag about it later.

Mr. GORE. I congratulate the distinguished and able Senator from Louisiana for making a very provocative speech. He has touched upon a vital point of public interest; namely, the open door being held wide open for the acquisition

[29] "Economic and Political Aspects of International Cartels," pp. 12–13.
[31] Op. cit., p. 14.
[30] Op. cit., p. 16.
[32] Op. cit., p. 20.
[33] Op. cit., pp. 33–34.
[34] Op. cit., pp. 38–40.
[35] New York Times, Feb. 17, 1960, pp. 1 and 17.

of very valuable patent rights on information, processes, designs, and methods which have been developed not only as the Senator has stated, at Government expense, but with a guaranteed profit in addition.

Mr. LONG of Louisiana. What we are doing—and it has been going on for some time—is to pay certain corporations to do Government work. In addition to a guaranteed profit over and above cost, those corporations are permitted to take out private patents on everything they develop at the taxpayers' expense.

The traditional way of doing it is that if a man pays for the research and development, he gets all the rights to it. That is how each one of these corporations does business with its employees and subcontractors.

Yet here is $6 billion a year in research and development subject to private patents by these corporations. Twenty of these companies got more than half of the money. So a mere 20 companies are getting patent rights of $3 billion a year of Government research and development.

Whenever Congress has voted on this question with its eyes open, so far as I know, it has pursued the kind of policy which the Senator from Tennessee advocated and fought for when we had the atomic energy bill under consideration in the Senate; namely, that if the Government is going to pay for the research and development, the rights to the patents should belong to the people, who pay for it.

I do not believe that the contractor, acting in the name of free enterprise, should be favored to perform for the Government something which it is fully capable of doing for itself, have access to the patent rights, and proceed to make the public, who paid for the research in the first instance, pay, time and time again throughout their lifetimes, and sometimes throughout the lifetimes of their grandchildren, for the very same patent rights and proprietary rights which the public paid for, to begin with.

Mr. GORE. Mr. President, will the Senator further yield?

Mr. LONG of Louisiana. I yield.

Mr. GORE. The Senator has very generously and kindly referred to the almost historic battle on the Atomic Energy Act of 1954. This was one of the key issues. After a session which lasted several days and nights, around the clock, the Senate accepted, by a large vote, an amendment which preserved to the Government the patent rights in the new and vital field of nuclear science. One of the reasons advanced in that particular instance was that the contractors were privy to information which was held secret from other businessmen and other citizens in adopting a contract. The permission to have the secrets was necessary in order to enable the contractor to perform.

I ask the Senator from Louisiana if that same element of access—exclusive access, in some instances—to defense secrets is not involved in many of the contracts with the Department of Defense.

Mr. LONG of Louisiana. Of course it is. The Senator well knows that most of the information with respect to space science is secret, and that much of the information concerning the development of new airplanes and new weapons is also secret. Only a few persons are privileged to know what that information is. In that respect, they are, of course, guaranteed a profit when they work with it, too. Their competitors are excluded from knowing the information; on the other hand, the contractor is guaranteed a profit when he is awarded a contract.

Mr. GORE. I thank the Senator from Louisiana.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. PROXMIRE. As usual, the able Senator from Louisiana is making an extremely persuasive talk. I am certainly inclined, instinctively, to agree with his position. I have received a number of inquiries from companies in Wisconsin which are deeply interested in the proposal the Senator from Louisiana is making. I am, frankly, very much troubled by some of its aspects.

The Senator from Louisiana himself submitted statistics to indicate how much greater the proportion which the Government spends for research has become in the last 6 years. When he did that, however, I did some calculation and found that whereas in 1953 the Government had invested $1.4 billion, and private industry about $2.3 billion, or a total of $3.7 billion, in 1959, for which we have the most recent figures, the statistics indicate that the Government spent $7.9 billion and private industry $5.3 billion, or a total of $13.2 billion.

We could talk quite a bit concerning the implications of this fact. One is that we are engaged in a tremendous increase in research in this country. I think that is very helpful. Next to investment in education, I think investment in research is the most useful expenditure we can make.

Second, private industry has increased its own investment in research, under these policies, from $2.3 billion to $5.3 billion. That is far more than double the amount spent in 1953, and is a much greater increase than will be found in any other index for this period.

I hope the Senator from Louisiana will correct me as I go along, because I know very little about this subject. Is it not true that what is taking place is happening under policies which have permitted private industry, in most instances, outside the Atomic Energy Commission, to retain the patents which they have developed at Government expense?

Mr. LONG of Louisiana. I believe the Senator will find that the increase on the part of private enterprise for research has been largely in fields where the industry does its own research without Government funds. For example, consider the oil and gas business. One reason why the petroleum industry and the natural-gas industry have less trouble than the coal industry today is that they have had an extensive research program for a long time. The probabilities are that the Government's expenditures to develop liquid fuels is only about 1 percent of the overall total.

I am not arguing, and I shall not argue, that if someone at his own expense proceeds to develop a patentable article, he should not obtain a patent on it. But the position I take is that if he does not do it at his own expense, the Government should take the same attitude with regard to the man who is serving as its contractor as he would take with respect to one of his employees.

Mr. PROXMIRE. I understand the Senator's position. I wholeheartedly agree with the moral argument he is making. However, I am very much interested in the practical results. It seems to me that it is tremendously important to do all that is possible to stimulate research in this country. It is very important for the welfare of small business and big business, and it is also vital and necessary to the preservation of this Republic. We should do all we can to stimulate private incentive for research.

These figures indicate that in electronics it is about 50 percent. The Senator pointed out that last year 54 percent was paid by the Government, and 46 percent by private industry. This work is being done in an area which is exceedingly important for the national defense and for the productive strength of the country.

If we are to adopt a policy which might result in modifying a research program which seems to have encouraged more research, I think we should do so with great care.

I am very much inclined to support—and enthusiastically support—the Senator from Louisiana, and because he is so expert in the field, I wanted to clear up some problems.

Mr. LONG of Louisiana. In the field of electronics, the products which private industry is developing are improved electric blankets, better electric toasters, better electric washing machines—better items for ordinary household use. It stands to reason that private enterprise should spend large amounts of money on research to develop new products of that kind.

On the other hand, when we are trying to develop guidance and control systems, aircraft instruments and similar items, and better radar systems, the Government is the principal customer.

Mr. PROXMIRE. I understand; and that is what we want to do all we can to encourage. But the point made by the Senator from Louisiana, as I understand it, is that if we follow a restrictive policy, there will be less incentive to engage in such research, which is so essential to our defense and also to our economic progress, and that therefore it will be less likely that the same volume of research will be conducted.

Mr. LONG of Louisiana. Those who handle this matter in the Atomic Energy Commission have told us—at least, Admiral Rickover told this to me, and I do not believe he would object to my making the statement public—that the problem is not lack of sufficient contractors. Instead, they have all the contractors they need; an ample number of them are willing to proceed on the basis of cost-

plus contracts. So there is no lack of firms willing to do that work.

Furthermore, the scientists and the engineers who are doing the work, and who will make the discoveries, know, at heart, that they are working for the U.S. Government, regardless of whether a contractor is imposed between them and the Government or not. In other words, one who is working on a guided missile knows he is working for the taxpayers and the people of the United States, and that they are paying the bill for that development; and the fact that there is a contractor between him and the U.S. Government does not mean that he does not regard himself as actually employed by the Government itself. Therefore, he has the incentive to give the country all the aid he possibly can, in connection with the development of such a project.

Mr. PROXMIRE. I certainly agree that insofar as concerns the application of ingenuity, which is the most important ingredient in research, as between working for General Motors Corp. or Lockheed Corp. or some other large corporation, on the one hand, and, on the other hand, working, in a sense, for the Government and for all the people of the United States, there probably would not be much difference, unless it was in the sense of working for the Government alone.

At the same time, the decision as to whether the job will be done or will not be done will not be made by the scientists who work in the research laboratories. That decision will be made by the executive officials of these large corporations. In that situation, is there not a tendency for them not to have that incentive, unless their corporations handle the work?

In that connection, may I quote from article I, section 8 of the Constitution, clause 8, which reads as follows:

> To promote the progress of science and useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries.

They admit this has been impersonalized by using the corporate form of organization. Nevertheless, those who are the real innovators and movers and make the decisions which are so important for our economy are the ones who run the large corporations. If they are discouraged by the policies the Government follows, such policies would be a disservice to our country, for those concerns and their officials must be encouraged to engage in such research, which is so vital to our future.

Mr. LONG of Louisiana. The greatest success our country has had in recent years, vis-a-vis the developments made by other countries, has been in the field of atomic energy. In that field we have not permitted private patents to be taken out on the discoveries made in connection with these Government contracts. I have no doubt that if we follow a policy to the effect that when the Government pays for the research that is done, the Government will own the discoveries which are made, and they will belong to the 180 million people of the United States who have paid for them, all these companies will still be most anxious to obtain as many of these contracts as they can; in fact, they will be virtually "knocking down the door" in their anxiety to obtain as many of the contracts as they possibly can.

Later in my remarks I shall cover some of the points the Senator from Wisconsin has been discussing.

One point is that by permitting these groups to take out, and to keep, private patents, we place a great cash incentive on their holding back such new information until they can develop it in patentable form, rather than to tell others who are working for the Government what they have learned about fuels, new metals, and so forth. Instead, there is an incentive for them to hold back that information to the greatest extent they possibly can, in the hope that, as a result, their companies will be able to obtain very valuable private patents which may be worth even billions of dollars to their companies.

This free and rapid dissemination of new information is one of the things we must seek to provide for, to the very best of our ability, in order to facilitate important developments in science and technology.

Mr. PROXMIRE. Certainly it seems that, as some persons argue, one reason why our country has moved ahead so rapidly in the economic field is that we have emphasized commercialization of patents and have made possible the obtaining of such exclusive, monopolistic rights for a period of 17 years, thus providing a superincentive to engage in research.

If the Government is to own the title to the patents, obviously they will become part of the public domain, and then anyone will be free to use them, and there will be no superincentive to engage in research, other than that required in order to do the job which one is paid to do. In that event—on the basis of the argument which many persons make—it seems that the peculiar and particularly American incentive which has been developed under our Constitution for 150 years may be lost.

Mr. LONG of Louisiana. That has always existed; the system is not a constitutional one. The Constitution gives Congress the power to grant patents; and, beginning in the day of George Washington, Congress undertook to grant patents to those who developed new products. But such patents were issued to those who made the discoveries and the developments at their own expense and on the basis of their own procedure. In short, those who pay to develop the new products will be able to keep the patent rights to them.

The Senator from Wisconsin knows that if he were the head of a large corporation, and if he hired a scientist to develop a new product, but did not insist that the patent rights to the product would belong to his company, the board of directors of the company would soon fire him. Similarly, such companies would fire anyone who was working for them, who permitted such private patent rights in connection with products which they had paid to develop, to go to the individual workers who developed them, at the expense of those firms.

Mr. PROXMIRE. Except for the fact that the Government does not commercialize and exclusively use the patents which are developed, whereas the corporations, like the inventors, do. So the Government does not have the same kind of incentive, certainly, that is had by the individual proprietor of an individual corporation.

Mr. LONG of Louisiana. The difference in that case is according to how one wishes to define the Government. If we look upon the Government as something detached, separate, and apart from the people of the country, that view would be a correct one. On the other hand, if we regard the Government as being the 180 million people of the United States, joined together for the purpose of collective action, then the 180 million people of the Nation who pay the cost of developing a new product, should not be charged a royalty fee for the use of the product, for the development of which they have paid in the beginning, or should not be charged monopolistic prices perhaps four times as great as the price they would pay if others were permitted to produce such products. Later in my remarks I shall discuss this point further.

Mr. PROXMIRE. Very well.

Let me say that I understand that the Senator from Louisiana takes this position on the basis of his position as chairman of the Monopoly Subcommittee of the Select Committee on Small Business. Of course, I am deeply interested in the effect of this situation on small business.

I was particularly interested in the report of the Subcommittee on Patents and Scientific Inventions of the House Committee on Science and Astronautics. In that report, the subcommittee took the position that the proposal of the Senator from Louisiana would, if adopted, be harmful to small business.

I should like to read a brief paragraph of the report which relates to that matter, although I am inclined to disagree with the conclusion therein stated; instead, I am inclined to agree with what the Senator from Louisiana has stated. However, I think some of the points set forth in the report should be answered.

I now read from that report:

> Frequent references were made by the witnesses to the adverse effect of Government ownership of inventions and patents on small businesses. It was argued, for example, that one of the most advantageous ways for small business to compete successfully against larger competitors is by allowing small businesses to retain ownership of the commercial rights in their inventions and patents, whereby they will have the ability to exclude larger competitors from a limited field under such patent rights. Although small businesses as well as large businesses would normally expect to grant the Government a royalty-free, nonexclusive license to use, for Government purposes, any inventions made during the performance of a Government research and development contract, the smaller business would stand to gain more than the larger one, since the economic strength of the

latter may be sufficient without patent protection, whereas the former are aided by, and derive economic strength from, the rights afforded by the patent system.

They say for this reason small business would gain more not by Government control of patents but through private commercialization of these patents.

Mr. LONG of Louisiana. I am familiar with that argument. I have heard it made before the subcommittee of which I served as chairman. That argument is a lot of hogwash. Let me prove the point by giving two illustrations.

This Government pays for doing agricultural research. Among the machines that were developed was a new carding machine which combs out cotton so that it can be twisted into thread. The new carding machine results in giving a 1-percent saving on the cotton that goes into making fabrics, which is a very valuable saving. When this machine was developed by the U.S. Government, manufacturers were authorized to be licensed for its manufacture. About 20 concerns entered into licensing agreements. They are all manufacturing that machine, and competing with each other. It has resulted in a much lower price than would be the case if one organization had patented it and charged a monopolistic price or the price that would have resulted from other concerns having to pay a licensing fee, which charge would be passed on to the public. In this case 20 concerns compete with each other.

If the same facts had applied to a private concern under the Department of Defense arrangement, one company would have manufactured the product, and the public would be paying higher prices instead of lower prices.

Let me cite what has happened with respect to the freezing of orange juice. The Department of Agriculture, which is required, under law, to make its patented products available to anybody, developed a process for freezing orange juice. The Senator from Wisconsin, I am sure, buys frozen orange juice every day, or, if not every day, at least when he shops for Mrs. Proxmire. That process was developed at a cost of about $70,000 by the U.S. Department of Agriculture, working with the State of Florida. There are more than 50 companies that produce frozen orange juice. The country gets the benefit of competitive prices, because the product is freely available. Is it better for small business to have 50 concerns competing, or to have 1 concern, in the name of small business, having a monopoly?

I know the Senator from Wisconsin has taken a consistent position on this question. It is much better to have 50 small businesses competing with each other than to have 1 large concern producing a product and charging monopolistic prices, or charging high licensing fees to manufacture that product, which costs are passed on to the public.

Mr. PROXMIRE. The Senator from Louisiana has said that $7.9 billion of Government money went into research contracts in 1959. Does the Senator have any figures at all to indicate how much big business received? He indicated 20 firms got more than half. Does the Senator have any figures to indicate how much the big firms received as compared with the small firms? If it can be shown that big business received a big proportion of that money, the argument made by the House committee would fall to the ground, because if small business gets little of the benefit of these research contracts, obviously they get little benefit from being able to commercialize the patents. On the other hand, they would benefit from the Government's making these patents generaly available, rather than from having the patents made available only to the big companies, which will result in doing away with competitive prices.

Mr. LONG of Louisiana. According to my recollection, under the Department of Defense, the large firms got 97 percent of this $6 billion. Let me limit it to the Department of Defense. The Department of Defense spent $6 billion in research, and the large firms got 97 percent of that $6 billion. They may contract something out to small firms or buy materials from the small businesses.

Mr. PROXMIRE. But they held the patents in those cases.

Mr. LONG of Louisiana. Generally speaking. The policy is not entirely consistent. In some instances, a large corporation like AeroJet which has a large amount of Government work, when working with Government contracts, will permit a subcontractor to keep patent rights to something it develops. Most of the big companies insist on keeping the patent rights if they let the small concern get some of the work. Most of the subcontractors do not work on a cost-plus basis; they work on a bid basis, in which they are lucky to make profits at all. The one who gets 97 percent of the money gets the big profit.

If I may use the illustration my father used, he is the fellow who milks the cow and takes all that appears to be there, and the small businessman is left with the strippings, whatever is left over after the other fellow gets through milking the cow. That is where small business comes in. My own guess is that if the small businessman were free from the threat of punishment which could be imposed upon him by the big businessman, those working for the Department of Defense would be a lot better off if these proprietary rights were not in effect, because they would be given an opportunity to bid on practically anything being produced; but in so many cases, with these patent and proprietary rights in effect, they cannot bid against big business. Of course, if they produced some product after it had been developed, they would be foreclosed from competing with a civilian patent in effect. The big concern has all the patent rights, and he got it at Government expense.

Mr. PROXMIRE. I thank the Senator.

Mr. LONG of Louisiana. The Senator is very welcome. I appreciate his colloquy.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. GRUENING. I congratulate the Senator from Louisiana very warmly on what is clearly a speech of historic importance. This is material with which I am certain a great number of Senators and certainly the general public are not familiar. It is a great pity that the Chamber is not fully occupied, so that all of our colleagues may hear this most valuable contribution being made by the junior Senator from Louisiana. It goes to the heart of much that is wrong with the present administration. It is another example of its entrenching special interests at the public's expense and to the detriment of the public interest.

The Senator discloses a situation where the Government is paying large sums for valuable research the benefits of which should belong to the public, which are worth millions of dollars—billions, in the course of few years—but which are being, instead, turned over to privileged insiders for their private profit.

I hope that Senator LONG's exposé will receive the widest attention from the press. It deserves first-page headlines because of its importance, and its newness. He has turned his spotlight onto a hitherto unexposed area of government. I congratulate the Senator from Louisiana on the amount of research he has put into his speech. I consider it of major significance.

Mr. LONG of Louisiana. I deeply appreciate the Senator's compliment. This problem has been increasingly drawn to my attention. The more I have looked into it, the more I have concluded that $6 billion of our money has been spent in such a fashion that not only has it been wasted, but it has resulted in an impediment to progress. The expenditures have been such that the public has been required to pay for the work a second time, and at a much higher cost, because of the royalty fees charged by the monopolies, than it paid in the first instance to develop the projects. It is obvious that the public is paying twice for the same thing, and is paying a higher price in both cases.

In some cases, the public is paying three times—once for discovery, which is paid for on a cost-plus fixed-fee basis; the second time in higher prices demanded by the monopoly; and the third time in the cost which the Government pays for cost-plus contracts to bracket in the inventions and thus make it impossible for the public to escape paying tribute to the monopolies, which originate the projects in Government-financed work.

Mr. GRUENING. How long has the particular situation which the Senator is exposing existed—or at least existed in the intensity and to the extent which he has described? Has it been in effect for a decade or two decades, or is it a matter of relative recency?

Mr. LONG of Louisiana. Actually, it has been taking place for about 8 years. During World War II, some of the large corporations found that they could extract from the Government the right to keep the patents which they had developed, at Government expense during wartime, when the Government had to call upon management for everything it obtained. During World War II, the Government, through the Department of Defense, succumbed on that score.

However, it did not follow that pattern in atomic energy. In the field of atomic energy, the Government at least succeeded in retaining the patent rights for the people of the country. But at that time the figure was much lower than it is now.

This is a practice which started as a mistake—a $500 million mistake. It has been permitted to grow into a $6 billion mistake, and private enterprise is trying to build it up to a figure much larger than that.

I regret that the Senator from Alaska was not here when this matter came up before. For some reason or other, it seems that the administration is absolutely dedicated to giving away to private contractors, on a monopolistic basis, the fruits of public research.

This fight occurred in 1954, during the consideration of the Atomic Energy Act. The distinguished junior Senator from Tennessee [Mr. GORE] made a very valiant fight at that time, when the Republicans were in control of Congress, and the administration was demanding the right to give away atomic energy secrets to private patent monopolies. That fight resulted in a showdown in which more than 95 percent of the Democrats, I believe, voted to sustain the position taken by the Senator from Tennessee.

Subsequently the administration has come forward and has tried to do in the field of space science what it was unsuccessful in doing in the field of atomic energy when the Republicans were in control of Congress.

My point is that Congress should pass legislation to stop the worst part of the practice which exists in the Department of Defense, where the big spending actually occurs. That is where the $6 billion is being spent. The space program is relatively small compared with the overall expenditures for defense. It seems to me that we should strike in the area where the biggest wastage is occurring. It is something which is growing rapidly, as the Senator from Alaska knows.

Mr. GRUENING. Are we not dealing with collusion on the part of the Federal Government—the executive branch—with certain favored companies? Has the administration not been using the taxpayers' funds for expenditures in research and permitting the lucrative results to go for the benefit of a few favorite private enterprises? Is that a correct appraisal?

Mr. LONG of Louisiana. In my judgment, a behind-the-scenes movement has been at work ever since this administration came into power, trying to find one way or another to permit public funds to be spent for private advantage. The largest corporations, as I pointed out earlier in my speech, have taken $6 billion in defense funds alone. Twenty companies got more than half of that money. That is a $3 billion item in itself. Yet we have witnessed such an attempt before, in the field of atomic energy. Now it is sought to be followed in the field of space science.

Mr. GRUENING. Is this not a new form of payola, on a grander scale than this administration has been guilty of in other areas?

Mr. LONG of Louisiana. I should certainly think so.

Mr. GRUENING. The Senator from Louisiana is to be congratulated on aprising the public of this situation. I hope it will be followed up with appropriate legislation, because what is taking place is something which is certainly not in the public interest.

Mr. LONG of Louisiana. I sincerely appreciate the statement by the distinguished Senator from Alaska.

Mr. GRUENING. Mr. President, will the Senator yield for a question?

Mr. LONG of Louisiana. I yield.

Mr. GRUENING. Does it not seem to be a fact that these policies, in addition to giving a certain advantage to certain individuals, are inflationary, and tend to increase the cost of commodities essential to our economy?

Mr. LONG of Louisiana. There is not a doubt about it.

Mr. GRUENING. Does the distinguished Senator from Louisiana recall that in the President's state of the Union message he urged us to fight inflation as, I think his words were, "as we would fight a fire imperiling our homes?"

Mr. LONG of Louisiana. One simple way to do it would be by an Executive order to the Department of Defense.

Mr. GRUENING. I hope the President will read the Senator's speech and take some action. Does he think that might happen?

Mr. LONG of Louisiana. I fear that is a forlorn hope, but I appreciate the Senator's saying it.

Mr. President, I have at the desk an amendment which would seek to carry out the objectives I have discussed. I am not determined to demand a vote on it, but I hope the chairman of the committee may be able to accept the amendment, at least, and take it to conference.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. STENNIS. The Senator from Louisiana and I have not really had an opportunity to discuss the merits of the amendment. The Senator from Louisiana mentioned it yesterday afternoon. I have listened with interest and some amazement to the facts he has brought to the attention of the Senate. I not only commend him highly for the fine work he has done on this subject, but also say to him I think there is great merit in many of the major points which he has made.

I assume the amendment, which I have not had an opportunity to study, reflects his views as put forth in the speech he has made. I think the subject is something which deserves major attention of the Congress, and I certainly trust that some affirmative action can be taken.

Feeling that way, I, at the same time, must say that to put the language of the amendment into the pending bill, even though the Senator has had very fine hearings, would be something the Senator from Mississippi would not feel he could do because of the lack of opportunity to become familiar with the matter, and to know exactly what we would be recommending and what effect it might have.

I would want the Senator to feel free to take such legislative course as he sees fit. As a fellow Senator who is in sympathy with his position to a great degree, it seems to me the Senator has brought this matter to the attention of the Senate and to the attention of the country and has made a very forceful presentation, which will, I believe, attract most favorable consideration. I would dislike to see the amendment defeated, but if offered, I would have to oppose it vigorously, for the reasons I have given.

If the Senator sees fit to let this be one step forward, and to take another step constructively, rather than to run the chance of having the amendment rejected today, I believe that would be the better course to pursue.

Under those conditions, which I am sure the Senator understands, since they have already been outlined, we would not wish to reject the substance of the amendment, but we certainly could not agree to it now or recommend that the Senate adopt it. Therefore, I would have to oppose it.

Mr. LONG of Louisiana. Mr. President, I would not want to force some of the members of the committee to oppose the amendment, if we will have an opportunity to present it to them. As I look over the list of the members of the Committee on Aeronautical and Space Sciences, I notice a very large number of Senators—and I include the Senator from Mississippi—who, I believe, would have strong reason to favor the amendment, after they have had a chance to study it. I think many would be inclined to agree with my proposal and to support it.

I believe this issue should be resolved in the present Congress. There will be other proposed legislation along this line. If I do not insist upon consideration of the amendment at this time, I wonder if the Senator could assure me there will be an effort made by the committee to look into this matter and to give us an opportunity to vote on it sometime during the present Congress?

Mr. STENNIS. Mr. President, I would make one additional point. The Senator's amendment would not materially change the policy of the NASA, because it now has the directive and the policy of waiving these benefits, so called, to the public, after a hearing. This proposal would cut directly across the policy of the Department of Defense—which, as the Senator pointed out, has far-reaching programs—and the policy of other departments and agencies of the Federal Government, including the Department of Agriculture.

Mr. LONG of Louisiana. Yes.

Mr. STENNIS. So far as the bill is concerned, presumably amendments will be proposed to the basic Space Act considered later in this session of Congress. I do not know when that will take place, of course. I could not give the Senator any assurance about an opportunity for consideration. I believe it would be more pertinent and more timely to consider such a matter later, rather than in connection with the pending bill, which is

an authorization of appropriations for the National Aeronautics and Space Administration.

I believe that is the extent of what I can say on the matter. The Committee on the Judiciary has a Subcommittee on Patents, Trademarks, and Copyrights, the Chairman of which is the Senator from Wyoming [Mr. O'MAHONEY]. That is another subject matter, so far as patents are concerned.

The Atomic Energy Commission, the Department of Defense, the Department of Agriculture, and NASA are the major groups the Senator has in mind. I hope the Senator can press his amendment, in substance, but I hope he will not press us to agree to it today.

Mr. LONG of Louisiana. I thank the Senator.

Mr. LAUSCHE. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. CANNON in the Chair). Does the Senator from Louisiana yield to the Senator from Ohio?

Mr. LONG of Louisiana. I yield to the Senator from Ohio.

Mr. LAUSCHE. I wish to commend the Senator from Louisiana for his very instructive and just argument, made in behalf of the taxpayers of the United States.

It is my recollection that under the common law, whenever an employee or an agent makes a discovery on the time he is devoting to his employer's work or his principal's work, any patent discovery becomes the property of the principal or employer. Moreover, as the Senator from Louisiana has pointed out, large corporations, when they hire scientists to do research work, specifically provide that if patents should result from the research such patents will belong to the employer.

In my opinion, those provisions in those contracts are merely a declaration of what justice and law ordinarily require.

I commend the Senator from Louisiana for pointing out that under the practice which we now follow, our Government, while spending billions of dollars of the taxpayers' money for research work, allows discoveries, by way of patents, to become the property of what would normally be the employee or the agent.

Am I correct in my understanding that that is the point toward which the Senator from Louisiana is directing his remarks?

Mr. LONG of Louisiana. The Senator is entirely correct.

Mr. LAUSCHE. It is the view of the Senator from Louisiana that if a research company has been given a contract and paid for its work with taxpayers' money, if there is a patent which results from the research work, justice requires the patent belong to the U.S. Government and not to the research agency?

Mr. LONG of Louisiana. The Senator is entirely correct. Generally speaking, that is the way this Government treats its own employees, even in the Department of Defense. The Department of Defense does some of its own research work. If a scientist or a technician develops something, it is my understanding that what the scientist or technician develops on Government time and on Government pay belongs to the Government. That is generally the case.

Certainly, every businessman and every corporation which employs someone to do research work insists that the fruits of the research belong to the employer.

The Senator well knows that the Government does a great deal of good research, entirely on its own account. We do research in atomic energy, and we do it in the field of agriculture, at Government installations. Everything which is discovered belongs entirely to the people of this country, to the 180 million people who are paying the bill for the discovery.

We are now talking about a private contractor who comes to the Government, who wants a contract with a guaranteed profit, on which he cannot posibly lose any money. He wants a contract to do work for the Government, instead of the Government doing its own work. In his case, although he demands of all his employees and of all his subcontractors that they turn over the proprietary rights to him, he wants to hold the rights against his employer, which is the Government of the United States, acting on behalf of 180 million people.

As I see it, it simply means that we as taxpayers pay once to develop all of these new products, which, in the case of the Department of Defense alone, involves $6 billion a year. The overall amount would be about $8 billion a year. We pay that much in taxes, which is more than the cost of our entire foreign aid program, to get the research done. So far as the people who do the work are concerned, they look upon themselves in a sense as employees of the Government, because they know if they are working for a big contractor who is trying to develop a missile, a good method of transportation, a new fuel, or a new metal, that the U.S. Government is paying for all of the work.

When they develop it, a private company comes along seeking to get the contract, and putting pressure on the Government right and left to get the contract and make a big profit out of it. Private companies propose to keep the proprietary rights. They are now patenting all these things and making the American public, in its capacity as consumer, pay a second time, a much greater price, in many instances, than it paid the first time.

To show what some of these things are worth, the British Government has a system which I believe is about half right. The government gets half the royalties and patent rights, and the contractor gets the other half. When the Vickers Viscount was developed, and was sold to American airlines and various other airlines around the world, and to a number of concerns in Great Britain, the government's half of the royalties paid the entire cost of developing that magnificent airplane. So the research, if it had been done by a single concern, would have been paid for twice. In this country we give away the rights to a man who has already made a profit.

The Senator has probably flown in one of the magnificent Boeing 707's. That undoubtedly was developed under a Government contract. It was developed for the Air Force under contract. It is a magnificent plane, but the price of the ticket must be greater because the people had to pay more to preserve the patent monopoly of that particular company, which was achieved at the cost of this Government.

The Lockheed Corp. developed certain of its planes for us under a Government contract, with a guaranteed profit. Then it proceeded to sell the planes, to be manufactured in Germany, and made a big profit out of all the patent and proprietary rights which should belong to us. Incidentally, that is one reason the foreign aid program is costing so much. We are giving all the missiles and rockets to foreign countries. They cannot manufacture them for themselves, because the American contractors who developed them have all the proprietary rights; and while the U.S. Government can give them away, the foreign country cannot, and the foreign country must operate through the man sitting at the door, and pay his tribute in terms of fees, royalties, and licenses, in order to produce something which we have. Our only alternative is to buy the missiles at our expense, and give them to the foreign country.

Mr. LAUSCHE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. LAUSCHE. While the Senator is describing these transactions and the results of them, the impression which is left with me is that there is complete justice in the arguments which the Senator from Louisiana is making. Frequently when we have an original impression of a transaction we react by declaring, "What he says is right," or "What he says is wrong." To my sense of justice, the arguments made by the Senator from Louisiana ring true in the maximum degree, and I commend him for the presentation which he has made today. I hope that out of it there will come fruitful results.

Let me add this further statement: For years I rebelled, while I was mayor of Cleveland and Governor of Ohio, at the fact that the bids submitted by salt merchants, electric light bulb vendors, and drug vendors were identical, to the penny. There was not a variation of a fraction of 1 penny in the prices bid.

The Senator from Louisiana dealt briefly with that subject, and I was glad he did.

Mr. LONG of Louisiana. At a later date I shall go into some more of these matters. It may interest the Senator to examine the situation which exists in connection with health research. We do health research in an effort to remedy cancer, heart disease, and all sorts of ailments. I once served on a cancer drive, and I am sure the Senator has done likewise. We stand out on the corner with a tincup in our hands to get money to aid research in order to save people's lives. After we stand on the corner for a while and get a few quarters, we supplement them with some of our own money, and the Government puts up money of the taxpayers to employ someone to do the research.

After we pay someone to develop a drug, he then proceeds to take out a private patent, and charge us three or four times what it cost to develop it to begin with. That is the kind of thing which I believe we should stop.

Mr. LAUSCHE. Mr. President, will the Senator further yield?

Mr. LONG of Louisiana. I yield.

Mr. LAUSCHE. The Senator from Florida [Mr. HOLLAND] tells me that in Florida there is a law that when someone is working on State of Florida business in research work, and obtains a patent, it inures to the benefit of the State of Florida in whole or in part.

Mr. HOLLAND. I am not sure which.

Mr. LONG of Louisiana. In my judgment this matter is of great consequence to the Government for the great number of reasons I have tried to spell out.

I regret to say that a majority of the members of the House Aeronautics and Space Committee have recommended to the contrary. They have recommended that the National Aeronautics and Space Administration proceed to give away all the rights being developed under NASA. A very vigorous minority group is fighting against that position. The hearings were held, and apparently the members were impressed by them. I have not had the opportunity to go over them, but I notice that most of the witnesses were patent lawyers. Of the remaining witnesses, most of them were representatives of large corporations, who are getting all this handout. Apparently no effort was made to seek the kind of witnesses we sought for the Small Business Committee—small businessmen, and people of that kind.

It is a little difficult to get witnesses from small business to testify, because the large corporations and those administering the Department of Defense have so many ways they can rough those people up.

A small businessman testified before us about the difficulty he had in getting the specifications to manufacture cameras. He told how it was costing the Government so much more than it should. Within 3 weeks, in the Department of Defense there was ordered a worldwide field inspection of everything he sold the Government, which meant that the great patent lawyer serving as Deputy Assistant Secretary of Defense sent down the word to rough that fellow up, because he dared to testify against a policy of giving away $6 billion a year of patent rights.

It is very difficult to protect small business witnesses who come and tell us the truth. If they are not discriminated against by those who are administering their Government, they are subject to discrimination against them by large corporations to which they frequently apply for subcontracts.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. GRUENING. What is the remedy? I understand that the distinguished junior Senator from Louisiana has an amendment for the purpose. I gathered from his colloquy with the Senator from Mississippi that the latter did not think this was the appropriate time to press the amendment, and that its chances of success were not good at this time.

I am glad that the junior Senator from Mississippi has returned to the Chamber, because I am very much interested in this subject, and I would appreciate having his views. It seems to me that we are dealing with an abuse which requires attention, and such remedy as may be available.

I wonder what suggestion the Senator from Mississippi has. He felt, I gathered, that this particular amendment was perhaps not timely, and that possibly some future time might be better for its presentation. I think this should be a matter of great concern to the American people. It is something which should have the widest and promptest attention. I hope steps can be taken to move into the situation with remedial steps, if not all at once, then at least as soon as possible so that some of the abuse may be diminished and, if possible, stopped.

Mr. STENNIS. Mr. President, if the Senator will yield to me, I should like to make a partial reply to the Senator from Alaska. In the first place, the Senator from Mississippi has really not made a study of this subject, and would not wish to be bound irrevocably by some point which might be made here as to future consideration.

The bill now before the Senate is an authorization bill for the entire budget of the Space Administration. It is one of the few agencies which must come to Congress for complete authorization.

This being the 3d of May, as a practical matter the bill should move along, because appropriations cannot be made finally until the bill becomes law.

In the second place, it is naturally a controversial subject which is embodied in the Senator's amendment. It will be contested, I presume, because of vested interests. That would necessarily slow the bill down greatly.

So far as the NASA is concerned, it partly complies with the position taken by the Senator from Louisiana, in that under the basic law it automatically receives title to all patents arising from NASA contracts, but the Administrator has authority to waive the Government's patent rights. NASA has now forwarded proposals that would change the present patent provisions of the National Aeronautics and Space Act of 1958. The argument of the Space Administration is that they ought to have a uniform position with the Department of Defense, which is the big factor in this whole picture, but they are not urging any change of legislation in connection with the pending authorization bill.

This is like any other important subject which needs review, as the Senator from Mississippi sees it. It should not be tacked on the pending bill without the fullest study, although the Senator from Louisiana has given it very fine study, but certainly it should not be added to the bill at this stage, anyway.

Proposals have been made to amend the basic space law. Consideration of changes in NASA's patent provisions in that connection would be more relevant than it would be here. It would be legislation which would not have to pass now, whereas this proposed legislation must pass at this session. Therefore, I would not want the Senator from Louisiana to take any position which would prejudice his idea. That is why I would hate to oppose the amendment, but I would have to, under the circumstances. I would suggest, therefore, that, without prejudice, he may withdraw his amendment.

Mr. LONG of Louisiana. In answer to the Senator from Alaska, I am anxious to see this matter come to a conclusion. I am very reluctant, however, to compel anyone who might be inclined to agree with my position to vote against the amendment on a procedural point. The same point which I am trying to make was, in my judgment, the most important single point of the Atomic Energy Commission fight in 1954.

Looking at the membership of the Committee on Aeronautical and Space Sciences, I see the names of Senators RUSSELL, MAGNUSON, ANDERSON, KERR, SYMINGTON, and STENNIS. The other three Democratic Senators were not in the Senate at that time. There are many Senators who voted for substantially the same position that I am taking today when the matter came to a vote in 1954. Therefore, I am constrained to withhold my amendment and not to offer it at this time, in the hope that the committee will be able to study it. If these Senators think they would have to oppose it at this time, I would be reluctant to compel them to vote against the amendment. Therefore, I would propose to submit the amendment, perhaps in a somewhat modified form, to the committee, in its consideration of other legislation, and withhold it at this time, in view of the course suggested by the Senator from Mississippi.

Mr. SCOTT. Mr. President, will the Senator yield for a unanimous-consent request, with the understanding that it may appear at the end of the remarks of the Senator from Louisiana?

Mr. LONG of Louisiana. I yield the floor.

Mr. STENNIS. Would the Senator from Louisiana formally withdraw his amendment?

Mr. LONG of Louisiana. I have not offered it.

The PRESIDING OFFICER (Mr. CANNON in the chair). The amendment has not been offered.

Mr. HOLLAND. Mr. President——

The PRESIDING OFFICER. The Senator from Florida.

Mr. STENNIS. Mr. President, may I ask who has the floor?

The PRESIDING OFFICER. The Senator from Florida has been recognized.

Mr. STENNIS. If there are no other amendments to be offered, since the committee amendments have been agreed to, I wonder if we could have third reading of the bill.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. STENNIS. The Senator from Florida has the floor.

Mr. HOLLAND. For what purpose does the Senator from Kentucky seek the floor?

Mr. COOPER. I was going to offer an amendment.

Mr. HOLLAND. I am perfectly willing to ask unanimous consent that I may be allowed to yield to the Senator from Kentucky and to the Senator from Mississippi, with the idea of getting through with the bill, but I want to get the floor, which I have been waiting to get for 2 days, but which I have not taken in order to accommodate other Senators. Apparently everybody has been accommodated except the Senator from Florida. I wish to present a conference report.

Mr. President, I ask unanimous consent that I may be permitted to yield, without my losing my right to the floor, to the Senator from Mississippi, to the Senator from Kentucky, or to the Senator from Pennsylvania, if they wish, to speedily conclude the business in connection with the bill being handled by the Senator from Mississippi.

Mr. SCOTT. Mr. President——

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered. The Senator from Mississippi.

Mr. SCOTT. Mr. President, will the Senator from Mississippi yield?

Mr. STENNIS. Does the Senator from Pennsylvania wish to make an insertion in the RECORD?

Mr. SCOTT. Yes.

Mr. STENNIS. I yield. I ask unanimous consent that I may yield to the Senator from Pennsylvania for that purpose only.

The PRESIDING OFFICER. Without objection it is so ordered.

THE NEED FOR MORE REALISTIC AND OBJECTIVE THINKING

Mr. SCOTT. Mr. President, the Amen Corner of Pittsburgh embraces a membership which typifies the dynamism and alertness of a city whose progress is a source of pride to all Pennsylvanians.

At the annual dinner of the Amen Corner, on April 9, two of our able and distinguished colleagues delivered extremely interesting and challenging addresses.

I ask unanimous consent to have printed in the RECORD at this point the speeches of the Senator from Vermont [Mr. PROUTY] and of the Senator from Oklahoma [Mr. MONRONEY].

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

THE NEED FOR MORE REALISTIC AND OBJECTIVE THINKING

(Speech of Senator WINSTON L. PROUTY of Vermont, before the Amen Corner, Pittsburgh, Pa., Saturday, April 9, 1960)

For some inexplicable reason until your personable, brilliant, and highly influential U.S. Senator, HUGH SCOTT, invited me to address you tonight I had never heard of the Amen Corner. Immediately I assumed that an organization with such a name must have some religious significance and envisioned myself being cornered by a group with voices lifted with evangelical fervor in hallelujahs and amens—a situation to which I am not particularly adapted.

However, when Senator SCOTT explained the nature of your organization and that I would not be expected to deliver a sermon I was happy to accept. I am more at home on the receiving end of sermons.

I have not been in Pittsburgh for at least 25 years and am delighted to find that the city of smoke and soot, which I recall from previous visits, has had a drastic face lifting and become a highly progressive metropolis of great beauty and cleanliness.

Let me assure you, too, that any 1 of the 100 U.S. Senators who more often than not finds himself addressing 95 or 96 empty seats in the Senate Chamber could not be other than inspired at the tremendous audience here tonight.

When your secretary wrote me a week or so ago to inquire concerning the subject of my remarks, I replied that I would speak on "The Need for More Objective Thinking."

Frankly, this was a somewhat evasive answer because, at the time, I had no idea whatsoever as to the nature of my talk tonight. However, inasmuch as I had to have a subject it was necessary to select one which would be sufficiently ambiguous to enable me to discuss almost anything.

Parenthetically, as the only note of political partisanship in my whole speech, I may say that, of course, I believe Republicans, as a general thing, display more realistic and objective thinking than do those other fellows.

Of course, psychologically, it was no accident that I chose the title "The Need for More Objective Thinking." For a long time now, I have felt the need to emphasize to my fellow Americans the need for more realistic and objective thinking in our search for solutions to the great problems which confront mankind in this year 1960.

And of those problems, the question of war or peace dominates all else for, by another name, it is the question of destruction or survival, not merely personally, but universally. It is ironic and, indeed, tragic that in a time of history when enlightened and civilized mankind stands on the threshhold of conquering many mysteries of nature and gaining possession of the means of abundance for all, a step in the wrong direction may lead us down the road back to the caves of darkness and barbarism.

That is why I cannot stress too strongly how important it is for each of us to take a fresh and unbiased look at the world we live in and to do some hard, realistic, and objective thinking about it.

This is not the world we inhabited before World War II. The Hiroshima bomb marked the end of an era and the beginning of a new and perilous period in human history.

The atomic bomb was only the beginning. Since then have come the hydrogen bombs, intercontinental ballistic missiles capable of transporting atomic warheads. Aircraft traveling faster than the speed of sound. Submarines that can travel faster and farther and stay down longer than ever before. The conquest of outer space, with sputniks and Tiros circling their separate orbits around that miniscule planet we call earth and home.

Also, since the end of World War II, only a decade and a half ago, Communist imperialism has become a major challenge to the established way of life throughout the world. The Communist bloc now exerts totalitarian control over 900 million human beings, one-third of the world's inhabitants, and one-fourth of the earth's territory. Within the space of a decade massive Communist China has emerged on the world stage and its role, though yet unwritten, is bound to be a major one.

In that same period approximately a billion people in more than a score of nations have become free of colonial rule, and are striving to create new societies and to achieve a better life for themselves. With understandable impatience they are aflame to join the 20th century. And almost without exception they interpret this to mean rapid industrialization. Most of these peoples live on or adjacent to the three less-developed continents: Asia, Africa, and South America, and they constitute approximately 70 percent of the earth's inhabitants. Most of them do not belong to the so-called white races who in recent centuries have dominated the progress of civilization as we have known it.

Just for comparison, let me point out that only one out of every 16th person in the world today is an American and that we occupy only 7 percent of the earth's surface.

Before the Second World War, many of our people, perhaps most of them, believed that America comprised, in John Donne's famous words, "an island intire of itself." But World War II and what followed have crumpled the walls of "Fortress America" like the walls of Jericho.

In the 19th century our position on a virtually empty continent, our need to expand to the Pacific and to grow in freedom, dictated the two basic purposes of our foreign policy:

1. That which was embodied in the Monroe Doctrine of preventing non-American powers from establishing themselves in the Western Hemisphere.

2. The concomitant avoidance of involvement in the alliances and conflicts of the great powers of Europe.

The United States stood, also—and this made our country a revolutionary influence in the world of that time—for the right of all peoples to national and individual freedom. That principle has remained ever since a salient element of our attitude toward the peoples of the world.

The first important break in our wall of isolation came in World War I, but then we retreated into our shell. We were not ready to accept the responsibilities of full participation in the family of nations.

Since the Second World War, however, the double challenges of Communist imperialism and the manifold problems of a changing world society, have made unprecedented demands on our people. Willy-nilly, because the ruins and ashes of the worldwide conflict left a vacuum which communism was all too eager to fill, we were forced to step forth in defense of freedom and our own way of life.

For most peoples of the earth this new world that is now in the making is an age of change, of liberation, of promise and of hope. The Communist powers have done and will do all in their power to shape it to their purposes. But we, the free nations of the world, also have opportunities to exert positive influences if we have the will and the wisdom to do it.

It is in the interest of the entire free world to have some of the less developed countries soon reach the point of break-through to self-sustained development. The advance of human welfare and of standards of living on a broad front is in our own interest, not only to hold the line against the expansion of the Communist empire, but to assure the progress and development of our own economy in the years ahead.

Today, there is above all a universal yearning for peace. Everywhere in the world—in the hearts of the women who bear and raise the children, in the hearts of the men who produce the goods we need, who raise the food we eat, who fight and die in the wars we become involved in—there is a palpable desire to end the cold war and to do away with hot wars forever.

Not only the yearning heart but the thinking head of every intelligent man and woman on earth must hope and pray that this universal desire can be achieved. The knowledge we already possess of the extent and character of the devastation—in terms of humanity and of civilization—which can

be wrought by an all-out war of modern weapons, must fortify our determination to continue exploring every possible road to permanent peace.

Despite great obstacles, President Eisenhower and Secretary Herter are relentlessly pursuing every possibility which may open a new path to peace. Through established diplomatic channels, through the United Nations, through international conferences, through personal contact at the summit, they leave no stone unturned in their search for peace and the world must do them honor for their efforts.

The growth of Soviet nuclear power, together with the maintenance of huge conventional forces in the Communist bloc, has compelled the United States and other free nations to be prepared for a wide variety of military moves from the fomenting of civil conflict to the launching of all-out nuclear war.

The need for a global military posture as a deterrent, and for operations if necessary, has compelled the United States to sustain an unprecedented peacetime military effort and also to maintain alliances with a large number of countries based on common efforts for mutual security.

This has been necessary because, while possession of the means of massive destruction by both sides has resulted, for the time being, in a position of mutual deterrence, total war still remains a horrible possibility. This could come about through direct military challenge, through miscalculation, or through local wars getting out of control.

The Soviet refusal to accept an adequate system of inspection and control of nuclear and other armaments, has made it impossible to reach agreement on an international system of arms limitation which would reduce or eliminate the prospects of total war.

The urgency remains to find some means of controlling nuclear and other weapons. It would now appear that the 10-nation Disarmament Conference in Geneva has reached a stalemate. Perhaps this is not too surprising and certainly we must not permit it to discourage us from keeping on trying. The world cannot tolerate indefinite continuance of the ever-more-costly arms race. But neither can we accept the Soviet offer of illusory security agreement without verifiable control.

Since there are no acceptable alternatives to negotiation, we must now look ahead to the summit conference in Paris the middle of next month. While we can look ahead with hope, we must not look to the summit with rose-colored glasses or we may become victims of disillusion.

Negotiations are not carried on in a vacuum. Armaments are not ends in themselves. They are instruments of foreign policy which add authority to the negotiators. The best way to establish a climate of disarmament is to remove the causes which make the burden of arms necessary. That means solving some of the issues which create friction between the parties.

For some time now the hottest issue between Russia and the free world has been Mr. Khrushchev's repeated threats to sign a separate peace treaty with East Germany in an effort to wash out Western rights in West Berlin. Of course we will not knuckle under to any such blatant threats, nor, as Secretary Herter has so clearly stated, as long as those threats remain can there be any real agreement on disarmament for "there is a clear relation between these two crucial issues."

As of this moment, I would be inclined to doubt that an agreement on Berlin can be attained at the summit. Perhaps the best that we can hope for is an agreement to resume negotiations at a lower level.

As to the Big Three conference to end nuclear weapons testing, that, too, appears to be at stalemate. As the result of the Camp David agreement between President Eisenhower and Prime Minister Macmillan the two Western powers have offered to join with the Soviet Union in a brief, voluntary, and unilateral prolongation of the present 18-month-old moratorium on all atomic tests, including the small and still undetectable underground tests.

The offer, however, has two conditions. One is that the Soviets sign a treaty which, in line with President Eisenhower's original proposal, bans all but the small undetectable underground tests and which provides for international inspection and control. The second condition is that the Soviets join at once in scientific research to perfect detection methods for the small underground tests so that these may later be included in the treaty. So far, the Soviets have not accepted this genuine offer.

It is true that some American military leaders and atomic energy officials have not displayed great enthusiasm for this Western approach. They feel we may be taking too much of a chance in the absence of foolproof inspection. For one thing, the Soviet record of broken promises and agreements does not lend assurance that they would keep their word not to test and develop small nuclear weapons for tactical use.

Secondly, they feel that since Communist manpower is greater than ours, the addition to their weaponry of tactical atomic firepower could give them significant advantages in smaller, local wars.

However, I do believe that the President is justified, in view of our overall defensive posture, in taking this calculated risk on moral grounds and to obtain the support of world public opinion.

All these situations have moved Secretary Herter to warn that "if anyone looks for dramatic achievements at the summit he may be disappointed." He has added, however, that "we do look for progress." And progress is at least a step in the right direction.

So, where does all this leave us? What must we do to save ourselves and our civilization?

To find the answer we must look at the world as it is—realistically and objectively, not as we might wish it to be, not as we would like it, not as the already realized achievement of our humanitarian dreams, but as it, in cold fact, is.

There is no doubt but that, with the death of Stalin, a change of face and form has come over Communist Russia. The usually softer voice and smiling physiognomy of Mr. K has deluded many into believing that the big bear has shed his claws. But the hard reality is that the claws have only been drawn in. The bear has not become a kitten.

The Soviet intention remains what it has always been; to take over the world for communism. Our largely successful foreign policy, and the internal needs of the Communist bloc have resulted in an at least temporary halt to military expansion. Their cold-war efforts are now being focused increasingly on the economic arena. And as targets, they have selected the less developed countries of Asia, Africa, and South America.

The latest economic plans of the Soviets show clearly that they are mobilizing their rapidly growing industrial strength for economic aggression. We are now engaged in an economic war on three fronts: trade, economic aid to underdeveloped countries, and internal progress. The purpose of the Russian trade and aid offensive is clear: to link the economies of the underdeveloped countries to that of communism. Trade and aid constitute their new instruments of aggression.

Most experts will agree that the Soviet gross national product has been growing at a faster rate than ours. This is not surprising, however, inasmuch as when Russia first began to grow as a major industrial power it was able to utilize production methods and technological advances developed by the Western nations over many years. Secondly, if you start with a relatively small productive capacity and add to it each year, the percentage of increase will be considerably greater than that involving additions to a larger industrial complex.

However, we will ignore at great peril to ourselves the fact that in a little more than 40 years the Soviet Union has become the world's second greatest industrial power. And we must realize that it is industrial output, rather than gross national product, which gives a better comparison of power positions.

This position is best gaged by the industrial base of a nation because this is an important backstop for the military establishment and for a country's international trading position.

Soviet industrial production has been increasing approximately 8 percent per year since 1950, twice the U.S. growth rate of 4 percent. The Soviet's greater growth rate is due to their policy of growth with little consumption.

The Soviets hold down consumption to about 55 percent of gross national product in contrast to 75 percent in the United States. The emphasis on industrial expansion and the military establishment is seen in the fact that only 27 percent of Soviet industrial output is devoted to consumer goods while our consumer output represents 70 percent of industrial production. While we continue to produce for ever-more conspicuous personal consumption, the Russians and their captive satellite peoples are forced to sacrifice for the state.

All in all, the people of the United States and the free world need to realize that we are at an important juncture in world history when right decisions must be made across the board. Basically, our need is to face up realistically to our danger; to replace our term insurance with an endowment policy.

The free world has a three to one superiority over the Communist bloc in economic resources. It has greater basic assets in its "growth with consumption" philosophy, and in its moral and religious values.

Our only handicap is that we are not slaves of the state; we are free men and an assembly of free nations. We are in a crucial contest with a monolithic group of captive peoples and nations controlled and directed from the one fountainhead, the Kremlin. That is the challenge of dictatorship to freedom. Can we, still retaining our basic freedoms, act in consort for our mutual interest? I say, "yes," but it will require self-discipline and sacrifice from all of us.

It is understandably human to view national issues from the narrow perspective of our own private interests, and to assume that what is good for "us" is, ipso facto, good for the country.

This, however, may not always be the case despite the difficulty some people have in understanding why their Representative or Senator may not always be able to see eye to eye with them on specific legislation.

A Senator is not a Senator of his State alone, he is a Senator of the United States of America, and his oath of office requires him to act in the best interests of the entire Nation.

In determining what is in that best interest, he is not a mere delegate or agent of various individuals or groups, all claiming to speak with the voice of the people. He was placed in his position of trust because the electorate had confidence in his integrity, his unselfishness and his maturity of judgment.

In the words of Edmund Burke, "Your representative owes to you, not his industry

alone, but his judgment, and he betrays, instead of serving you, if he sacrifices it to your opinion.

I would advise any citizen who wishes to persuade a Member of Congress, or a committee of Congress, to his particular point of view, to be prepared to demonstrate that his personal, parochial interests coincide with the larger interests of the Nation as a whole and, preferably, that they contribute to the general welfare of the country.

At this time of the year, when each citizen has recently faced, or is still facing, the admittedly distasteful task of figuring out his fair share of the cost of preserving our way of life, it is perhaps the ideal time to drop our selfish points of view and adopt a more objective and realistic method of thinking.

If we do that, we will realize that the only alternative to paying the price for peace is paying a still higher price of annihilation.

I would like to conclude by saying "Amen" to the stirring words of Vermont's Revolutionary hero, Ethan Allen, when he told the Continental Congress: "I wish to God, America would at this critical juncture exert herself. She might rise on eagles' wings, and mount to glory, freedom and immortal honor if she did now but know and exert her strength."

SPEECH BY SENATOR A. S. MIKE MONRONEY, AT AMEN CORNER, PITTSBURGH, PA., APRIL 9, 1960

I appreciate greatly the invitation extended to me to address this annual dinner of the Amen Corner honoring your president, Mr. Joseph William Hubbard. Looking at the distinguished list of "Who's Who" speakers who have addressed you in the past—Governors, pundits, Congressmen, mayors, admirals, and a quorum of the U.S. Senate—I feel tonight like I did the day I was elected to Phi Beta Kappa.

I am sure that Senators love to speak here. The very name Amen Corner intrigues us. We are used to service in the "heckling chamber" and this refuge, after 2 months of civil rights filibustering, is welcome indeed.

I note too with pleasure that you trust your speakers to select their own topics. This is rare indeed in this business. Usually people who work all day selling automobiles want you to talk about automobiles, editors want you to talk about the press, scientists want to talk about science, and farmers want to talk about subsidies. Now proving that politicians do not always talk about politics I want to talk about "Tomorrow's Horizons."

From my assignment as chairman of the Aviation Subcommittee of the U.S. Senate, I have seen a revolution in civil aviation. We're moving so fast, so far, so high, that it's hard to keep up with yesterday, let alone tomorrow. Planes delivered or on order will double the seating capacity of the world's airlines. Where we formerly brought out one new plane model every 2 or 3 years, this past year has seen not one, but five spectacular new turbine-powered machines introduced on the airlines. Ranges have gone up from 1,500 to 3,500 miles and altitudes from 10,000 to 15,000 to 40,000 feet and speeds up to 450 and 500 miles per hour.

"My day" of an average jet, as outlined to me by one of the vice presidents in charge of scheduling, was to schedule within the 24-hour span a round trip from New York to Los Angeles. Since there had to be a stopover at Los Angeles of a few hours, they proposed to fly to Kansas City or Oklahoma City and return to Los Angeles during this period.

In the last 18 months we have proved that man can circle the globe without ever touching the wheels of his plane to the earth. Last year Gen. Curt LeMay, Vice Chief of the Air Force, flew from Japan to Washington, D.C., nonstop over the polar route in 20 hours. He set a new record, but the remarkable thing about this trip was that he left on a Tuesday and arrived on Monday. The children in the primary classrooms have greater interest in these fabulous new frontiers of travel than their elders.

But even these developments leave us unprepared for things to come. The new B–70 is now being built in California. It will cruise at 70,000 feet at three times the speed of sound. They wish to make a supersonic, commercial version as well. At 2,000 miles an hour, the distance between Washington and Los Angeles would be 1½ hours.

The only thing bad about this new plane is that it has no windows. I told the designers it would never be popular as the passengers would get claustrophobia. They were quick to explain that they had solved that easily. Instead of having windows that might blow out at the high pressurization required for 70,000 feet altitudes, and thus endanger the lives of all passengers, they have provided for televising the territory they were passing over a screen in the front of the plane.

Now testing the X–15, Pilot Scottie Crossfield will zoom this Buck Rogers missile-like jet up to 125 miles above the earth—100 miles into outer space. It is likely to be man's first controlled flight into the relative vacuum of the space beyond the earth's atmospheric layer. And even beyond man-piloted airspace ships like the X-15, come the astronauts of the man-carrying missile.

As dangerous as this voyage will be, it is comforting to know that we already know more about the environment man will face in these new probes into the great beyond than Columbus knew when he set sail to find a new route to the wealth of India.

Thus, as man has perfected the "eye in the sky" satellite that can televise back weather and other information, as it orbits the earth, we move beyond our earthly horizons and seek out new ones in outer space. The contest of science is taking on the thrill of a basketball game as Russia and the United States compete.

From a late start, our American scientists are beginning to close the gaps. Thus, after the Soviets managed to put a satellite in orbit around the moon and to photograph its dark and unseen side for the first time in the world's history, we chose a longer and harder target.

Today from nearly 4 million miles out Pioneer V seeks its orbit with the sun. With power generated from the radiation of the sun, it is sending back its messages loud and clear.

As our horizons are lifted by scientific progress to encompass outer space, I am haunted by two possibilities. The first is that our scientific and technological progress and the whole civilization that supports it may be totally consumed in the thermonuclear war which it has made possible. I do not believe that this possibility represents our most immediate danger because I think that it is one that has been generally recognized. Our political leaders of both parties and the leaders of other nations understand the catastrophic results which a "hot war" would bring. All of us pray that the efforts being made in Geneva and at the summit will serve to reduce the chances of such a horror.

The other danger which faces America is more subtle, but nonetheless real. Politicians and businessmen have tended to resign themselves to an age of science and have become so hypnotized by the exploits of science in missiles and rocketry that they have failed to understand the other challenge which faces us. Tomorrow's war may be a space war. Today's war is an economic war. It will be fought and won on the ground. It can be won only if we marshal the genius of politics, of business, and of labor.

Winston Churchill understood that even more demanding than the "sudden shock of battle" were the "long drawn out trials of vigilance and exertion." The Soviet economic offensive is such a trial. It will test the courage, drive, and endurance of our free system versus their slave system.

As early as 1952 Stalin said: "We can win the world peaceably. It will eventually turn upon West Germany and Japan. But the stupid, greedy West will hamper their foreign trade. Then we shall draw them into our orbit through overwhelming trade agreements."

Then in 1957 Khrushchev arrogantly declared: "We declare war upon you—in the peaceful field of trade."

As a hard-bitten Communist, Mr. Khrushchev certainly believes in his system and is convinced that given time and continuing progress he can outproduce us and outtrade us under his totalitarian system.

We have seen the threat already in several fields, but these thrusts into our markets and into the world market are just the scouting forays for a bigger offensive later.

Last year we saw Russia deliberately invade and destroy the stable world aluminum market. Granted, they dumped only a small part of the total world supply, but it forced the whole price structure down to an uneconomic level. It cost Russia little, but its impact on our industry during that period was alarming.

Last fall, we saw Communist-made pig iron offered to buyers at a delivered price in Buffalo 20 percent below the price of American-made pig iron.

The aluminum deal, the pig iron deal, as was the tin dumping a few months earlier, were cases of intentional disruption of international markets. While Russia blamed "imperialist America" for dumping and breaking the prices of metals from small independent states, she herself was creating the chaos she decried.

Her end is to invade and disrupt trade and politics. Long-term credits and barter deals give legitimate cover for her agents. We need look no further south than Cuba to see this pattern.

Russia's production is rising, the quality of her products is improving, the skills of her labor force are increasing, according to the foreign industrialists who have carefully inspected their hundreds of new plants. Natural resources are being developed in hydroelectric projects which dwarf Grand Coulee. One huge dam being built near the Arctic Circle will supply power over great distances to industry. They have developed a transmission system using extra high voltages over heavy-duty wires that will deliver electricity to points up to 1,000 miles distant, with a line loss of only 10 percent.

Beyond this picture of industrial mobilization and bitter competition for world markets is another specter even more challenging to our system—the hordes of industrialized Chinese.

Don't make the mistake that the Chinese are all "no tickee—no laundry" people. Under a slave-disciplined system, they are moving at a faster pace than did Russia in her early years of industrial effort. They have far to go, but they are on the move. Industrial experts from Canada, men of great experience, who had seen dozens of their new plants on a 3-month inspection trip, declared them modern, well-run, and ably managed. Young Chinese in their late 20's and 30's, trained in the Russian industries, with new equipment and machinery, worked thousands of youthful Chinese, recently off farms, for long grueling hours with a drive for production increases that to these Canadians was fantastic.

These Chinese goods haven't yet reached the world markets in quantity. But I have seen fabrics and other Red Chinese goods in Hong Kong priced substantially below even the competing Japanese products.

Even in the free world we face competition tougher than we have ever faced be-

fore. This comes from our friends. It is less brutal, but no less keen. This is a new era of competition for the United States. Heretofore, we have been troubled with cheap, low quality goods from Japan, Germany, Italy, and France. With plants today more modern than ours, they have rebounded to challenge us in our own private pasture, the quality markets of the world.

Where you used to see four out of five cars of American manufacture in most European countries, today you are lucky to see one out of five. Where European and Asian airports formerly served airliners 100 percent of American design, today the ratio is about 50–50. In electronics they match our quality and undersell us sharply. Japan soon will market a large-screen color TV set here for $295.

I'm not trying to paint a dark picture for the sake of discouragement. Rather to say simply that the "honeymoon is over." No longer does "Made in U.S.A." entitle us to a monopoly on quality goods in this world, for there are others crowding us every step of the way.

It seems simple logic that as more and more countries compete in the production of more and more goods to satisfy the world's demand, a basic element of American policy must be to increase the market for those goods. This in turn requires that the United States continue its efforts to contribute to the economic development of those nations of the world whose present poverty goes unrelieved because they haven't the means with which to buy the products they need.

This is not just an American problem, it is a common problem to all of those nations of the world who are producing an exportable surplus of capital and of industrial and consumer goods, and more and more it is being recognized as a common problem.

Within the last year a bipartisan effort in our Government has resulted in the United States proposing that the free world establish the International Development Association as an affiliate of the International Bank for Reconstruction and Development. It will provide additional resources for international loans—not U.S. gifts—to underdeveloped countries for those projects which contribute to their economic growth.

Not only does the creation of new markets require financial assistance to the countries whose people can then become our customers, it requires that American business open new frontiers with new products and new techniques. Atomic energy offers a fertile field for new and imaginative approaches to bring the underdeveloped nations into the 20th century and into world commerce.

Radioactive isotopes for industry and for human health already are showing great promise. For agriculture, vast experiments are going on to increase production and develop new types of foods and new strains of livestock. We need only breakthroughs on cheap and safe electric generating plants to open up vast new markets around the world from atomic power. For engineering use in excavating canals, harbors, and reservoirs, controlled underground atomic blasts offer promise of construction miracles.

In the field of desalinization of the ocean's water, the great heat of atomic piles may hold the answer to unlocking nature's secret. Here we could help our own water-hungry coasts of California and Texas and export plants that could turn the north African coast, now in virtual revolution, into a peaceful, prosperous and productive area. In the Middle East, where irrigation is the difference between a desert-parched starvation and a lush Imperial Valley type of agriculture, dangerous tensions of possible war could be eased through such breakthroughs in desalinization of sea water.

Contribution to economic development can assure an expanding rather than a static world market. But the market may expand while America's share of it contracts. We must still meet growing competition in price, in service, and in the quality of our product. Through the resourceful leadership of free men, we can meet the threat of Soviet competition.

We must search out and develop new inventions, new techniques, and new products. Such developments must be a dynamic part of our economy, but there is still a firm and immutable rule of economics that there is no substitute for hard work. All the gadgets, automation, mass production, and design still demand quality work for quality products. This means quality workmanship and quality management. It means a delivered product superior to any and all competition.

But we can't meet the challenge of competition by following the easy road of doing the same things as we've always done before. We can't meet it if we don't realize that we must earn again each year the title of the greatest power of the world.

We can't meet it by living in the joys and the prides of the past, but must find the new frontiers of tomorrow, and as pioneers in a new age use new tools with new vigor for the preservation of our way of life.

This we can't do with a 30-hour week. Nor can we do it with management taking 2 months off each year at Palm Springs or Palm Beach.

Our danger is real as other nations, some slave and some free, seek the place in the sun that we hold with casual indifference, forgetting the callouses and sore muscles that won us that place. If we do not understand this fantastic drive of our competitors who have grown lithe and lean and shrewd and clever under the hardships of hunger and privation, we will follow the path of other great powers which today are only shells of former worldwide glory.

There is a grim reminder that should spur us on while we still have a margin of leadership. Voltaire wrote 200 years ago:

"The sound that history makes is the sound of satin slippers going downstairs, and of wooden shoes going up."

It's time we put on our fathers' working boots.

AUTHORIZATION OF APPROPRIATIONS FOR THE NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

The Senate resumed the consideration of the bill (H.R. 10809) to authorize appropriations to the National Aeronautics and Space Administration for salaries and expense, research and development, construction and equipment, and for other purposes.

Mr. STENNIS. Mr. President, may I ask the Senator from Kentucky if we could take up the committee amendments now, or does he seek to speak on the committee amendments? Mr. President, may we have order?

The PRESIDING OFFICER. The Senate will be in order.

Mr. STENNIS. One of the committee amendments is to strike out the provision with reference to the Civil Service Commission—the exceptions.

Mr. COOPER. Then I wish to address myself to that amendment. Is that the first amendment?

Mr. STENNIS. Yes.

The PRESIDING OFFICER. The Chair would like to state that the committee amendments were adopted en bloc.

Mr. STENNIS. Yes; they were offered and adopted en bloc, subject, however, to the usual proviso, as the Senator from Mississippi understood, that they could be taken up as original matter by any Senator.

The PRESIDING OFFICER. Yes.

Mr. COOPER. For the purpose of propounding some questions on that amendment, I offer an amendment.

The PRESIDING OFFICER. Does the Senator from Mississippi yield?

Mr. COOPER. I wish to ask some questions.

Mr. STENNIS. Does the Senator from Kentucky desire to ask some questions?

Mr. COOPER. Is it in order for me to offer an amendment?

The PRESIDING OFFICER. An amendment is in order.

Mr. COOPER. I offer an amendment.

The PRESIDING OFFICER. The amendment will be stated.

The LEGISLATIVE CLERK. On page 6, line 17, insert:

SEC. 4. That paragraph 203(b)(2) of the National Aeronautics and Space Act of 1958, as amended (42 U.S.C. 2473 (b)(2)), is amended by striking out "ten" and inserting in lieu thereof "thirteen," and by striking out "two hundred and sixty" and inserting in lieu thereof "two hundred and ninety."

Renumber the following sections.

Mr. STENNIS. May we have order, so the Senator from Kentucky may be heard?

The PRESIDING OFFICER. The Senate will be in order.

Mr. COOPER. I recognize that the members of the committee have given this bill a great deal of attention. I have great respect for the committee, for the chairman of the committee and for the chairman of the subcommittee who presented the bill today. I want to congratulate the chairman of the subcommittee on his presentation and also the Senator from Maine [Mrs. SMITH] for her statement, and the Senator from Ohio [Mr. YOUNG].

I should like to tell the Senate why I have offered the amendment. I note that the committee had added $50 million to the authorization. I think that was the wise thing to do. As has been said, the added funds may be needed in the event there is a breakthrough, or something new is developed. In that event, a new authorization would not be required, and funds could be made available quickly for that purpose. However, in reading the committee report and also the hearings, I was interested in the item which was deleted by the committee, to which my amendment is directed.

It is admitted, I believe, that NASA has made tremendous progress. The Administrator of that organization, Dr. T. Keith Glennan, has stated that in the sophistication—or technical excellence—of the satellites which we have put into space he has no doubt that the United States is ahead of Russia. Dr. Glennan has also said, and it has been said on the floor of the Senate, that in one important respect it is believed we are behind Russia, and that is we do not possess an engine with thrust which can put large payloads into space.

I understand Dr. Wernher von Braun's organization was transferred from the

Army to NASA for the chief purpose of developing an engine with the thrust capable of putting large payloads into space.

Only a few days ago a multiengined device was fired in the first static test of the booster for the Saturn project. There is hope that there will be developed a single-chamber engine for the project, called Nova, which will also develop 1,500,000 pounds of thrust.

The issue I raise is this: Money will not develop these great engines. Men will develop them—men with experience and great scientific qualities. They are the men who are now working on the great booster engines at the new George Marshall Space Flight Center.

I have read the record. It appears that NASA did not ask for the additional money provided by the Senate committee, although I am glad more money was provided. NASA asked that 30 scientists, technicians, and engineers be excepted from the Civil Service regulations. They said that 16 of them were needed at the George Marshall Space Flight Center to work on the large booster rocket.

I notice that Dr. Glennan and others testified that this exception is needed in order to be able to hold or to retain scientists, engineers, and technicians who are needed at the George Marshall Space Flight Center. I noted also that one of those who was to be covered by the amendment which has been deleted was Dr. Wernher von Braun.

I asked some questions of the Space Agency and was told that it is feared that if the exception is not made, it is possible that some of the men who have been working on this great project may be attracted by offers from private industry, and thus may be lost to the Government. It is not certain that that will happen. However, I should say that if there is any possibility at all that the Government would lose the services of the scientists, engineers, and technicians who are working on projects in the very field in which the United States is behind Russia, then the Senate ought to adopt the amendment which was adopted by the House and except those persons from the regulations of the Civil Service Classification Act. The Civil Service Commission has said it should be done. The Bureau of the Budget has said it ought to be done. The space agency has said it ought to be done.

I know the objectivity of the Senator from Mississippi [Mr. STENNIS]. I have the most profound confidence in him. I should like to ask him, Is there any danger at all that if this amendment is not kept in the bill, the Government might lose the services of some of the engineers, scientists, and technicians, who are serving under Dr. Wernher von Braun at the George Marshall Testing Center?

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. STENNIS. I think the Senator from Kentucky has made an accurate statement of the facts in connection with this problem. I call his attention to the background of my answer to his question. I do not know whether he had the opportunity to be here earlier in the day when this question was covered in my presentation of the bill.

The subcommittee and the full committee were unanimously in accord that these positions and exceptions be made as advocated by the Senator from Kentucky. However, a very vigorous objection was raised by the Committee on Post Office and Civil Service, which is now considering the very question as it relates to the space agency and other agencies of the Government. So in deference to the position and responsibility of that committee, the Committee on Aeronautical and Space Sciences removed the provision from the bill as it is now before the Senate, and made this explanation in the report:

> The committee believes that a valid case has been made for authorizing 30 additional top-level positions to NASA in order to assure that it can attract and hold the high-caliber personnel needed to plan and execute the civilian space program. However, in view of the request of the chairman of the Committee on Post Office and Civil Service, the provision in question has been deleted from the bill in order to permit the committee to consider NASA's requirements in connection with the total personnel picture of the Federal Government. In view of the importance of this matter, it is hoped that necessary action will be taken promptly.

If such action should not be taken promptly, presumably additional proposed legislation will be introduced before the Senate on the basic law relating to the Space Administration, and at that time I shall certainly feel free to offer the very proposal to which the Senator from Kentucky makes reference.

However, I know that our committees are considering the matter. I have talked with the Senator from Kansas [Mr. CARLSON] on the floor this afternoon. The Senator from South Carolina [Mr. JOHNSTON] is not in the Chamber at the moment, but the report contains a letter from him.

I think the fears of the Senator from Kentucky are well grounded with respect to the situation, but I believe he can be assured that some affirmative action will be taken along the very lines which he advocates.

Mr. COOPER. Is it not correct to say that the House took action to except 30 positions at the request of NASA, so as to make certain that 16 of those positions would be available to needed persons at the Marshall Space Flight Center?

Mr. STENNIS. The Senator is correct.

Mr. COOPER. If the Senate does not accept that provision, we have no assurance except that the Committee on Post Office and Civil Service might take some action which would follow the request of NASA.

Mr. STENNIS. Certainly that committee of the Senate has primary and major responsibilities in this field. They have been requested to consider the question and have agreed to do so.

Mr. COOPER. I recognize that fact; but when the bill authorizing the space agency was originally drawn, it provided for the exception of 260 personnel, and the Committee on Aeronautical and Space Sciences made the exception at that time, did it not?

Mr. STENNIS. The Senator is correct. That was at the time of the creation of a new agency, and such action was considered absolutely necessary at that time.

Mr. COOPER. I observe the chairman of the Committee on Post Office and Civil Service in the Chamber. I have served under him. I know the high quality of his work. I know what a good man he is, and I am aware of his deep interest in this subject. I see other members of the committee also in the Chamber.

We are dealing with the question of the space agency. Everyone has been speaking about how far the United States is behind Russia in missiles and space projects. Actually we are not behind in the number and in the sophistication of satellites which the space agency has put up. We are ahead. However, we are behind in the development of a large booster engine. Money will not develop it, but men will. The men whom Dr. Wernher von Braun and Dr. Glennan want for this purpose would be taken care of by the proposed exception. So today we can make certain that those men will be provided to the space agency.

I should say that in 99 cases out of 100, or perhaps in 999 cases out of 1,000, we should defer to the Committee on Post Office and Civil Service. However, I cannot understand why, in an important matter such as this, and particularly in this field, we should not go ahead, grant the exception, and settle the matter now.

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. JOHNSTON of South Carolina. I dislike to raise opposition to a matter such as this. However, we all know that the question of supergrades in the various departments is not only handled by the Committee on Post Office and Civil Service, but is also, as the usual practice, studied in the Civil Service Commission. Ordinarily a certain number of supergrades are granted. Then the Civil Service Commission makes a study to see what agency or department needs the supergrades the most.

The Committee on Post Office and Civil Service has had hearings, and is now having hearings, on matters pertaining to pay, supergrades, and matters of that kind.

I assure the Senator from Kentucky that we will give this matter every bit of attention we possibly can and will bend over backward to help the Space Agency.

However, if we should ever start to let the various agencies say how many supergrades they will have, without there being some supervision by the Committee on Post Office and Civil Service and the Civil Service Commission, we will get into trouble. If one agency receives such consideration, another agency will want it, and soon every agency will be seeking supergrades.

I realize that insofar as the Aeronautics and Space Agency is concerned, these positions probably are needed at this

time. But we should not break down our regular governmental procedure, for if that were to happen, then, I warn the Senate, as I have done time after time in the past, we would be taking a most dangerous course.

Mr. COOPER. But suppose the Post Office and Civil Service Committee does not agree that such exceptions should be made. Then the Space Agency might lose the services of valuable scientists, whose work is most necessary to the successful conduct of the program.

Mr. JOHNSTON of South Carolina. I am in favor of granting the exceptions, so the request of the Agency can be complied with; and that would be done on the basis of authorization by the Civil Service Commission, with concurrence by the Committee on Post Office and Civil Service. Certainly we do our best to safeguard that procedure.

Mr. CARLSON. Mr. President, will the Senator from Kentucky yield to me?

Mr. COOPER. I yield.

Mr. CARLSON. I believe that all of us wish to take the necessary steps to safeguard the retention of the services of these valuable employees, whose work is for the benefit of the Space Agency and also for the benefit of the Nation as a whole. But I do not know of any instance in which, after the Civil Service Commission—which, after all, makes studies in regard to all such matters—has recommended to the committee that the specific jobs be allowed, the committee has not agreed that they should be allowed.

As the Senator from Kentucky has said, we are concerned with having the orderly procedure followed; and the committee has proceeded on that basis. When such necessities arise, I assure the Senator that the requests will be promptly met.

Mr. JOHNSON of Texas. Mr. President, will the Senator from Kentucky yield to me?

Mr. COOPER. I yield.

Mr. JOHNSON of Texas. Mr. President, I have not been a member of the subcommittee which handles this proposed legislation. However, as a result of the action taken by the full committee, I believe the amendment the Senator from Kentucky has submitted is not now in the bill. I believe the reason why the full committee took out the amendment was, not that we did not recognize the urgent necessity to have these additional positions created, but that we felt that if we were to proceed on that basis, we would be usurping the jurisdiction of the standing committee headed by the very able senior Senator from South Carolina [Mr. JOHNSTON].

If this proposal is meritorious—and I believe it is—I think the Senator from South Carolina will soon hold a committee hearing, and that the committee will soon act upon the proposal.

In any event, this matter will be in conference, inasmuch as the House of Representatives included the provision in its version of the bill.

On the other hand, as majority leader of the Senate, I did not wish to proceed on a basis which would result in usurping the jurisdiction of other committees. I thought that if the proposal were meritorious, the Senator from Kansas [Mr. CARLSON] and the Senator from South Carolina [Mr. JOHNSTON] would promptly call meetings of their committee; and, if not, the matter could wait for a reasonable length of time. As a matter of fact, I do not think any present employee would be discharged, in any event.

I believe the request is justified, and should be approved, and our committee report so states; but in my opinion this matter comes within the jurisdiction of the Committee on Post Office and Civil Service. So I hope we shall give that committee an opportunity to pass on the proposal. If the committee does not view the matter in the way we do, of course we can then proceed to pass on it. But I take the same point of view the Senator from South Carolina does.

Mr. COOPER. Mr. President, I understand the position of the Senator from Texas, the chairman of the Space Committee, and recognize his deep interest in this field. I also have my own responsibilities as a Member of the Senate. I know that all of us have been giving a great deal of thought to this subject, for it has been stated repeatedly that the United States is far behind Russia, at least so far as rocket power is concerned.

So I do not understand why we should run the risk of losing any of the valuable personnel whose services are so important in this field. We should not run that risk, in my opinion, even though we may wish to defer for a few weeks to another committee. I recognize that to proceed without giving the committee having jurisdiction an opportunity to pass on the matter might be construed as contrary to the spirit of the Senate procedure, and in ordinary circumstances I would wish to uphold that established procedure. But in this instance I believe we should do what we know is surest and best for the Space Agency, and for the combined development of the Saturn project with its large booster cluster—that is, make sure that we do not lose the services of any of these very valuable employees and highly trained scientists.

Mr. JOHNSON of Texas. No loss of the needed personnel has resulted from the delay. Years ago, we urged acceleration of the program. The delay which occurred was not due to any lack of personnel. The delay was due to a lack of acceleration because of the failure of the executive branch to make the decisions necessary to push this program with a sense of urgency.

The omission of the Senator's amendment will not result in preventing any valued employee from working on the booster rocket. All of the Von Braun group have their positions now; and this matter will not affect them except as to delaying possible promotions. In any event, higher salaries can be paid and additional positions can be added after the Congress acts on this matter.

I do not think there will be an adverse effect on the booster rocket program by having this committee give its consideration to the request; and I do not believe it is fair to imply that consideration by the Post Office and Civil Service Committee would have such an effect.

Mr. COOPER. I hope it will not. But I have read the record, and certainly they requested additional excepted positions.

Mr. JOHNSON of Texas. But our committee does not have primary jurisdction as to that. If our committee were to proceed to act on the matter at this time, such action would be similar to action by the Committee on Agriculture and Forestry on an appropriation bill. The Committee on Post Office and Civil Service has jurisdiction in regard to the grades.

Mr. COOPER. But in the first bill for the space agency, provision was made for the creation of 260 supergrade positions.

Mr. JOHNSON of Texas. Yes; and in that case we cooperated with the Committee on Post Office and Civil Service. In this instance, I believe the House committee has done likewise.

So I see no reason why we should not permit the Senate Committee on Post Office and Civil Service to have an opportunity to hold hearings on this matter and to consider it. The chairman of the committee has stated in writing, as well as in person, that he plans to do so.

If we were to have the Space Committee proceed without regard to the jurisdiction of the Committee on Post Office and Civil Service, and without its concurrence, other committees then would have a precedent for taking similar action. In that event, we might just as well abolish the Committee on Post Office and Civil Service.

Mr. DIRKSEN. Mr. President, yesterday seven supergrade positions which were provided for in the mutual security bill were deleted simply because the request for them had not been made of the Committee on Post Office and Civil Service. Although that case might not be entirely analogous to this one, yet the general principle is precisely the same.

Mr. CLARK. Mr. President, will the Senator from Kentucky yield to me?

Mr. COOPER. I yield.

Mr. CLARK. I should like to commend the Senator from Kentucky for raising this very important point. I agree with him that, as regards many of the areas which are critical and of vital importance to the security of the Nation, the time has come to lift the ceiling for the supergrades, and to pay the salaries which must be paid in order to obtain for the Government the benefit of the best brains which must be brought to bear on these problems if these essential programs are to be developed in the national interest.

But I should like to plead with the Senator from Kentucky to permit the Committee on Post Office and Civil Service to have an opportunity to act on this matter in accordance with the orderly procedures of the Senate.

I see in the Chamber at this time four members of that committee, all of whom have been listening with great attention to the remarks of the Senator from Kentucky. So I plead with the Senator from Kentucky to permit that committee to take action to meet the need which the Senator from Kentucky has so ably and so eloquently presented.

As one member of that committee, I assure him—and I see the chairman of our committee in consultation with him at this very time—that I shall do everything that I possibly can, and I know that the chairman of the committee will do likewise, to have our committee act promptly on this matter. I know the same will be true of the ranking minority member of the committee, the Senator from Kansas [Mr. CARLSON], who is also in the Chamber at this time. All of us will do our very best to see to it that this program does not suffer for lack of sufficiently high salaries to attract the best brains which are needed.

I commend the Senator from Kentucky for his interest in this matter; and I believe I can assure him that the members of the Committee on Post Office and Civil Service, who have this responsibility, will measure up to it.

Mr. LAUSCHE. Mr. President, will the Senator from Kentucky yield to me?

Mr. COOPER. I yield.

Mr. LAUSCHE. I wish to subscribe to the objective the Senator from Kentucky has had in the remarks he has made and in the amendment he has submitted. Moreover, based upon what has been stated, it seems to me that the members of the committee which normally should take jurisdiction of this matter have very definitely indicated that they, too, subscribe to the basic principle enunciated by the Senator from Kentucky.

Mr. COOPER. Mr. President, I have raised this question because I believe it is most important. I know the Committee on Aeronautical and Space Sciences has made great progress and has speeded up the space program.

However, Dr. T. Keith Glennan, Administrator of NASA, on the program "Meet the Press" a few weeks ago, did make the statement that the cut which was made last year by the Congress in appropriations for the space agency resulted in setting back F–1, the big single chamber booster engine, by at least 6 months. Of course, I recognize that the Senate initially provided the full amount requested, but had to compromise with the House which had made a substantial cut. But that was his statement. And although money is important—and it evidently is important, because Dr. Glennan said the cut Congress made last year forced them to stretch out the Nova booster engine project—I want to repeat that even with money, these great developments cannot be achieved unless we have the men to make them.

What worried me, when I read that the Senate committee had struck the amendment included in the House bill, was the possibility, before the Post Office and Civil Service Committee had acted, or in the event it did not act, or was tied up with the House in conference, we might be faced with the loss of scientists that we need—and there are so few—to develop the large booster engines.

If I felt there were any possibility of success for my amendment—and I know there is not, from what has been expressed on the floor—I would like to see the Senate replace that section. It is evident it will not be done, because of the position taken by the leadership and by the chairmen of the committees.

However, I am glad that I raised the question, and that we have had statements made by members of the Aeronautical and Space Sciences Committee, the Appropriations Committee, the chairman of the Post Office and Civil Service Committee, and the minority leader. So I feel assured that these civil service exceptions will be made and that Dr. Wernher von Braun will be kept working on the booster engine.

Mr. President, I withdraw my amendment.

The PRESIDING OFFICER. The bill is open to further amendment.

If there be no further amendment to be offered, the question is on the engrossment of the amendments and third reading of the bill.

The amendments were ordered to be engrossed, and the bill to be read a third time.

The bill was read the third time.

The PRESIDING OFFICER. The question now is, Shall the bill pass?

Mr. STENNIS. Mr. President, I ask for the yeas and nays on final passage.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is, Shall the bill pass? On this question the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from New Mexico [Mr. ANDERSON], the Senator from Virginia [Mr. BYRD], the Senator from Mississippi [Mr. EASTLAND], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Alabama [Mr. HILL], the Senator from Montana [Mr. MURRAY], and the Senator from Wisconsin [Mr. PROXMIRE] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] is absent because of illness.

I further announce that the Senator from Minnesota [Mr. HUMPHREY], the Senator from North Carolina [Mr. JORDAN], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Oregon [Mr. MORSE], the Senator from Wyoming [Mr. O'MAHONEY], the Senator from Alabama [Mr. SPARKMAN], and the Senator from Missouri [Mr. SYMINGTON] are necessarily absent.

I further announce that, if present and voting, the Senator from New Mexico [Mr. ANDERSON], the Senator from Virginia [Mr. BYRD], the Senator from Mississippi [Mr. EASTLAND], the Senator from Arkansas [Mr. FULBRIGHT], the Senator from Missouri [Mr. HENNINGS], the Senator from Missouri [Mr. SYMINGTON], the Senators from Alabama [Mr. HILL and Mr. SPARKMAN], the Senator from Minnesota [Mr. HUMPHREY], the Senator from North Carolina [Mr. JORDAN], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Oregon [Mr. MORSE], the Senator from Montana [Mr. MURRAY], the Senator from Wyoming [Mr. O'MAHONEY], and the Senator from Wisconsin [Mr. PROXMIRE] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Indiana [Mr. CAPEHART], the Senator from Nebraska [Mr. HRUSKA], and the Senator from New York [Mr. JAVITS] are absent on official business.

The Senator from Utah [Mr. BENNETT], and the Senator from Kentucky [Mr. MORTON] are necessarily absent.

The Senator from Kansas [Mr. SCHOEPPEL], and the Senator from North Dakota [Mr. YOUNG] are detained on official business. If present and voting, the Senator from Utah [Mr. BENNETT], the Senator from Indiana [Mr. CAPEHART], the Senator from Nebraska [Mr. HRUSKA], the Senator from New York [Mr. JAVITS], the Senator from Kentucky [Mr. MORTON], the Senator from Kansas [Mr. SCHOEPPEL], and the Senator from North Dakota [Mr. YOUNG] would each vote "yea."

The result was announced—yeas 78, nays 0, as follows:

So the bill (H.R. 10809) was passed.

Mr. JOHNSON of Texas. Mr. President, I move that the Senate insist on its amendments and request a conference with the House of Representatives thereon, and that the Chair appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. JOHNSON of Texas, Mr. STENNIS, Mr. YOUNG of Ohio, Mr. DODD, Mr. CANNON, Mr. BRIDGES, Mrs. SMITH, and Mr. MARTIN conferees on the part of the Senate.

Mr. STENNIS. Mr. President, I wish to highly commend and also thank Mr. Max Lehrer, staff member, for his highly valuable services to the subcommittee during the hearings and presentation of this bill. His services were outstanding, of the highest quality, and of great value to the committee and to the Senate.

ORDER FOR ADJOURNMENT TO TOMORROW

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that when

the Senate concludes its business today it stand in adjournment until 12 o'clock noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

DEPARTMENT OF COMMERCE AND RELATED AGENCIES APPROPRIATION BILL, 1961—CONFERENCE REPORT

Mr. HOLLAND. Mr. President, I believe that under the unanimous-consent agreement I have the floor.

The PRESIDING OFFICER. The Senator is correct.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield to the majority leader.

Mr. JOHNSON of Texas. Mr. President, I understand that the Senator from Delaware [Mr. WILLIAMS] plans to make a motion in connection with the conference report, as follows: That the Senate insist on its amendment numbered 13 and ask for a further conference with the House thereon, and that the Chair be authorized to appoint conferees.

I am informed that the distinguished chairman of the subcommittee [Mr. HOLLAND] is prepared to discuss the conference report this afternoon, but there are many Senators who have engagements, and who wish to know whether there will be any further yea-and-nay votes today. If the Senator from Delaware makes his motion and asks for the yeas and nays, I am sure that there will be another yea-and-nay vote.

Therefore, in order to accommodate all Members of the Senate, I am about to suggest that the Senate remain in session as late this evening as necessary to discuss the conference report, and that there be a unanimous-consent agreement that, after the morning hour tomorrow, there be 30 minutes of debate, to be equally divided between the chairman of the subcommittee [Mr. HOLLAND] and the Senator from Delaware [Mr. WILLIAMS], and that the Senate then proceed to vote on the motion.

I submit the unanimous-consent request.

The PRESIDING OFFICER. Is there objection?

Mr. HOLLAND. I have no objection, but I wonder if the majority leader would not be willing to have the vote come at a fixed hour, so that Senators can count on it. The Senator from Florida was here all yesterday afternoon and has been here all this afternoon waiting for this matter to come up. If the time were fixed at 1 o'clock, 1:30, or some other fixed time, I think it would accommodate Senators.

Mr. JOHNSON of Texas. In order to do that the morning hour would have to be interrupted. I do not know how many Senators will be present, or how long they will talk.

Mr. HOLLAND. I have no objection.

Mr. JOHNSON of Texas. I express the hope that the morning business can be concluded by 12:30, and that the Senate can vote on the motion at approximately 1 o'clock. But if several Senators put in an appearance, and each takes time to talk, more time will be required than if no Senators appeared.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas? The Chair hears none, and it is so ordered.

The unanimous-consent agreement was subsequently reduced to writing, as follows:

Ordered, That on Wednesday, May 4, 1960, following the conclusion of morning business, the Senate proceed to the consideration of the motion of the Senator from Delaware [Mr. WILLIAMS] that the Senate further insist upon its amendment No. 13 to H.R. 10234, the Commerce Department appropriation bill, ask a further conference with the House on the amendment, and that the Chair appoint the conferees on the part of the Senate.

Ordered further, That debate on such motion be limited to 30 minutes, to be equally divided between the proponents and opponents and controlled by Mr. WILLIAMS and Mr. HOLLAND, respectively.

Mr. HOLLAND. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 10234) making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1961, and for other purposes. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The legislative clerk read the report. (For conference report, see House proceedings of April 28, 1960, p. 8920, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield.

Mr. STENNIS. I wish especially to thank the Senator from Florida and the subcommittee which worked on the problem for the consideration given to what is called the pilot agricultural weather forecasting program for the Mississippi delta area.

This program has been in operation for 2 years on a modest budget of $48,000 and has saved farmers in the area thousands of dollars. These weather forecasts have been used to assist farmers in planting, in applying agricultural chemicals and in harvesting. A 10-county survey made by the Mississippi Extension Service indicate that $1,100,000 was saved by weather forecasts which prevented premature planting and over $800,000 was saved by timely weather information that assisted farmers in applications of agricultural chemicals.

The Senate bill provides a small increase of $27,000 to strengthen this weather program and extend the area of forecast coverage to the delta area of Louisiana.

I notice that no reference was made to this project in the conference report. In view of the most favorable comments in both the House report and the Senate report as to the soundness and desirability of this project and the very modest amount requested, $75,000, I am hopeful that the intent here is to permit the Weather Bureau to implement this important program along the lines recommended in the Senate Committee Report.

I ask the Senator from Florida to comment on that subject if he will.

Mr. HOLLAND. Mr. President, I am glad to comment. The conferees were in accord that this was a worthy project, and that the expansion of the project by a small additional appropriation, so that the area in Mississippi which is covered would be enlarged, and so that adjoining areas in the delta—I believe lying in Louisiana—would also be covered, was a very desirable improvement. It was decided that the amount allowed by the Senate should still stand. I will say to the Senator that that project is in the conference bill, in the amount approved by the Senate.

Mr. STENNIS. I thank the Senator for his understanding of this project. It is estimated by the Mississippi Extension Service survey that at least $800,000 was saved last year in that area in connection with planting. Weather reports enabled farmers to time the planting, to keep from losing the seed which would not come up in adverse weather.

Mr. HOLLAND. I am very happy that such good results were attained. I congratulate the Senator from Mississippi, who was the one who initiated the program, upon such fruition of his efforts.

Mr. President, I should like to make a brief opening statement. I have agreed to yield to the Senator from Illinois [Mr. DOUGLAS], but I believe he wishes to withhold his comment or questions until after I have concluded my opening statement, following which I shall be glad to yield to other Senators.

Mr. President, I wish first to insert in the RECORD a tabulation showing various figures as they apply to the general fund appropriations. I ask unanimous consent that the insertion may be made at this point.

The PRESIDING OFFICER (Mr. LUSK in the chair). Is there objection?

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

Department of Commerce and related agencies appropriation bill, H.R. 10234

GENERAL FUND

1960 appropriations to date	$1,105,146,900
1961 estimates	799,615,000
House bill	760,522,235
Senate bill	738,388,300
Conference action	729,624,375
Under the Senate bill	8,763,925
Under the House bill	30,897,860
Under the budget	69,990,625
Under the 1960 appropriations	375,522,525

Mr. HOLLAND. Mr. President, I simply wish to say, by way of brief mention, that, as against the 1960 appropriations of $1,105,146,900 out of the general fund, the conference report calls for $729,624,375 for fiscal 1961.

The conference amount is under the Senate bill by $8,763,925, under the House bill by $30,897,860, and under the budget $69,990,625.

The amount is under the 1960 appropriations by $375,522,525, for the reasons discussed in the original debate between the Senator from Illinois [Mr. DOUGLAS] and me.

Mr. President, I also ask unanimous consent to place in the RECORD at this point a tabulation covering figures appropriated by the pending bill from the Highway Trust Fund for the Federal Aid System.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

Highway trust fund

1960 appropriation	$3,028,000,000
1961 estimates	2,689,000,000
House bill	2,687,383,000
Senate bill	2,689,000,000
Conference action	2,688,691,500
Under Senate bill	308,500
Over House bill	308,500
Under 1961 estimate	308,500
Under 1960 appropriations	339,308,500

Mr. HOLLAND. Mr. President, the conference action provides $2,688,691,500. These appropriations are for the Federal aid system.

I should like to give some other figures at this time.

Mr. President, I have before me a résumé which I should like to present for the information of Senators, since I understand that final action on the conference report will not be taken until tomorrow.

The following résumé of the conference may be helpful in understanding the report now under consideration. The conferees had for settlement 32 amendments; in 6 instances the Senate receded; in 6 instances the House receded; in 16 instances the conferees agreed upon amount compromising the House and Senate differences upon a nearly 50–50 basis; and 4 disagreements were noted. Of the four disagreements in the report, three of a technical nature were resolved when the House receded and concurred with the Senate amendments. Amendment 13, relating to free or reduced rate transportation on American vessels, is still in disagreement. That, as I understand, is the amendment upon which the Senator from Delaware [Mr. WILLIAMS] wishes to predicate his motion for standing by our previous action and ask for a conference with the other body upon this item alone.

The Senate conferees receded on amendments with the following results: Amendment No. 1 deleted language proposed for official entertainment expenses; amendment No. 2 appropriated $2,660,875 as proposed by the House instead of $2,822,400 as proposed by the Senate for the general administration of the Department of Commerce; amendment No. 21 deleted language proposed by the Senate to appropriate $1,030,000 for the purchase of foreign currencies for research and technical services of the National Bureau of Standards; amendment No. 25 deleted language proposed by the Senate making Weather Bureau research and development funds available until expended; amendments Nos. 30 and 31 appropriated $50 million as proposed by the House for the revolving fund of the Small Business Administration as proposed by the House instead of the $47,920,000 proposed by the Senate and deleted the appropriation of $2,080,000 for the grants for research and management counseling proposed by the Senate.

The House conferees receded on amendments with the following results: Amendment No. 3 appropriated $2,584,000 as proposed by the Senate instead of $2,415,025 as proposed by the House for the Office of Field Services of the Department of Commerce; amendment No. 4 appropriated $8,898,500 as proposed by the Senate instead of $8,947,500 as proposed by the House for the current census statistics program of the Bureau of the Census; amendment No. 16 appropriated $160 million as proposed by the Senate instead of $200 million as proposed by the House for the repayable advances to the highway trust fund; amendment No. 19 provided $10 million for reimbursement of sums expended for emergency repair of highways and bridges as proposed by the Senate instead of $9 million as proposed by the House; amendment No. 28 appropriated $5,597,000 as proposed by the Senate instead of $5,201,000 as proposed by the House for the procurement and technical assistance and related activities of the Small Business Administration; and amendment No. 32 appropriated $2,455,000 as proposed by the Senate instead of $2,295,000 as proposed by the House for the U.S. Tariff Commission.

The 16 instances where compromise amounts were agreed upon include: $17.4 million for the operating expenses of the Coast and Geodetic Survey where it is felt that priority should be given to the oceanographic surveys to be undertaken by the ship *Pioneer;* 50–50 splits for the business service activities of the Business and Defense Services Administration and the Bureau of Foreign Commerce; provision of $14,500,000 for the salaries and expenses account of the Maritime Administration to provide $8,045,000 for the administrative expenses, $1,253,000 for the "Maintenance of shipyard facilities and operation of warehouses" and $5,202,000 for the reserve fleet; a 50–50 split between House and Senate figures to provide $22,567,500 for the Patent Office to insure a more timely issuance of patents; a split on the limitation for general administrative expenses of the Bureau of Public Roads; adjustment of two amendments under the Federal-aid highways trust fund to reflect action taken on other related amendments; a split on the research and technical services program of the National Bureau of Standards to provide $18,800,000; splits on Weather Bureau amendments—three in number—providing funds for operations, research, and purchase of airport facilities instruments; the conferees indicate that in connection with Weather Bureau activities that flying safety should be given priority and specifically state that the allowance for research and development includes the $300,000 proposed by the Senate for additional flight time and instrumentation of aircraft utilized in the hurricane research activity. I am informed that this aircraft is also utilized in the spring of the year in high altitude research in the Midwest during the tornado and other severe weather periods. The conferees agreed upon the transfer of $16,363,000 for the administrative expenses of the Small Business Administration loan program in lieu of the $15,763,000 proposed by the House and $17,563,000 proposed by the Senate.

Amendments in technical disagreement, which the House now concurs in, include language to provide funds by transfer for the furnishing of the memorial chapel at the Kings Point Merchant Marine Academy; language to authorize the transfer of one military aircraft to the Weather Bureau; and language authorizing the annual audits of the St. Lawrence Seaway Corporation on a calendar, rather than a fiscal year basis, as heretofore.

All the items which I have covered up to now in my remarks have already been agreed to by the House. So far as I know, there is no disagreement on the part of the conferees either of the Senate or the House. All the conferees signed the report.

The other item, still left in disagreement, is the amendment presented by the Senator from Delaware [Mr. WILLIAMS] relative to the prohibition of reduced rates when a person travels on a subsidized ship, if the person traveling is an official of the United States.

On that amendment, the Senate and House conferees refused to recede. The amendment was left in disagreement. I immediately referred that matter to the Senator from Delaware, so that he might make arrangements for anyone who might view the matter as he did to present his case or their case before the House of Representatives, to which the conference report had to go first.

In spite of that, the House, by unanimous voice vote, refused to accept the Senate amendment. That is the sole item in disagreement.

I now yield to the Senator from Illinois.

Mr. DOUGLAS. I thank the Senator from Florida.

I should like to inquire about two amendments. They deal with increases which the Senate placed in the bill over and above the sums which the House had appropriated. The first deals with the $5,000 which the Senate allowed to the head officials of the Department of Commerce for entertainment. The Senator from Florida will remember that the Senator from Illinois protested that item when it was on the floor, but he was unsuccessful in getting it eliminated.

May I ask if my understanding is correct that this item has now been eliminated and is not contained in the final bill?

Mr. HOLLAND. The Senator from Illinois is correct. The House conferees agreed with the philosophy of the Senator from Illinois instead of with the philosophy of the Senate committee. They decided that no entertainment, at public expense at least, was in order, and the item, which would have allowed the use for entertainment of $5,000 of

the total appropriation for salaries and expenses was eliminated. The Senate conferees have receded.

Mr. DOUGLAS. I am happy that this is the situation. It seems to me to be extraordinary that the Secretary of Commerce, who has been belaboring Democrats in Congress for spending money should have demanded $5,000 in order that his guests and his associates might eat and drink at the expense of taxpayers. I am very glad that this item has been eliminated.

I might say that at the time when the debate occurred I made a pledge that if this item were eliminated I would try to meet the needs of the Secretary of Commerce by sending him a case of orange juice to substitute for the more powerful potions which undoubtedly would have been purchased if the $5,000 item had remained in the appropriation.

Now that that has been done, I should like to say that I will order this case of orange juice to be sent to the Secretary of Commerce, Mr. Mueller, with the compliments of the Senator from Illinois.

Mr. HOLLAND. I am sure that Mr. Mueller will be happy, and I am sure he will be even happier if the orange juice is Florida orange juice.

Mr. DOUGLAS. I do not know whether Florida orange juice is any better than California orange juice, but in view of the fact that the Senator from Florida was so willing to listen to the arguments of the Members of the House, at least, I will see to it that this case of orange juice comes from Florida, in keeping with the spirit of casting one's bread upon orange juice to have it come back as orange juice.

Mr. HOLLAND. I thank the Senator for his courtesy. Does the Senator wish to ask another question?

Mr. DOUGLAS. Yes. The second question deals with the second amendment. It will be remembered that the House appropriated for the conduct of the Office of the Secretary of Commerce $2,666,875. The Secretary of Commerce made the plea that this was not enough money for him, that he needed more money for assistants. He made this plea about the same time that he was traveling to Philadelphia and other places to denounce Members of Congress as wild spenders and the Democrats as budget busters. The Senate committee either did not know about the speeches or, taking his testimony as valid testimony and not as public speeches, increased the House appropriation by $161,525, to a total of $2,822,400. Is that correct?

Mr. HOLLAND. The Senator is correct. The House figures were adopted by the conferees. The Senate receded.

Mr. DOUGLAS. In other words, the conferees adopted the position of the House, and also the position which the Senator from Illinois urged unsuccessfully on the floor of the Senate. Is that correct?

Mr. HOLLAND. That is correct. The Senator from Illinois found warmer friends on the part of the conferees of the House for his strenuous arguments on these two points than the Senate proved to be, or than the Senate committee proved to be. I congratulate him upon having found such friends, because he carried his point through their efforts.

Mr. DOUGLAS. I thank the Senator from Florida. I hope this will teach a lesson to the Secretary of Commerce and to other Cabinet officers that they should not have a double standard; that they should not demand increased appropriations of Congress for their particular offices, and at the same time denounce Members of Congress for appropriating sums which they request.

I hope that a copy of this colloquy, embossed, may be sent to the Secretary of Commerce, calling his attention to the fact that we hope he has been taught a lesson—although we are not certain he has been, because I notice he made a speech the other day denouncing Congress as budget boosters and the Democrats as wild spenders. However, if he is around next year—which we hope he will not be—this action may serve as a warning to him then, even though it has a delayed time effect upon him.

In any event, I thank the Senator from Florida for yielding on this point. I hope the full import of this lesson is borne in upon the Secretary of Commerce, Mr. Mueller, and his Under Secretary, Mr. Philip A. Ray.

Mr. HOLLAND. I thank the Senator from Illinois for his remarks.

I may say to the Senator from Delaware, whom I see on the floor, that I propose to ask that the Senate agree to the conference report, which I understand is necessary in order to lay a predicate for us to call up the item in disagreement, so that the Senator from Delaware can address his motion to it.

Mr. President, unless there are questions which Senators desire to ask on other items, I ask that the conference report be agreed to.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

Mr. HOLLAND. Mr. President, before I call up the item in disagreement, I should like to complete my own statement by placing in the RECORD a matter which I think is necessary to correct some disagreement which has apparently arisen on the part of some Members of the other body.

Mr. President, I have noted from certain statements appearing on page 8224 of the RECORD of April 19 that members of the corresponding subcommittee of the other body have twice discussed the method by which the Senate reduced the Department of Commerce and related agencies appropriation bill for 1961 below the amount approved by the House. These reactions were due apparently to statements originally appearing in the press and subsequently included in a publication issued by the United States Chamber of Commerce.

In highlighting the appropriation bill on the floor of the Senate on Thursday, March 24, I had occasion to refer to the $40 million reduction in the repayable advance to the highway trust fund, which apparently is the bone of contention, and in answer to Senator DOUGLAS' queries, on page 6495, assured him that this amount would not require subsequent appropriation.

This matter was further discussed when the conferees met, and I am much pleased to note that when the conference report, now under consideration here, was being discussed on the floor of the House on Thursday, April 28, Mr. PRESTON said, as his statement appears on page 8921 of the RECORD:

Mr. PRESTON. I will be glad to make a statement on that point. The budget estimates on this bill were $799,615,000. The House reduced that to $760,522,235, a cut of $39,092,765.

The Senate bill further reduced the amounts from $760,522,235 to $738,388,300 through the device of cutting the repayable advance to the highway trust fund; and that was made possible due to the fact that two points of order were made on the floor against forest highways and public lands highways because the language the budget sent us undertook to put those two categories under the trust fund. Points of order were made that knocked them out; consequently the Senate was then in a position to reduce the repayable advance to the trust fund appropriation by $40 million. So that is the method they used to reduce our total. However, I may say we further reduced the bill in conference from $738,388,300 in the Senate bill to $729,624,375, a reduction of $8,763,925 on the part of the House conferees.

Mr. President, without laboring the point, and by way of supplementing the excellent summary made by Mr. PRESTON, I ask unanimous consent to have included at this point certain portions of the testimony relating to this reduction appearing on pages 500 and 501 of the Senate hearings. I believe that this record will show clearly the wisdom of the committee and of the Senate in reducing the repayable advance, an action accepted by the House conferees.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

ESTIMATED EXPENDITURES AND REVENUES

Senator HOLLAND. Page 672 of your justifications which you placed in the record shows your estimated revenues and expenditures on the basis of proposed legislation. That is, $27 million gas-tax receipts to be transferred from the trust fund to the general fund, and $39 million expenditures for forest highways and public-land highways to be charged to the trust fund.

Does this indicate that on the basis of present legislation the repayable advance could be reduced by $66 million, the total of the $27 million and $39 million?

Mr. TALLAMY. I believe that is so; but I would like to have Mr. Allen speak to it.

Senator HOLLAND. Well, this is a rather complex question. I will pass this around to you [handing papers].

RELATION TO PROPOSED LEGISLATION

Mr. J. C. ALLEN. If the proposed legislation were not enacted, we would not have to expend for the forest highways and public-lands highways $27 million by December 31, and the trust fund would retain in it the aviation gas tax of approximately $13 million by December 31, making a total of $40 million that we would have available as of December 31, which we do not count on in our budget request.

Senator HOLLAND. The reason we are asking this question is, If this committee and Congress should adopt the same attitude that the House has already adopted, namely, that it will not make appropriations for the forest highways and for the public-lands highways until the legislation is changed, but will instead insist upon the Budget Bureau and the agency following the law as it is now on

the books, in the absence of the transfer of the aviation gas sum, the reimbursable amount would be reduced, could be reduced, should be reduced, $66 million, rather than be stated in the bill in the full amount of $200 million. Is that correct?

EFFECT OF DELAYING APPROPRIATION

Mr. J. C. ALLEN. No, sir. It could only be reduced by $40 million, because it is the first 6 months of the year that we are concerned with the repayable advance. We need the $200 million by December 31, but if we do not have to pay for forest highways and public-lands highways out of the trust fund, and the aviation gas tax is retained in the trust fund, then by December 31 we would have $40 million more available than we now anticipate. Therefore, the advance could be reduced under those circumstances by $40 million.

Senator HOLLAND. I think that is clear. That ties in, as you see, with the principal question which the committee and Congress are going to have to decide; whether or not they propose to go ahead and make an appropriation out of general funds for the two objectives not now covered by the trust fund, when the Budget Bureau has failed to follow the present law, and the agency, under the direction of the Budget Bureau, has failed to do so. Some way, somehow, we have to bring this annual stalemate to an end.

I do not know what the committee in its judgment is going to decide, but the point we are trying to bring out by these last questions is that the total amount of reimbursable funds is tied in with this question that I have just been talking about.

Mr. TALLAMY. That is correct.

Senator HOLLAND. And the total reimbursable funds would be reduced, as you say, $40 million, in the event that the Senate agrees with the House and leaves these two items out of this present bill.

Mr. J. C. ALLEN. If they are not financed from the trust fund, our requirements would be reduced $40 million by December 31.

Mr. HOLLAND. Mr. President, I believe that concludes all action upon the report except to ask that the item in disagreement be laid before the Senate.

The PRESIDING OFFICER (Mr. LUSK in the chair), laid before the Senate a message from the House of Representatives announcing its action on certain amendments of the Senate to House bill 10234, which was read, as follows:

IN THE HOUSE OF REPRESENTATIVES, U.S.,
April 28, 1960.

Resolved, That the House agree to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 10234) entitled "An act making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1961, and for other purposes";

That the House recede from its disagreement to the amendments of the Senate numbered 12, 23, and 27; and agree to the same;

That the House insist upon its disagreement to the amendment of the Senate numbered 13.

Mr. HOLLAND. Mr. President, I may say that that message transmitted from the House covers all four of the items in disagreement, but shows that the House accepted three of the Senate amendments which were in disagreement, and disagreed to the amendment of the able Senator from Delaware [Mr. WILLIAMS].

I now yield to the Senator from Delaware.

Mr. WILLIAMS of Delaware. Mr. President, it is my understanding that there is complete agreement among the conferees as to all the amendments which were in conference with the exception of amendment No. 13, which I offered on the floor of the Senate.

Mr. HOLLAND. That is correct.

Mr. WILLIAMS of Delaware. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Delaware will state it.

Mr. WILLIAMS of Delaware. Is this the appropriate time to file a motion in connection with amendment No. 13, or should the Senate first agree to the three amendments which are not in disagreement?

The PRESIDING OFFICER. It is in order at this time to file the motion.

Mr. HOLLAND. Mr. President, to clear the record, my understanding is that the conference report has been agreed to.

Mr. WILLIAMS of Delaware. Yes.

Mr. HOLLAND. That means that the Senate has agreed to all the other amendments, in accordance with the action of the committee of conference.

Mr. WILLIAMS of Delaware. With the exception of amendment No. 13.

Mr. HOLLAND. All that is left for action is amendment No. 13.

The PRESIDING OFFICER. The Chair understands that the only amendment in disagreement is amendment No. 13.

Mr. HOLLAND. That is correct.

Mr. WILLIAMS of Delaware. Mr. President, I shall submit a motion in connection with amendment No. 13, but before doing so I should like to pay special tribute to the chairman of the subcommittee, the distinguished Senator from Florida [Mr. HOLLAND], as well as to all the other conferees, for the excellent work they have done in reaching agreement on the bill up to this point. I make this statement notwithstanding the fact that the particular amendment which I offered on the floor was not brought back to the Senate with the agreement of the House conferees.

I know from a study of the record of the conference that the Senator from Florida [Mr. HOLLAND], the Senator from Maine [Mrs. SMITH], and the other conferees worked hard in their effort to persuade the House to accept this amendment; and that when the House conferees refused to accept the amendment, the Senate conferees brought the report back to the Senate in order that we as a body might make a final determination as to the action we should take concerning amendment No. 13, which is in disagreement.

It is always a matter of regret to me when I find myself in a position different from that of the Senator from Florida, particularly so in this instance, because I know that from the standpoint of the substance of the amendment he is just as strongly in support of it as I am.

Yet I feel that in the situation in which we find the bill before the Senate today, even if the Senate agreed to the conference report, presumably tonight, and if the President of the United States were to sign the bill tomorrow, the act would still not become effective until July 1. This is the appropriation bill for the Department of Commerce for fiscal 1961. Therefore, because there is no urgency for the bill, and because all the disagreements between the House and the Senate have been ironed out with the exception of one amendment, I believe it is only proper that we ask the conferees to go back and try once again to persuade the House on the merits of accepting this amendment.

The Senator from Florida called my attention to the fact that if the amendment remained in disagreement, the conference report would go back to the House, and he suggested that I see what I could do to generate interest in the House in at least having a yea-and-nay vote on the amendment. The Senator from Florida took every precaution possible in order to afford me the opportunity to have that done.

However, the House was acting quickly; and before I could make this arrangement, the conference report was agreed to, and the House had rejected this amendment.

I call particular attention to the proceedings in the House in that connection. They appear in the CONGRESSIONAL RECORD for April 28, on page 8922, and show the consideration given by the House to amendment No. 13. In that connection, I may say that it is the amendment which proposed the placing of a prohibition on the American merchant marine, so it could not give free or reduced-rate transportation to employees or officials of the U.S. Government:

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

"Senate amendment No. 13. On page 12, line 11, insert 'No common carrier by water subject to the Shipping Act of 1916, as amended; the Merchant Marine Act of 1936, as amended; or any other Act; shall directly or indirectly issue any ticket or pass for the free or reduced-rate transportation to any official or employee of the United States Government (military or civilian) or to any member of their immediate families, traveling as a passenger on any ship sailing under the American flag in foreign commerce or in commerce between the United States and its Territories and possessions; except that this restriction shall not apply to persons injured in accidents at sea and physicians and nurses attending such persons, and persons rescued at sea, and except that this restriction shall not apply to persons referred to in section 405(b) of the Merchant Marine Act, 1936, as amended (46 U.S.C. 1145(B)), relating to steamship companies carrying mails of the United States: *Provided*, That nothing in this section shall prevent the United States Government from entering into contractual arrangements with said companies for reduced transportation rates involving the traveling expenses of those Government employees (military or civilian) when such transportation costs are paid for by the United States Government. Any person or corporation who knowingly violates this section shall upon conviction thereof be fined not less than $500 nor more than $10,000 at the discretion of the Courts for each such violation.' "

Mr. PRESTON. Mr. Speaker, I move that the House insist on its disagreement to the amendment of the Senate numbered 13.

The motion was agreed to.

No explanation of the amendment was made. I find no fault for that reason; perhaps someone should have requested an explanation. Nevertheless, that was the extent of the proceedings in the House in connection with the amend-

ment. I believe that if the House had realized what was in the amendment, the House would have given it more careful attention.

I have particularly in mind the fact that during recent months much has been said by Members of both Houses of Congress, in criticism of members of the executive branch who have accepted lavish or expensive entertainment from taxpayers who were interested in certain important decision which those Government employees or Government officials could make. One Commission member was forced to resign, because it was disclosed that he had accepted entertainment, in Florida, on a yacht which belonged to a person who was vitally interested in a decision to be made by the agency of which that Federal Government official was a member.

Only last week a House committee made a rather serious criticism of certain officials and employees of the Department of the Interior; attention was called to the fact that they had accepted entertainment in the home of the president, as I recall, or some other official of a company with which their agency was negotiating a contract or some other arrangement for the leasing of certain Government land. On every occasion those Government officials made rather strong statements to the effect that their decisions had not in any way been influenced as a result of that entertainment; and nothing in the record would show otherwise. However, all of us agree that it is improper, to say the least, for public officials or other public employees to act in such a way that they would be subject to such criticism.

So, Mr. President, I believe that the Members of Congress, as well as the officials of the executive branch, have no moral right to accept free vacations or subsidized vacations from the American merchant marine, particularly when we realize that this industry is being subsidized by means of appropriations voted by the Congress, to the extent of approximately one-quarter of a billion dollars annually. During the past 8 years, the Congress has voted to the American merchant marine direct subsidy appropriations in the amount of more than $1 billion.

This appropriation bill carries appropriations and directions for the payment to the American merchant marine of subsidies amounting to more than $250 million. Certainly, Mr. President, there could be no more appropriate vehicle to which this amendment could be attached than the appropriation bill by which the American merchant marine will receive one-quarter of a billion dollars.

Therefore, I felt this bill was the most appropriate one to which this amendment could be attached; and I felt that the Congress should agree to adopt the amendment, which merely would require of the American merchant marine the same standard of conduct which the Congress has insisted on requiring of the railroad industry and the aircraft industry, as regards free or reduced transportation for public officials.

Previously, Congress has provided that neither the American railroads nor the American airlines may give free or reduced transportation to public officials. Yet nothing in existing law would prevent the American merchant marine from offering to any Member of the House or any Member of the Senate or to any official in the executive branch of the Government a free trip around the world, either for himself or for the members of his family.

Mr. President, I shall not engage in personalities; neither shall I refer to specific cases, except one, which I previously have cited. When the bill was previously before the Senate, I cited that case, which is the only one I shall cite on the floor. A few years ago, when I was a member of the Committee on Interstate and Foreign Commerce, our committee was in the midst of holding extensive hearings in connection with a bill of great importance to the American merchant marine. The shipping companies were almost unanimously in favor of the bill. I shall not now discuss the merits of the bill; in fact, it may very well be that at that time I voted for the bill. I do not now recall the final outcome. However, the point is that in the course of the hearings by the Committee on Interstate and Foreign Commerce on the bill—and I was then a member of the committee—the shipping industry, through its official representative, sent to the chairman of the committee a letter in which any member of the committee was offered a free trip on any passenger ship flying the American flag. I said then, and I repeat now, that that was highly improper. After it was denounced by our committee, the committee unanimously rejected it, and likewise supported my contention that it was improper. And I am reasonably certain that I am correct when I say that not one member of the committee accepted such a trip.

However, it is true that, under existing law, there is no prohibition of such conduct. In other words, if, on tomorrow, we had before us a bill dealing with the American merchant marine, and if the bill called for a subsidy of one-quarter of a million dollars to that industry, nothing in existing law would prevent a representative of that industry from coming to my office, or to the office of any other Member of Congress, or to the office of any member of an agency of the executive branch of the Government, which might be dealing with the American merchant marine or with such a measure, and discussing with that public official the merits of the proposed appropriation, and at the same time offering a free steamer trip or a free vacation on a ship of the American merchant marine. So I say it is time for us to act to prevent, by law, anything of that sort.

I do not say that any Member of Congress or any member of the executive branch has been unduly influenced in that way. But if we are to lay down a code of conduct for the members of the executive branch of the Government, so as to prevent them from accepting lavish entertainment from groups or industries who are interested in important decisions which those public officials could make—and let me say that I joined in seeing to it that those standards were applied—then let us indicate a willingness on our part to live in accordance with the same code.

It has been argued that the amendment is directed against Members of Congress and officials of the executive branch of the Government, and that therefore the amendment would single them out for undue criticism. It has also been said that the amendment does not apply to every taxpayer who might receive free or reduced-rate transportation or entertainment from these companies. However, I point out that the amendment is drafted in exactly the same way as was the provision we passed in regard to the American airlines and the American railroads, and it would cover the same territory. Certainly the Congress has no right to provide by law that an official of such a company could not entertain on his yacht a private citizen who was not in any way in a position to affect a decision by a Government agency which would be of value to the company of that official. The two situations are not comparable.

The Commission member who was criticized for accepting entertainment on the yacht which belonged to an official of the company which had a case pending before that Commission, could properly have accepted such hospitality if he had been only a private citizen; in that case, there would not have been any criticism. The only criticism comes when public officials are involved. All public officials have to be much more careful in their conduct, so as not to accept entertainment or free or reduced-rate transportation in such circumstances.

Therefore, Mr. President, I submit, and send to the desk, a motion which I ask to have stated at this time. I wish to have the motion acted on tomorrow.

The PRESIDING OFFICER. The motion will be read.

The legislative clerk read the motion, as follows:

I move that the Senate further insist upon its amendment numbered 13, ask the House for a further conference, and that the Chair appoint the conferees on the part of the Senate.

Mr. WILLIAMS of Delaware. Mr. President, I again desire to emphasize that I am paying my respects to the Senator from Florida and the conferees who also supported this amendment on the floor of the Senate at the time the bill was before the Senate; and I know that they did everything they could at the time. However, as I said earlier in my remarks, I do feel that if we can send this bill back to the House, in another effort to have them consider it, they will accept this amendment.

I feel very strongly they will do that in view of the fact that the House itself has one or two committees now conducting investigations on payola in industry and conducting investigations with regard to lavish and excessive entertainment on the part of members of the executive branch.

I do not see how a committee of either the House or the Senate can criticize any member of the executive branch for doing that which we insist upon having

a right to do ourselves. There can be only one code applicable to Government employees, and it must be applicable not only to members of the executive branch, but to members of the legislative branch as well.

In conclusion, Mr. President, I ask unanimous consent that a copy of the amendment as approved by the Senate be incorporated in the RECORD at this point in my remarks.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

That no common carrier by water subject to the Shipping Act of 1916, as amended; the Merchant Marine Act of 1936, as amended; or any other Act; shall directly or indirectly issue any ticket or pass for the free or reduced-rate transportation to any official or employee of the United States Government (military or civilian) or to any member of their immediate families, traveling as a passenger on any ship sailing under the American flag in foreign commerce or in commerce between the United States and its Territories and possessions; except that this restriction shall not apply to persons injured in accidents at sea and physicians and nurses attending such persons, and persons rescued at sea, and except that this restriction shall not apply to persons referred to in section 405(b) of the Merchant Marine Act, 1936, as amended (46 U.S.C. 1145(B)), relating to steamship companies carrying mails of the United States: *Provided further*, That nothing in this Act shall prevent the United States Government from entering into contractual arrangements with *said* companies for reduced transportation rates involving the traveling expenses of those Government employees (military or civilian) when such transportation costs are paid for by the United States Government.

SEC. 2. Any person or corporation who knowingly violates this Act shall upon conviction thereof be fined not less than $500 nor more than $10,000, at the discretion of the court, for each such violation.

Mr. HOLLAND. Mr. President, since the Senator from Delaware has made what I take to be his principal argument in reference to his motion, I think it is only fair to make a brief statement of the position which I shall take tomorrow when the matter comes up on the floor.

In the first place, I think not only my subcommittee, the full committee, and the conferees, but I personally have done everything possible, in an effort to be helpful to the Senator from Delaware, that was reasonable or possible under the circumstances.

When the Senator offered his amendment, I stated on the floor that I would support it, I asked the Senate to agree to it, I accepted it, I told the Senate the conferees would make a battle for it, and every conferee stood by the present speaker in the conference insisting that this amendment be adopted.

Mr. President, we ran into considerable difficulty by reason of the following facts: First, the amendment is a legislative amendment offered to an appropriation bill, and therefore subject to a point of order. The House conferees did not want to subject the whole bill to a point of order on the floor of the House, and made it very clear they would not agree to have that course followed.

The House conferees explained to us that legislation identical with this, or similar to this, had been pending in a legislative committee of that body, not just this session, but in other sessions, and had not been accepted by that committee. They stated that committee was very strongly opposed to the legislation. They also called our attention to the fact, which we had already known when we went into conference, that the amendment as submitted by the Senator from Delaware, and as included in the bill on his request, had objections leveled against it from two governmental agencies, which, upon study, we thought were sound objections.

One of those objections came from the Panama Canal Company, which wanted to be sure the amendment did not apply to their transportation of Federal employees and officials which is at rates below the charges made in such cases by other commercial carriers.

The second point made was an objection by the Defense Department to the effect that, though the amendment as drawn excluded members of the Defense Department—that is, soldiers, sailors, or the like—it did not go so far as to exclude their dependents from the provision which was placed in the amendment allowing the Defense Department to make omnibus contracts for the carriage of its personnel on subsidized ships.

Upon receiving that complaint, the committee had discussed it with the Defense Department, and had worked out the wording under which that objection could be corrected, and went to the conference with two proposed modifications of the amendment, which we endeavored to sell to the House conferees.

The first, as I have said, made it clear that it did not relate to persons carried on the vessels operated by the Panama Canal Company; and the second included within the omnibus contract right of the Department of Defense, the dependents of either military or civilian employees or servants or officials along with the heads of families.

The House conferees were not willing to undertake the correction of the amendment in spite of the fact that the Senate conferees strongly urged that that course be followed.

Notwithstanding those facts, Mr. President, the Senate conferees, mindful of their commitment to the Senator from Delaware, and to others who, like him, were strongly committed to this amendment, declined to recede and insisted on reporting back that amendment in disagreement.

Just as directly as the Senator from Florida could go from the conference chamber to the seat of the Senator from Delaware, he did, to report to the Senator from Delaware that this was the course taken, in order that the Senator from Delaware could make arrangements in the House, if there was anyone in the House who supported his point of view—and, as a matter of fact, my point of view—so that when the conference committee of the House made its report, any defense, any requests for a rollcall vote, or any other action which the Senator from Delaware thought proper, might at least be asked for, and obtained, if possible.

Instead of that course being followed, there is no evidence, from examining the record of the transactions in the House of Representatives which took place the day following, that any Member of the House of Representatives asserted any interest in this particular amendment or any desire to have a rollcall vote, both of which facts are recorded by the Senator from Florida.

The Senator from Florida does not feel it is reasonable to expect that his committee or the Senate should have held up the enormous amount of business included in this bill, covering, as it does, much more than $3 billion of Federal funds, in order to pursue this matter further; and he is going to ask the Senate, in the morning, to disagree to the motion made by my distinguished friend from Delaware, because he believes we have granted him every possible consideration and every possible defense. We feel that to go back now, without having knowledge that the House will even appoint conferees again, would be a very great mistake.

Incidentally, the Senator from Florida talked to the minority leader, who had also been talked to by the Senator from Delaware, in an effort to see whether the minority conferees on the House side could not be interested in taking this matter up in the House, but was informed by the minority leader [Mr. DIRKSEN] that, upon contacting one of the House conferees, he was told that not only would he not bring it up, but he would not agree to the appointment of conferees to go into this matter again.

I do not know what further action was taken. I do not see, Mr. President, how, in all friendliness and in all consideration, since it seems to us we have gone a very long way to be cooperative, we could be expected to go any further in this matter. For that reason I shall ask the Senate tomorrow to reject the motion of the distinguished Senator from Delaware.

Mr. President——

The PRESIDING OFFICER (Mr. LUSK in the chair). The Senator from Florida.

ADJOURNMENT

Mr. HOLLAND. Mr. President, pursuant to the order previously entered, I move that the Senate stand in adjournment until 12 o'clock noon tomorrow.

The motion was agreed to; and (at 6 o'clock and 20 minutes p.m.) the Senate adjourned, under the previous order, until tomorrow, Wednesday, May 4, 1960, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES

TUESDAY, MAY 3, 1960

The House met at 12 o'clock noon.

The Chaplain, Rev. Bernard Braskamp, D.D., offered the following prayer:

Psalm 16: 7: *I will praise the Lord, who hath given me counsel.*

Most merciful and gracious God, who art the inspiration of our prayers and their answer, we beseech Thee to bless us daily with a vivid and vital sense of Thy divine counsel and companionship.

Grant that, as citizens of this great Republic, we may earnestly strive to cultivate and maintain the institutions, the traditions, and habits of a responsible and disciplined freedom.

Wilt Thou confirm us in our purposes and desires to live helpfully and harmoniously with all who are seeking to follow the ways of justice and righteousness.

Inspire us with aspirations and longings to live the life of sacrificial love and service which alone is worthy and capable of supplanting and overcoming all the hatreds and antagonisms among the members of the human family.

Hear us in the name of the Prince of Peace. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States was communicated to the House by Mr. Ratchford, one of his secretaries.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed with an amendment, in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 11510. An act to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

The message also announced that the Senate insists on its amendment to the foregoing bill, requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. FULBRIGHT, Mr. GREEN, Mr. SPARKMAN, Mr. WILEY, and Mr. HICKENLOOPER to be the conferees on the part of the Senate.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 5421) entitled "An act to provide a program of assistance to correct inequities in the construction of fishing vessels and to enable the fishing industry of the United States to regain a favorable economic status, and for other purposes."

FOREIGN AID PROGRAM

Mr. PASSMAN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. PASSMAN. Mr. Speaker, the Foreign Operations Subcommittee on Appropriations has no plan to cripple the foreign aid program. We will appropriate on the basis of need and not upon the basis of desire on the part of those who are without knowledge that the weakness of the program is too much money and not too little.

If you would give the same press coverage to the facts established by my subcommittee as given to the President, who is without facts, then, in all probability, there would be no additional appropriation for foreign aid until this grandiose, wasteful program has been brought under control.

If the President would spare me 1 hour to discuss this program with him so that he may be familiar with facts, then he would accept a $1½ billion reduction below his request for fiscal 1961, and know that it is ample to continue the program uninterrupted on a need basis.

It appears that any spending for any program other than foreign aid is wasteful in Mr. Eisenhower's views.

FREE COPIES OF TEXAS OBSERVER ARTICLES FOR FREE DISTRIBUTION

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. PATMAN. Mr. Speaker, on several recent occasions our very able and distinguished colleague, the gentleman from Maine [Mr. OLIVER] has made some extremely pertinent remarks about the importance of our money and banking system, and the importance of having public attention and public thinking focused on these matters. In the course of his remarks, Congressman OLIVER has also called the attention of the House to a series of well-informed articles on this subject from the Texas Observer, a small giant of a newspaper published at Austin, Tex., which supply many of the challenging public questions that have been generally neglected.

Because of the wide interest which has been aroused by Congressman OLIVER'S remarks and by the Texas Observer articles, these remarks and articles are being reprinted in pamphlet form, so that they may be sent to teachers, educators, and other individuals who have expressed interest.

Single copies of this pamphlet will be sent by me, without charge, to any individual who requests it. In addition, there will be a limited supply of the pamphlets to meet the requests of educational and nonprofit organizations for multiple copies, also without charge. Requests should be addressed to me at 1201 House Office Building, Washington, D.C.

THE DEPRESSED AREAS BILL

Mr. FLOOD. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. FLOOD. Mr. Speaker, I take this time to bring to the attention of the House again that tomorrow at noon under the difficult procedural practice of the Calendar Wednesday rule, the depressed areas bill will be called up. The administration and its leaders will oppose this bill violently. This means you must be prepared for sudden death rollcalls to prevent this bill from being considered by the House.

So you on both sides of the aisle, because this is not a partisan matter—Republicans as well as Democrats sponsored and are fighting for this bill—should be here. It is ironical that the President last night, today, tomorrow, and tomorrow night cried and will beat his breast and loudly be shedding tears about the depressed areas of the world, but none, none and nothing about the depressed areas of America.

FARM LEGISLATION

Mr. ANDERSEN of Minnesota. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. ANDERSEN of Minnesota. Mr. Speaker, I would like to invite all Members of the House who are interested in agriculture to listen to the analysis of the Andersen-Jensen farm bill which I will give under special order this afternoon. I think you will all be interested, and I hope you will be interested to the extent you will really study the bill. We think we have the answer to the most vexing problem today in agriculture.

We welcome any suggestions; we will welcome your cooperation. We are simply placing this matter before the Congress for consideration, and in Mr. JENSEN'S name and in my own I invite you to take part for an hour in discussing one of the most vital problems affecting our economy today.

POLISH CONSTITUTION DAY

Mr. FRELINGHUYSEN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. FRELINGHUYSEN. Mr. Speaker, today, May 3, is the 169th anniversary of Poland's Constitution Day, the equivalent of our Fourth of July.

For some years this body has solemnized Poland's Constitution of 1791, so near to the date of ratification of our own great Constitution, in order to assure our Polish friends that we have not forgotten our pledge to help Poland restore her freedom and independence.

We Americans have much in common with the people of Poland. Her two generals, Pulaski and Kosciuszko, made great contributions to our struggle for freedom in the American Revolution. Countless Polish immigrants have added to our strength since that time—over 7 million Americans are of Polish origin.

Although Poland is today a captive nation behind the Iron Curtain, we Americans know that the Polish people retain their independent spirit and love of freedom. This was proved beyond a doubt in the June 1956 Poznan revolt

when workers in the streets chanted, "We want freedom." It was proven again last summer when Vice President RICHARD NIXON visited that nation on his return home from Russia. Even though the regime did not publicize the time of arrival of Vice President and Mrs. NIXON, a million Polish citizens turned out to welcome him. This was their way of saying, "Tell your people that we will never surrender to slavery."

What is our answer to such determination from a people who, through no fault of their own, have so often been pawns in the ancient and modern struggles between East and West? As I see it, it is that the peaceful liberation of Poland and the other captive nations remains our primary objective. We must use every opportunity to convince them that we are their friends. We must continue our efforts, through the extension of cultural and student exchanges, to satisfy their hunger for knowledge of the West.

For a nation with such a history and courage—a nation which has given the world a Paderewski, a Chopin, a Madam Curie—deserves to be free.

NATIONAL RADIO MONTH

Mr. LINDSAY. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. LINDSAY. Mr. Speaker, the month of May has been designated again this year as National Radio Month and I deem it fitting to remind my colleagues of the great efforts continually being made by the 4,000 radio stations and its tens of thousands of employees dedicated to serve the American community.

National Radio Month this year will be symbolized by the theme, "Radio—The Heartbeat of Main Street," and rightly so. Today there are more than 155 million radios in use in the United States. Ninety-seven out of every one hundred homes in the Nation have radios. Thirty-nine million automobiles have radios. Indeed radio is our constant companion and its opportunity to be an influence for the good in our daily lives is limitless.

The role of radio is of the utmost importance to the development and progress of the Nation and its people. Radio serves as a lifeline during emergencies, a crusader for civic betterment, an educational and informational medium for all, and a boundless source of facts so important in our daily lives.

I am highly gratified that a substantial portion of the leaders of the radio industry are located in the 17th Congressional District which I am honored to represent. I have had close association with the management and staff of each of these stations serving the New York metropolitan area which includes my district and I can testify to the leadership which they provide and the contribution which they make to the community.

FOREIGN AID

Mr. HAYS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. HAYS. Mr. Speaker, if the President did not prove anything else in his speech last night he proved that ignorance is bliss. He asked that we continue to pour out $4 billion, to reach out and pour weapons to small-bore dictators, as we have been doing in the past.

What has happened? This whole program places more than three-quarters of its emphasis on weapons, weapons for dictators who collapse ultimately like the house of cards, weapons which then go to our enemies.

If the program were for technical assistance with any chance of winning the cold war with Khrushchev I would be enthusiastically behind the program, but I cannot be behind this kind of a program. All you have to do is call the roll, Korea, Cuba, and on down the line.

THE ADMINISTRATION'S LEGISLATIVE PROGRAM—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 385)

The SPEAKER laid before the House the following message from the President of the United States, which was read and referred to the Committee of the Whole House on the State of the Union and ordered to be printed:

To the Congress of the United States:

Of this, presumably the last congressional session during my term of office, 4 months have gone by. Thus far the one major accomplishment is enactment of civil rights legislation. Although Congress rejected certain of my recommendations in this area—those relating to equality of job opportunity and assistance to States attempting to desegregate their schools—the new civil rights measure is another important step toward the attainment of the ideal of equal rights before the law for every citizen.

With only 2 months apparently left in the session, we still have a great deal to get done for America. I stress this now because, first, the time grows short in which to legislate prudently and wisely, without undue haste; and, second, too great a preoccupation with the events of an election year could seriously impede constructive effort. With the Congress controlled by one party and the executive branch by the other, these difficulties could become severe.

We should jointly resolve that the shortness of time and political rivalries will not be allowed to prevent us from serving the American people effectively. Matters are still pending that are vital to the health of our economy and to the Nation's security and world peace; none of us can afford to electioneer at the expense of these. Nor can we yield to the temptation to neglect projects that we know are essential to good government but possess little popular appeal, and at the same time overemphasize others in the hope of benefit to one party or the other, or individuals therein.

Relating these considerations to a few of the programs still pending, I refer, first, to our vital mutual security effort.

During most of our Nation's history, our growth was strongly influenced by two unique conditions: First, for more than a century and a half two great oceans protected us from the violent struggles of the Old World. Although in recent years we became engaged in two global wars, our relative isolation gave us months in which to assemble, train and equip our forces deliberately and unmolested. Second, from the very beginning, our Nation's rapid expansion was encouraged by commercial and financial assistance from the nations of Europe. These countries provided us with valuable skills and the capital needed to accelerate the development of our resources, industries, and commerce.

These conditions have radically changed. America emerged from World War II as the mightiest nation in a free world that, in the main, was exhausted and crippled. Soon thereafter we came to realize that new weapons of great power, speed, and range had markedly reduced the value of our ocean shield. Our homeland, in any future major war, would be a prime target, and our warning time against surprise attack would be minutes, not months. Our security cannot now be achieved by methods and a level of effort believed adequate only a few years ago.

In a world, moreover, in which an aggressive ideology drives ceaselessly to destroy human freedom, it is now the United States to which aspiring free peoples, particularly in underdeveloped areas, must look, as America once did to others, for the technical knowledge and financial assistance needed to help them strengthen their economies and protect their independence.

Such changes as these gave rise to our mutual security program, one of the most necessary and successful enterprises America has undertaken throughout her history. Started more than a decade ago, the program helped to save Greece, forestalled economic collapse in Turkey and Western Europe, supported the countries of the SEATO Alliance, sustained the strength and independence of South Korea and the Republic of China, and made real progress, in underdeveloped nations on five continents, in combating disease, poverty, and suffering, and thus has strengthened the resistance of those areas to Communist penetration, propaganda, and subversion. Clear it is that the mutual security program provides the surest path by which America can lead to and sustain a durable peace with justice.

Such a program serves the Nation at large rather than any particular locality, section, or group. Only with difficulty, therefore, can its great rewards be measured by individual communities and citizens. It inevitably follows that in the annual contests over the public

use of tax revenues, there is a tendency to bypass the needs of this vital security program in favor of domestic projects that, urged by special groups, achieve a measure of support far greater than their overall value to the Nation warrants. Understandable this tendency is, but I deem it a great disservice to America to indulge it. The security of our country obviously demands that our mutual security program be carried forward at an adequate level.

I have asked new appropriations of $4.175 billions for this program for the 1961 fiscal year. Nearly half of this—a sum one-twentieth of our own defense budget—is to assist the military forces of the free world, comprising 5 million soldiers, 2,200 combatant ships, and 30,000 aircraft. I need not remind the Congress of the low cost at which this force for freedom is sustained as compared to the cost of an aircraft carrier, a squadron of jet bombers, or an Army or Marine Corps division in our own defense structure.

Of the other parts of the program, one-third is for economic assistance required to help sustain these large forces abroad. The remainder consists of loans, technical assistance, and grants to help underdeveloped nations. These are the funds that spell the difference between hopeless stagnation and progress for hundreds of millions of people who, with us, believe in freedom.

Congressional approval of these funds for mutual security will profoundly benefit our people. To our allies and to others with whom we discuss the great issues of our times, it will signify that a united America has not wearied in the discharge of its responsibilities, and that we are unshakable in our determination to attain a world order in which men are free to pursue their goals in peace. And I emphasize once again that, as we strive to build the kind of world in which America believes, our adversaries are not all included in the single word "communism." They are distress and privation as well, and also the desperation of peoples when they realize that, lacking outside help, they struggle in vain to better their lives. Widespread chaos and misery cannot provide a world climate in which our free Republic can prosper and remain secure. There is for America no higher purpose or greater need than to measure up to her world leadership responsibilities.

I am keenly aware of the contention that, because of an adverse balance of payments and because of certain failures in administration, America should curtail these mutual security efforts. We must, and do, strive for greater efficiency. Likewise, we do have a problem with balance of payments, but the way to meet this is by positive actions which expand exports. Neither difficulty can be met by withdrawing from our responsibilities for world leadership and from partnership in the protection of freedom. We need—in our own interests—greater human progress and economic growth throughout the world. We cannot achieve these by an assault either on mutual security or on liberal trade policies.

I congratulate the Congress for its actions thus far on the funds for mutual security in the authorizing legislation, and I reaffirm the imperative necessity of providing the appropriations that the authorization would allow.

Next is agriculture, a subject on which I have commented repeatedly to the Congress.

In no domestic area do we have a more obvious need for corrective action. We cannot wonder that the patience of our farmers wears thin. By force of law, the Government's surplus holdings, especially of wheat, continually increase. These overhang the market, depress prices, and impose an ever more onerous burden upon all citizens, our farmers particularly. I have offered many recommendations for attacking the problem through bipartisan action. Action there has been on occasion, but, in respect to wheat especially, far less than needed or of a kind that would make our farmers' present troubles grow worse.

In an effort to break the legislative stalemate I recently advised the Congress that, within broad guidelines which I suggested, I would approve any constructive farm bill that the Congress might enact. There is as yet no agreement on the part of the two Houses of Congress on a constructive approach.

Meanwhile, farmers grow more concerned about their future, and our people generally become increasingly unhappy as their Government expends a thousand of their tax dollars every minute on the self-defeating wheat program. Lately I have noted, with deep concern, a growing disposition in certain congressional quarters to favor proposals long ago rejected as unworkable, and which would obviously go beyond even the very broad limits I outlined almost 3 months ago.

I regret also the continuing tendency to rely, in agriculture, upon Federal controls, which inevitably create interference with the lives of our farm people. I still believe that America's farmers prefer, as certainly I do, the development of legislation which will promote progress for them toward economic equality and permit them the maximum freedom.

Surely it is time, in the interest of all Americans, for the Congress to face up to the admittedly difficult problems of agriculture. It is constructive results that farmers want and need. Indeed, I believe that all America is looking for this kind of action before this session adjourns.

Also badly needed is extension of the Sugar Act, soon to expire. At stake are an assured and stable supply of sugar for our people at reasonable prices and removal of the uncertainties now facing this industry. A 4-year extension of the present program, modified to give the President authority to adjust quotas in order to assure America of an adequate sugar supply, is needed to give farmers and processors the time to plan. Appropriate recommendations are before the Congress. The interests of America require that legislation be enacted before the Congress adjourns.

I have repeatedly stated the need for legislation in other important areas. Some of these measures are of a kind that, at the expense of responsible government, tend to be shunted aside in an election year.

First is the urgent need of Federal courts for enough judges to hear the greatly increased number of cases being filed each year. Regardless of expediency justice calls for prompt action.

The Judicial Conference of the United States has recommended the creation of approximately 40 new judgeships. This recommendation is supported by the administration and by virtually every important professional organization concerned with the administration of the courts.

We who advocate equal justice under law have a duty to make it effective. In certain districts injured people must wait over 4 years for justice or compromise their rights; innocent people who are defrauded are made a laughingstock because the delay in the courts deprives them of an effective remedy; justice is denied the weak because they cannot finance the delay necessary to be heard. Further neglect of this need is heartless. For all our people, I most earnestly urge swift action on the pending measure to increase the number of judgeships.

Next I refer to my request of last June to remove the statutory prohibition against the Treasury's paying more than 4¼ percent interest on Treasury bonds which are due more than 5 years after issuance.

The American people have a great deal at stake in this legislation, for failure to remove this interest rate restriction can have many serious consequences, including the forcing of a new upturn in living costs. The Treasury, under this restriction, continually faces the prospect of having to manage the Government's $290 billion debt in ways that would unavoidably increase the upward pressures on prices and on the interest rate for the consumer credit so important to millions of our citizens.

Again, I stress the need for prompt removal of this harmful restriction.

We also owe it to America to provide adequate new revenues for the highway trust fund (as my proposal for a gasoline tax increase would do), so that we may keep our very important highway program on schedule; and fiscal responsibility dictates that we not fail to raise postal rates and thus end the heavy drain on general revenues for postal services which Congress has said by law should be self-sustaining. Our other revenue proposals—notably, extension of certain excise taxes and an added tax on aviation fuel—also need to be approved.

Additionally, as I recently emphasized by special message to the Congress, we have compelling reasons to liberalize our immigration law during the course of this session. I remind the Congress, also, that this is World Refugee Year. Our country was one of those sponsoring this move in the United Nations. In harmony with the spirit of this resolution, and in keeping with America's tradition of leadership in humanitarian causes, we should press forward, in this session, with the refugee legislation I have recommended to the Congress.

I add two proposals of special importance to future Presidents of the United States. First is provision of Presidential office space. The Congress has met its own space requirements and those of the Supreme Court. Requirements for modern office facilities for the President, his staff and the news media assigned to the White House are no less necessary and urgent. Second, the need to carry forward Presidential powers to reorganize the executive branch is acute, in the interest of efficiency and economy in this huge Government. Both of these authorizations are clearly essential. I again urge their approval before this session adjourns.

I refer now to a number of programs of intense interest to millions of our people—programs intended to initiate or enlarge benefits for various groups or sections of the Nation. Such projects require objective analysis and a nicety of decision so that on the one hand there will be no neglect of essential Federal responsibility and on the other hand no surrender to the election-year temptation to overspend and overreach. Responsibility respecting these will do credit to both parties but, more important, will benefit our people.

A comparison of 1952 and 1961 Federal expenditures shows the pace of the Federal advance in matters of this kind. Likewise it discloses the pressing need for prudence both as regards the level of these expenditures and the extent of Federal involvement in the problems of individual citizens. For labor, welfare, and veterans' programs, including payments from trust funds, cash payments to individuals were $11.7 billion in 1952. The comparable figure in the 1961 budget is $26.4 billion. Thus there has been a 125-percent increase in these programs during a period in which the population increased by 16 percent. This growth in payments far exceeds any increases required to match the 12-percent rise in living costs during this period.

Among such matters still pending I would mention, first, school construction legislation. Long ago the administration asked Congress to approve a sound program to help colleges and universities and elementary and secondary schools meet their pressing construction needs. I have stressed that any such Federal assistance should be provided only to meet genuine need, and that it must preserve for the States, local communities, and educational institutions their traditional responsibilities for education. The administration's debt service plan for elementary and secondary schools, and its comparable plan for institutions of higher learning, both before the Congress for over a year, conform to these standards.

By these programs we would help to construct 75,000 additional elementary and secondary classrooms at a Federal cost, over the next 20 to 30 years, of $2.2 billion, and at a Federal cost of $500 million we would help build higher education facilities costing in the aggregate some $2 billion. The financing for the initiation of these programs is included in my 1961 budget.

It will be deeply disappointing if the Congress should fail to authorize such programs, and no less disappointing if, instead, programs that basically conflict with these standards should be passed.

Area redevelopment legislation also needs priority attention. I have long urged legislation authorizing loans and technical assistance to help areas afflicted with long-term, substantial unemployment resulting from technological changes. The purpose is to diversify these economies and thereby create new sources of private employment. With important local efforts to provide new jobs already under way, Federal help must be of a kind that strengthens and supplements rather than displaces or discourages those efforts.

I think it is basic that we reject the various schemes that would perpetuate insecurity by making distressed areas dependent upon the uncertainties of continued Federal subsidies, or that would pour Federal dollars into areas where distress has been temporary and which are competent to meet their problems themselves. Moreover, it will injure, not help the chronically affected areas if funds and loan advantages are indiscriminately broadcast to other areas that do not urgently require such assistance.

The only way this difficult problem can be sensibly solved is through healthy government-community cooperation that creates self-sustaining local economies. It cannot be solved by a dispiriting and misplaced benevolence on the part of the distant Central Government. The people who need this help are hopefully looking for truly constructive action this session. For this purpose I have recommended a Federal program amounting to $53 million, to be expended for loans and technical assistance.

The Secretary of Health, Education, and Welfare will present this week a new program which will enable older people truly in need of help to meet the calamity of catastrophic illness. This program will take full advantage of, and support, the progress that has been made by private efforts; it will recognize the traditional Federal-State relations in various fields of assistance; and, additionally, it will not do violence to the private relationships that must continue to characterize the rendering of health care services.

Behind this program is a meticulous and thoughtful weighing of many alternatives. I believe the Congress will find this proposal of great value to our people most in need of medical protection in their later years. I urge this program in place of compulsory schemes which over a period of years would blight America's unexcelled medical standards and leave unaided large numbers of citizens we are striving to help.

The Fair Labor Standards Act likewise needs attention before these next 60 days elapse.

For several years I have urged expansion of coverage under this act to include approximately 3 million additional wage earners. This is the most urgently needed change in this law, and I hope that the Congress will not fail to provide it.

The Secretary of Labor recently presented the Congress with information indicating that the minimum wage could be increased moderately without disruptive effects upon the economy. On the other hand we should, as responsible officials, stand firmly against an excessive increase which could cause unemployment and severe repercussions in many industries and areas of our country. It is of great importance to the well-being of the American people that we govern our actions in this area by economic facts rather than by political or social prejudice.

Nor, I believe, should we close this session without enacting various long-pending measures, mostly in the field of conservation—each of them important to all our people, but particularly to our citizens out West.

Among these measures I refer as examples to preservation of our priceless seashore areas, establishment of the Arctic Wildlife Range, permission to Western communities to expand into public land areas, research assistance to the coal industry, and the Fryingpan-Arkansas and San Luis projects. Approval of these and similar pending bills will help to round out the program of natural resources development—now at a record level—which I presented last January in my budget message. We also need a solution of the Indian heirship problem and to give the people of Guam and the Virgin Islands a voice in the Congress.

As a general but most important consideration, I point again to the need of restraint in new authorizations for Federal spending. Our Federal accounts should balance with enough left over for a reasonable payment on the public debt, on which we are already paying for interest alone more than $9 billion per year. Proposals now before congressional committees would, if approved, raise our annual spending by tens of billions of dollars in 1961 and would disrupt Federal budgets over the next 5 years by many scores of billions.

For America's sake, we must resist the temptation, this year or any year, to overspend the taxpayer's hard-earned dollars and overcentralize responsibilities in the Federal Government. If we fail in this, we will weaken our hope of ever controlling Federal extravagance and will indefinitely postpone debt retirement and tax relief. At the same time we will debase our currency, invite the resurgence of inflationary forces, undermine local and State responsibility, and thus erode away America's strength at home and in the world. We should avoid preemption of State and local functions and take genuine national need rather than glittering desirability as our guide in Federal expenditures.

Most taxpayers, I believe, are becoming more and more aware of the results of laws that, though sometimes carrying a surface appeal, far too often add unjustifiably to the tax burdens of the individual.

Finally, I repeat my hope that in the brief span remaining before adjournment the executive branch and the 86th Congress can work constructively together in the interest of America and avoid schism

and stalemate. The measures I have mentioned, and many others also calling for action this session, must go forward if we are to keep faith with our countrymen. Let us remember, as congressional deliberations proceed, that both the Nation and the world are looking on.

With sound progress as our object, we can accomplish much despite the shortness of time left in this session. Working together responsibly, we shall surely make America a stronger and better nation; and, so working, we shall brighten the cause of freedom and peace everywhere on earth.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *May 3, 1960.*

DEPARTMENT OF INTERIOR AND RELATED AGENCIES APPROPRIATION BILL, 1961

Mr. KIRWAN. Mr. Speaker, I ask unanimous consent that the managers on the part of the House may have until midnight tonight to file a conference report on the bill (H.R. 10401) making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1961, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

PRIVATE CALENDAR

The SPEAKER. This is Private Calendar day. The Clerk will call the first bill on the Private Calendar.

RELIGIOSA LUIGIA FRIZZO ET AL.

The Clerk called the first bill (H.R. 3805) for the relief of Religiosa Luigia Frizzo, Religiosa Vittoria Garzoni, Religiosa Maria Ramus, Religiosa Ines Ferrario, and Religiosa Roberta Ciccone.

Mr. AVERY. Mr. Speaker, I ask unanimous consent that this bill be passed over without prejudice.

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

There was no objection.

LOUIS J. ROSENSTEIN

The Clerk called the bill (H.R. 10230) for the relief of Louis J. Rosenstein.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of $33,857.85 to Louis J. Rosenstein, of 1916 Sixty-fifth Avenue, Philadelphia, Pennsylvania, in full settlement of all claims against the United States. Such sum represents compensation for personal injuries sustained as the result of an accident on March 21, 1946, near Lyon, France, involving a United States Army vehicle: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shal be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendments:

Page 1, line 5, strike out "33,857.85" and insert "$7,500".

Page 2, line 1, strike out "in excess of 10 per centum thereof".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SOFIA N. SARRIS

The Clerk called the bill (S. 1466) for the relief of Sofia N. Sarris.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Sofia N. Sarris, shall be held and considered to be the natural-born alien child of Louis and his wife, Gladys Sarris, citizens of the United States: *Provided,* That no natural parent of the beneficiary, by virtue of such parentage, shall be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GIM BONG WONG

The Clerk called the bill (S. 2309) for the relief of Gim Bong Wong.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, the minor child, Gim Bong Wong, shall be held and considered to be the natural-born alien child of Chin Get Wong and Yee Yoke Ying Wong, citizens of the United States: *Provided,* That the natural parents of the said Gim Bong Wong shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ANTONIO MENDEZ GARCIA AND PALMIRA LAVIN GARCIA

The Clerk called the bill (H.R. 1493) for the relief of Antonio Mendez Garcia and Palmira Lavin Garcia.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Antonio Mendez Garcia and Palmira Lavin Garcia shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act upon payment of the required visa fees. Upon the grant of permanent residence to such aliens as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct two numbers from the appropriate quota for the first year that such quota is available.

With the following committee amendment:

Strike out all after the enacting clause, and insert the following: "That the Attorney General is authorized and directed to cancel any outstanding orders and warrants of deportation, warrants of arrest, and bonds, which may have issued in the cases of Antonio Mendez Garcia and Palmira Lavin Garcia. From and after the date of the enactment of this Act, the said persons shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and orders have issued."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MRS. MARGARET BAKER

The Clerk called the bill (H.R. 2085) for the relief of Mrs. Margaret Baker.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Mrs. Margaret Baker shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

BUCK YUEN SAH

The Clerk called the bill (H.R. 2588) for the relief of Buck Yuen Sah.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Buck Yuen Sah shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

BRICCIO GARCES DE CASTRO

The Clerk called the bill (H.R. 2665) for the relief of Briccio Garces de Castro.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of

America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Briccio Garces de Castro shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ANTONIA MARTINEZ

The Clerk called the bill (H.R. 2671) for the relief of Antonia Martinez.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Antonia Martinez shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee: *Provided,* That a suitable and proper bond or undertaking, approved by the Attorney General, be deposited as prescribed by section 213 of the said Act.

With the following committee amendments:

On page 1, strike out lines 3, 4, 5, 6, and the language through "visa fee:" on line 7, and substitute in lieu thereof the following: "That, the Attorney General is authorized and directed to cancel any outstanding orders and warrants of deportation, warrants of arrest, and bond, which may have issued in the case of Antonia Martinez:".

On page 1, at the end of the bill, add the following: "From and after the date of the enactment of this Act, the said Antonia Martinez shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and orders have issued."

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

FUMIE YOSHIOKA

The Clerk called the bill (H.R. 2823) for the relief of Fumie Yoshioka.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Fumie Yoshioka, who lost United States citizenship under the provisions of section 349(a)(5) of the Immigration and Nationality Act, may be naturalized by taking prior to one year after the effective date of this Act, before any court referred to in subsection (a) of section 310 of the Immigration and Nationality Act or before any diplomatic or consular officer of the United States abroad, the oaths prescribed by section 337 of the said Act. From and after naturalization under this Act, the said Fumie Yoshioka shall have the same citizenship status as that which existed immediately prior to its loss.

With the following committee amendment:

Strike out all after the enacting clause and insert: "That for the purposes of section 101(a)(27)(B) of the Immigration and Nationality Act, Fumie Yoshioka shall be deemed to be a returning resident alien."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

PRECIOLITA V. CORLISS

The Clerk called the bill (H.R. 3789) for the relief of Preciolita V. Corliss (nee Preciolita Valera).

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Mrs. Preciolita V. Corliss (nee Preciolita Valera), the widow of a United States citizen, shall be deemed to be within the purview of section 101(a)(27)(A) of the Immigration and Nationality Act, and the provisions of section 205 of that Act shall not be applicable in this case.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

KARNAIL SINGH MAHAL

The Clerk called the bill (H.R. 4670) for the relief of Karnail Singh Mahal.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Karnail Singh Mahal shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JACK DARWIN

The Clerk called the bill (H.R. 7033) for the relief of Jack Darwin.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Jack Darwin shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

With the following committee amendment:

Strike out all after the enacting clause and insert: "That, for the purposes of the Immigration and Nationality Act, Jack Darwin shall be deemed to have been born in Germany."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GLORIA ANNE LOVEDAY

The Clerk called the bill (H.R. 7895) for the relief of Gloria Anne Loveday.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Gloria Anne Loveday shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota-control officer to deduct one number from the appropriate quota for the first year that such quota is available.

With the following committee amendment:

Strike out all after the enacting clause and insert: "That, for the purposes of the Immigration and Nationality Act, Gloria Anne Loveday shall be deemed to have been born in Great Britain."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

PARKER E. DRAGOO

The Clerk called the bill (S. 1328) for the relief of Parker E. Dragoo.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Parker E. Dragoo, Supervisory Park Ranger, Department of the Interior, Death Valley, California, is hereby relieved of liability to the United States in the amount of $370.34, representing the amount charged him due to the excess weight of household effects shipped to a new duty station, such excess weight resulting from special packing and crating designed to insure the safe arrival of said effects in a newly developed area not served by common carrier.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

RONALD R. DAGOR AND RICHARD J. HENSEL

The Clerk called the bill (S. 1408) for the relief of Ronald R. Dagor and Richard J. Hensel.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is hereby authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the persons enumerated below the sums specified, in full settlement of all claims against the Government of the United States as reimbursement for personal effects lost as a result of a boating accident on July 11, 1957, on the Susitna River, Alaska, while on official business of the Fish and Wildlife Service, Department of the Interior: Ronald R. Dagor, $121; and Richard J. Hensel, $118: *Provided,* That no part of the amounts appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with these claims, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JAY R. MELVILLE AND PETER E. K. SHEPHERD

The Clerk called the bill (S. 1410) for the relief of Jay R. Melville and Peter E. K. Shepherd.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is hereby authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the persons enumerated below the sums specified, in full settlement of all claims against the Government of the United States as reimbursement for personal effects lost as a result of a boating accident on June 14, 1958, on the Bremner River, Alaska, while on official business of the Fish and Wildlife Service, Department of the Interior: Jay R. Melville, $208; and Peter E. K. Shepherd, $306.65: *Provided,* That no part of the amounts appropriated in this Act shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with these claims, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MRS. JOHN SLINGSBY ET AL.

The Clerk called the bill (S. 2173) for the relief of Mrs. John Slingsby, Lena Slingsby, Alice V. Slingsby, and Harry Slingsby.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to (1) Mrs. John Slingsby, the sum of $250; (2) Lena Slingsby, the sum of $750; (3) Alice V. Slingsby, the sum of $350; and (4) Harry Slingsby, the sum of $50; all of Fargo, North Dakota. The payment of such sums shall be in full settlement of all their claims against the United States for compensation for personal injuries, pain and suffering, loss of earnings, and property damages, and for reimbursement of medical expenses incurred by them, as the result of an accident which occurred near Cle Elum, Washington, on August 14, 1953, when an automobile owned by the said Harry Slingsby and operated by the said Alice V. Slingsby was struck by a United States Army vehicle: *Provided,* That no part of the amounts appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with these claims, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

ESTATE OF HILMA CLAXTON

The Clerk called the bill (S. 2234) for the relief of the estate of Hilma Claxton.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Charles L. Claxton, of Saint Paul, Minnesota, in his capacity as administrator of the estate of Hilma Claxton, the sum of $696.43. The payment of such sum shall be in full satisfaction of all claims of such estate against the United States for payment of certain money orders payable to Hilma Claxton (deceased), which were issued in Huron, South Dakota, during the period from May 8, 1929, through December 28, 1929, but which were not presented for payment within the period in which they could have been received by the Post Office Department: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CAROLINE HENKEL ET AL.

The Clerk called the bill (S. 2333) for the relief of the heirs of Caroline Henkel, William Henkel (now deceased), and George Henkel (presently residing at Babb, Mont.), and for other purposes.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the rightful heirs of Caroline and William Henkel, now deceased, and to George Henkel presently residing at Babb, Montana, the sum of $16,000. The payment of such sum shall be in full settlement of all claims against the United States for any damage to the lands allotted to Caroline, William, and George Henkel in townships 36 and 37 north, range 14 west, Montana principal meridian, on the Blackfeet Indian Reservation, Montana, or to the crops of said lands, caused by seepage or flooding due to percolation from the Saint Mary's Canal of the Milk River reclamation project, and for any other alleged injuries to said lands or the crops thereon caused by the construction, operation, or maintenance of works of the Milk River reclamation project.

The payment of such sum shall also be in consideration of the granting of a permanent easement for seepage and flooding due to percolation through and over such lands from Saint Mary's Canal or other works of the Milk River reclamation project. The release of such claims and the granting of such easement in a form and manner satisfactory to the Secretary of the Interior shall be a condition precedent to the making of any payment under this Act: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JOE KELLER AND H. E. PIPER

The Clerk called the bill (S. 2507) to relieve Joe Keller and H. E. Piper from 1958 wheat marketing penalties and loss of soil bank benefits.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding any other provision of law, the 1958 wheat acreage on farm numbered 4–249 in Saline County, Marshall, Missouri, operated by Joe Keller and owned by H. E. Piper shall not be considered to have exceeded fifteen acres by reason of the failure to destroy the wheat acreage which was left standing, but not harvested, in an attempt to comply with instructions received from the county committee. No marketing penalties shall be assessed and no soil bank benefits shall be denied or required to be refunded, on account of such failure.

SEC. 2. The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated to Joe Keller and H. E. Piper, or either of them, the sum of any amounts received or withheld from them, or either of them, on account of the failure referred to in the first section of this Act.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

SAM DOOLITTLE

The Clerk called the bill (H.R. 9760) for the relief of Sam Doolittle.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Sam Doolittle, Highway 80, West, Newton, Mississippi, the sum of $281.68. Such sum being the total court cost bill paid by the said Sam Doolittle, one of the defendants, in the case styled: United States of America, plaintiff, versus Sam Doolittle and Earl Davis, defendants, being Civil Action File Numbered 846, in the United States District Court for the Southern District of Mississippi, Eastern Division, which court costs the said Sam Doolittle was required by the said court to pay notwithstanding the fact that the judgment rendered on October 5, 1959, was in his favor and against the United States of America, plaintiff: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

LT. COL. ALONZO C. TENNEY

The Clerk called the bill (H.R. 9652) for the relief of Lt. Col. Alonzo C. Tenney.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Lieutenant Colonel Alonzo C. Tenney, United States Air Force, a sum equal to the amount which he would have received under the provisions of Public Law 561, 84th Congress, 70 Stat. 245, approved June 4, 1956, if he had made timely application under such Act for pay and allowances from October 4, 1950, to November 7, 1950, the said Lieutenant Colonel Tenney having failed to make application for such compensation because of the action of the United States Air Force in failing to comply with Lieutenant Colonel Tenney's request for information from his official record upon which to make such claim, and in the Air Force holding such request for information for almost three months, and in the action of the Air Force in replying to such request and furnishing the information after the expiration of said law.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JOSEF ENZINGER

The Clerk called the bill (H.R. 9563) for the relief of Josef Enzinger.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Josef Enzinger shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper quota control officer to deduct one number from the appropriate quota for the first year that such quota is available.

With the following committee amendment:

Strike out all after the enacting clause and insert: "That, the Attorney General is authorized and directed to cancel any outstanding orders and warrants of deportation, warrants of arrest, and bond, which may have been issued in the case of Josef Enzinger. From and after the date of the enactment of this Act, the said Josef Enzinger shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and orders have issued."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CHIEKO SAKANO AND HER CHILD, MASAO SAKANO

The Clerk called the bill (H.R. 7367) for the relief of Chieko Sakano.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the administration of the Immigration and Nationality Act, Chieko Sakano, the fiancée of William R. Williams, Junior, a citizen of the United States, shall be eligible for a visa as a nonimmigrant temporary visitor for a period of three months: *Provided,* That the administrative authorities find that the said Chieko Sakano is coming to the United States with a bona fide intention of being married to the said William R. Williams, Junior, and that she is found otherwise admissible under the immigration laws. In the event the marriage between the above-named persons does not occur within three months after the entry of the said Chieko Sakano, she shall be required to depart from the United States and upon failure to do so shall be deported in accordance with the provisions of sections 242 and 243 of the Immigration and Nationality Act. In the event that the marriage between the above-named persons shall occur within three months after the entry of the said Chieko Sakano, the Attorney General is authorized and directed to record the lawful admission for permanent residence of the said Chieko Sakano, as of the date of the payment by her of the required visa fee.

With the following committee amendments:

On page 1, line 5, after the words "United States," insert "and her child, Masao Sakano,".

On page 1, line 6, strike out the words "a visa" and substitute "visas".

On page 1, line 6, after the word "as" strike out the word "a".

On page 1, line 6, after the word "temporary" strike out "visitor" and substitute the word "visitors".

On page 1, line 10, after the words "and that" strike out the words "she is" and substitute the words "they are".

On page 2, line 3, strike out the word "she" and substitute "and her child, Masao Sakano, they".

On page 2, line 8, after the name "Chieko Sakano," insert "and her child, Masao Sakano,".

On page 2, line 11, after the name "Sakano" insert ", and her child, Masao Sakano,".

On page 2, line 11, strike out the word "her" and substitute the word "them".

On page 2, line 12, strike out the word "fee" and substitute "fees".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended so as to read: "A bill for the relief of Chieko Sakano and her child, Masao Sakano."

A motion to reconsider was laid on the table.

JACK KENT COOKE

The Clerk called the bill (H.R. 8156) for the relief of Jack Kent Cooke.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of title III of the Immigration and Nationality Act, Jack Kent Cooke shall be held and considered to have been admitted to the United States for permanent residence on September 28, 1950, and to have complied with the residential and physical presence requirements of section 316 of the said Act.

With the following committee amendments:

On page 1, line 3, strike out "of title III".

On page 1, line 5, after the words "have been" insert the word "lawfully".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

EMPLOYEES OF GENERAL SERVICES ADMINISTRATION

The Clerk called the bill (S. 2430) for the relief of certain employees of the General Services Administration.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Carol S. Stake, William Lockwood, Laura J. Fromm, William Baxter, Selma M. Cohen, Anna Gerlach, Frank J. Frericks, Milton J. Rosasco, Margaret Baird, Margaret Klein, Thomas S. Cunerd, and John G. Arendes are hereby relieved of all liability to the United States arising out of the granting to such persons, as employees of the General Services Administration, of compensatory time off during the leave year 1957 in lieu of annual leave for which such persons had applied, but which had been denied, during the leave year 1956. The Administrator of General Services is authorized and directed (1) to arising out of the granting to such persons, whose annual leave was thereafter charged in satisfaction of such liability the amount of leave so charged, including any reduction in the maximum amount of accumulated leave permitted in the case of such person, and (2) to pay, out of any money available

for the payment of salaries of employees of the General Services Administration, to any such person who thereafter refunded to the General Services Administration the value of such leave in satisfaction of such liability, an amount equal to the amount so refunded.

The bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

RELIEF OF CERTAIN ALIENS

The Clerk called the joint resolution (H.J. Res. 688) for the relief of certain aliens.

There being no objection, the Clerk read the joint resolution, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Dea Poy Yut shall be held and considered to be the minor alien child of Mr. Bok K. Dea, a citizen of the United States.

SEC. 2. For the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Yoichi Omori shall be held and considered to be the minor alien child of Mr. Eddie Jenkuro Omori, a citizen of the United States.

SEC. 3. For the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Rafael Walog shall be held and considered to be the minor alien child of Mr. Anastacio Walog, a citizen of the United States.

SEC. 4. For the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Dominga Recacho shall be held and considered to be the minor alien child of Mr. Max Reclosado Recacho, a citizen of the United States.

SEC. 5. For the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Elena Acosta Bartolome shall be held and considered to be the minor alien child of Mr. Agapito Alipio Bartolome, a citizen of the United States.

SEC. 6. For the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Vasso Papas (formerly Vasiliki Katsouli) shall be held and considered to be the minor natural-born alien child of Mr. and Mrs. John Papas, citizens of the United States.

SEC. 7. For the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Stavroula Katsoulis and Lela Katsoulis shall be held and considered to be the minor natural-born alien children of Mr. Christos Peter Papas, a citizen of the United States.

SEC. 8. For the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Caterina Salvitti Crivelli shall be held and considered to be the minor natural-born alien child of Mr. and Mrs. Ralph Crivelli, citizens of the United States.

SEC. 9. For the purposes of the Immigration and Nationality Act, Milka Lackovic shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee.

SEC. 10. For the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Argyro A. Logothetis shall be held and considered to be the minor natural-born alien child of Mr. and Mrs. Constantinos Logothetis, citizens of the United States.

SEC. 11. For the purposes of the Immigration and Nationality Act, Theodoros Spiros Psitos shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee.

SEC. 12. For the purposes of sections 101(a)(27)(A) and 205 of the Immigration and Nationality Act, Christina Minardo Calabrese shall be held and considered to be the minor natural-born alien child of Mr. Joseph Calabrese, a citizen of the United States.

SEC. 13. The natural parents of the adopted beneficiaries of this Act, shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MRS. MAURICIA REYES

The Clerk called the bill (H.R. 4437) for the relief of Mrs. Mauricia Reyes.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Mrs. Mauricia Reyes, the sum of $50,000. The payment of such sum shall be in full settlement of all claims of the said Mrs. Mauricia Reyes against the United States arising out of the personal injuries sustained by the said Mrs. Mauricia Reyes on November 29, 1949, at Brooke Army Hospital, San Antonio, Texas, as the result of the negligent administration of a caudal anesthetic. This claim is not cognizable under the Federal Tort Claims Act: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendments:

Page 1, line 11, strike "negligent".
Page 2, line 3, strike "10" and insert "5".

The committee amendments were agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MICHAEL J. COLLINS

The Clerk called the bill (H.R. 5589) for the relief of Michael J. Collins.

There being no objection, the Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of $25,000 to Michael J. Collins, of Rego Park, Long Island, New York, a decorated combat veteran of World War II and the Korean conflict, in full settlement of all of his claims against the United States for the infringement of personal liberty, malicious prosecution, false imprisonment, illegal arrest, loss of personal property, and unlawful detention by United States Army authorities; damage to personal reputation, impairment of health, medical, dental, and personal expenses which resulted from his false arrest on May 4, 1954, and his subsequent imprisonment at Fort Bragg, North Carolina, Fort Gordon, Georgia, and Leavenworth Federal Penitentiary, Kansas, until the 21st day of January 1956, on the false charges of burglary and sodomous assault. The said Michael J. Collins was unlawfully and falsely imprisoned from May 4, 1954, to and including the 21st day of January 1956, pursuant to a sentence to dismissal from the service, forfeitures of all pay and allowances, confinement at hard labor for a period of ten years, under sentence of a general court-martial on the 5th day of June 1954. Subsequent to the application for a new trial and the action of the Judge Advocate General of the United States Army, who as a result of his investigation found substantial evidence of fraud perpetrated on the court prejudicial to Michael J. Collins at the trial and that evidence was suppressed, concealed, altered, and forged by certain unscrupulous members of the Army; and further, that the conviction was based on perjured testimony given by some of the prosecution witnesses who testified at the court-martial, the dishonorable discharge of Michael J. Collins was set aside and his commissioned status restored and his record corrected to show his continuous good standing as an officer of the United States Army Reserve: *Provided,* That no part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

With the following committee amendment:

Strike all after the enacting clause and insert: "That the Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of $25,000 to Michael J. Collins, of Rego Park, Long Island, New York, a decorated combat veteran of World War II and the Korean conflict, in full settlement of all of his claims against the United States and as reimbursement to him for expenses incurred in establishing his innocence and to remove injustices resulting to him from his conviction which was based upon fraudulent evidence fabricated and produced by certain unscrupulous members of the United States Army: *Provided,* That no part of the amount appropriated in this Act in excess of 10 percentum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000."

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. HEMPHILL. Mr. Speaker, I ask unanimous consent that the further call of the Private Calendar be dispensed with.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

DEPARTMENT OF DEFENSE APPROPRIATION BILL, 1961

Mr. MAHON. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11998) making appropriations for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes; and pending that motion, Mr. Speaker, I ask unanimous consent that general debate be limited to today and that the time be divided equally between the gentleman from Michigan [Mr. FORD] and myself.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER. The question is on the motion offered by the gentleman from Texas.

CALL OF THE HOUSE

Mr. SPRINGER. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 64]

Adair	Feighan	Montoya
Alexander	Flynn	Morris, N. Mex.
Anderson, Mont.	Forand	Morrison
	Fountain	Nix
Andrews	Frazier	Pelly
Ashley	Gallagher	Philbin
Barr	Garmatz	Powell
Barrett	Giaimo	Preston
Bolton	Gilbert	Prokop
Bonner	Grant	Rains
Bow	Haley	Reece, Tenn.
Boykin	Halleck	Roberts
Brademas	Halpern	Rogers, Tex.
Bray	Hargis	Rooney
Brown, Mo.	Harmon	Rostenkowski
Buckley	Herlong	Roush
Burleson	Hoffman, Ill.	Schenck
Byrnes, Wis.	Holt	Scherer
Cahill	Holtzman	Selden
Canfield	Horan	Shelley
Cannon	Jackson	Sheppard
Carnahan	Jones, Ala.	Spence
Cederberg	Kasem	Staggers
Celler	Kee	Taber
Chelf	Kilburn	Taylor
Coffin	King, Utah	Teague, Calif.
Collier	Knox	Teague, Tex.
Cook	Lafore	Teller
Daniels	Laird	Thompson, La.
Davis, Tenn.	Lankford	Thompson, N.J.

Dingell	Mason	Willis
Donohue	Merrow	Withrow
Dowdy	Miller, Clem	Wolf
Durham	Miller, N.Y.	Young
Elliott	Mitchell	Zablocki
Farbstein	Moeller	Zelenko

The SPEAKER. On this rollcall 312 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE

Mr. FLYNT. Mr. Speaker, I ask unanimous consent that the Committee on Interstate and Foreign Commerce and subcommittees thereof may have permission to sit during general debate this afternoon.

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

AMENDING SECTION 152, TITLE 18, UNITED STATES CODE

Mr. FORRESTER. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 5747) to amend section 152, title 18, United States Code, with respect to the concealment of assets in contemplation of bankruptcy, with Senate amendment thereto, disagree to the Senate amendment and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from Georgia? [After pause.] The Chair hears none, and appoints the following conferees: Messrs. FORRESTER, DOWDY, and POFF.

DEPARTMENT OF DEFENSE APPROPRIATION BILL, 1961

The SPEAKER. The question is on the motion offered by the gentleman from Texas.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11998), with Mr. KEOGH in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. MAHON. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, this afternoon we take up for consideration the defense appropriation bill. As is always the case, this is the largest appropriation bill of the session. This year the bill provides a total appropriation of $39.3 billion. The answers to our defense problems are not as clear as today's midday sun. The committee has worked at length—4 months—in an effort to do a good job on this tremendous assignment.

If you do not have before you a copy of the committee report, I wish you would send for a copy, because after I have completed some formal remarks I would like to direct your attention to some of the significant things that are embraced in this bill and described in the report. All of us, when we go home, are called upon from time to time to report to the people we represent on the state of our preparedness. This is understandable. Survival is the No. 1 issue of the country.

Now I shoud like to begin by talking to you in regard to some very complex and difficult matters.

UNITED STATES VERSUS U.S.S.R.

We have grown accustomed to comparing ourselves to the Soviet Union and seeking to determine where we stand, whether we are behind, ahead, or on an even basis. We are concerned, for the purposes of the bill before us, with military comparisons. This is the field where the Soviet Union has concentrated a major effort for the past 15 years. This is the field in national policy in which the Russians, in their desire for world prestige and power have, perhaps, wanted most of all to excel. In this field they have done a remarkably good job. Prior to recent months, it could be said unequivocally that in overall striking power we led the Soviet Union. The gap has been closing rapidly in recent years, but I believe we can still say without equivocation that our striking power is greater. However, the development of the intercontinental ballistic missile has had a very important impact upon the situation.

MISSILE GAP—DETERRENT GAP

Now I would like to make some remarks in regard to the question of whether or not there is a missile gap and whether or not there is a deterrent gap. Perhaps it might be well, for purposes of clarification to define just what we mean by "missile gap" and "deterrent gap." These are separate and distinct subjects and should not be confused. The terms are not synonymous. The term "missile gap" is used almost exclusively in reference to ICBM's—the number possessed by the United States versus the number possessed by the Soviet Union. This is a missile versus missile comparison and does not represent actual overall military power.

The "deterrent gap," on the other hand, does reflect total military power. By this term we refer to those total military forces of all types which are calculated to deter war, including the ICBM. If we say there is a missile gap, that is not equivalent to saying there is a deterrent gap. We could readily have a missile gap and not have a deterrent gap.

Because of their emphasis on the development of the ICBM, the Soviets have made spectacular progress. The estimates are, and I believe these estimates are correct, that the Soviets are ahead of us in ICBM's and will be ahead of us through 1963. More so than any other weapon in existence, the ICBM is the ultimate weapon. There is in existence no defense against this weapon, not even a system which would warn us that an attack is on the way. From the testimony I have listened to, I do not foresee a fully effective defense against the ICBM or the intermediate range ballistic missile for that matter during this decade. Indeed, I do not foresee that there will ever be a defense against the long-range ballistic missile that is fully effective. Judged by the fact that there is not now in being a fully effective defense against the manned bomber, it does not seem unrealistic to assume that there may never be a fully effective defense against the ICBM.

As to a warning system to detect an ICBM attack, later this year we may have in operation a partial system and in 2 or 3 years we may have a fairly adequate warning system. This is the high priority project known as BMEWS. Another high priority project in this area is the MIDAS space satellite for

which additional sums above the budget are being provided in this bill. A warning system is not to be confused with a defense system.

On the defense system known as the Nike-Zeus, we have been working for 5 years. For this system, including the money in this bill, we have provided a total of $1 billion. Last year we provided $437 million and this year we are providing $278 million. This is all research and development money. If the system is ever perfected and put into operation, it will cost, for partial national coverage, a minimum of $10 billion.

The concern of the country over the missile gap is perfectly understandable when we contemplate the deadly capability of the weapon and the double-barreled fact that there is in being neither a warning system against it nor a defense system to combat it.

I am not trying to say that we should be in a state of terror over the prospect of a massive ICBM attack upon us tomorrow. The estimates are that the U.S.S.R. does not have on launchers sufficient operational ICBM's to attempt a massive attack. To launch anything less than a massive attack calculated to knock us out in one supreme effort would be foolhardy, as it would invite obliteration.

In 1961 the Soviets will have more ICBM's than they have today and in 1962 and 1963 they will have many more.

Today, if estimates are correct, is not the period of danger if we think exclusively of ICBM's. The danger period will be in 1961, 1962, and 1963. After that, both sides will tend to have a sufficiency of ICBM's and probably some reasonably adequate system for detecting an attack. This is not to imply that after both sides have a sufficiency of intercontinental ballistic missiles and probably some detection system, the danger period will end. Far from it. There will probably still be no effective defense against the weapon and the existence of a period of ICBM-plenty does not present a rosy prospect.

Warning is important for the very significant reason that if a country gets warning it has a better chance to protect and preserve an important part of its retaliatory force and launch a counterattack which will destroy the aggressor country. Therefore it is a great deterrent.

The military problem of the aggressor who would launch a surprise attack is how to destroy the opponent without himself being destroyed. Obviously, this is a very complex and difficult problem. To assure survival of this country in the event of a surprise attack, we possess what is called a mixed force—forces on land, sea, and air, at home and abroad. To destroy a sufficient portion of this force would confront the aggressor with a tremendous undertaking. We believe it would be an impossible undertaking for him today and we must keep it that way. Even a few well-placed hydrogen bombs of heavy megaton yield launched in retaliation could destroy millions of lives and vast resources otherwise, making the damage sustained in a retaliatory attack unacceptable from the aggressor's standpoint. This evident fact is a major deterrent to nuclear war.

Deterrence is, today, the key word in our military lexicon. The maintenance of deterrence can prevent war and have a major bearing on efforts to achieve peace and understanding at the conference table.

Nothing could be more important militarily than to make sure that we are able to preserve a sufficient retaliatory force in the event of an attack, surprise or otherwise. We must not only be able to maintain such a capability, the opponent must be convinced that such a residual power would exist even after an attack upon us is made.

AIRBORNE ALERT

As is well known, and as the hearings will reveal, Gen. Thomas S. Power, who under the directions of the Joint Chiefs of Staff commands our primary attack force, is deeply concerned over the preservation of our strike capability in the event of a surprise attack upon us by ICBM's. He has written at length on the subject; he has made many speeches about the problem and he has appealed to appropriate officials in the executive and legislative branches of Government to hasten the acquisition of a strong airborne alert capability.

He strongly believes in such a course of action. During the current fiscal year General Power, is working toward an airborne alert capability. About $100 million with the approval of the Secretary of Defense and the Joint Chiefs of Staff is being spent on this program during the current fiscal year. The budget request for this purpose for the period covered in the pending bill is $85 million. We have increased that sum to $200 million. In addition we have included in the bill, as we did last year, a provision which gives the President authority to spend any amount necessary to put into effect an emergency airborne alert. It is not that we advocate an airborne alert at this time. We hope it will never be necessary, but a capability to instantly inaugurate an adequate and continuous airborne alert would tremendously enhance our deterrent power and discourage war. This is especially true during the missile gap period of no defense and only partial warning against ICBM attack.

We go a long way toward assuring an avoidance of World War III if we deter an ICBM attack.

BOMBER THREAT

There is to be considered as a threat to our security the possibility of an attack being made upon us by manned bombers. The Soviet Union is strictly second rate in this field, but has substantial capability. Moreover, we have a warning system against a bomber attack. This warning would enable the Strategic Air Command to launch its forces and destroy any opponent in the event a manned bomber attack should be directed against us. It is hard to see how any power could rationally conclude that a bomber attack could safely be made on this country. We would have warning, we would have considerable defensive power against the bombers, and we would have no serious difficulty in launching an overwhelming retaliatory blow. If this reasoning is correct it would indicate that a surprise bomber attack would be most unlikely and the chief threat of major war lies in the ICBM field.

I will state a little later in these remarks some of the things which Congress has done above and beyond Defense Department recommendations to prevent a deterrent gap.

I believe sufficient reference has been made to the question of whether or not there is a missile gap. There is, without doubt, in my opinion an ICBM missile gap. I personally do not believe there is a deterrent gap.

DETERRENT GAP, 1961, 1962, 1963?

Having concluded that there is presently no deterrent gap, I should now like to direct your attention to the question of whether or not there will be a deterrent gap in 1961, 1962 or 1963. Probably it would not be profitable at the moment in this fast changing world to seek to go beyond that period. The question is a hard one because no one knows precisely what the future holds, or even precisely what all the exact facts are as of the moment. We cannot predict precisely what we may do and we do not know precisely what our opponent will do.

One of the major objectives of the bill before us is to assure that there will be no deterrent gap during this period. If we continue to maintain our bomber strength, our oversea bases and military personnel, and our fighting ships, and if we move forward as planned with our long-range missiles, and if we develop a strong and thoroughly dependable airborne alert, and if we move along with our ICBM detection systems as planned, I see no reason why there should be a deterrent gap during the next 3 years. I believe we will move forward. Therefore, in summary, I would say there should not be a deterrent gap during the next 3 years.

COMMITTEE ACTION ON MISSILES

I would feel more confident in these conclusions if we had decided in 1958 or even in 1959 to expedite to a greater extent our Atlas ICBM program, our only ICBM which is operational. But the clock cannot now be turned backward. It will be remembered that last year the committee went far beyond the budget in this area. We took steps to increase the Atlas missile program from the nine squadrons provided in the budget to 17. This was not an unimportant action. We also took steps to accelerate the solid propellant Minuteman ICBM. And in 1958 and 1959 we took major actions above the budget to develop and expedite the Polaris fleet ballistic missile program. This weapon which Congress has backed so heavily with a total of $879 million above the budget, including substantial sums in the pending bill, will make a major contribution to deterrence.

The $115 million above the budget provided in this measure for airborne alert capability should make a significant contribution to the prevention of a deterrent gap.

NONPARTISAN APPROACH TO DEFENSE

Congress has not approached the consideration of defense on a partisan

basis. Democrats and Republicans have worked together. We have been out in front of budget requests presented to us in pushing the development and acceleration of significant programs such as the ICBM, the Polaris missile, antisubmarine weapons, the airborne alert capability and other key undertakings. If there is any credit insofar as Congress is concerned, both Democrats and Republicans are entitled to that credit. I am pleased with the fine cooperation which we have had in the Appropriations Committee and on the House floor.

If there is no deterrent gap, and if one does not develop, those who study the record will give Congress important credit for this achievement.

MISSILE GAP COULD HAVE BEEN AVERTED

I wish now to make a statement on a subject which is not generally understood. The missile gap was deliberately accepted by Defense officials. They concluded that this could be done with safety. The missile gap was not inevitable. It could have been avoided. It was, in large part, a product of the mixed-force concept of the Joint Chiefs of Staff and the Secretary of Defense.

Had we undertaken to prevent a missile gap and match the Soviet Union with missile for missile in the ICBM category, we could have done this by an all-out crash program in Atlas ICBM's, beginning about 2 years ago. We might have done it last year. We could not do it now, but by an all-out crash program for Atlas ICBM's initiated today, we could close more quickly the missile gap. In other words, we could reduce the size of the gap and shorten the duration.

Defense officials did not deliberately plan the missile gap as a disservice to American security. Officials simply felt that our power in other areas, principally in the field of manned bombers for a necessary time period, would offset the missile gap and be amply sufficient to deter war or destroy the aggressor, should war occur. Moreover, it was not known 2 years ago that the Atlas would be operationally successful. Although the director of the Atlas program, General Schriever, said at the time that there were no important obstacles to the success of the missile. However, considerable risk was involved. But expensive risks are not unusual in the Pentagon.

Another factor entering into this picture was the level of Government spending. It was felt that to match the Soviets missile for missile in the early phases of the ICBM contest would cost a vast sum of money beyond that which was necessary for defense during the time period. This was out of step with the idea of a balanced budget. I am not saying that budgetary considerations have been placed above the question of national security. I do not think there was any intention to do this or that this was done. I am just reciting the history of what has happened and is happening as a result of careful and deliberate planning by the Defense Department.

I should add that there was a tendency to downgrade the first generation ICBM and bank more heavily upon more reliable follow-on missiles as technology progressed. Stating it another way, in addition to the factor of cost, which had to be considered was the factor of whether or not it was wise to build up a large capability in the first generation, more or less unsophisticated Atlas missile. Most of such missiles would have been less effective and more vulnerable than improved versions of our missiles were expected to be.

Also at the time it must be understood that we were spending large sums to produce the more sophisticated Titan ICBM and achieve success in the field of research and development and ultimately in the production of the solid propellant Minuteman ICBM. The Minuteman is expected to be the latest, cheapest and best version of the ICBM now in process of development and production.

Another major factor in defense plans which ruled out the necessity of a crash program for the Atlas missile was the highly promising fleet ballistic missile, the Polaris.

If war is prevented, then the decisions which have been made against a crash Atlas program to prevent the missile gap will have been wise. If war should not be deterred and if war comes in the early 1960's, then the decisions will have proved to be unwise. Only history can answer the question with complete finality.

Now I would like to make reference to the findings in the report of last year. We said in our report last year that the members of the Joint Chiefs of Staff as a body were not fully facing up to their responsibility; that they were not making necessary decisions; that they were not hammering out among themselves in the JCS meetings issues involving certain highly important matters.

There was no desire to disparage the members of the Joint Chiefs, they are men of of fine military background, men of character, and outstanding ability, men whom the nation is fortunate to have in important positions of leadership. The problem was and is one of procedure, having to do with the consideration of basic defense questions and the making of timely decisions.

I want to say for the Secretary of Defense, Mr. Thomas Gates, that he in cooperation with the Joints Chiefs of Staff has seen to it that we now have a tremendously improved performance. Last fall when the budget was under consideration the JCS became actively involved. They discussed the strong and the weak elements of the entire defense program including highly controversial issues. I want to say for the Secretary of Defense that he has gone to the meetings of the Joint Chiefs of Staff and he has encouraged and secured action and decisions, and he has been successful in a significant way in getting more timely action on important issues. I want to compliment very warmly the Secretary of Defense for his very outstanding contribution in this particular area. I have great respect and admiration for the Secretary.

AIRLIFT

Now I should like to turn to the report and call your attention to the acceleration of airlift capability, which I consider to be one of the very significant things we have done in this bill. We went above the budget to the extent of $250 million, a quarter of a billion dollars, to provide additional airlift. This is not airborne alert but more effective aircraft to transfer the fighting men of the services to danger points in the event of an emergency, whether it might be in a global war or limited encounter. Our airlift capability has been inadequate for years. Finally this year key officials in the Department of Defense, when interrogated by the committee, confessed what some of us have maintained all along, that our airlift is inadequate, and so we have provided $250 million for the procurement of modern aircraft designed to take our forces to the point of danger or action in the event of an emergency. We hope that through the efforts taken on this bill we deter global war, but we must also have capability in limited war, and that is one of the major things we are doing in providing for airlift.

SUMMARY OF APPROPRIATIONS

Now, it is impossible to discuss every aspect of this bill. I shall place in the RECORD page 2 of the report which gives a breakdown of the $39.3 billion provided in this bill for defense appropriations. There is no need for me to recite the information given there.

Department of Defense appropriations, 1961—Summary of appropriations

Title	Appropriations, 1960	Budget estimates, 1961	Recommended in bill, 1961	Bill compared with—	
				Appropriations, 1960	Budget estimates, 1961
Title I—Military personnel	$11,644,324,000	$11,813,000,000	$11,818,760,000	+$174,436,000	+$5,760,000
Title II—Operation and maintenance	10,437,367,000	10,527,300,000	10,353,092,000	−84,275,000	−174,208,000
Title III—Procurement	13,336,013,000	13,085,000,000	12,948,627,000	−387,386,000	−136,373,000
Title IV—Research, development, test, and evaluation	3,816,535,000	3,909,700,000	4,217,388,000	+400,853,000	+307,688,000
Total, titles I, II, III, and IV	39,234,239,000	39,335,000,000	39,337,867,000	+103,628,000	+2,867,000
Distribution of appropriations by organizational component:					
Army	9,375,805,000	9,315,000,000	9,403,440,000	+27,635,000	+88,440,000
Navy	11,006,503,000	11,816,000,000	11,900,675,000	+894,172,000	+84,675,000
Air Force	17,478,706,000	16,997,000,000	16,843,752,000	−634,954,000	−153,248,000
Office of the Secretary of Defense	1,373,225,000	1,207,000,000	1,190,000,000	−183,225,000	−17,000,000
Total, Department of Defense	39,234,239,000	39,335,000,000	39,337,867,000	+103,628,000	+2,867,000

CHANGES MADE IN BUDGET PROGRAM

If you do not read anything else in the report, you should turn to page 5, where it is shown exactly how we have changed the defense program that was presented to us. The program that was presented to us in January, February, and March, and April was worked out last fall, and in this rapidly moving world it is expected that changes would be made, and we made a number of them, and the Department of Defense made a number of them. All Members will want to note carefully page 5 of the report as this is the program you are being asked to approve by the passage of this bill.

Department of Defense appropriations, 1961

COMMITTEE CHANGES

Additions:	(*In millions*)
Army National Guard and Reserves (to maintain the respective strengths at 400,000 and 300,000 rather than 360,000 and 270,000 proposed in the budget)	+$105.4
Army modernization (to provide additional high priority equipment for Army modernization)	+207.6
Airlift (for procurement of urgently needed modern aircraft to provide a greater airlift capability)	+250.0
Aid defense (to provide fighter planes as replacements for Bomarc missiles)	+215.0
Airborne alert (to provide for a greater capability to undertake an airborne alert, if and when necessary)	+115.0
Minuteman missile (to speed development on a mobile capability for the Minuteman missile)	+$20.7
Polaris submarine (to provide for expediting the Polaris program by fully funding 5 submarines, with supporting missiles and equipment, and partially funding 7 submarines, instead of fully financing 3 and partially financing 9 as proposed by the Department)	+241.0
Antisubmarine warfare (to provide for a more aggressive antisubmarine warfare program by financing 3 nuclear attack submarines at a cost of $171 million (1 more than the original budget request and retaining the 2 proposed for elimination by departmental adjustments to the budget), by providing for 2 destroyer escort vessels at a cost of $50 million, and by financing further high priority efforts in research to the extent of $100 million)	+321.0
Space (to speed work on the urgently needed Midas, Samos, and Discoverer projects)	+54.0
Total committee additions	1,529.7
Reductions:	
Travel (a 10 percent reduction supported by a limitation, to curtail abuses in travel)	−73.1
Transfers of surplus stock fund cash	−15.5
Communications (to compel consolidation and better management of communications facilities)	−$84.3
Departmental Administration (to bring under control the headquarters military and civilian bureaucracy)	−33.6
Operation and Maintenance (for various economy adjustments in addition to travel and departmental administration)	−85.8
Army Procurement (funds not needed because of slippage in jeep vehicle deliveries and anticipated recoupments from off-shelf sales)	−128.0
Procurement Generally (to reflect a reduction to force more economical procurement practices)	−400.5
Aircraft Carrier	−293.0
Bomarc (to eliminate financing for the Bomarc-B missile except for $50 million to continue development testing if found necessary. Involved is a reduction of $40.4 million in funds requested for 1961 and $253.6 million in 1960 and prior years funds)	−294.0
Total committee reductions	1,407.8
Net change in revised programs	+121.9
Semiofficial amendments	−119.1
Net change compared with January budget	+2.8

Department of Defense, summary of major forces, fiscal years 1959–61

	Actual June 30, 1959	Planned June 30, 1960	Planned June 30, 1961
Department of the Army:			
Divisions	15	14	14
Armored Cavalary regiments	5	5	5
Armored combat commands	1	1	1
Brigades (Infantry)	2	2	2
Battle groups (Infantry)	8	8	9
Field Artillery missile (heavy) (Redstone)	3	3	3
Army Missile Commands	4	4	5
Army Air Defense antiaircraft battalions	(85)	(81¾)	(84¼)
Guided missile battalions (equivalents)	74	73¾	81¼
Other bns (gun, skysweeper, automatic weapons)	11	8	3
Separate surface-to-surface missile battalions	18	24	26
Active duty military personnel	861,294	870,000	870,000
Reserve components personnel (drill pay status and 3 to 6 months' trainees)	713,600	700,000	[3] 700,000
Army National Guard	399,427	400,000	[3] 400,000
Army Reserve	314,173	300,000	[3] 300,000
Active aircraft inventory (Regular and Reserve)	5,199	5,663	5,791
Helicopter	2,357	2,714	2,840
Fixed wing	2,842	2,949	2,951
Department of the Navy:			
Commissioned ships in fleet	860	817	817
Warships	386	383	382
Other ships	474	434	435
Attack carrier air groups	16	16	16
Carrier antisubmarine air groups [1]	----	11	11
Patrol and warning squadrons	42	42	41
Marine divisions	3	3	3
Marine aircraft wings	3	3	3
Active duty military personnel	801,911	794,000	794,000
Navy	626,340	619,000	619,000
Marine Corps	175,571	175,000	175,000
Department of the Navy—continued			
Reserve components personnel (drill pay and 3 to 6 months' trainees)	165,230	174,029	174,082
Naval Reserve	120,371	129,029	129,082
Marine Corps Reserve	44,859	45,000	45,000
Active aircraft inventory (Regular and Reserve)	9,649	8,657	8,348
Operating aircraft	7,562	6,852	6,791
Logistic support aircraft	2,087	1,805	1,557
Department of the Air Force:			
USAF combat wings (including missile wings)	105	96	[2] 91
Strategic wings	43	40	38
Air defense wings	27	23	20
Tactical (including airlift) wings	35	33	33
USAF combat support flying forces	145	118	115
Air refueling squadrons	60	62	66
MATS air transport squadrons	27	22	21
Other specialized squadrons	58	34	28
Active duty military personnel	840,028	825,000	825,000
Reserve components personnel (drill pay status and 3 to 6 months' trainees)	127,758	133,985	135,000
Air National Guard	70,994	72,000	72,000
Air Force Reserve	56,764	61,985	63,000
Active aircraft inventory (regular and reserve)	20,890	18,650	17,741
Operating aircraft	18,260	17,337	16,509
Non-operating aircraft	2,630	1,313	1,232

[1] Prior to fiscal year 1960 the carrier antisubmarine capability was represented by 22 carrier antisubmarine squadrons which are reorganized into 11 carrier antisubmarine air groups.

[2] Figures do not reflect action of the committee on air defense programs.
[3] Reflects committee action.

Then I think that you will want to turn to page 29 and see the table of forces which this bill will provide. This table shows that we will have in our Armed Forces about 2½ million men—Army, Navy, Air Force, and Marines. There is other information provided, not on that table but elsewhere, which shows that there will be something like 1,045,000 civilian workers. Information provided in this table shows that there will be about 1 million members of our Reserve Forces. This shows the number of airplanes that will be in the active inventory of the services and gives a general recitation of the content of the forces provided for in this bill. One can then go to the various sections and get more precise information with respect to what is provided.

DEPARTMENTAL HEADQUARTERS

The committee gave consideration to the civilian and military personnel associated with departmental headquarters. The committee felt that a better job of defense could be done with fewer people, civilian and military. The committee felt that a modest 10-percent cut would be in the overall best interests of defense and has made reductions in the funds provided accordingly. Explanations of committee action are contained in the following excerpt from the committee report:

DEPARTMENTAL ADMINISTRATION

In the Washington, D.C., metropolitan area the Department of Defense and the military services have their principal headquarters. Certain of the departmental activities of the services are, however, performed at important headquarters located outside of this area. According to the best information that the committee was able to obtain—and the committee regrets that authoritative and definitive information is not available in the Department of Defense—the numbers of people in headquarters activities in the metropolitan area total 31,500 civilians and 14,000 military at an approximate total cost for salaries and support of $383 million. Again, according to the best available information, the people serving in important departmental headquarters outside of this immediate area total 4,500 civilian and 4,000 military at total costs of approximately $69 million. Thus, there appear to be engaged in departmental administration, regardless of location, a total of over 36,000 civilian employees at a cost of slightly over $336 million, including administrative support of military personnel, and approximately 18,000 military personnel at an additional cost of approximately $116 million in pay and allowances, or a grand total of nearly 54,000 people at an annual cost of over $452 million.

The committee feels that this amount of manpower and cost represents topheaviness and is unwarranted and recommends a reduction of 10 percent in the civilian manpower and costs together with a limitation on the numbers of military personnel that may be assigned to departmental administration.

In approaching the problem of control in the area of departmental administration, the committee has been hampered by the failure of the Department of Defense to present the estimates—which are largely included in the Operation and Maintenance accounts—on a comparable basis which would fully disclose the organizational entities, the personnel, both civilian and military, and the related fund estimates. In attempting to establish some degree of comparability as to administrative activities, the committee determined that as a basic distinction from other groups the departmental force is that force which is engaged in general supervisory and administrative direction and control of the various field forces. In turn, then, the field forces are those engaged either directly or indirectly in locally executing the laws and other delegated or assigned activities. The committee was compelled to make this broad distinction in recognition of the existence of certain significant headquarters organizations outside of the Washington, D.C., metropolitan area.

Accordingly, the recommended reduction was applied in the estimates to the following offices or items:

Office of the Secretary of Defense

Department of the Army

Headquarters, Department of the Army.
Offices of the Heads of Technical Staff.
Office of the Surgeon General.

Department of the Navy

Executive Office of the Secretary.
Office, Chief of Naval Operations.
Judge Advocate General.
Office of Naval Research, Departmental administration.
Bureau of Naval Personnel, Departmental administration.
Bureau of Naval Weapons, Departmental administration.
Bureau of Ships, Departmental administration.
Bureau of Medicine and Surgery, Departmental administration.
Bureau of Yards and Docks, Departmental administration.
Bureau of Supplies and Accounts, Departmental administration.
Headquarters, U.S. Marine Corps.

Department of the Air Force

Headquarters, U.S. Air Force.
Field extensions: Aircraft Nuclear Propulsion Office; Air Force Academy Construction Agency; Air Force Intelligence Center; Director of Civilian Personnel; Director of Civil Engineering; Director, Operations; Deputy Chief of Staff, Personnel; Office of Information Services; USAF Central Coordination Staff—Canada; 1002d Inspector General Group; 1003d Inspector General Group; Director of Intelligence; 1070th USAF Medical Service Group.
Headquarters, Air Materiel Command.
Headquarters, Air Research and Development Command (including Ballistic Missiles Division; Detachment 1, Wright Air Development Center, Air Defense Systems Integration Division; and ARDC, European Office).

It is expected that the Secretary of Defense will assure that in the budget presentations accompanying the estimates for 1962 there will be uniformity in description of departmental administration, and that the amounts for that purpose will be separately identified. In preparing for these presentations he should promptly determine which offices, if any, that are not included in this list are properly departmental administration, and should by administrative control apply the reduction to such additional offices. In this area, the committee has reference to the functions of Headquarters, Military Sea Transportation Service, and Headquarters, Military Air Transport Service which are comparable to functions of the Chief of Transportation, Army. The latter office is included in the committee imposed reduction, the former two activities being industrially funded are of necessity not directly affected. In the administration of the limitation imposed, it should be understood that the types of expenses referred to include (a) salaries and all expenses related to the compensation of personnel; (b) office supplies and equipment, including rentals and costs of office space alterations; (c) temporary duty travel costs for military and civilian personnel; and (d) all other expenses charged during fiscal year 1960 to departmental administration by each military department.

The belt tightening which the committee action will require should not all be accomplished by normal attrition. The committee does not believe that such an approach would get the results so evidently necessary. However, care should be exercised that proper direction and control continue while the unnecessary activities are being eliminated. During the forthcoming fiscal year, the committee will also observe with interest the degree to which the departments tend to divert work which should be done by Government employees to contract operators. The Department can be assured now that, to the extent it resorts to contracts, the estimates for the following year will be suspect.

It would not be possible in the course of debate on this bill to get very deeply into the many subjects which are involved. Most of you have been voting on this annual appropriation bill for many years and are generally familiar with what it covers. What we are presenting is the best that we could do and we hope and confidently believe that generally speaking, while you may not agree with every detailed provision, you will be willing to support the measure as the best that can be agreed upon at this time by way of an appropriation bill for the Armed Forces for the fiscal year which begins this coming July.

Mr. FORD. Mr. Chairman, I yield myself such time as I may desire.

Mr. Chairman, this bill, H.R. 11998, is predicated on the military program and budget submitted by the budget to the Congress in January. That program and the funding for it if approved by the Congress and executed by the Pentagon will continue to maintain the military superiority of the United States over any and all potential enemies.

This program and the funding for it which was submitted in January has been revised to a limited degree from January in the first part of this year to the present time. Such changes in this fast-moving world are not only necessary but highly desirable. The maintenance of the status quo is indefensible. Adherence to flexibility is absolutely essential for our national security.

The House Committee on Appropriations after hearings that lasted through January, February, March, and into April, has brought to the membership as a whole a bill which to some extent is slightly different from that recommended by the President. Actually the dollar increase over the budget submitted in January is 7 one-thousandths of 1 percent. I might add that that is an insignificant increase when you look at the overall total.

It is true that we have added approximately $1,500 million to the budget as submitted. On the other hand, we have reduced certain programs overall to the extent of approximately $1,400 million. The net result is that we have increased figures in the budget as submitted by the President to the extent of 3.9 percent and we have revised them downward to the extent of 3.6 percent. The net result, when you look at the small increase over all and the relatively minor revisions

within the total amount, is that this bill, I think it is fair to say, basically adheres to the military concepts and programs that have been pursued in recent years and more specifically the program submitted to Congress in January of this year.

In the lifetime of most of the people in this Chamber we have seen some great changes and transitions in military policies and equipment. Take the Navy. Before World War II the battleship navy predominated. During World War II the aircraft carrier navy took the principal lead. As we look down the road, I think it must be obvious to most people that the submarine navy is going to have a very significant impact on policies and programs in our Navy.

In the case of the Army, we have moved from the World War I trench-warfare type of tactics to World War II strategy, which was infinitely more mobile. In World War II the Maginot Line theory of ground warfare was proven unsound. It was proven to be ineffective. Today we have what we call the pentomic concept of ground forces, smaller units, self-sustained, dispersed laterally and otherwise over great areas of land.

In the case of the Air Force, I think you have seen even greater changes. At its inception, our aircraft were driven by piston-type powerplants. Of recent years, we have moved into a jet type of propulsion. SAC bombers are today 100 percent jet-propelled. But, beginning now and accelerating in the months ahead, we are going to find the Air Force relying to a greater and greater degree on missiles, both air-breathing and ballistic. It is somewhat of a paradox, really, that the Air Force which started out flying in the wild blue yonder may in the short months ahead move underground with hardened Atlas and Titan bases and move to the transportation of their ballistic missiles over railroad tracks. Somebody in our committee facetiously has commented that the Air Force might well go to the Army Corps of Engineers and to the Army Transportation Corps to do a substantial part of their work in the days ahead.

These illustrations of changes over a relatively short period of time are only the beginning because in the period before us, we are moving in all these services to new concepts, new equipment, and new tactics. However, the budget submitted by the President and virtually endorsed by this committee and, I hope, by the House will permit us the flexibility and the power to maintain our military superiority.

Now what I would like to do is to run through rather quickly the various figures that are included in the committee report. I would like to say one word at this point, however. Although I speak forcefully in favor of this bill and the committee report, if I had been the one person to write the bill or to write the report, I would not have written either as they are submitted to you. However, in the process we go through in the Committee on Appropriations, we have to vote on each individual item. Sometimes you win and sometimes you lose. At the conclusion, it is up to each individual in the committee to make up his mind as to whether or not on balance he can endorse the bill overall. It is my considered judgment that this legislation on balance is sound and should be approved. I cannot help but say, however, in some instances we seem to have taken a paradoxical approach. We have been moving in the last year or so a little more to what has been called "the conventional war problem." There seems to be a higher degree of unanimity in the Pentagon that we have a wholly sufficient retaliatory force. There seems to be the feeling in the months ahead, perhaps, a greater threat to us is the problem of limited war. So we have been funding and accentuating programs that are aimed in that direction.

In this bill before us, we have $250 million over and above the $120.4 million recommended by the President for airlift. The aim, the objective of this additional airlift is to help transport ground forces and their equipment more quickly from the United States to some danger spot in either the East or the West.

Basically, I agree with the action taken by the committee, but it seems paradoxical to me that we have at the same time eliminated from the Navy program the new attack carrier which, if built, would be on station and would provide to our ground forces, when landed, the needed and essential air cover so that they could carry out their military operations.

It appears to me we have accentuated the ability to get our ground forces to these trouble spots, but by the elimination of the carrier we have perhaps placed them in some danger by not providing that new carrier to give them adequate cover when they land. Nevertheless, it is my hope that when this bill gets to the other body the other body will add the carrier. If they do, then in conference there is a chance, and I hope it materializes, that the carrier will be included in the final version.

To run quickly down some of the figures in the bill: The January submission by the President called for $39,335,000,000.

On March 24, the Air Force, and on April 6 the Department of Defense, submitted certain revisions to the January budget. The net result of those submissions was a reduction in the overall total of $119,100,000.

The committee submits for your consideration a bill that includes a figure of $39,337,867,000. This is $103,628,000 more than was carried in the appropriation act for the Department of Defense.

As indicated earlier, the total increase over the amount requested by the President in January is $2,867,000. This is seven one thousandths of 1 percent more than the President requested. If you relate the increase to the amended budget which was submitted in the spring, the figures here are $121,967,000 more than the total.

Over the years the Congress has been seeking to get better management in the Department of Defense. It is my considered judgment that in the last few years this has been accomplished substantially. I would be the first to admit, the Department of Defense having 2,500,000 men in uniform and more than a million civilians, is bound to make mistakes, but if you will look at the overall record I feel that tremendous progress has been made.

I have here a chart which shows the trend of obligational authority. When this bill is enacted into law money is not taken from the Treasury and turned over to the Department of Defense; the enactment of this law simply gives to the Department of Defense a line of credit. In the parlance of the Committee on Appropriations, that means "obligational authority." Here is the trend of obligational authority from 1950. In 1950 it was approximately $13 billion. That was just prior to the Korean war. In 1952, at the time of the Korean war, it went up to $58 billion. In 1955 it dropped down to $29 billion. In 1960 and 1961 it is leveled off at a figure of approximately $40 billion.

This does not include all of the money for the entire Defense Establishment. We must add to it what we call the military construction program; we must add to it the military portions of Atomic Energy Commission programs; we must add to it the mutual security military assistance program. The net result when you accumulate all these various programs is that the total for national security is approximately $45 billion.

Obligational authority is not the only basis upon which we test the management capabilities of the Department of Defense. We must look at expenditures. This chart shows the expenditures that have taken place in the last 10 years for the Army, Navy, and Air Force. In 1950 it was about $12 billion, in 1953 it went up to $43 billion, in 1955 $36 billion, and in 1960 and 1961 it has leveled off in this particular area to $41 billion. This $41 billion, of course, does not include the extra programs which I described a few minutes ago. When they are included it would add approximately $4 billion to $41 billion per annum.

This chart shows the unexpended balances. The Committee on Appropriations in particular and the Congress in general have been critical of the fact that in many instances we have had large unexpended balances of obligational authority that has been made available previously. Our committee in particular thinks that these unexpended balances should be kept at a minimum. It is our feeling that if you keep them at a minimum, then we get better management and better control, not only in the Pentagon but in the Congress.

In 1950 the unexpended balance was $9.9 billion. That was just before the Korean war. In 1953 that unexpended balance went up to $62.3 billion. That was at the height of the Korean war when Congress made available to the Department of Defense vast amounts of obligational authority. It was not possible to spend out that obligational authority in each fiscal year in which it was made available. The reason is that when the Department gets obligational authority, it signs a contract for the procurement of a tank, aircraft, ship, gun, or a plane.

They have to have that obligational authority before they can make the contract. But when the obligational authority is made available it does not mean that the expenditures come automatically in the same fiscal year. There is always a lag, and as you will see here, in 1961 the unexpended balance had gone down to $31.3 billion, in 1962 down to $30.8 billion. This chart shows the desirable trend of decreasing unexpended balances.

I have some doubt it will go much below this figure of $30.8 billion if we keep up our obligational authority at about the level we have in the bill for fiscal year 1961.

Mr. KNOX. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Michigan.

Mr. KNOX. Will the gentleman inform me as to the status of the Bomarc missile program?

Mr. FORD. May I say to the gentleman from Michigan that I would like to conclude my statement, then I will be delighted to answer questions about any specific weapon program.

Mr. KNOX. I appreciate the gentleman's position.

Mr. FORD. One comment about unobligated balances. This is a term which you do not see too often. But when the Congress makes available obligational authority it is generally expected that that authority will be obligated during the fiscal year in which it is made available. However, for various reasons, some good and some bad, all such obligational authority is not necessarily obligated before the end of the fiscal year.

Tremendous strides have been made in this area in reducing that amount. In 1955 the amount at the end of the fiscal year was $15.7 billion including military construction funds. At the end of fiscal 1960 it has been reduced to $4.9 billion again including construction funds. This is a tremendous reduction. Most of the reduction has come about because of the action of the Congress in putting pressure on the Department of Defense, but at the same time in recent years there has been a greater degree of cooperation in this regard than heretofore.

Now I would like to turn quickly to some of the specific programs that are contained in the budget and in the recommendations by this committee. Military personnel, active duty: The total amount included in the bill is $10,369,540,000. This will provide an active duty manpower strength of 2,489,000 members of the Army, Navy, Air Force, and the Marines. This general statement is true. We have approved without deviation or change the President's recommendations for active duty strength for all services. In the case of the Army the President recommended a strength of 870,000 at a cost of $3,261 million. In the bill the figure is $3,244,448,000, a decrease of approximately $16.5 million. This reduction between the budget and the bill is predicated on a flat 10 percent reduction made by the committee in travel for active duty personnel. In the case of the Navy the manpower strength is 619,000. The President recommended $2,528 million and the committee approved $2,507,055,000, a decrease of $20,945,000. This decrease, again, is based on the reduction in travel which the committee approved across the board for all services. The Marine Corps has an active duty strength of 175,000. The budget request was $607 million. The committee has recommended $604,577,000, a decrease of $2,423,000.

I would like to point out at this point that in the current fiscal year and in the next fiscal year the Marine Corps strength will be 175,000. Some people have alleged and indicated that this active duty strength for the Marine Corps is insufficient. They contend it ought to be 200,000 or 225,000. May I suggest that you compare this figure of 175,000 active duty Marine strength with the 70,000 marines we had on duty just prior to the Korean war. In other words, today we have over 100,000 more marines on active duty than we had at the outbreak of the Korean war.

I would like to say a word of commendation for the Marine Corps. Last year they were cut back to 175,000 from a figure of 185,000 or 189,000. The Marine Corps, in order to handle their manpower, took out of each of the three Marine Corps divisions a certain number of battalion landing teams. I think there were eight all together. This was objected to by some. However, the Marine Corps this year, with the same overall strength figure, has come back and said. "Because we are getting better marines, we are more efficiently running the Marine Corps. We are able to put back into the Marine Corps two of the battalion landing teams that we had to take out previously."

In other words, the Marine Corps, instead of complaining about a reduction in manpower, has taken the manpower figures and gotten more frontline capability from the overall figure that they had previously. I think this is good manpower management. I want to compliment the Marine Corps for taking this attitude and obtaining this result. The Army to some degree has accomplished similar results. The Air Force has an active duty strength of 825,000. The budget called for $4,030 million. The committee bill recommends $4,013,460,000, a decrease of $16,540,000. This decrease, as in the case of the others, is predicated on the travel reduction.

Let us turn to military personnel reserve forces. The overall amount requested for the reserve forces is $674,220,000. It will provide a reserve strength of 1,009,082. This includes the Army National Guard, the Army Reserve, the Navy Reserve, the Marine Corps Reserve, the Air National Guard, and the Air Force Reserve.

In the case of the Army National Guard the committee has approved an active strength of 400,000. The budget, in the personnel part of the bill, recommended $199 million. This bill includes a figure of $229,903,000, an increase of $30,903,000. This increase is based on the difference that the committee has with the President's manpower recommendations. The President felt that the Army National Guard should be cut from 400,000 to 360,000. The committee felt that the Army National Guard has done a good job and will continue to do a good job. The committee felt that for the money invested we get a good return in the National Guard. We disagreed with the President and added the funds I have indicated. We did not put in the bill, however, mandatory floors such as that recommended by some organizations and individuals.

In the case of the Army Reserve we have a figure of 300,000. This was based on a budget recommendation of $200 million by the President. The figure in the bill before you is $233,115,000. This is an increase over the President's budget recommendation of $33,115,000. Again, the President had recommended a reduced strength from 300,000 to 270,000. The committee disagreed for primarily the same reasons I have indicated in the case of the Army National Guard. Again, there is no language in the bill calling for a mandatory floor of 300,000.

It should be added that the Army National Guard and Reserve are the best trained and best equipped in their history. This means both outfits are better prepared to handle their responsibilities in our war plans.

In the case of the Navy Reserve, we have a strength of 129,082. The President recommended $88 million in this program. The committee recommends $87,168,000, a decrease of $832,000. This reduction, very small in total, is predicated on the cut in travel which I discussed earlier in connection with the active-duty personnel account.

The Marine Corps Reserve is 45,000. The President recommended a figure of $25 million. The committee recommends $24,661,000, a decrease of $339,000. This reduction is again based on the cut in travel which I discussed earlier.

The Air National Guard is 72,000 active participants. The President recommended $46 million. The committee proposes $45,609,000, a decrease of $391,000, this decrease based again on the travel cut.

The Air Force Reserve, a strength figure of 63,000, a budget figure recommended by the President of $54 million. The bill proposes $53,764,000, a reduction of $236,000, again a cut related to travel.

Now I should like to turn to another area which is retired pay for Army, Navy, and Air Force personnel. The budget estimate for retired pay for fiscal 1961 is $775 million. That is almost a billion dollars in pay for people who have retired from the three services.

Seven years ago the figure was $330 million per annum, so in a period of a few years it has more than doubled.

Recently the Department of Defense had a serious study made of this problem, and rightly so. In 1965 the cost of the retired pay program, if you just take the law as it is written, will be $1,117 million in the 12-month period. If you go to 1970 the annual cost of retired pay, and this comes out of the military budget every year, will be $1,741 million per anum. If you go to 1975 the annual

cost will be $2,465 million. If you go to 1980, and 1980 will be here quicker than some of us hope and think, the cost out of the Department of Defense appropriation bill will be $3,090 million every 12 months.

I report that only because it is a huge sum annually that we are obligated to pay. It is something because of its magnitude that we cannot treat lightly. It is something that should be appreciated by the military who have served on active duty for 20 years or more. It is a substantial part of your defense bill right today and will become increasingly important.

Next, operations and maintenance. The total figure is $10,353,092,000. In the case of the Army the budget figure is $3.1 billion. The committee proposes a slight increase, an increase of $4,500,000. This is based on the increases for the Reserve and the National Guard. The reductions, that to some extent offset both of these increases, relate to the communications proposals and a number of other areas where reductions are proposed. I suggest you turn to page 47 of the committee report. The details are set forth there.

With reference to the Navy budget for operations and maintenance, the President recommended $2,550 million. The bill proposes $2,499,388,000—a slight decrease of $50,612,000. The details of the increases and decreases within the accounts are set forth on page 48 of the committee report.

The next item, the Marine Corps. The President recommended a budget of $176 million. The committee proposes $174,726,000–a decrease of $1,274,000. The details of the increases and decreases are set forth on page 48 of the report.

The next item is the Air Force operations and maintenance budget. The sum recommended by the President was $4,282 million. The committee has reduced that $109,596,000.

There have been specific increases up and down. The figures and the details are set forth on page 48 of the committee report.

You will note in the operations and maintenance part of the bill, we have continued again the limitation on the Air Force Academy of $16 million for operation and maintenance. They propose that they have the authority to spend $16,925,000 for operation and maintenance of the Air Force Academy. The committee has put a limitation of $16 million on operation and maintenance funds for the Air Force Academy. This limitation, which is only applicable to the Air Force Academy, arose because the committee a year ago felt that expenditures, both in construction and operation and maintenance, by the Air Force Academy had gotten out of hand. This was our way of seeing, at least in this one field, if we could do something about it.

Mr. ROGERS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. FORD. I am happy to yield to the gentleman.

Mr. ROGERS of Colorado. What is the limitation to be placed on the Air Force Academy under your recommendation here?

Mr. FORD. It is limited to the operation and maintenance funds, a total of $16 million for the fiscal year 1961.

Mr. ROGERS of Colorado. That is $16 million?

Mr. FORD. Yes, sir.

Mr. ROGERS of Colorado. The gentleman from Michigan recognizes that the Air Force Academy at the present time is not up to full strength because of the new buildings, and just getting into it last year; does he not?

Mr. FORD. We appreciate that.

Mr. ROGERS of Colorado. Was that one of the reasons for the limitations? I am just interested and I would like to know because I am on the Board of Visitors.

Mr. FORD. May I say to the gentleman from Colorado that originally the construction of the Air Force Academy was handled through the military construction appropriation bill after the authorization legislation was approved. The Air Force not only used construction funds to build the buildings, but over the years they appeared to siphon off some operations and maintenance money for additional construction. The committee felt that that was not the right way to do it. We did not think that operations and maintenance money was for the purpose of basic construction. The only way we could solve the problem was to put an arbitrary limit on what they could use out of the O. & M. funds account. We realize that all of the construction of the Air Force Academy is not yet completed. We do not want that construction completed out of O. & M. funds. We want them to come before the proper committee for those construction funds and get the money that is needed, if they can justify it.

Mr. ROGERS of Colorado. Is there some question as to the purchase of installed classroom equipment and other such items, which you claim should have been charged to construction rather than to maintenance and operation? Is that not a point in dispute?

Mr. FORD. I can only say it is the judgment of our committee, and the investigators who worked for the committee, that we think this is the way to handle the problem.

If they have any serious difficulty I am sure the committee will listen to their story and make any modifications necessary, if they can lay it on the line.

Mr. ROGERS of Colorado. Mr. Chairman, will the gentleman yield further?

Mr. FORD. I yield.

Mr. ROGERS of Colorado. I take it that if the Air Force Academy should show need for additional sums, in excess of the limitations placed in this bill, the committee would be willing to consider that in the future if they make out their case.

Mr. FORD. I can assure the gentleman from Colorado that that is the case.

On the item of procurement for all services we have requested that you approve a figure of $12,948,627,000.

In the case of procurement of equipment and missiles, Army, the President recommended $1,337 million, the committee recommends $1,374,102,000, an increase of $37 million-plus. This increase is brought about by an increase of $207 million for the modernization of the Army offset in part by additional obligational authority coming from the mutual security program to the extent of $120 million. The net increase in new obligational authority is $37 million in this bill.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. FORD. I shall be very pleased to.

Mr. McCORMACK. In connection with procurement, did the gentleman's committee find evidence that there was some unnecessary duplication?

Mr. FORD. In our report we relate certain instances where we thought there had been some inefficient management. However, in the hearings you can find some excellent examples of first-class management in procurement. Our committee in taking a look at the broad procurement picture decided that in order to stimulate better management practices we would cut procurement for the three services an arbitrary 3 percent. We felt a little prod from the Congress would get them to do a better job in their negotiations with management. That is objected to by the Pentagon, but I think they can do a better job and this action may help.

Mr. McCORMACK. Will the gentleman yield further?

Mr. FORD. Certainly.

Mr. McCORMACK. I think Assistant Secretary Perkins McGuire is doing a very good job in this direction, especially when we realize the entrenched practices that have grown up through the years, with which we are all familiar.

I am sure the gentleman recalls that I offered an amendment to the Defense Department Reorganization Act, known as the McCormack amendment, which gave complete authority to the Secretary of Defense to coordinate across the whole board in the entire field of procurement and services without the necessity of coming to Congress for permission if there was any disagreement. The gentleman is familiar with it.

Mr. FORD. I am.

Mr. McCORMACK. I know the gentleman's committee had it in mind. I want to congratulate the committee. I realize that it has not gone as far as it could, but I also realize that Assistant Secretary McGuire is doing everything he can in that direction, and I know the gentleman's subcommittee recognizes it and will follow up in the future.

Mr. FORD. I wholeheartedly agree that Mr. McGuire as Assistant Secretary of Defense is doing a first-class job. He is a dedicated man and he is running his job in a topnotch manner.

Mr. McCORMACK. Might I say, if the gentleman will yield further, that I am not sure whether Perkins McGuire comes from Boston or just outside of Boston.

Mr. FLOOD. If the gentleman will yield, the gentleman's name still is McGuire.

Mrs. CHURCH. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield.

Mrs. CHURCH. I am very glad to take the floor following the distinguished

gentleman from Massachusetts with whom I served for some years on the Committee on Government Operations. On that committee, and as a member of the Subcommittee on Military Operations, I became aware, with more than justified shock, of the tremendous cost and waste involved in poor military procurement practices.

I have read the report of the Appropriations Committee on this bill today, and I want to congratulate the committee on stating frankly that there is room even now for improvement in procurement. I may say to the gentleman that what bothers me is that this seems to be a recurrent problem. It is over 8 years since my earlier described subcommittee began to take up consideration of the errors in procurement, and I say "errors" kindly.

Will the gentleman tell me whether or not his committee has made any recommendations other than the 3-percent cut in appropriations that may bring some immediate remedy to the situation?

Mr. FORD. Our committee has had two very detailed investigations of procurement and practices in the Defense Department over the last 2 years, and I am told that the Committee on Armed Forces has likewise investigated procurement policies and practices. I am convinced we are making headway. I only ask the gentlewoman from Illinois to appreciate that when you are dealing in an area that involves almost $13 billion per annum you must expect progress to be made slowly but surely. There is no millennium, there is no panacea. It depends on the people, it depends on policy. I can only reemphasize that I think we are making real headway.

Mrs. CHURCH. Would the gentleman think that a change in method of procurement might hasten the improvement?

Mr. FORD. We made some substantial changes by the so-called single-manager plan. They have seven or eight such single-manager programs now. They are going into two more in the current and next fiscal year. Those I think are helpful in preventing duplication, in preventing waste and will result in our getting more defense for the dollars spent.

Mrs. CHURCH. The gentleman knows that my chief interest also is in getting more defense for the dollars spent, and in doing everything possible likewise to maintain the strong fiscal position on which any ultimate defense must rest.

Mr. FORD. I appreciate the gentlewoman's remarks.

Mr. KNOX. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Michigan.

Mr. KNOX. The gentleman has now reached the field of procurement. I requested the gentleman to yield a few minutes ago, but he asked me to withhold my questions until this time.

The question is in connection with the Bomarc. In the report of the committee the President's budget is stated an appropriation of $421.5 million for continuous procurement of the Bomarc missile for fiscal 1961. As I read down through the report I find now that this amount has been cut back to $50 million for further development, tests and evaluations, if necessary. There is a recouping of funds amounting to $253 million that had been previously appropriated. Roughly calculating, the amount of money that has been spent, that could not be recouped, is some $121 million.

I would request that the gentleman inform me as to how in such a short period of time, about 6 months, the President's budget would call for $421.5 million in this field for the procurement of Bomarc missiles and that the committee found justification for cutting this back to $50 million and still do a good job as far as the defense of our Nation is concerned.

Mr. FORD. If I may respond to the gentleman, I am not perhaps the best one to answer the question because I was in the minority in the decision made by the committee on this item. However, some explanation by me might be helpful.

We took the President's cutback program which was submitted in March, then further reduced it, knocking out all new money in the program and recouping money that is available in the fiscal year 1960. We left a total of $50 million for a continuation of research, development, testing, and evaluation. The committee did it, if I may speak for the majority, because the testing program of Bomarc B has not been very successful. I am being a little kind—others will speak more forcefully on this than I.

The responsible people in the Air Force and the Defense Department say that these technical problems can and will be licked and the $50 million which is available in the bill for the continuation of the research, development, test and evaluation will permit them to go ahead. If they are successful in the scheduled tests, they can convince the other body, perhaps, that the money should be made available as originally proposed. Then, in conference, if that is the will of the conferees, the Bomarc B program can be funded as proposed.

Mr. MINSHALL. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Ohio. He is one of those who believes very strongly and was in the majority in the cutback of the Bomarc program.

Mr. MINSHALL. In response to the gentleman from Michigan [Mr. KNOX], I should like to suggest that this is nothing new about the evaluation of the Bomarc program. There is no area in the history of this country of any program that has been a more complete failure than has the Bomarc. We have spent nearly $2 billion on this program for over 11 years, and last year I was one of those on the committee who opposed this program. I then subsequently offered an amendment on the floor to try to strike out the entire program, and it was not until this March, the latter part of March, that General White of the Air Force came before our committee and, I am glad to say, agreed with my point of view and agreed with me that the Bomarc program was no good.

Mr. FORD. May I just correct the gentleman? General White never said the Bomarc program was "no good." He did agree to a modification of the program.

Mr. MINSHALL. That is a kind way of putting it, if I may use the gentleman's own words.

Mr. FORD. He said that the program should be modified from a 16 base, as I recall, to an 8-base program for Bomarc B and recommended the expenditure of funds in the budget as provided. But, the facts are—and I am trying to be objective about it—that the testing program has not been successful.

Mr. MINSHALL. It has been a complete failure, as a matter of fact, may I say to the gentleman from Michigan [Mr. KNOX]. I think of the eight or nine tests, only one of these tests has been partially successful.

Mr. FORD. May I make a suggestion? I would like to finish my comments, and then if the gentleman from Ohio will take some time, he and the gentleman from Michigan [Mr. KNOX] can discuss the issues. Or, I will give the gentleman from Michigan time on his own, and he can ask questions. I know Dr. DIXON and others have some questions to ask. Let us handle it that way in one package, rather than break it up at this time.

Mr. MINSHALL. I thank the gentleman.

Mr. SIKES. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Florida.

Mr. SIKES. I would like to clarify the RECORD. There is some apprehension that a part of the $50 million that is carried in the bill is for construction, so I would appreciate the concurrence of the gentleman from Michigan and the chairman of the subcommittee that all of the money in this bill is for testing and that none of it is for construction. Does the gentleman concur?

Mr. FORD. It is my understanding that this $50 million is in the procurement account, but it is for research, development, testing, and evaluation of the Bomarc B missile.

Mr. SIKES. Does the gentleman also concur, may I ask?

Mr. MAHON. Mr. Chairman, I concur in the statement that this is research and development program money, regardless of the location of the money in the bill.

Mr. KNOX. Mr. Chairman, will the gentleman yield further?

Mr. FORD. I yield.

Mr. KNOX. I believe, in order to have some continuity of thinking on this particular program, it should not be divided in the RECORD. I think it should continue on to determine whether or not the Congress, following the recommendation of the committee, is acting in the best interests of the defense of our country.

Mr. FORD. I shall be glad to yield time to the gentleman from Michigan, for himself or for others, who can discuss in detail the Bomarc program. I

will probably participate in the discussion if I can be helpful.

Mr. KNOX. I defer to the gentleman's suggestion.

Mr. FORD. Let us take next the Navy procurement program. The President recommended a budget of $4,579 million. The committee proposes $4,643,390,000, an increase of $64,390,000. This increase is based primarily on the addition of 2 fully funded Polaris submarines over the budget program. In the program we end up with 14 fully funded Polaris submarines and 7 long leadtime Polaris submarines. This gives a 21 Polaris submarine program. It is a very effective weapon and one which I am very confident will be operational in 1960 for the first two ships.

In addition, we added two destroyer escorts for antisubmarine work. We kept in the budget one attack submarine, the two attack submarines which the Department had proposed to delete, and added one more. The additional figure of $57 million provides for the fourth attack submarine.

We knocked out the carrier, the conventionally powered carrier. As I said earlier I disagreed with that decision, but it did permit us extra leeway to add these other programs some of which I have mentioned.

For the Marine Corps the President recommended a budget of $94 million. The bill proposes $91,180,000, a reduction of $2,820,000, a very minor change in the Marine Corps procurement.

The Air Force budget as recommended by the President was $7,075 million. The committee has proposed a figure of $6,839,955,000, a reduction of $235,045,000. There are a number of changes upward and downward. We added $215 million for F–106 aircraft. We added $250 million for airlift. We cut out a total of $675 million for Bomarc. The total of the additions and subtractions resulted in a cut of about $235 million.

Turning to research and development, the total figure is $4,217,388,000. The reductions in the Army below the figure proposed by the President total $510,000. He had recommended a figure of $1,041,700,000. The committee figure is $1,041,190,000, an insignificant decrease.

In the case of the Navy the budget as proposed by the President was $1,169 million. The bill proposes $1,268,530,000, an increase of $99,530,000, a very insignificant decrease offsetting the $100 million added by the committee to increase our effort in the antisubmarine warfare area. The committee felt, and I joined the committee in this, wholeheartedly, that we must do more in antisubmarine warfare. By putting this extra $100 million in the program I think we will continue to get a better program and more results in this vital area.

The Air Force budget was $1,334 million. The committee has recommended $1,542,668,000, an increase of $208,668,000.

The CHAIRMAN. The gentleman from Michigan has consumed 1 hour.

Mr. FORD. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. FORD. This increase in the Air Force program is based on such changes as this: We have added $20,700,000 for the Minuteman program. This will give it a greater mobility. The original concept of the Minuteman envisaged hardened bases underground. We now feel that the mobility concept is perhaps more important.

This extra $20 million will give us research and development funds to push this important aspect of the program.

We have added $10 million to the Discoverer program, which is one of our satellites for military purposes, $10.2 million for our Midas satellite program, and $33.8 million for the Samos satellite program. All of these satellite programs are for purely military purposes.

Mr. EVINS. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Tennessee.

Mr. EVINS. The gentleman has made a most excellent statement, but I believe he did not cover in the reduction of Air Force personnel some of the flying personnel. Would the gentleman elaborate on that a little bit?

Mr. FORD. The committee has recommended a limitation of the aeronautically rated personnel in all services. The committee found there were approximately 101,000 aeronautically rated officers. The committee believes that that number could be reduced. We could take some people off flying duty who from a military point of view were not needed in that capacity. We could save money primarily in that regard by cutting back the flying hours of personnel for whom there is apparently no future military need in a rated combat responsibility. So we cut back by 3,000 the total number of aeronautically rated officers.

I think that the Defense Department when they look at the proposal will find this constructive. I think this provision will assist the responsible people in the Pentagon.

Mr. EVINS. The gentleman would agree that genuine flying officers should continue to have flight pay? It is the chairborne fliers, so to speak, who would be cut out of flight pay?

Mr. FORD. It is my opinion that this proviso will not interfere with any real flying aeronautically rated officer who can do his job. It will help to cut out those from active duty as aeronautically rated officers who just do not have a combat aviation assignment.

May I say one thing about ARPA, which is the Advanced Research Projects Agency. The budget calls for $215 million; no change. This is the agency which has the responsibility of going into the unknown from the point of view of military weapons programs. We have to have it because 5 or 10 years from now we need a better weapons system than we have today in all fields. ARPA's responsibility is in this area.

We have left $150 million for the emergency fund. This is necessary in the case of any crisis when Congress is not in session.

In conclusion I should like to add this: First, I appreciate the Committee's indulgence. I apologize for speaking too long. However, it seems to me it is important that all of us know as much as we possibly can about the appropriation bill that involves the national security of this country. I hope and trust that you will approve it. It is a good bill. It is the result of long hours under the competent leadership of our chairman, the gentleman from Texas [Mr. MAHON]. I think it deserves your support. If it is approved our national security will be maintained not only for the immediate future but for the long haul.

Mr. CEDERBERG. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield.

Mr. CEDERBERG. I have been listening with interest to the very fine remarks of my colleague, the gentleman from Michigan. I am aware of the abilities of the chairman of this subcommittee, the gentleman from Texas. As I look at the membership, it is made up of distinguished men who have spent a long time holding hearings on this subject. I would like to ask this question of the gentleman from Texas or for a comment from the gentleman from Michigan and other members of the committee. After having given this subject such long and exhaustive study, what do you think would happen if this defense budget were cut $5 billion?

Mr. FORD. My response would be that we would seriously handicap the officials, both military and civilian, in the executive branch in maintaining for us a strong national defense program. Such a slash in funds for the Defense Department would impair our national security.

Mr. CEDERBERG. Does the gentleman from Texas care to state what he thinks would happen?

Mr. MAHON. I think we would have to cut our strength, our forces, reduce our manpower; and I think it would be a very, very serious mistake to make a $5 billion reduction at this time. I do think with improved management and more unification, we could get more for the money, but we would not be able to get it just by a mere cut of $5 billion.

Mr. CEDERBERG. Is it not true that in any program of this size, there is always room for better management; is that not correct?

Mr. MAHON. The gentleman is correct in saying that there is always room for a great deal of improvement in large programs of this kind.

Mr. CEDERBERG. The reason I ask this question is that a distinguished Member of the other body visited my State and my district a week or so ago and emphatically stated that we could cut $5 billion from this defense budget—and he did not proceed to tell us how to do it. I was just wondering in view of the statements of the gentleman, the distinguished chairman of the committee and the distinguished minority chairman, it appears to me that possibly that statement was a little bit unrealistic and flavored just a little bit politically.

Mr. FORD. Mr. Chairman, I think this provision will assist the Department of Defense. How much time do I have remaining?

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. MAHON. Mr. Chairman, I yield 20 minutes to the gentleman from Florida [Mr. SIKES], a senior member of the committee.

Mr. SIKES. Mr. Chairman, this bill provides more deterrent capability and provides more defense in more fields than any bill previously reported by this committee. This bill makes significant contributions in such fields as airborne alert, missile attack capability, antisubmarine warfare, Army modernization, airlift, and others. The committee has pointed to weaknesses in various fields of expenditure and seeks to correct them—weaknesses in procurement practices, in travel where funds were requested for more than one change of station for each man in the services during the year, weakness in numbers of personnel and personal assignment practices and others. We have not hesitated to make major shifts in emphasis in weapons systems where the testimony and experience have justified those shifts.

Mr. Chairman, this bill is peculiarly the handiwork of the distinguished gentleman from Texas, chairman of the subcommittee [Mr. MAHON]. I take no credit from others for their work on this bill, and I know they join me in giving credit where credit is due in citing and commending the generalship, the superb leadership, and outstanding ability shown by GEORGE MAHON in shaping the course and the contents of this bill.

The Congress is fortunate in having in its membership a man whose wide knowledge has inspired improvements year after year in defense appropriations and whose courage in meeting defense problems has earned the confidence and support of his colleagues.

Now I want to talk briefly about some of the strengths and some of the weaknesses of the bill itself.

While we spend billions on rockets and missiles, and on an alert Strategic Air Command, all of them vital to the Nation's defense, we have to remember that a chain is no stronger than its weakest link; we have to remember that the element of surprise is the best weapon an aggressor can have.

Insofar as the power of Congress is concerned we try to be sure that there are no fields in which an aggressor can surprise and destroy us. But let us also remember when an aggressor discovers that his foe is prepared principally to meet one type of attack, he is going to seek to use another method of attack. So, to achieve a deterrent capability that is effective we have to carefully explore all fields of defense where attacks may be launched. A serious weakness in one field can render useless all the capability available in others.

For instance, for over a decade we in this country have relied largely upon our nuclear striking force to deter war. The great bulk of our money and resources has gone into the buildup and maintenance of the nuclear deterrent.

Now we are faced with the hard fact that the Communists have in being a powerful long range nuclear force which is in effect a counterdeterrent. There are many knowledgeable individuals who firmly believe that we are about to arrive to the point of a nuclear standoff. Since we fully realize that the Communist objective remains complete subjugation of the free world in general and the United States in particular it becomes more important each passing day that we take stock of our total military force not just one segment, as important as it might be.

Year after year the Congress has voted huge sums for military defense. More than half of the money in the budget goes regularly to meet the cost of war. Having voted those huge expenditures for so many years Congress naturally assumes that the nation is adequately protected. It is more than a little disconcerting to be told or to have our constituents told that there are serious weaknesses in America's military posture.

The American people know that we have the most expensive military forces in the world. We appropriate more money by far than any other nation in the free world. Our pay scales are much much higher than those of any other country. Congress has passed bill after bill to keep standards high and to boost the morale of the Armed Forces, has granted fringe benefits, including quarters for dependents of servicemen, at home and abroad, schools for dependents, travel for the dependents, medical benefits, and many, many other benefits. These add hundreds of millions of dollars to our defense bill every year. I am not decrying this expenditure; I am simply stating the fact. Yet despite the efforts of the Congress we find that the services often fail to do the simple things which are so important to morale. For instance, it is almost impossible to get the services to recognize the importance of allowing a man to be stationed as close as possible to his home when he is returned from duty overseas. Each man when he is reassigned after overseas duty is encouraged to submit a list of three bases within the United States where he would prefer to be stationed. I do not know what happens to those lists. I am about convinced no one ever sees them after the servicemen turn them in. Two, three, or even five minutes time spent checking a man's record before he is reassigned would in many, many cases permit that man to be stationed at a base close to his home; and it would mean a great deal in morale to many, many thousands of Americans in and out of the services.

I have been discouraged by lack of real effort on the part of the services to overcome some serious deficiencies revealed during the Korean war. At that time a shocking number of American youth yielded to Communist brainwashing and turned against our own people. We need a stronger effort to instill esprit de corps, to maintain strong morale, to put plain backbone into those individuals who need it.

There is not a great deal we in the Congress can do about these matters but we have, within our capabilities provided just about everything imaginable for our Armed Forces except modern weapons, principally for the Army and the Marines. We are weak in this field. I do not know who is to blame. The administration over the years has set budget limitations. Of course they are trying to keep costs from going right out the top of the tent. The efforts of Congress over the years to improve the defense posture by shifting budget figures or by exceeding budget figures have been only partially successful.

In order to provide modern planes and more missiles within the framework of the administration's fiscal picture, and we must have these weapons, something had to be left out. It is just as simple as that.

Significantly, for the Army during fiscal years 1955, 1956, and 1957, there was no new obligational authority for major procurement and production. In fiscal 1958, the amount of new obligational authority for major procurement and production was less than 1 percent of the new Army budget. This is highly indicative of the degree to which we do not, now, have a modern army.

Mr. HOFFMAN of Michigan. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] Fifty Members are present, not a quorum.

The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 65]

Adair	Elliott	Montoya
Alexander	Feighan	Morris, N. Mex.
Alger	Flynn	Nix
Anderson, Mont.	Forand	Osmers
Andrews	Fountain	Pelly
Ashley	Frazier	Philbin
Auchincloss	Gilbert	Powell
Ayres	Grant	Prokop
Barden	Haley	Rains
Barr	Halleck	Reece, Tenn.
Barrett	Hargis	Roberts
Baumhart	Harmon	Rogers, Tex.
Bolton	Hays	Rooney
Bonner	Herlong	Rostenkowski
Bow	Hoffman, Ill.	Roush
Boykin	Holifield	Schenck
Brademas	Holt	Scherer
Brown, Mo.	Horan	Selden
Buckley	Jackson	Smith, Miss.
Burleson	Jones, Ala.	Spence
Cahill	Kasem	Taylor
Canfield	Kearns	Teague, Calif.
Cannon	Kilburn	Teague, Tex.
Carnahan	Lafore	Teller
Celler	Lankford	Thompson, N.J.
Chelf	Lesinski	Tollefson
Collier	McCulloch	Wampler
Cook	Machrowicz	Weaver
Daddario	Madden	Withrow
Davis, Tenn.	Marshall	Wolf
Dawson	Mason	Young
Denton	Merrow	Zablocki
Derwinski	Miller, Clem	Zelenko
Dowdy	Miller, N.Y.	
	Moeller	

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. KEOGH, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 11998, and finding itself without a quorum, he had directed the roll to be called when 329 Members responded to

their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

DEPARTMENT OF DEFENSE APPROPRIATIONS, 1961

The CHAIRMAN. The Chair recognizes the gentleman from Florida [Mr. SIKES].

Mr. DIXON. Mr. Chairman, will the gentleman yield?

Mr. SIKES. I yield.

Mr. DIXON. I read from the report of the committee:

> The Bomarc–B missile has had very little success to date in its testing program. It has become obvious that this is a very questionable weapon system, and therefore, a majority of the committee considered it inadvisable to place any reliance at this time upon such a weapon.

In view of the fact that they had a 100-percent successful flight here in April, would you subscribe to such a statement that you could not place your reliance in this missile?

Mr. SIKES. May I say to the gentleman from Utah—I appreciate his interest in this program. I am not one who has lost confidence in the Bomarc–B. Nor was I one of the majority who voted a drastic reduction in the program. It very frequently happens that a new weapon, an advanced weapon, encounters many difficulties in its initial stages.

A year ago we had a situation which was somewhat similar with the Atlas. There were a series of unsuccessful Atlas flights. Many people lost confidence in Atlas. Since that time the Atlas flights have been almost universally successful and now we are providing for an expansion of the Atlas program. It so happens that in the new series of tests of Bomarc–B now being conducted at the Air Proving Ground Center at Eglin Air Force Base, one test has been conducted. I have here a letter from the commanding general of that center, and here is what he said.

Mr. DIXON. Is that Bomarc–B?

Mr. SIKES. This is Bomarc–B. I read from the letter:

> The first attempt to fire a Bomarc–B at the Air Proving Ground Center was made on April 13, 1960. The launch was successful and the missile performed a simulated interception with the desired flight profile. Launches will be resumed in May 1960 after completion of additional work on the Eglin Gulf Test Range.

I think it is entirely possible, that the faults which have plagued the early tests of Bomarc–B now have been successfully overcome and that we may have a properly functioning weapon within a short time. We have included enough money in this bill to carry on a full-scale test program.

Mr. DIXON. But not production?

Mr. SIKES. No procurement money is in the bill as reported to the House.

Mr. DIXON. Mr. Chairman, will the gentleman yield for an additional question?

Mr. SIKES. I yield.

Mr. DIXON. The program would have been very well completed in accordance with the revised recommendations by 1962. Does the gentleman favor chopping this off all of a sudden?

Mr. SIKES. My answer to the question is that I am in favor of going ahead with all tests and with the modified Bomarc-B procurement program as outlined to the committee by the Air Force.

Now, if I may continue my statement, I said that in the effort to provide more modern planes and more missiles within the framework of the administration's fiscal picture—and we must have these weapons—something has had to be left out. The Army and Marine modernization and airlift have suffered most. As a result, ours is the only modern army in the world which is using a World War II rifle.

Our forces have an inadequate number of inadequate tanks. Our tanks are rebuilt World War II tanks, which every tankman knows are not a match for the completely modern post-World War II Russian tank which is available to the Russians in far greater numbers than we possess. Most of the equipment of our Army and Marines is World War II equipment—60 percent of it, in fact—some of it modernized, but almost none of it new, redesigned equipment which matches that of the Communist forces.

Mr. Chairman, I do not question the bravery or the courage or the training of the American forces; I know they will give a thrilling and a heroic account of themselves on any battlefield; but, Mr. Chairman, I shudder to think what would happen if we should be forced to commit American troops against overwhelming numbers of better equipped Communist troops.

Let us not try to create false courage in the statement that one American soldier is the equivalent of many enemy soldiers. A man who is outgunned is in a bad enough plight if he faces only one enemy.

If there are several enemy soldiers around him, each with better weapons than he possesses, his plight becomes serious indeed. That is where we are. Our forces do not even have effective rapid-fire submachine guns which tank crews need, and which are so important for the infantrymen in close fighting, or for night fighting. The forces of little Israel have them and found them very useful in routing overwhelming numbers of Egyptians, and the cost is $20 apiece.

Mr. Chairman, the start which is made toward any modernization in this bill is one of the most important features. But it is only a start. The Army has had to scale down its procurement needs year after year in order to live within the budget limitations imposed upon it by the administration. Its mobilization reserve of reasonably modern weapons has grown smaller and smaller. We have very little in the way of modern equipment with which to arm our forces if there should be a requirement for general mobilization. This modest increase will, if the Army is allowed to use it, provide the new rifles which were stricken from the current budget by the Department of Defense, and ammunition for them; provide a limited number of new armored personnel carriers, a few additional mobile artillery howitzers, a few additional mobile long-range guns and ammunition for both. One of the principal items would be some additional battle tanks with ammunition and infra-red fire control to provide night-fighting capability. The new M–60 tank which is in the budget is a match for any in the world. It is extremely important that we get more of them in the hands of troops without delay. The modernization money which we are including also provides for a reasonable number of Davey Crockett rockets. These are valuable lightweight battlefield nuclear weapons. They give a tremendous added punch to the capability of our limited numbers of troops. In addition, we provide for new chemical rockets and multiple launchers. We have an extremely limited capability in this field which is becoming recognized more and more as one of the major fields of warfare and one for which we have extremely little readiness. It is one of those the Communists are most likely to use.

In this bill we are making a start—a modest start—which must be implemented in future years. The money in the bill it not adequate by far to do the whole job in the field of Army modernization.

Now, money in an appropriations bill will not provide modern equipment. The money must be spent. If the administration disregards the work of this committee and the Congress we still will have ill-equipped forces in battle lines around the world, facing hostile troops with superior weapons and superior equipment.

Of equal importance to modernization is the necessity for improving our airlift capability. The necessity of rapid movement of our forces to meet unanticipated emergency limited war situations was reemphasized during the Lebanon crisis. But it should be noted here, as it was noted in Russia, that our resources were heavily taxed to move in one battle group even though there was no shooting. Army experts tell us in the more recent Caribbean test in March our airlift simply failed to meet the test; we failed to show the ability to airlift major forces and equipment in a hurry.

In other words, Congress has been told that the United States flunked the test—a huge airlift of men and equipment to Puerto Rico. The exercise showed that 90 percent of the U.S. military transport planes are obsolete.

It has been stated publicly that only 31 transport planes in that field are modern; 332 modern planes are needed, but it takes time as well as money to provide them. During the 2-week exercise in Puerto Rico, 447 aircraft hauled 21,000 troops and 11,000 tons of equipment from scattered points in the United States to Puerto Rico. Now, that is about a division plus a battle group. It is a sizable force. But the amount of equipment and supplies was wholly inadequate for a major effort and made no provision for battle losses of planes or equipment.

Now, why do I say this is inadequate? Why do I say we flunked the test? Because it took so many airplanes and so

much effort to do a relatively small job, over a short distance, when nobody was shooting. A real airlift would have to cover very much greater distance than the 942 miles that this airlift covered, and there would not be time for the 5 months of preparation that it took to put this show on the road.

We have had the benefit this year of some extremely valuable work by a subcommittee of the Committee on Armed Services headed by our distinguished colleague, the gentleman from South Carolina [Mr. RIVERS]. Through brilliant and painstaking work his subcommittee has provided very valuable information and has highlighted the necessity for additional airlift; has shown that there are serious weaknesses in our airlift capability which have never before been so graphically revealed. They have shown clearly that serious questions concerning the Nation's airlift remain unsolved. This problem the committee attempts in part to answer by recommendations in this bill.

We provide $50 million for the development of a proper plane. It has now been revealed that we do not even have an adequate plane designed specifically for airlift purposes. It will take several years to develop such a plane, and there is $50 million in this bill to do it. Then there is $250 million for procurement of aircraft of existing types for the earliest possible availability. We recognize the problem. We propose to meet it. The Army must have mobility to survive under modern conditions. It must be able to strike fast and effectively. Here as in modernization there is a serious deficiency. The effort to correct this situation should have the wholehearted endorsement of the Congress and the administration.

Now, I consider, Mr. Chairman, the committee has made a serious mistake by eliminating the aircraft carrier which was recommended by the Department of Defense. The Navy started out several years ago on a program to build one new carrier a year. For the last 2 years the Congress has, to all intents and purposes, refused to provide the funds. Actually last year we provided money for long leadtime items for a nuclear carrier, which the administration refused to spend, because the administration had requested funds for a conventional carrier. There are many people, of course, who are not satisfied that carriers are essential during this missile and nuclear submarine age. But I should like for you to remember that this is the fourth year since construction was started on a new carrier. I should like for you to remember that carriers are an essential part of a defense arsenal; that the carrier's mobility and long-range striking capability make it a chief factor in many battle engagements. Equipped with jet fighters, with bombers, with missiles these ships can maneuver to any point on the globe where they serve as a prime requisite, particularly for limited war. This was so clearly brought out during the Lebanon crisis and during the subsequent crisis in Chinese waters.

The carriers in our fleet are wearing out. The striking power of the fleet is based around those carriers. The effectiveness of the fleet air arm rests on the carriers. They are an essential part of the Navy's contribution to the national defense. The value of our deterrent capability lies chiefly in its versatility. We cannot afford to weaken and eventually to destroy this important part of our defense system.

I have spoken frequently about chemical and biological warfare—about the threat these weapons pose to the national security, and about the critical importance of establishing a defense posture which will protect our people against them.

There is an increasingly realistic awareness of the CBR threat among the military, in the Congress, within the scientific and professional community, in the public press, and among the American people in general.

The Director of Research and Engineering of the Defense Department, Dr. Herbert F. York, has rendered yeoman service in providing the means to improve the military capability in chemical and biological warfare.

General Lemnitzer, the Army Chief of Staff, has shown unusual vision and aggressiveness in supporting this area which in the past has too frequently been given superficial attention and support.

Other Army people have been equally capable, and I particularly have in mind Lieutenant General Trudeau, Army Chief of Research and Development, Lieutenant General Colglazier, Army Deputy Chief of Staff for Logistics, and Major General Stubbs, Army Chief Chemical Officer.

Funds for research and development in chemical warfare and biological warfare are increased to an extent which will add appreciably to our capability. I am sure the Members of the House will agree that in this age of science and technology this is most worthwhile expenditure. In addition, the Army is making progress in the modernization of its chemical warfare and biological warfare weapon systems. For example, it has recently completed development of a chemical rocket which will fill a much needed role and help match Soviet capability. We have included $3.5 million for procurement of 13,000 of these rockets and launchers.

In the Congress, the House Science and Astronautics Committee has, within the past year, held extensive hearings on CBR weapons. Its report has been invaluable in telling the true story about CBR, its importance to the national security, and in emphasizing the needs existing in this area.

The active interest of the scientific and professional community is demonstrated by the report of the American Chemical Society Committee on Civil Defense and by the symposium recently held at the semiannual meeting of the society last month in Cleveland.

These actions have acted as a stimulus to the Office of Civil and Defense Mobilization which is charged with the responsibility of protecting the civil population against attack. As you know, there has been a vast public apathy toward civil defense efforts. The symposium helped to focus public interest on the crucial problem of protection against CBR attack, about which little has been heard in the past.

I am certain that you all have seen and read the many factual articles on chemical warfare and biological warfare in the public press in the past few months. I am happy to say that the press has been constructive and has been sincere in its efforts to present the facts of chemical and biological warfare in their true light. This has been a long step from the emotional and sensational treatment of the past which has been instrumental in obscuring the real nature of chemical and biological weapons systems. And I hasten to add that the overall response of the American public has been most receptive and understanding—with very few exceptions. Our people have soberly accepted the information which has been published and has asked for more.

The Soviets, in comparison with us, have an active, substantial field capability in chemical warfare and biological warfare. Their troops are trained in chemical warfare and biological warfare operations, both offensive and defensive. Perhaps more important, their civil defense program against chemical and biological warfare is vast beyond our concept. They have 30 million people trained in defense against these weapons, and the number is increasing daily. They have defensive equipment available for millions of people. We do not have the capability to match them either in military capability or civil defense. We must continue to examine our strengths and weaknesses—maintaining the one and correcting the other.

I am seriously concerned about the pattern of antichemical and antibiological propaganda which has appeared in certain publications and which has been disseminated by certain organizations. These people may be well meaning and may not realize the full significance of what they are doing. They would have this country abandon all efforts to strengthen our ability to withstand chemical and biological attack by an enemy. They have exerted similar efforts in the atomic field. However idealistic they may be, they are playing into the hands of the Soviet propagandists. They refuse to recognize that our continued existence as a free nation makes it mandatory that we provide a defense which permits us to cope with enemy attack.

I am equally concerned with the lack of protective equipment available for our people. We have no masks. We have no warning systems to alert our civilian population to an attack. We have no protective clothing or shelters. While I acknowledge that the civil defense people have programed $1 million for procurement of masks, I maintain that we are wide open to chemical and biological warfare attack by an enemy. We badly need both defensive equipment and capability.

If we were to make this a perfect bill, ready for all emergencies which we are capable of meeting, I think it would take just about all the money in the current budget. It would substantially double the funds that are now carried in this bill within the framework of the budget structure now before us. Obviously this is something that is impractical. We have tried to stay within the budget guidelines but to improve the defense it provided.

I consider this an effective bill within the limitations that we have worked under. I consider it a bill which will materially strengthen most areas of the national defense. I consider that the Nation will be more effective in its search for world peace if we pass this bill and if its recommendations are carried out.

I repeat, Mr. Chairman, what I said in the beginning: this bill provides more deterrent capability, more defense in more fields than any bill previously reported by this committee.

ARMY MODERNIZATION AND STRATEGIC MOBILITY

Mr. GEORGE P. MILLER. Mr. Chairman, will the gentleman yield?

Mr. SIKES. I yield.

Mr. GEORGE P. MILLER. Mr. Chairman, two items of extreme importance to the effectiveness of our Army are the need for modernization and the requirement for suitable airlift. It is unfortunate that these two subjects do not have the "Buck Rogers" type of appeal to the average individual, for they are as important to the adequate defense of our Nation as any missile yet devised or any complex atomic powered piece of machinery yet thought of. The need for improvement in these two fields is so obvious that I am afraid that we will overlook it in our enthusiasm to catch up and surpass the Russians in our missile or space race.

To illustrate the need that exists in the field of modernization, let me review with you some of the things that have happened since World War II and the Korean war. In World War II, the United States had assembled the hardest hitting most modern Army in the history of mankind. We had so mobilized our industrial capacity that in addition to arming our own forces we were able to equip our allies, including Russia, with some of our weapons and vehicles. Then Germany and Japan were defeated and peace returned to the world. Following the pattern that we had set after World War I, our magnificent military machine was rapidly demobilized and the industrial production of war material was stopped. We assumed that the world had suffered too greatly to continue the armed strife that had claimed so many lives and damaged so much property. This assumption proved to be incorrect, for the Communists soon served notice that they were going to capitalize on the after effects of the war. They seized the opportunity afforded by the letdown following World War II to further their conquest of world domination. Their intent was obvious when we saw that they did not follow the lead of the free world nations in demobilization. In fact, their armed forces were strengthened instead of reduced. Their leaders saw to it that the mistakes they had committed during the war in regard to organizational concepts and equipment deficiencies were rectified. Their army began to receive new equipment and their satellite states were given the older yet still effective material that Russian forces had used during the war. In short, the Russian Army was maintained at a strength of about 2.5 million men and they instituted a continuing program of modernization.

The world did not stay at peace very long. Small incidents began to occur in the underdeveloped areas of the world, culminating in the unjustified attack by the North Korean Communists on an ill-prepared South Korea. This attack was such a flagrant disregard of agreements and treaties reached following the liberation of Korea from the Japanese that the United Nations sent troops into Korea to combat the Communists. Our Army divisions were sent into Korea with a hodgepodge of equipment, some of which had been standing in ordnance dumps in the Pacific area without effective maintenance for 5 years. The early experiences of our troops in Korea should have proved to all concerned the danger involved in not providing modern weapons for our ground forces. The rounds fired from our World War II light tanks bounced off the heavier North Korean-Russian tanks like tennis balls. We held on to the Pusan Perimeter by the liberal use of fortitude and slowly built up our forces to the point where they were able to rout the North Koreans and to contain the Chinese Communists.

Korea settled down to an uneasy truce in 1953 and today the country is an armed camp with soldiers facing each other across a demilitarized zone. This area could erupt into war at any moment, and what have we done to insure that our two divisions in Korea will be able to repel the attack of numerically greater forces?

The equipment of our two divisions in Korea is representative of our Army throughout the world. They are currently equipped with weapons and materiel about 60 percent of which is of World War II vintage. About 30 percent of their equipment has been purchased during or since the Korean war started in 1950. They will begin to get a trickle of new equipment in 1960, but it will be a considerable time before they are completely reequipped. The questions that I raise are simply these: Are we keeping the faith with these American men facing the Communists in the Korean hills? Are we keeping the faith with our American troops facing the Communists in Europe? I say we are failing them.

There are some who will disagree with me. They will point with pride to the fact that this year the Army will start receiving new rifles and new machineguns, new tanks, and new armored personnel carriers. And they will say that this is concrete evidence of our concern for the modernization requirements of our Army. The thing that they will not explain is why we have waited so long or why we have provided so little. The new equipment that the Army can obtain from the funds now available is but a poor start on the amount actually and desperately needed. The Army's case has been eloquently stated. The requirement totals approximately $2.5 billion annually to truly modernize, yet in fiscal year 1961 only $1.5 billion is included in the budget for Army procurement. This leaves a deficit of roughly $1 billion between what the Army needs and what it is being provided. I ask those who maintain that we are taking care of the modernization needs of the Army to explain this difference.

The other area that needs corrective action is in the field of strategic mobility. The Army is the only service that does not have its own means of transporting their strategic reserve forces, yet they are the service that have always been and will always be called on to furnish the troops for sustained land combat. Recent inquiries into the adequacy of military airlift have brought out that there is a requirement to provide more lift and better lift if our strategic reserves are to have the mobility they need. It is too early to say what corrective action will be taken as a result of the investigations into this subject, but if more and better aircraft are not provided, the exhaustive perusal of this problem conducted by the Special Committee on National Military Airlift of the House Armed Services Committee will have gone for naught. This special subcommittee heard testimony from every available authority on the subject of airlift. Without partiality and with a complete bipartisan approach it determined that serious deficiencies in our national military airlift do exist. Recommendations will be included in this subcommittee's report that will advocate the correction of the gross disparities in our airlift capabilities.

In summary, I sincerely believe that we, as Americans, must make up our minds to provide the Army with whatever is necessary to enable them to completely and rapidly modernize their forces. Further, we must insure that new and suitable aircraft are obtained for use by the Military Air Transport Service. The provision of this additional airlift will enable the Army's strategic reserves to be moved when they are told to move. If the provision of funds for modernization and for aircraft means that our national budget will not balance, then I say it is better to operate in the red than to become slaves of the Reds. We must do whatever is necessary to maintain our freedom.

Mr. MAHON. Mr. Chairman, I yield such time as he may desire to the gentleman from Texas [Mr. KILDAY].

ARMY MODERNIZATION REQUIREMENTS

Mr. KILDAY. Mr. Chairman, during the past year there has developed a sense of need for modernization in our Army. The glaring disparity between the United States and the Soviet Army has been publicized in the newspapers and magazines throughout our Nation. The Soviet goal of world domination is not a closely held objective, they publicly admit that they intend to convert the world to communism. The Russians have not geared their military posture to a single weapons system, they have maintained a

well balanced armed force that includes missiles, aircraft, ships and submarines, and the largest most modern army in the world. The Russian concept of war includes a dominant role to be played by the army despite the destructive capacity of missiles. They are not banking on a short war that involves the exchange of intercontinental ballistic missiles and no engagement of ground forces. The assignment of such an important role to the Russian Army is verified by their continuing program of modernization. Since World War II, the Russians have completely reequipped their army not once, but several times, providing them with new tanks, artillery, rockets, personnel carriers, and other important impedimenta of war. Their older equipment was supplied to their satellite states improving their capabilities for conducting conventional ground warfare.

In comparison, the U.S. Army has been operating on such strict budgetary lines that several deficiencies have developed since the close of World War II and the Korean war. In the first place, Army strength has steadily declined from a Korean war peak of approximately 1.5 million men to a total of 870,000 men in 1960. A more startling revelation was that the Army was being forced to utilize arms and equipment that, in many vital instances, were inadequate or obsolete. In fact, about 60 percent of the Army's inventory was purchased during World War II and Korea, and only about 30 percent of the Army's inventory had been acquired since the close of the Korean conflict in 1953. The sums of money made available to the Army in each year's budget during the past decade was not sufficient to replace those items that were wearing out, much less to start purchasing newly developed arms and equipment.

Not until 1960, when interest and pressure to rectify the poor state of modernization in the Army became so great, was anything concrete done about the situation. The Army was given sufficient funds to purchase a number of new rifles, machineguns, tanks, personnel carriers, aircraft, and rockets. The provision of these new items will materially improve the capability of our Army, but it must be recognized that the Army is still far from their goal of complete modernization. The funds made available in fiscal year 1960 were only about 40 percent of the $2.5 billion deemed necessary by the Army for 1 year's expenditure for new modern equipment. The Army has maintained for several years that their modernization program must be a phased program that will take about $2.5 billion per year until it is completed. The provision of this amount of funds would insure two things: First, that the Active Army and the high priority Reserve Forces would be reequipped in a reasonable period of time; and secondly, that modern equipment would be available for utilization in the event of mobilization.

In view of the emphasis on maintaining a modern ground warfare capability exhibited by the Russians and the rapidly improving capabilities in this same area shown by the Chinese Communists, it is incumbent upon us to insure that our capability in this field is also improved. If a general war should erupt our ground forces would immediately be involved with a numerically superior enemy. We must, in order to even the odds, give our troops modern effective tools of war. This cannot be done overnight. We must continue the emphasis on modernization and, in fact, speed up the process so that our Army will be second to none in the quality and effectiveness of their weapons and equipment. Any other course of action is courting disaster.

I do not speak lightly of this matter, nor do I speak from emotion. I only need to remind you that the distinguished chairman of the Armed Services Committee, after hearing the testimony of the Secretary of the Army, the Chief of Staff, and other witnesses, considered this matter so serious that he, with the complete support of the Armed Services Committee, addressed a letter to the chairman of the Department of Defense Appropriations Subcommittee urging that $928 million be added to the budget request for the purpose of providing modern equipment to the Army. The $207.6 million which has been added in the bill we are considering today is a step, not as large as I would like to see, but nevertheless a step in the right direction and I therefore urge my colleagues to give their full support to this program.

Mr. FORD. Mr. Chairman, I yield 20 minutes to the gentleman from New York [Mr. OSTERTAG].

Mr. OSTERTAG. Mr. Chairman, first of all I should like to say that I am personally proud to be associated with the Defense Department Appropriations Subcommittee. I might point out that the work of this committee, as you can well imagine, by virtue of the era in which we live is not only interesting but it is challenging and most responsible as well. As our distinguished chairman has pointed out, the work of this committee has been anything but partisan. There has been complete harmony, although we do not always agree on final decisions. But in any event it has been progressive, it has been stimulating and it has been challenging.

We are all aware of the fact that this is the largest budget bill to come before the Congress. It constitutes much more than half of our total national expenditures. It represents funds which have far-reaching effect in maintaining and providing for our national security. There are many functions, there are many purposes and many weapons involved in this bill before us today.

Generally speaking I would say that I applaud this bill and I applaud the program that has evolved as a result of the committee's work following the recommendations and the submission of the budget and justifications by the Department of Defense. The committee worked many, many strenuous hours and days and weeks involving, I believe, seven volumes of testimony. And while I do not agree with all the changes that the committee has made I believe I can say that the program is sound and our defense posture as a result of this programing, including the committee changes, is in balance. Perhaps now is the time for us to reflect that we are living in a fast-changing and moving world. Technological changes and progress taking place today and scientific developments have played an important role in the military weapons and systems of defense.

It is a challenging and difficult task to deal with this bill because changes take place almost daily right before your eyes. What may be a modern, new, and effective weapon today is gone to the archives, so to speak, tomorrow, and something new is here or coming along to take its place.

I want to make a prediction, for fear that we may have a misconception of what is happening in this whole field, that costs of national security and defense will continue to rise. Advancements will be made and new weapons will develop, all of which point toward more and costlier expenditures.

This bill alone, some $39.3 billion, carries funds in excess of $4 billion, approximately one-tenth of the total expenditure, for research and development. You can well recognize that research and development, tests and evaluation, are an important and costly part of making progress and maintaining a high level of meaningful security.

Recent years have witnessed many changes. Our chairman has described the picture adequately and well, but we hear much about retaliatory power and deterrent forces capability. Our military authorities of the Defense Department have stood firmly on the policy of the mixed strategic forces concept. Our distinguished chairman explained the meaning of the mixed strategic forces concept. I believe our report adequately and properly points out that as a Congress, and particularly our committee, we support the principle of the mixed concept. It is a fundamental principle which is enunciated and developed in this bill. As indicated in our report, the committee supports this concept and it will continue to be a basic approach to our defense effort.

This concept is vital to meet all types of emergencies, because we see today more than ever before the need to be adequately ready not only for an all-out nuclear worldwide war but adequately prepared for what might be termed "limited wars."

Secretary of Defense Gates told our committee during the course of our hearings, and I should like to quote the Secretary's statement in part and I quote:

> The two principal objectives of our defense program continue to be: First, to deter the outbreak of general war by maintaining and improving our present capability to retaliate with devastating effectiveness in case of a major attack upon us or our allies; and second, to maintain, together with our allies, a capability to apply to local situations the degree of force necessary to deter local wars, or to win or contain them promptly if they do break out.
>
> I have no doubt that today our defense forces can accomplish these major purposes. However, the problem of maintaining our capability to deter general war has become complicated and costly because of the rapid

progress in military technology. These changes are coming fast and are drastic. The defense program must be kept under continuous review.

On the very point that the Secretary made, that these changes are coming fast and are drastic and that the defense program must be kept under continuous review, it is significant to note that the President and the Department of Defense submitted to us not long ago certain changes over the original budget, reprograming in the Air Force involving the acceleration of the intercontinental ballistic missiles and in the Navy to increase the number and the timetable of the Polaris atomic submarine missile.

Time will only permit me to discuss a few of the highlights of this bill and the program. No measure to come before the Congress has such far-reaching import as does this bill. Increases and reductions have been made, but the overall picture dollarwise remains about as programed by the Department of Defense and the administration. It is true that the committee has increased this budget bill or this appropriation over the budget request by approximately $2,800,000.

Military personnel remains as programed, that is, at about the 2,500,000 level except, as has been pointed out, the committee restored the full strength with regard to the Army National Guard; and the Army Reserve has an increase of 40,000 and 30,000 respectively, so that the total for the Army National Guard will be 400,000 and the Reserve will remain at 300,000. The total cost during the next fiscal year, as the gentleman from Michigan [Mr. FORD] pointed out for the military personnel will be approximately $12 billion, which is an increase of $174 million over that of last year and $5.7 million over the budget. This includes, and I think it bears repeating, that the $12 billion for military personnel includes the sum of $775 million for retired pay. As our report indicates, the cost of retired pay may well reach the $3 billion mark annually in the not too distant future. It is a serious matter and I think it ought to be well recognized that this is a costly part of the support of our military responsibilities.

Operation and maintenance for all services calls for a sum of about $10,300 million. I should like to point out that military personnel calls for $12 billion. Operation and maintenance of our Military Establishment has a figure over $10 billion. These two areas of military functions constitute more than half of the total military budget. So by the time we have provided for personnel and maintenance, we have less than half for procurement and for research and development and the other important factors of our military operation.

Involved in our overall defense program by virtue of the development aspect, we have had successes and we have had failures some of which are controversial, and to some extent, issues. We have heard today, and you will hear hereafter a discussion and, perhaps, some concern about the aircraft carrier and its role and its mission. You have heard and you will hear again in the future about the airlift and the airborne alert.

Then there is the Strategic Air Command, our bomber force and its role in connection with our defense picture.

Then there is the antisubmarine warfare which has concerned the committee considerably and which we have generally agreed requires stimulation and more money.

Then there is, as our chairman has pointed out, the question: Is there any defense against missiles? We are confronted with the possibilities of successfully and effectively developing the Nike-Zeus, or rather should I call it the antimissile missile.

Then there is also the issue of whether or not, and to what extent, we can move forward with the development of the B–70 bombers.

Then there is our continental defense which involves fighter planes, interceptors, and missile interceptors, and also the issue of the alleged missile gap or a comparison of missile numbers.

In the Navy, we have one large program under shipbuilding and conversion. More than $2 billion is going into shipbuilding, which is an increase in the overall program by some $48 million, despite the fact that the carrier which involves some $280 million to $290 million has been eliminated. The changes, of course, in the shipbuilding program involve the procurement of more Polaris submarines and more nuclear attack submarines. Personally, I do not subscribe to the carrier elimination from the program. I believe it is essential to our defense. Nevertheless I should like to point out that our carrier fleet today numbers 24, of which 14 are attack carriers and 9 antisubmarine carriers.

On the other hand, I support enthusiastically the substitution that has been made in the addition of Polaris submarines and missiles. All told that change will give us, under the revised Polaris program, 21 of these atomic submarine missile ships, or additional striking power of some 336 missiles in that strategic force.

The important thing about the Polaris missile, with which I am sure everyone is familiar, is the fact it is not only a great missile, but it has great mobility to move about the high seas in all parts of this world. The Defense Department, the committee, and all concerned are most happy with the success and development of this famous No. 1 weapon in our arsenal of weapons; and I predict to you that before this year has ended we will have at least two of these Polaris submarines operational in the high seas of the world.

This adjustment and reprograming will give us three additional nuclear submarines and two additional escort vessels.

The airborne alert which has been previously mentioned will give us a capability that we have never had before. There is an increase of $115 million in this bill added by the committee which will provide the allover sum of $200 million for airborne alert.

I think it is only fair to point out that the appropriation of this money does not place in being an operational airborne alert; it will provide the necessary parts, spare parts, equipment, and on-the-shelf procurement necessary and available for an airborne alert should the need arise and the requirements call for it. The point, however, is that the additional money included by the committee in this bill merely accelerates the total picture of airborne alert and gives us a larger number of planes available and ready for airborne alert.

The airlift program has been discussed and will be discussed later. Two hundred and fifty million dollars has been provided for in this bill over and above the original budget request.

The aircraft procurement program, incidentally, calls for $3,200 million, which is an increase of $231 million over the budget request.

We add $215 million for 50 F–106 fighter-interceptors. That, of course, is in lieu of the Bomarc.

I should like to take the remaining moments I have to speak directly to the missile program. Our distinguished chairman pointed out the success of the Atlas and the fact that we have the Atlas intercontinental ballistic missile operational today. We also have the Titan in the process of development, a similar missile; but, more than that, everyone is highly pleased with the progress in the development that is taking place in regard to the Minuteman. As has been pointed out, and I think it is important to recognize that the Minuteman is a more sophisticated intercontinental ballistic missile, not only sophisticated but mobile in that it can be moved in any part of the country and does not require vulnerable sites. At no time have we given thought or consideration to the fact that we have perhaps the largest family of missiles of any nation in the world, including the U.S.S.R.

We have many kinds of missiles. We usually think of missiles in terms of an intercontinental ballistic missile. But we must not forget that the Navy has certain missiles, the Army has certain missiles, and the Air Force has many missiles. For example, we have missiles coming along such as the Hound Dog, a ballistic missile which can be launched from a B–52 bomber to a target some several hundred miles away. We have the Sky Boat under development, and, incidentally, I might mention we have the Quail, which is a decoy missile.

Mr. Chairman, we have provided for a total of 27 Atlas squadrons and this highly successful ICBM adds great strength to our retaliatory and deterrent striking power. With the acceleration of the Minuteman—with the Polaris for all practical purposes in being today—with our great Strategic Air Command based all over the world and with the terrific seapower we possess there can be no doubt as to our wisdom of following the mixed concept of striking force. No mention has been made of the intermediate range ballistic missiles and it is worthy of mention that we do have today the Thor and Jupiter IRBM's which are currently operational on foreign soil and ready to go.

Mr. Chairman, I am proud to have had the privilege of participating in the hearings and the work of the Defense

Appropriations Committee. I recommend the approval of this most important appropriation bill and I believe that it will lend additional strength—additional progress and greater security for America and the free world. May I add that our great and diversified military striking power is second to none and there is every reason to believe that we will continue to hold that position in the days and years ahead. It constitutes the means to deter an attack on the part of any potential enemy. We are not behind and there is no deterrent gap. This measure adds materially to that important capability and I commend it to you.

Mr. MAHON. Mr. Chairman, I yield such time as he may desire to the gentleman from Mississippi [Mr. WHITTEN].

Mr. WHITTEN. Mr. Chairman, the chairman of my subcommittee, the gentleman from Texas, has done a splendid job in handling this bill. As many of you know, I have differed greatly in recent years both as to the method we use in determining our defense expenditures and also, in many, many ways have I differed as to how the services run their own affairs.

I acknowledge to start with, however, that the Defense Department is so terrifically large it is next to impossible to have any thorough understanding of even a small segment of it. The gentleman from Texas has worked very hard indeed in trying to keep together and to bring together an overall pattern that meets the present policies of the United States. While I have differed in times past, and still differ, with our national policy and with the policies followed by the Congress, I do recognize that public feeling and public sentiment, the decisions and determinations of the executive department and of the Congress, are such that this subcommittee and the full committee has had to deal with this overall problem in full cognizance of that situation.

I have been pleased to see in recent years that this subcommittee has investigated various aspects of this overall program. The hearings carry many of the reports of these investigators. It is shown that there is tremendous waste throughout the military services. In my judgment, it shows that there is a tremendous waste not only of dollars, but of manpower. We in this country are committed to what appears to me to be a most unsound approach to meeting our military needs.

We accede to the opposition that this country under no circumstances would ever hit the first blow. Now, stop and analyze that. It means that as long as Russia maintains her Iron Curtain she can open the curtain slightly just a few inches, at any time, show us a little sample, and claim that it is representative of the overall, and immediately our policy calls for us not only to protect ourselves against what we saw behind that slight opening in the curtain, but to follow a policy of protecting ourselves from every conceivable thing which we think Russia could possibly have.

In the hearings before our committee we have had the heads of nearly every service say, "Now, if you tell us what Russia is going to do, we will not want everything to have a perfect situation in our particular service." Well, who can tell anyone what Khrushchev will do? If you know today, who would know tomorrow? But, as long as our policy is to give the enemy the assurance that under no circumstances will we hit the first blow, actually they could not be spending or doing anything like we do. Yet, as long as they talk big, as they do, they could lead us into spending ourselves into bankruptcy, which really means destroying our ability to support a real war. Now, it is not that I begrudge the spending of a military dollar. I believe in it. I have voted for each and every one of these bills, but I firmly believe we get only about 50 percent defense for the dollars we spend.

Now, why do we do this kind of thing? It is because military spending has got all mixed up into our domestic economy to the point where, when we try to deal on a strictly military needs basis, we get pressures from every side; and it costs more than we get in return.

Within the overall budget submitted to this committee, I think the committee has done an excellent job of rearranging the funds that were requested in what certainly appeared to the committee to be a more sound operation. We find that many of these military officers retire at an early age. Many of them, who have gone to school at the expense of the Government and have rendered excellent service for the Government, the minute that their service does not get as much of the assignment as they feel they should have, they retire at an early age and in many instances go to work for a contractor who, in many instances, deals with the Defense Department. A few days ago the House passed a bill that is said to correct that situation, but to me that bill is wholly inadequate. It provides that where a military man does retire and accepts employment with a contractor and then does selling to the Government, to military officers with whom he perhaps earlier worked, that the retired military man is subject to court-martial provided a third military man files charges. I doubt that is going to get very far in breaking up this practice, for each would insist it was only a social visit.

Now, I personally do not know that any of this has happened, but when you read in these hearings where the military department is declaring over $7 billion worth of materials obsolete and surplus each year, it certainly does make you think somebody has been selling a whole lot of salt, so to speak. When you find, as in the Bomarc program, where in 8 or 10 years you spent billions of dollars and still do not have a workable weapon in that area, you at least would feel a little more confident if you did not know that military men were working for this corporation and coming back to Washington every time there is any danger a contract might be canceled.

Now, there was testimony in the hearings about these 18 top military people that were entertained in Bermuda by one of the big aircraft companies. The Department says they have no rules to prohibit these policy-making folks from taking such trips. They do prohibit such for the procurement officers. However, these top people who really determine policy are 10 times more important in providing a market. Today throughout the world the military are provided with PX's and commissaries, not merely in areas where it is hard to get something, but such facilities have become part of the fringe benefits, so those in the service can buy groceries at 20 percent less than the general public has to pay.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. I appreciate very much the gentleman mentioning what to me appears to be one of the greatest problems that confronts the Nation, and that is military procurement. I have been sitting for some time on a committee that has been attempting to wrestle with the problem of what we are going to do with Government-owned surplus property. Of course, we have these great surpluses of Government-owned property, especially in the military, because we have had very bad procurement practices in the Armed Forces.

The Hoover Commission, of which I was a member, made quite a study of that particular problem. Of course, there is every evidence in the world that the military has been overbuying steadily and also there is evidence that private industry has been overselling the military forces, as the gentleman has so well explained. I think it is a problem that the Congress must take on and must do something about, because it is costly, more costly than any other operation of the Government; and I am referring to these bad procurement practices which the gentleman has described so ably. I want to congratulate him on what he has said.

Mr. WHITTEN. I certainly thank my friend from Ohio. I know he has done an excellent job in this area.

In connection with this problem, what makes it more serious is the fact that in the Department of Defense you find many—and I will say nearly all of them are conscientious Americans such as we are, with the same desires, and they work just as hard as we do in trying to bring some order out of what in many instances appears to be chaos. But the danger in this situation is that every section of our country has gotten so dependent upon military spending for the moment that we do not have the support of local people to the degree we should have in pulling this thing in, because the public is interested in manufacturing, and in selling and in keeping the wheels turning. I am interested in this country's keeping its wheels turning, too. But I do say that needless defense spending is the one place where you do not get any usable goods. Surplus de-

fense spending is almost 100 percent inflationary, and as long as you spend half the national budget for defense it means that half the national budget is going into this area where you do not get goods to offset the expenditure, though of course we must have real defense.

Whatever our defense needs are, we must meet them. But in the law and in the practices and in the planning, a big part of our spending is of highly doubtful value. Whether it meets a real military need is open to question.

I know I cannot solve this problem by making this kind of speech, but I do think the chairman of our subcommittee, the gentleman from Florida, the gentleman from Michigan and the gentleman from New York who preceded me, have done a fine job in discussing the overall details in this bill. Therefore I have taken this time to point out as best I can the other side to which we must give attention, which means that I believe the most essential part of our defense is the strong economy we must maintain. And since it appears this situation with Russia could last 25 or 30 years it could well be the winner will be that nation or that group which protects its economy to support its military efforts, so it can last 25 or 30 years. If in the next 25 or 30 years inflation we have seen in the last 8 or 10 continues, it is highly doubtful our dollars would buy very much. The record every year shows that our military costs from 4 to 7 percent more merely because of the depreciating value of our dollar. If you take the figure of 6 percent and if you continue depreciating our dollar for 16⅔ years, we would get down to the point where it would be hard to figure just what, if anything, the dollar would buy.

But again, we see from the public and in the press and from our leadership, and through our candidates for public office, and I believe without exception those who are running for President are not saying that we need this or that or the other thing in defense and that we need to unify and get away from having four services—that is what we have, we add the Pentagon to the three services and in effect, in my opinion, we have four now—but they are saying to the country what we need is to increase the level of defense spending.

Is not that something? Now, I think they are pretty wise there because the American public does like to see the money turned over and their appeal is popular for the moment. We have got into the unfortunate public attitude that defense is judged by the level of spending and not by how wisely we may spend.

May I say in this overall contest between us and the Soviet Union that can last 25 or 30 years we start off with one great weakness, and that is our commitment of never striking the first blow. That is why they can bleed us white without their doing a thing, except give a glimpse at a sample while claiming everything.

Our troops are contributing to defense, which is essential. They are paid for by this country without doing any kind of work to support the economy. We are not going to change that. I am not saying we should. But in the Soviet Union the troops go out and gather the crops and install telephone wires and support the economy. As you can readily see, the expense of maintaining them is not the same as in a nation where we do not follow any such course.

Again, they say we must maintain this defense posture. I hear that phrase used a lot. It is perhaps a good descriptive term. However, this is a contest between our side of the world and the other side. The nation which can stay strong and last the longest is likely to win. But we apparently are more and more interested in posture, in spreading the contracts, in bringing benefits and officers' clubs and sales free of Federal taxes, early retirement and jobs with contractors doing business with the same office from which they have just gotten out, to the point where we have quit being realistic about this whole situation.

I think this public attitude is perhaps more serious than the Defense Department attitude, because I honestly believe that except for public pressure, congressional pressure, our interest in keeping the wheels turning the Defense Department would hold its own spending down better than we have let them hold it down.

Mr. KOWALSKI. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Connecticut.

Mr. KOWALSKI. I want to commend the gentleman for his splendid statement on how to prevent waste. I would like to suggest a look by the committees at the procurement. This does not have to do with the public, it has to do with the military. We have found a way to have intelligent requirements. I have for example, a report of the Accounting Office with a hundred-some-odd bad-management items listed ranging from half a million to $60 million. For instance, in San Antonio they had an overage of spare parts of $20 million at the same time they were putting in a requirement of $20 million more for putting in the same parts. I think we must find a solution to that.

Mr. WHITTEN. I certainly think so, too. Our subcommittee has been making investigations along that line and I know the gentleman has been doing that, too. We put our reports in print and they appear in the press. Then because stopping this waste would affect employment in a certain area, it gets lost in the shuffle. I agree this is a tremendous operation and we do not have unity of the services.

General Power has been quoted throughout this country to the effect that we are letting our defense go to pot, so to speak. In my questioning of him before this committee he said that involved in this was that he would like to have all the things he needed, but he readily agreed that the overall decision was one for the President who had to match desires of each service against the overall ability to meet the problem from the economic standpoint. This difference between the heads of services usually goes back to the fact that they want a bigger part in the assignment. They are honest about it. When the Army wants a bigger assignment what gets in print is that it did not get the money it wanted. Actually it was the assignment they missed which would have taken money. When the Air Force wants a bigger part in the assignment, which takes money, the press says defense has been cut because they did not get money when really it is an assignment the service did not get.

Then the Navy wants a bigger part of the job and that is the real basis for their complaint. For instance, the head of the Air Force said he opposed the building of the carrier. I said, "Well, now, General, if the Navy is going to have the money, can you say they could spend it better than for a carrier?" He said, "Oh, no, if you are going to give the money to the Navy, they doubtless know more about how they should use it than we do." Now he was not against the Navy. He felt the Air Force could do that assignment better than the Navy, however, they might spend it. Then when you point up that the Army wanted to finance a bigger share in the job and add it to what the Air Force wanted in a bigger share of the job—figured in money; and then add the cost of what the Navy desired and add them together and then you call on representatives of each of the three to say what they did not obtain, some people then say we are letting the country go to the dogs—look how you cut the needs of these forces, they say. Under our system, the President as Commander in Chief and as President has the final responsibility to determine what our defense needs are and how they best can be met in line with the protection of the public economy, which is essential for defense. Each of these top military men says that is the President's task and each of them said, "It is not my job to determine whether to finance my desires would wreck our economy or whether we should forgo it so we can keep our economy strong to support our defense for this long period of years ahead of us." But, unfortunately, defense spending is popular with the public. It is a way to run for office now to say, "We believe in a high level of defense spending—more wheels turning and more apparent prosperity." May I say all of that comes at the cost of depreciating your dollars further, thus, endangering your military situation further, as I see it.

Mr. SANTANGELO. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield.

Mr. SANTANGELO. I wish to commend my colleague, the gentleman from Mississippi for saying these things which indicate the great waste and inefficiency in the military forces especially in the field of procurement. I think the committee has done a wonderful job in detailing all of these instances where money has been squandered, in such instances as this, to cite only one example, where although only 300 foot lockers were requested, 100 times that number, or 30,000 foot lockers were sent to fill the order, at a cost of over $100,000 in

transportation costs. I think it is high time that the recommendations of the committee were followed so that we can eliminate this waste and inefficiency in the Department of Defense.

I am supporting this bill and I am pleased to support the committee's recommendation in a change of direction whereby our Nation can obtain value for the dollars expended.

Mr. WHITTEN. I thank my friend, the gentleman from New York.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. WHITTEN. I yield to the gentleman from Iowa.

Mr. GROSS. I, too, want to commend the gentleman for saying some things that badly need to be said and reiterated in the House of Representatives and throughout the country. It is not peculiar that we cannot somehow get a Commander in Chief who will knock enough heads together to get some unification in the Department of Defense and to stop some of the things that are going on? I wonder when, if ever, we will get a Commander in Chief who will do that?

Mr. WHITTEN. I certainly feel every effort should be made in that regard. I would say again perhaps the most dangerous thing today is the public attitude where, as is the case today, when people come to Washington, they do not come to us asking us to slow down on all this spending, but they come to us to help them get a military contract or to get them a base or to prevent the closing of some kind of military installation or other even if we do not even need it. The public has gotten wrapped up in that sort of thing. Anybody who studies the history of Germany or Japan will come to the conclusion that getting into war was caused in part by getting the domestic economy wrapped up in defense spending. Of course, in those countries they had dictators and aggressors at the head of the government. Fortunately we do not have that here.

Mr. Chairman, I would repeat here what—Let me tell you what I told the Joint Economic Committee when they invited me to testify on the "impact of the Government's supply and service programs on the national economy."

First, may I repeat, it seems that the overwhelming majority of our top military leaders agree that the present competitive, or cold war, involvement with Russia could well last 25 years. That does not mean, of course, that we can feel safe for that or any other period. It does mean that we must meet our day-to-day, month-to-month, year-to-year defense problems—but in such manner that we can remain strong for that period. If we do not, we could well lose out because our economy cracks up first.

This fact makes it imperative, in my opinion, that we eliminate the waste in military spending, that we eliminate the billions we are spending in the name of defense but for which we get no real defense.

We must place the maintenance of a strong domestic economy alongside front line military striking power as an equal part of our defense capability.

In presenting the views I present here to the Appropriations Committee, I have frequently said that I believed I was more fearful of the Russian threat than any one I know. First, because she is causing us to destroy ourselves, and secondly, Russia is developing too much for us to exhaust ourselves as though we were running a 100-yard dash.

Mr. Chairman, for the record, I have been a member of the Appropriations Committee of the House of Representatives for about 17 years. During World War II, I was a member of the Subcommittee on Naval Appropriations in the House of Representatives. For the past 6 years I have been a member of the Subcommittee for Defense Appropriations, and also a member of the Subcommittee for Military Construction Appropriations since it was created. In these various capacities, I have spent months hearing testimony, asking questions, obtaining inspections and investigations, leading to a rather firm belief that we do not have too much defense. Doubtless we would never have too much.

However, it is my belief we have far too much spending for the defense we have. I am convinced defense is only one of the factors that enter into our determinations for defense spending, the others are pump priming, spreading the immediate benefits of defense spending, taking care of all services, giving all defense contractors a fair share, spreading the military bases to include all sections, and so forth. Such a course, if I see the matter right, leads to waste, to inflation, and to dangerous public and congressional attitude. It would be well, if you have not done so, for you to read the investigators' report of procurement practices, which I insisted upon—Appropriations Committee hearings of 1956, volume I, pages 9 to 98. The wasteful practices shown there are startling. Very little has been done to eliminate most of what is shown.

Because so many factors, vested interests, pump priming, and other considerations have crept into the field of defense spending, it is next to impossible to get anyone to look at the matter objectively.

A few years ago a relatively unknown U.S. Senator became Vice President, then President, largely by virtue of investigations of military waste.

Today, however, we find that defense is largely measured by the level of spending. The Rockefeller report, the Gaither report, and practically all others stress "we must increase the level of spending."

Today we do not find any of those mentioned for the Presidency in either party stressing the wasteful defense spending, but rather the higher level of defense spending which he will either bring about or continue.

All, in their public expressions, seem to ignore or, in my opinion, at least fail to stress that a solvent, strong, inflation-free national economy behind our front-line military is an equal or perhaps an even greater part of our overall defense strength than the frontline military.

It is not that these men are not able, strong, and possessed of integrity. Rather it is because they are experts in judging public opinion. No longer is it politically popular to scale down, even if we do not need the particular production. if thereby we affect adversely immediate employment in a particular area, or stir up a particular military service, or stir up a large segment of the financial giants in the Nation.

What frightens me is that I believe these potential candidates have judged public opinion correctly, and therein lies our greatest danger. When the American people are more interested in turning the wheels, leading more and more to paper money, with less and less attention to maintaining a strong economy to support our military, I believe it high time to stop, look, listen, and act.

At the same time, I have confidence in the American people; and I firmly believe that if even one of those mentioned for the Presidency set out to show the American people the wasteful way in which their money is being spent, if he got the facts over to the American people, I believe the people are sound enough to make that man President. I know such a man would render a great service to the future security of our Nation, whether he won or lost.

Let us see what leads me to this belief that we reach for that which offers immediate spending.

MILITARY STRESSES POSSIBILITIES

Last year, for instance, notwithstanding a budget in excess of $40 billion for the Defense Department, a great deal of our committee's time was taken up with the things the military desired over and above those included in the budget. Significant was the fact that each of these proponents of increased spending above the budget based their desires on the fact that Russia could have this, that and the other. Doubtless Russia could have a number of them, but all agreed Russia could not have half the "could haves."

All the way through the hearings the pitch to our committee was on that basis. You would perhaps be interested in reading the discussions I had along that line on pages 876 to 884, part I, of last year's hearings.

DEFENSE SPENDING AND BUSINESS

You will doubtless recall the story carried in newspapers a few months ago, based on hearings of the Armed Services Committee, about 18 high ranking officers of the Defense Department being entertained by the Martin Co. at the company's expense, totaling quite a number of thousands of dollars. Significantly the Martin Co. is the company which has had the contracts, amounting to many millions of dollars, for development of the Mace missile. Last year the question before our committee was whether the Congress would go along with procurement of such missiles from the Martin Co., at a cost of hundreds of millions of dollars, before the Mace mis-

sile had been proven. I happened to vote against such a procedure; but it would be hard to determine how much influence on the Department's off-the-record support for this procurement these visits by top military officers as the guests of Martin Co. may have had. According to the press, the Martin Co. tried to charge off the thousands of dollars spent on this entertaining as a necessary expense of procurement of contract. It is said Internal Revenue turned the request down.

However, this year the Secretary of Defense stated that unless the item was identified, so far as he knew this increased expenditure might in turn be used as a part of the cost which would result in increased profits in the overall charge by the Martin Co. to the Government.

Significantly, the Department of Defense testified it has regulations prohibiting procurement officers from accepting such entertainment, but nothing to cover these higher officers, who determine whether to recommend spending. Discussion of that subject can be found on pages 92 to 111, part I, this year's hearings.

It is to be noted that most of the top people in our Defense Department came from big business. Defense is a big job and it requires people with big experience. However, in response to request made by our subcommittee last year, the Department has this year submitted a list of retired military personnel who are now employed by contractors doing contracting with the Defense Department. That list covers 18 pages and would be found on pages 75 to 93, part I, of our hearings of this year. Thus we have the situation of top people in the Department being from big business and those companies doing huge contracting business with the Department having large numbers of retired military personnel working for them. This makes it hard to determine just what is what, or rather who is who. When we study the matter further we see that there is no State in the Union, and hardly a district in a State which does not have defense spending, contracting, or a Defense Establishment. We see the effect in public and congressional insistence on continuing contracts, or operating military bases, though the need has expired.

MILITARY ESTABLISHMENTS

I am on the Subcommittee on Military Construction, which is headed by the gentleman from California [Mr. SHEPPARD], a very valuable Member of Congress. In our subcommittee room we have a huge map on which military installations in the United States are identified by a pin. If you will look, the map is virtually covered with such pins; and in some areas, in spite of the large map, some pins have to be stuck in the ocean since there was not room in the map of the State. At that, this map makes no effort to show the plants and factories and personnel engaged in producing various things purchased for the use of the military. You might take a look sometime.

Then we turn and study Japan and Germany prior to the last World Wars and see that the eventual course of events followed a period in which big business and the military joined together to run the country. There, as we all agree, the government was controlled by leaders who were for aggression. Fortunately we do not have that situation here. However, there the people opposed to the leaders because of the involvement of military spending in the domestic economy were unable to muster enough strength to hold such leaders back.

We in this country have such an involvement of military spending in our domestic economy that it is politically risky to even talk of cutting back defense spending, even if it be waste we are cutting out. Little thought seems to be given to the overall strength or soundness of our economy in the years ahead, which I think is one of the major necessities if we should have war. Most military witnesses seem to want what they want without reference to the economy, which they say is not their particular assignment.

This year, for instance, the Secretary of Navy in his opening statement to our committee voluntarily stated that responsible budgetary officials in the naval service throughout the Navy said they needed something over $19 billion in appropriations for the coming year, that in the budgeting processes this had been scaled back to about $12 billion, approximately the amount we have this year. That would mean a 60-percent increase. In support of their need for at least the full budget amount, it was pointed out that prices paid for material by the Navy had increased 7 percent each of the last several years. Anyone who takes just a few moments to figure would realize that if we continue a 7-percent increase each year, which in effect means 7 percent further inflation each year, for about 20 years our money would not be worth anything; and all know that our economy would crack up.

By the same token if the President's Bureau of the Budget and the Congress had gone along with the desire as the Secretary of the Navy described it, "of responsible budget officers of the Navy" and should grant the 60-percent increase which naval personnel would like to have over last year's funds or this year's budget, if that same course were followed with regard to other defense and foreign aid programs, there would not be any money left to run the country. If you are interested, you will find this discussion in the next volume of our subcommittee hearings, which should be released within the next week or 10 days.

AIR FORCE ACADEMY

Most of you will recall the building of the Air Force Academy, where the Air Force paid no attention to the congressional limits on money to be spent, nor to the Comptroller General's finding that much spending was illegal, but spent what they wanted to in order to get what they wanted.

Now they are training fine Air Force officers there, I am sure; but please realize those young men being trained there under "hothouse conditions" in that rarefied financial atmosphere will likely be passing on the spending of half the national income within 10 years.

Do you suppose such a record of expenditures tends to cause them to have much awareness of the need for a strong national economy or really to give any thought to it?

I would point out that our announcement to the world, which I think very foolish, that the United States will never strike the first blow means that Russia, by opening the Iron Curtain slightly to show one sample, or one prototype, or by dropping misleading claims for our intelligence to pick up, could bleed us white without spending much money themselves.

This very real possibility is extremely dangerous to us, unless we keep conscious of maintaining a sound economy, of protecting it. If we go overboard every time Russia makes a claim, or makes a little show, Russia could win without striking a blow by making us destroy ourselves.

Illustrative of this was May Day a few years ago, when Russia showed a big bomber. Immediately our people said they had 12, with hundreds more coming off the lines. The Budget Bureau was accused of letting our defense down; Secretary Wilson came before Congress for $450 million extra for our B–36 bomber, I believe it was.

Now it is agreed Russia never had them, and our B–36 has gone the way of the horse and buggy.

Perhaps I can best cite to you these numerous examples of what goes on with the military by quoting to you from a speech I made on the floor of the House January 23, 1957, in connection with a defense appropriation bill from my committee. This speech was off the cuff but from the heart, and I quote:

Mr. Chairman, I have served on this committee for a number of years. I have listened to the testimony of witnesses from the various departments in our Defense Establishment. As some of you may recall, trying to learn as much as I could I went to Russia in 1956, spending my time with our own people from our own Embassy and traveling over the country. I have made every effort to make myself as well informed as possible, but with all of that effort I am not prepared to say just how great the Russian threat is. I simply do not know. My speech here today is not to minimize in the least the dangers of Russia and Russian aggression; but it is to speak a word of caution, that we do not let our fear of Russia make us destroy ourselves at home.

First, may I say to you, it is in the record of these hearings that the successful flight of the satellite was not unexpected to the United States. The surprise lay in the fact that it was a number of weeks, or a few months, earlier than might have been anticipated. I think the record is clear that prior to the satellite's launching the military people in our Government made the determination to devote most of our energies and attention to the missile program, and the prime endeavor was toward getting the missile to come down at the proper place without disintegrating. In other words, decisions were made with full knowledge of the likelihood of the successful Russian satellite.

I think, looking back, that our folks now realize we may have underestimated the psychological benefits the Russians might get throughout the world in successfully launching the satellite. Be that as it may, that has passed. The tragedy, as I see it, and the danger, as I see it, second only, if second at all, to the Russian threat, is what we are doing to ourselves because of Russia. We are judging our defense not by the wisdom with which we spend. We are judging our defense by how much money we appropriate and how much money we spend, as well as by how large a backlog of orders we give certain corporations in certain States.

I returned here in December 1957, right after the satellite had been successfully launched by the Russians; and one of the first things to meet my eyes was an article in the Christian Science Monitor, which everybody knows is a stable and conservative newspaper. It was said in that article that in view of the slight downturn in business the Government was going to pump prime by putting out more defense contracts. Now, is that a way to make a determination as to how to meet the Russian threat? Is promoting business what we use as the determining factor?

I turn to the U.S. News & World Report and see the headline "Big Spending—Lift for Business." In the next issue: "The New Congress—Pump Priming." And in another issue it says: "$2.5 Billion for Missiles. More To Come. Who Gets It?" Then it lists the companies which will profit by such spending.

You will recall that last year I pointed out the Defense Department spent $50 billion with 10 corporations in 5 years, and their stocks increased in value from an average of $58 per share to $149 per share in that period.

We had a candidate for national office insist as one reason to support him and his party that if he and his party were elected, contracts would be given to American Motors so it would not go under; and may I say if we are spreading the pie, American Motors is entitled to its share. But what a way to run a railroad.

It is serious when we use defense as a means to pump prime, no matter whose district it may be in. It is putting our economy on a shaky basis, and it seriously weakens our chances of meeting a real war. May I say with all the sincerity of my heart, we are a greater threat to ourselves because of the fear of Russia than Russia is to us.

If this thing is as serious as it is said to be, let us start looking to how much defense we are getting for the dollar instead of judging defense by how many dollars you give the Department for a home for the Chairman of the Joint Chiefs of Staff, or to increase the grade of all civilians on an average of two grades in the last 2 years.

Yes, it is time that we put the interest of the United States first; and the first place to do that is here at home, so that we get some defense for the dollar. If every time you see a new wrinkle on the Soviet sun you want more spending, more money, instead of thinking about how you might shift what you are already spending it for—you are going about it the wrong way. We are making our dollar cheaper and cheaper, to the point that our folks lose confidence in it.

I would like to remind you that 2 years ago, that great leader and fine Member, the head of the Armed Services Committee, in presenting the military public works bill which amounts to about a billion dollars every year, mostly spread over the country, told us in the House, "My friends, there is something in this bill for every Member." And sure enough, when you read the requests for military construction, they had them listed by States so you could see every Member had a monetary interest in passage.

Under this full funding, that my friends believe in so much, every time you try to cut any of them out, Mr. Chairman, I get calls saying, "Did you know that is in my district?" I had them in the last few days. No; I am kind of walking alone. I cannot work my side of the street. I do not even have anybody on my side of the street to work with.

But I plead with you to think about it. It is high time we begin to look after keeping a sound and secure country and getting a dollar's worth of defense for every dollar spent.

Again, as I told you last year, in the Air Force they had so much money they set up a group of officers and men to try to see how much money they did have in how many different accounts. This is a matter of record. They called it Operation Smokeout. Then, when they did find out how much money they had that they did not know they had they recovered it to their own use and called it "recoupment."

I have not been able to bring this up to date; but last year at the time this bill was up, they had already recovered from themselves in excess of $1,300 million, which until Operation Smokeout they did not know they had so far as use was concerned.

To put it in a nutshell, Mr. Chairman, because we have Federal spending tied in with "pump priming" and tied in with our domestic economy, we look at how much money we appropriate and tell the people, "We are safe because we are spending the money, even increasing it." Certain Democrats are saying in the press, "Why, we are going to look after you and that is why we ought to have a Democratic President, because we will spend $2 or $3 billion more for defense," as though that in and of itself would provide safety. And the Republicans top that here today by saying that they would already have been spending more money except for the Democrats. The Republicans are sayirg "Congress cut out essential money last year." That is incorrect but it shows what the country is up against from some party leaders in both parties.

It so happens I agreed with Mr. Wilson that the soundness of our economy is a major part of our defense. I joined with him in most of the things he did. I hope that I may have expressed myself a little less brusquely than was his custom sometimes. However, I want it understood that I admire his courage because he had an awareness of the necessity of starting to get things done at home.

But let us get down to my main worry. As a retired admiral expressed it to me: Here is the way you are handling your defense—because we know the Russians have a good football team, we are trying to surround the perimeter of the football field with good football players; and the primary reason for that is that everybody gets a cut out of the salaries of such extra football players, labor, industry, and congressional districts.

In the process, we have our economy and our domestic programs caught in defense spending; and, if you know your history, such a situation contributed greatly to leading Germany into two World Wars and Japan into one. I hope that we are smarter than they are. But it appears to me we are on the road and perhaps running a little faster at this stage of the game than they were. We need defense, but we must judge our defense by the wisdom with which we spend rather than how much we spend.

I repeat, if the danger from Russia is as great as many believe, we had better put first things first; and above all we must make our defense decisions on defense needs rather than on a pump-priming basis.

SIZE OF DEFENSE PROGRAM

In order to get some idea of size and cost of the defense program, I present a few statistics.

Funds available to the Defense Department for military services each year since 1951 are:

	Billion
1951	$50.7
1952	60.1
1953	48.6
1954	34.4
1955	28.8
1956	31.9
1957	36.2
1958	36.1
1959	41.2
1960 (estimated)	40.6
1961 (estimated)	40.6

In addition, large sums are authorized each year for international security programs, closely related to our defense effort.

Another indication of the size of this program is the number of persons engaged in its various activities. In June 1950 the Defense Department alone had 1,460,000 military and 753,000 civilian personnel. By June 1959 this figure was 2,500,000 military and 1,078,000 civilians, a total of nearly 3,600,000. In addition, nearly 40,000 people are engaged in those activities which directly support the Defense Department, including the ICA, Civil and Defense Mobilization, Atomic Energy Commission, Selective Service System, and National Aeronautical and Space Administration. The total number of people engaged directly in the defense program of the Federal Government represents over 2 percent of our total population.

Nearly 57 percent of estimated expenditures in 1961 is going directly to the security effort. And this does not include the $5.5 billion for the veterans programs or any part of the $9.6 billion of interest on the national debt, both of which are largely due to our national security programs.

A SERIOUS EFFECT—INFLATION

Of course, the most serious immediate result of a heavy expenditure in the name of defense, such as we now have, is inflation.

Many seem to believe that we can expend 20 percent of our energies for national defense and not only have the same amount left but actually have more—make a profit, so to speak. It cannot be done, but in order to lead people to believe it is being done we have to a large extent supported our military spending by inflation.

Theoretically, such inflation can be avoided by properly financing the costs through taxation and other revenue-producing means. Actually, however, for the last 10 or 15 years this Government has not raised anything like the amount of money that it has spent. Throughout the last war and up until this date it is estimated the Government collected in taxes only about $1 of each $2 it has spent. The other dollar was raised by issuing bonds, which became the basis for printing more money. With all the so-called prosperity which we feel we have enjoyed for the past 8 or 10 years

we have been paying only about 50 percent of our bills, having now a debt of approximately $290 billion.

The Government has been doing what some individuals have tried to do. It has found it can pay debts by issuing notes. The Government has learned to take those notes from one bank or buyer to another, and like the individual the longer we continue this situation the worse off we become. At one time we realized we could not carry on this kind of thing indefinitely; but now few people seem to want to stop. The greatest optimist of today is someone who foresees a balanced budget for 1 year.

This practice has resulted in an inflationary situation which has become increasingly serious each year, with the result that our price levels have continued to climb. Using 1947–49 as a base, consumers' prices have increased since 1939, as follows:

	Percent
1939	59.4
1950	102.8
1959 (November)	125.6

We have a great number of people in this country who are retired, disabled, dependent on insurance or fixed salary and who are helpless against inflation. Many are under social security. Others are dependent on old age pensions. Reserves that have been built up to the credit of these programs on the books of the Nation are fixed in terms of dollars as of the day they are paid in. But the dollar gets cheaper and cheaper, and thus the fund gets smaller and smaller in comparison with what you have to pay to provide real security.

When an individual can pay a dollar debt with a 75-cent dollar years later, and a 50-cent dollar if he waits still longer, it can become habit forming. It can wreak havoc once it gets to the point where no one has any confidence in the dolllar.

I was in China during the war when that government quit printing $10 bills because it cost more to print them than the $10 bill would buy. At that time it cost about $1,500 a day to hire a man to do a day's work. The person hired with this $1,500, however, could hardly buy enough to eat. Needless to say, the government of that country fell.

France followed this inflationary course and, frankly, could not have protected itself for a week without help. De Gaulle had to be recalled.

Our people in the United States are already becoming disturbed about the present and future value of our money. Our people are getting fearful of the American dollar. Look around you. Farm income has been so low as to change the picture, but for years many lawyers, doctors, and professional men bought farms, and even now keep the price of farmland far about its earning ability. Many businessmen have gone out from the cities and bought land, not because the farm will bring a fair rate of return on the investment, but because they want something firm, something they can pick up in their hands, something they can see. It has been the history of every country. When leading citizens of other nations became fearful, passed up productive investment for a hedge against inflation, when a large percentage started dodging the tax collector, it inevitably resulted in a crackup of the economy of these nations. Can this country be an exception?

EFFECT ON INDIVIDUAL INITIATIVE

Probably our greatest long-range danger is in the effect such national policies will have upon the initiative and energy of our people, young and old. Why should a person work and save if what he has is to be taken away by inflation. It is apparent that more and more people want the Government to take care of everything. Instead of relying on himself the individual is tending to rely more and more on a labor union, on the company that employs him, on a farmer's cooperative, on a trade association or a professional society, and on his Government.

EFFECT ON PRIVATE BUSINESS

When the Government builds a plant for some companies, as it did a few years ago, to that extent they are setting up competition in that field, not only in wartime but thereafter. When you give special tax amortization to some campanies in order to get them to increase their production, you not only favor such companies but actually you may end up with a reduced production as against that which you intended.

A few years ago I studied this problem in connection with the manufacture of nitrogenous fertilizer. The products that go into nitrogenous fertilizer are products which in time of war are greatly in demand to meet military needs. They also are products which have other large uses as chemicals, so frequently the prices for the chemicals in other chemical processes exceed their value as fertilizer. Then such chemicals go into such uses. These facts, together with the increased production need from agriculture during the war caused the Government to determine that there should be an increase in the amount of nitrate fertilizer. The Government set as a goal an increase, I believe, of 500,000 tons of nitrate products a year. The companies which had been in this field were asked to subscribe to such increase; and the increase was oversubscribed by more than a hundred percent.

Tax amortization certificates were issued to the first companies to sign up. The increased production was made or in the process of being made. But there were more companies which wished to produce nitrate fertilizers, fully a hundred percent more than that which was permitted under the goal set. As a result many companies were left out.

You may ask, "Why don't those companies go ahead and expand on their own?" If they do, they have to compete with these other companies which have gotten tax relief and will be able to amortize their increased plant expansion within 5 years, whereas those who expand on their own without such tax amortization will not be able to compete with them on an equal basis for 5 years.

It was admitted by the head of the Defense Production Administration that through this means they not only had the authority to determine which companies got the tax amortization, but he readily could see that in their efforts to get increased production, in effect, for a given period of time, it could be that their actions which helped on a temporary basis, might actually serve to reduce the supplies that might have otherwise been made available if business itself had moved into the field. Not only that, but the Government in this kind of operation actually decides whether the manufacturers in a given field will have competition.

In the case of aluminum the Government determined increased amounts were needed. And the Government then, believing there should be competition in this field, granted permits and tax amortization to new companies, thereby giving competition to the Aluminum Co. of America and to the Reynolds Metals Co., which had almost a virtual monopoly in the field. Perhaps that is good. However, as a lawyer, I have always understood you are limited to breaking up monopoly by court order and not by competition.

Thus it is under the guise of national defense we have seen the Government moving more and more into the field of determining who can go and who can stay in business.

DISLOCATION OF INDUSTRY

Another serious result of large defense spending is the dislocation of the normal operation of industry and disruption of the normal channels of trade. Military contracts involving large sums of money, extensive quantities of manpower and materials and frequently a large portion of the Nation's supply of a particular item invariably upset the normal distribution of business among the various areas of the country and disturb the balance between large corporations and small business.

Awarding business in such large quantities usually limits normal competition among bidders. Use of cost-plus-fixed-fee contracts on a negotiated basis, which we continue in nearly all cases, whatever you may be told, has proved to be a very costly and disrupting method of doing business.

Other serious economic and social problems frequently result from this dislocation of industry, including manpower shortages in one area and unemployment in another. Shortages of housing, schools, and community facilities also have developed in certain war impacted areas, with very serious consequences.

The shortage of defense contracts in New England and several other parts of the country created a serious problem. Unemployment and unemployment payments increased in those areas. This was particularly true in the State of Rhode Island where the principal industry there was watchmaking, for which very few defense dollars have been spent at the present time. This same condition has existed in many other areas where the special items produced are not in demand for military purposes.

Another problem of industry which results from large military contracts results from the tendency to award an increasingly larger percentage of such contracts to the larger industrial concerns. Our experience has been that during periods of large military expenditures, the smaller companies throughout the country are starved out. It is only natural for the contracting officials of the Military Establishment to give preference to the larger organizations, since production of many military items requires special skills and equipment not possessed by smaller concerns. Frequently large amounts of capital required for large-scale production of military ordnance are required to establish the plant and facilities. Also, the matter of deadlines and speed in production gives an advantage to the larger producer. So this complaint is not in criticism of any one. It is merely recognition of one of the less desirable effects of the defense effort.

EFFECT ON AGRICULTURE AND NATURAL RESOURCES

During the war we called on American agriculture to "feed the world." Never has a group responded to a greater extent. Short of labor, machinery, and fertilizer, the farmer increased his production. It was increased by more than 25 percent. Then with the war over, though there was a need to help feed foreign countries until they got on their feet, with his plant expanded, accustomed to huge demands for his products, we find American agriculture the whipping boy of the press and of many of the people.

We have tried to meet the problem with foreign aid. The records show that not only have we been supplying the money to foreign countries through mutual security and, in turn, selling commodities back for it, but we have provided capital for foreign countries to go into business, setting up competition for ourselves—much of it by American companies abroad.

According to the testimony of the Secretary of the Treasury before our committee last week, we have exported through the various aid programs $50 billion in capital. We are feeling it in the movement of our gold reserves. With that much of our capital exported, you can easily see that competition of borrowers for capital remaining is resulting in constantly increasing interest rates.

A few years ago one of the most conservative Members of the Congress, one of those who has participated in practically every move to reduce national expenses—sometimes to the extent that even I felt he was being shortsighted—came to me and said he certainly regretted to see me vote to cut foreign aid, because, as he said, "I do not know whether you ever noticed it, but I have always supported the mutual security program, largely because we were selling these commodities to the mutual security countries for that money."

Thus, it is a $6 billion foreign-aid program obtained a vote in that instance because to some extent commodities from his area were being sold for the funds which were being granted to the countries. It would be much cheaper and far less inflationary if we gave away the commodities instead of giving them the money to buy such commodities.

DEPLETION OF OUR NATIONAL RESOURCES

We had in this country about 150 years ago 8,000 million board feet of timber. Today we have about 1,600 million board feet.

One hundred and seventy-five years ago we had 8,000 million tons of iron ore. Today it is down to 62 percent of what we originally had.

Only 175 years ago we had in this Nation 500 million acres of fertile soil. We have wasted 200 million acres of that land, and there is another 100 million that is washing away today.

By 1975, according to the present rate of increase in population, we will have a population, not of 150 million but 190 million.

When you appropriate money for foreign aid programs the money comes back here for the purchase of commodities. Since we get the money, they get the goods. We thus have no goods to offset the expenditures, and the resulting inflation is apparent. The money that we have let foreign countries have is a part of the national debt.

It is a problem as to how we are going to handle this great public debt. What we have really done, however, is to deplete our supply of iron ore, our oil reserve, our timber, our soil fertility. Sixty-five percent of the basic raw materials that are used in industry come from the farm, and the other 35 percent almost without exception depletes our iron ore and the other basic natural resources we have in this country. Many people do not seem to worry about that fact.

The president of the Standard Oil Co., in an article carried in the Atlantic Monthly, and quoted by the Reader's Digest, said:

> We make a mistake to think of natural resources as so many stacks of raw material piled up in a storehouse. The fact seems to be that the first storehouse in which man found himself was only one of a series As he used up what was piled in that first room he found he could fashion a key to open a door to a larger room. And as he used the contents of this larger room he discovered there was another room beyond, larger still.
>
> It is conceivable that the entire globe, earth, ocean, and air, represents raw material for mankind to utilize with more and more ingenuity and skill. The stone age lasted several hundred thousand years. The copper and bronze age 400 years. In modern times the age of iron has given way to the steel age. Steel was first made in commercial quantities 95 years ago.

Sounds nice, does it not? But China exhausted her natural resources, and she is still without. So it is with India and nearly every wornout country we are aiding today.

WHAT CAN WE DO?

What can we do? I do not know that there is any easy answer. I rather think we would make a mistake trying to cut back to 15, 20, or 30 years ago. I believe the best we can hope for, and that which is best for us, is to try to seek a period of stability. In other words, do not try to turn back, but try to level off, and transfer our wasteful defense spending to developing our Nation at home, where we get value for the dollar spent.

Let us hold defense spending to real defense. Let us realize that "surplus to defense needs" spending could be better spent almost anywhere else.

I think the first step is a balanced budget. With a balanced budget we can measure benefit against cost. Let us realize that all cannot make a living and all accumulate stocks, bonds, and notes unless somebody else owes them. What we are accumulating is the Government's promises to pay. While we may hold our fair share of money and bonds, our name is signed to the notes and bonds that everyone else holds.

In the period of adjustment let us have real soil conservation in the great watersheds of our Nation and stop the thousands and thousands of little floods which periodically give us something like the great Kansas-Missouri flood, which did $2 billion worth of damage. Let us spend our money for roads and schools and hospitals and similar works.

That would be much better than pump priming under the name of defense. Let us realize that security comes from within, and that credit on the books of the Nation which owes $290 billion merely means we are dependent upon the future earning powers of our own country.

DOMESTIC PUBLIC WORKS BILL

In the last session of Congress the President vetoed the public works appropriation bill because we could not afford, he said, the future costs of these domestic public improvements in view of our governmental expenditures. Congress failed to override his veto. When I could get no one else to do so, I offered the motion to send the bill back to the President with the new starts included.

After a bitter fight in the Appropriations Committee, my motion carried 19 to 17. It swept by the House and Senate. Then when the President vetoed the bill the second time, we overrode his veto. This is the first time this ever happened in history. I am proud of my part in that action. However, I am even more happy that the overwhelming majority of the Congress approved my argument, which I repeat here:

> Mr. Chairman, as a member of the Committee on Appropriations, I offered this motion to reduce each item 2½ percent and to retain the 67 new projects, after it became apparent that it would not be offered otherwise. I am not a member of the Public Works Subcommittee. I have no projects in this bill, present, past, or future. I offered that motion because I think, and I thought then, that it is high time we took care of our own country.
>
> If the President and a majority of the Congress are going to have a foreign aid program of billions of dollars annually; if we are going to raise travel allowances for Federal employees, Federal pay; if we are going to increase benefits to veterans, and provide more inflated dollars to almost everything, if we are going to have all these other things, if we continue using appropriations to put money in the hands of people and thereby increase the national debt, I think that we owe it to our future and to our children to protect our own coun-

try, its soil and its natural resources. The President's veto would have us do all these other things at the expense of our own country.

These facts are argument, not against domestic public works but for them. May I say to you that the argument made as to how much we owe, and about the deficit, and all of that, is the strongest argument for giving attention to our own country that I can bring you. May I tell you that the strength of the dollars that we have, the ability to pay debts that we owe, for whatever it is worth, is dependent upon the country that stands behind it.

Mr. Chairman, money spent improving the Nation, preventing floods that cause damage of hundreds of millions of dollars—and preventing drought damage, improving harbors, is sound. Yes, I would look out for my country first, recognizing that it is the basis for everything. Then after we have looked after the factory and the home, I would see what else we were able to do.

I am glad I won out in that fight; I am glad the President's budget this year yielded on this issue.

We must have a strong defense. To have a strong defense we must see we get a dollar's value for a dollar spent. We must realize that for the defense to be strong, the economy must be strong—and that means we must cut out waste, cut out expenditures in the name of defense which provide no real defense, but which provide built-in inflation. We must keep developing our country at home, we must not let the Nation run down.

Gentlemen, I have stressed this phase of our problem as strongly as I know how, realizing that with my 100 percent effort, I cannot hope to obtain over 10 percent effectiveness.

Mr. FORD. Mr. Chairman, I yield 15 minutes to the distinguished gentleman from Ohio [Mr. MINSHALL].

Mr. MINSHALL. Mr. Chairman, I had not planned to speak today on this bill, but in view of the fact that one of the programs I have been especially interested in has been mentioned I feel it incumbent upon me to make a few remarks. Let me say at the outset that I think I would be most remiss if I did not commend my good chairman and the committee on the outstanding job they have done, and I think the American people should know that the one thing above all others that characterizes this committee is the nonpartisan way in which it functions. There was no middle aisle. During all our discussions everything was done, every vote was taken based solely on what in the mind of each Congressman was best for all of America. That is the kind of bill we present to you: What is best for all America?

Mr. Chairman, a year ago I was among the committee members who sought to reduce the fiscal 1960 Bomarc program by some $200 million. There were two basic reasons behind my position at that time.

First was my belief that we were spending far too much money for a weapon that would not be available in quantity until the manned aircraft threat for which it was designed had been replaced by an ICBM against which Bomarc is absolutely useless.

I was gratified when the Chief of Staff of the Air Force, General White, came before our Defense Appropriations Subcommittee last March and took somewhat the same position. While I realize that all flight test programs must suffer failures, for otherwise there would be no reason to conduct such flight tests, I cannot help but feel that Bomarc had had much more than its share of failures to date. Out of eight recent test flights at Cape Canaveral they have had only one partially successful test, and that test got off the pad and that was about all. Two immediately prior tests were failures, the rest of them never got off the ground but burned on the pad.

I would like also to point out at this time that even the most lukewarm advocates of this Bomarc program are found within the Air Force itself and even amongst them there are some Doubting Thomases, including General White himself, who said in testimony before our committee:

Yes; there has been much slippage—

As he put it—

There has been much slippage in the Bomarc program.

The other generals, the generals on the research and development program for the various services, General Trudeau, General Medaris, who recently resigned, Admiral Hayward, Gen. Maxwell Taylor, all agree that the Bomarc program is one that should be scrapped.

Dr. York, the Chief of the Defense Department research and development program, also expressed serious doubts about the Bomarc program; and I would like at this time to read from the record what he said before our committee.

I quote exactly from the record:

Mr. MINSHALL. From a research and development program point of view, and that is your primary field, have you had any other programs that have had a history of failures for so many years, since 1952, and into which they are still sinking billions of dollars? If so, name them.

Dr. YORK. I cannot think of any offhand, Mr. MINSHALL.

Mr. MINSHALL. In other words, this one stands out by itself?

Dr. YORK. I am not familiar with the program beyond a couple of years. During that time the Bomarc B has done poorly, indeed. The Bomarc A, however, had come to the point where it was working, although, as you probably know, the Bomarc A has not done well either in the last year.

Mr. MINSHALL. What do you mean, it has not done well?

Dr. YORK. There have been some test firings of it and it has not performed properly either.

Mind you, Bomarc A is the predecessor to Bomarc B, which is the so-called improved version that has not yet had a completely successful test firing.

Mr. MINSHALL. We do not have a Bomarc A or B that works and the public relations on this is all out of proportion. I have clippings from newspapers from all over the country implying that Bomarc is now defending us against enemy air attack.

Dr. YORK. The troubles with Bomarc A and B have been traced back largely to ground equipment. That program was going well when it was at Canaveral and then they moved it over to Eglin.

So much for Dr. York's testimony.

The point I should like to bring out is that amongst all of the research and development people, there was only one who thought even halfheartedly of the Bomarc program, and that is the Air Force itself.

Mr. Chairman, if I could in fact become convinced that Bomarc would become valuable in time to be of use, I would never have offered the amendment I did a year ago. But time, evidence, and the facts have proven me correct. I am today more convinced than ever that to have continued this billion-dollar boondoggle would have been to send good money after bad. As the report on this bill states, the action of the committee will save and put into other defense channels $675 million.

Mr. Chairman, I am glad the committee voted to stop this kind of waste.

Mr. MAHON. Mr. Chairman, I yield 5 minutes to the gentleman from South Carolina [Mr. RIVERS].

Mr. Chairman, will the gentleman yield?

Mr. RIVERS of South Carolina. I yield to the gentleman from Texas.

Mr. MAHON. I wish to say to the gentleman that the Committee on Appropriations, in trying to do something in a rather big way, and, in my opinion, in a rather significant way, about improving our airlift capabilities, took into consideration the very excellent presentation which the gentleman from South Carolina made before the Committee on Appropriations. I personally was encouraged to seek to provide additional funds for airlift by the very fine hearings which have been conducted by the gentleman from South Carolina [Mr. RIVERS].

The gentleman from South Carolina has performed a great service to the Nation and to the cause of defense generally as chairman of a subcommittee of the Committee on Armed Services having to do with the problem of airlift. I am pleased to have the opportunity to make this statement.

Mr. RIVERS of South Carolina. I thank the gentleman from Texas. My reason for taking this time, Mr. Chairman, is to compliment the great Committee on Appropriations, particularly the subcommittee under the leadership of the distinguished and splendid gentleman from Texas [Mr. MAHON].

Mr. MAHON. May I say to the gentleman that his work in bringing out a lot of information was very persuasive with the committee. It is good that we have been able to work together in this constructive manner.

Mr. RIVERS of South Carolina. Our subcommittee was convened by the gentleman from Georgia [Mr. VINSON] in late January. We held hearings for at least 6 weeks, and we took over 2,000 pages of testimony on the adequancy of our present airlift. But that did not include classified information and exhibits.

After only 2 or 3 weeks of testimony we came to the conclusion, from the classified material and other information, that our airlift was woefully inadequate. We found that we only had 31 modern aircraft out of a total of 383

common-use aircraft, 36 of which were stationed overseas and would not be available should an emergency arise.

I want to thank the committee for giving me the opportunity of bringing to the attention of the great Committee on Appropriations facts which were developed by our subcommittee.

We did not come to your committee and recommend that you buy any maker's airplane. We came to you and brought testimony to show where the shortages were and what the condition of our inventory was. Ninety percent of our planes, with the exception of 31, were 8 to 10 years old and getting older every day. The information which we received in connection with the sensitive forces of the Army which would have to be moved, the striking divisions, in case of an emergency, showed that the capacity to move these sensitive divisions would be extremely difficult, if not almost impossible, in the time limit prescribed by the Joint Chiefs of Staff. After having heard this testimony and the cordial reception that we received at your hands, your positive action in making available $250 million for the procurement of new inventories, plus $50 million for the development of the strategic operational requirement plane, is indeed gratifying. On behalf of the Committee on Armed Services, the gentleman from Georgia [Mr. VINSON], and my subcommittee, of which I have the great and signal honor of being chairman, I want to thank the committee for making such a positive contribution to this woefully needed area. We are very deficient in this area with the type of plane we have. Something had to be done and must be done. You have made a positive contribution, and I want to make that known here today. I have never been so cordially received or never had a more positive response from a great committee.

In another area you are making available $200-odd million for the modernization of the Army. That is a significant thing. I frankly do not feel that during our lifetime we will see the ICBM's destroying this country; I do not feel that way. But, I know there will be brush fires and I know that the Army will be called upon to put these brush fires out, but unless you modernize your Army as you are doing and have the capacity of immediate airlift, you will never put those brush fires out. They will be the Communist planes seeking to destroy this Nation in these isolated areas which could develop into a world conflagration.

Now, in connection with the modernization of our airlift, I call to your attention that this must be the beginning, because $250 million cannot be but a beginning of this very large job of keeping our airlift modern. Take, for instance, the SOR plane, $50 million. That in itself will not develop a plane, but it will be a beginning, it will be a significant beginning in all three of these areas, and I think you deserve the everlasting thanks of a great nation.

Mr. FORD. Mr. Chairman, I ask unanimous consent that the gentleman from Nebraska [Mr. WEAVER] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. WEAVER. Mr. Chairman, the bill before the House today is, perhaps, the most important single measure that we will consider during the 2d session of the 86th Congress. It is a measure that carries with it the future of our Nation, the life or death of a generation of Americans and, as well, the life of generations yet to be born.

The defense appropriations bill for fiscal 1961 was written by our subcommittee after long and careful thought, after months of hearings and the testimony of hundreds of witnesses from the Department of Defense and from outside. I would like to state at the outset of these remarks that never have I worked with a group of more dedicated Americans than with the men on the Subcommittee on Defense Appropriations. The chairman of that subcommittee, the gentleman from Texas [Mr. MAHON], and the ranking minority member, the gentleman from Michigan [Mr. FORD], have shown a real understanding of the vast and complex problems of our defense program. The entire committee cast politics aside and worked in a truly nonpartisan spirit. If any bill before the House can be said to be nonpolitical in nature that term can be applied to the present measure. I would also like to pay tribute to the very fine men who worked with us as staff members of the subcommittee. They have devoted long hours to the preparation of material and have devoted themselves unstintingly to the welfare of their Nation. I cannot say too much in their praise.

Mr. Chairman, we in the United States today are faced by a peculiar and dangerous situation. As the President prepares for the summit conferences this month in Paris, he must work from a position of unquestionable strength. We cannot allow any potential enemy—and we do have a potent and dangerous foe in this world—to believe that we are weak or divided. We must assure him that we are strong and united in our determination to maintain peace and freedom.

Our enemy today is world communism. It is not just a nation or a group of nations; it is an alliance of peoples dedicated to the godless theology of Communist domination not only of the territories already controlled, but of the world itself. Communism cannot exist except through expansion. Already it controls close to half of the population and land mass of the world. It is pushing, probing, constantly on the move to find new weak spots where it can expand and grow.

We are faced, too, with a peculiarity of geography. Communism is concentrated. The Soviet Union and Red China are contiguous as are almost all of the satellite nations. They form one great mass of people living in one great land mass. The heart of this empire is in Moscow but unlike the free world, Moscow has direct access to all points of the Communist empire without crossing water or other nations, that is, with the exception of Albania.

This means that the United States is committed on a number of fronts scattered from Berlin to Seoul, Korea. At every point we must remain alert and must remain strong. To do otherwise is to court disaster. For this reason we must maintain comparatively large forces in actual combat readiness. And to back up these forces we must deal from a position of war capability which cannot be doubted by our potential enemy.

Not only is the enemy building up his strength in land forces, he is building as well a very strong aggressive attack force in the form of nuclear intercontinental ballistic missiles augmented by a fleet of bombers capable of delivering a heavy nuclear blow to the United States itself. We would be foolish and blind not to admit to ourselves and the world that the Soviet Empire is capable of striking a disastrous blow to the free world. They are ahead of us in the production of some forms of missiles. They are, man for man, stronger in ground forces than we are. We cannot hope to match them soldier for soldier on the battlefield today. They do have a large fleet of submarines—several hundred of them—and some of these submarines are capable of launching a very low-caliber missile—but one that is nevertheless dangerous to almost all portions of our homeland.

The Communist empire is strong, and it is dedicated to expansion and world domination. It is capable of delivering today a heavy blow against the United States itself. It will be even more capable of launching such an attack a year or 2 years from now. This is our enemy, not a nation, not a people, but an ideology which dominates many millions of people and which has girded itself for war both on a limited basis along its frontiers and on a massive nuclear exchange basis.

Our job as a Congress—and the job which the subcommittee undertook and I think accomplished well in this bill—is to prepare the United States to meet this challenge. We must both be strong enough to meet any new move by the Communist empire and we must make absolutely certain that the Soviet bloc knows this strength exists. It must be crystal clear to the leaders of the Communist world that if they undertake a military venture of any kind anywhere it will lead only to their own undoing.

Our problem as a Congress is to bake a cake with all the ingredients in it that will mean safety for the United States and its free-world allies throughout the globe.

Such a task requires us as chefs to measure the ingredients with care, to mix them thoroughly and to allow ourselves enough oventime so that the finished product will come out well. To do this we have followed a recipe which might be termed a mixed attack force. We have undertaken to provide for this country a strong and balanced deterrent force which will make any potential enemy think long and hard before undertaking

any new aggressive action. Our aim is to make him aware that such an aggressive move can lead only to his own suicide.

Our primary reliance still must be in our manned bomber force until the day arrives when they can be augmented to a degree with guided ICBM's. We do have a strong bomber force in being and our Strategic Air Command cannot be matched today by any potential enemy. To make this force even stronger and even more capable of protecting us through a deterrence principle, the committee has acted to provide an airborne alert. This bill authorizes the President to order and finance such an alert in the event of any emergency. We have done more than that, however. We have included in this bill a sum of $200 million for spare engines and other spare parts to back up such an airborne alert. To undertake such an operation means the quick wearing out of material and it must be readily replaceable. This $200 million—which is some $115 million over the budget request—will provide those on-the-shelf items needed to keep our aircraft in the air should the crisis arise. We have not provided for the additional manpower this would take but have written into the bill language which would permit the President to pay for such an operation through deficiency financing.

Actually, Mr. Chairman, this $200 million will not be wasted even if there is no airborne alert requirement. In the long run these spare parts will have to be used. In the normal course of day-to-day training planes do wear out and do have to have replacement parts. In the event there is no airborne alert, these spare parts purchased now will simply mean less in the way of procurement in years to come.

Supplementing this manned bomber force of ours we have a mixed inventory of very excellent weapons systems already in being or nearing the operational stage.

Our greatest single strength, I feel, is the Polaris submarine-launched missile system. It is also a very expensive system because of the launching mechanism needed to make it work. The submarines themselves are very expensive items. However, I am confident that they will pay for themselves in an added security this Nation could not have without them. Because of their mobility and the secrecy element we are capable of obtaining, this missile will give any potential enemy pause. He cannot find the submarines to destroy them. Therefore, within a period of a very few years we will have poised and waiting 336 Polaris missiles, any one of which would be capable of destroying targets in the heartland of the Communist empire. Such a threat would make any rational Soviet leader think hard before pushing the button.

To make certain that Polaris is capable of fulfilling its mission, the committee has increased the budget figure in this area to provide for an eventual 21 submarines. To do this we have added $241 million more than the original budget requests submitted by the Department of Defense.

The first Polaris submarine will be operational by the end of this calendar year. When the first launching submarine comes into the fleet, and goes on station we will be in a better position to see how it performs and whether its performance warrants an even more rapid expansion of this program. If it does, the committee no doubt will follow that course next year.

Another potentially fine weapon is the Minuteman ICBM. This missile will at first be used from hardened launching sites within the United States. However, this solid propellent missile is so advanced and so sophisticated that it will be mobile, capable of being fired from trains or barges that can be moved at will.

This will give us that added element of mobility that will keep any potential enemy guessing and will make it much more difficult for him to launch a completely devastating attack. To provide for this mobility the committee has added $20 million to the budget estimates.

The outstanding missile we have in being now is the Atlas ICBM. With a devastating nuclear warhead this missile is capable of hitting any point within the Communist empire. The bigger brother to the Atlas, Titan, is also moving rapidly toward the operational stage. In all we have 27 Atlas and Titan squadrons, the last 6 of which will have 12 launching sites and missiles instead of the originally planned 9. The first of these squadrons is already operational and the remainder will come into operation within a period of 2 years.

Our strategic, deterrent strength, therefore, consists of a manned bomber fleet that cannot be matched, augmented by a group of advanced and potent ballistic missile systems, Polaris, Atlas, Titan, and within a few years, Minuteman. This is our deterrent force. But we must also have strong, flexible forces to fight the so-called brushfire wars which the constant probing of the Communist bloc is likely to ignite.

To do this we have undertaken a modernization program for the Army, which involves some $207 million. This is a followup on last year's appropriation. It will give this country a flexible and dangerous striking force.

To provide mobility for this striking force the committee has undertaken a program of modernizing our airlift. We learned from witnesses who appeared before our committee that the airlift planes are sadly in need of replacement. We need new transports, and a much bigger force. To do this, the committee increased the budget estimates by some $250 million.

Our Navy, which has traditionally been our first line of defense, was not neglected in this budget. We, however, did not concur with the admirals' desires for a new conventionally powered aircraft carrrier. Instead we have concentrated on what we consider to be the best vessels ever manned by our Navy, the underseas craft. The atomic-powered submarines now in operation are beyond doubt the best vessels ever to be used by the Navy. They are very fast, highly maneuverable weapons. They are a match for any surface vessel now in the fleet. We have undertaken to strengthen this arm of our naval forces.

The United States has traditionally always depended heavily upon its Reserve forces of citizen-soldiers both in the Active Reserves and in the National Guard.

For some reason the professional soldiers in the Pentagon have always in recent years attempted to downgrade this force. They have suggested repeatedly a 10-percent cut in the National Guard and Reserve forces. It has puzzled me as to why this has so often and repeatedly been suggested by the Pentagon. I am very pleased to be able to report that the committee has insisted in this bill on maintaining the National Guard at its authorized 400,000-man strength. The committee has recommended $229,903,000 for the Army National Guard and $233,115,000 for Army Reserve forces.

In this connection I might mention that the National Guard is more than merely a reserve force to back up the Army in case of need. It is, in fact, an emergency force for use within the United States during any time of crisis. In my own State of Nebraska this spring the National Guard has performed great service to the people during the flood crisis which developed. The guard saved many hundreds of lives and performed in a very fine manner in protecting property in the flood areas. I cannot say too much in praise of this worthy, working organization.

Deterrent strength alone is not enough to guarantee the safety of our Nation. We must undertake, too, those programs designed to protect us should the enemy decide at some point to launch a major aggression.

Here again the committee has undertaken a mixed force, balanced and, we feel, effective. Our air defense setup involves both fighter aircraft, for which this bill provides some 50 additional highly efficient, deadly fighter planes, plus the Nike-Hercules squadrons scattered throughout the country, guarding our important cities and defense centers. In this connection, the committee found, much to our disappointment, that the highly advertised Bomarc system has been a failure. Over a billion dollars has been spent on this weapon, and it now appears that it is highly overrated. For this reason, the committee chopped some $294 million from budget requests for this weapon. We have left in the bill $50 million for additional testing work on the weapons should the military feel that this is desirable.

In the area of antisubmarine warfare, the committee has found our Nation gravely endangered by a lack of progress and a lack of imagination on the part of standpat Navy officers. During the years since the end of World War II, the submarine has become a very dangerous, deadly weapon. We are well ahead in design and capability in this field, although the Soviet bloc does have several hundred submarines which it can turn loose. Many of these submarines are capable of launching missiles.

The development of our own atomic submarines was made possible by the hard, sure thinking of a single man. He coordinated the work of the Navy Department and made it possible for us to make remarkable, dramatic progress in this area. He has kept us ahead of the Soviets in this very vital field.

The committee feels that the Navy must find another such person to undertake the development of a good antisubmarine-warfare system. We have spent vast sums of money in this field and have as yet made little progress.

The committee cut from the Navy budget the conventional aircraft carrier it had requested. We have diverted this money into the antisubmarine warfare field where it is most urgently needed. We have provided additional funds for research and additional funds for the procurement of surface and undersea ships for this service. The most potent submarine killer is a submarine itself. We have provided funds for the building of new attack submarines, nuclear powered. These may well become the backbone of our antisubmarine warfare effort.

In the field of protection against a guided missile attack we feel that real progress is being made although we are far from safe in this area. To give the United States adequate warning we have increased funds for Midas early warning satellite. When developed this will give us the information needed about any potential enemy's missile launching sites and will warn us if any launches are made.

Work is progressing on Nike-Zeus, the antimissile missile. However, this work is far from completion and much more research and development must be done.

In summarizing the work of the committee this year, Mr. Chairman, I would like to say that we are developing now and for the future a very capable, very effective deterrent force and are working toward a force capable of protecting ourselves and our allies in the event the enemy should decide to strike anywhere in the world.

It is true that we are at present lagging behind the Soviet Union in the production of missiles. This in itself, however, is not the great and overwhelming danger some people who make irresponsible statements would lead us to believe. The danger would lie in the possibility that we would lag in our ability to deter an enemy attack. We are not behind in this field. We are keeping pace with the Soviet Union during these critical years and the Soviet Union knows this. We have a force which is so well dispersed and so varied that it cannot be destroyed by any single blow. We are providing for additions to this force which will make it impossible for the enemy to strike without knowing that he will suffer the kind of damage from which he cannot recover.

During the next 2 to 3 years the enemy will remain ahead of us in the production of missiles. The gap will narrow month by month as our own weapons systems come into operation on an increasing scale. Within a period of 3 to 4 years there will be no gap in this area at all. We will be ahead of the Soviets.

We cannot discount all of the spectacular claims made by the Soviet Union. I feel, however, that overemphasis on these claims is doing the Nation a real disservice. We are today prepared to meet any Soviet attack. There is no deterrent lag. The question is not whether we have one missile or one thousand. The question is whether we have enough weapons to make an attack on us disastrous for the aggressor. I feel that we are now capable of that and will remain capable. This bill gives the U.S. armed services the kind of support they need.

I most strongly urge and recommend passage of this bill and I hope we can get unanimous support to demonstrate to the world the unity of the people and our determination to remain united and strong and free.

Mr. MAHON. Mr. Chairman, I yield 15 minutes to the gentleman from Pennsylvania [Mr. FLOOD].

Mr. FLOOD. Mr. Chairman, I am not very mad about this bill this year. For about 10 years, particularly in the last several years, I have been very mad about it.

But, there is one thing I would like to say not particularly related to the bill, that is, the provisions of the bill, but it has to do with an atmosphere and an attitude on the part of the Executive toward the Congress of the United States—and I gather more particularly this subcommittee—for its temerity and its impertinence and its presumptiveness that any Member of Congress would dare to question the sanctity of the defense budget when it is wheeled up here to this auditorium. I do not stand in that awe of Secretaries of Defense, of the Army, Navy, Air, or generals and admirals, no matter how many stars they have on their shoulders or in their eyes or hair, under any circumstances.

I certainly was disturbed when the President of the United States said that he knew more about this bill and this business than anybody in the Pentagon or anybody in the Congress, or, apparently, any place else. Well, he has a right to say that just as much as I have the right to say what I am saying. But what manner of meat is this upon which our Caesar feeds? Why, I just do not agree with that, either. Just so we understand, they have the responsibility to send here what in their best judgment is the best defense bill and by all the powers that be, every Member of this House has just as much right—more, say I—to take it apart and put it back together again as best he or she sees fit. That is the way it has always been and that is the way it is going to be.

One thing I do not like, you all know, although I am not going to introduce an amendment on it; I do not like the idea of cutting back the Marine Corps to 175,000. If I had my way I would place in this budget the dollars and hardware for the Marines to be, certainly at a minimum of 200,000; and if I had the say I would put in there for the Marines what the Commandant of the Marines say he believes he needs, and that is 225,000. I believe of all the sections of this budget—because I, too, with my friend from South Carolina [Mr. RIVERS], see no ICBM, all-out, universal nuclear war on the horizon, but I do see brushfire wars or limited wars. As the Good Book says, you will have war from now on; there will be wars and rumors of war until the end of time, all the conferences to the contrary notwithstanding. And when you want the Marines you want them last night. And 200,000, to me, would be the irreducible minimum.

For the Army, when General Eisenhower became President Eisenhower, the great Army of the United States had 20 great divisions and the great Army of the United States, for every year that General Eisenhower has been President Eisenhower, has lost a division a year. In 7 years we have lost 7 divisions. I would restore them last night. I believe the Army, at a minimum, should have what they ask, 900,000. And I would follow General Gavin and General Ridgeway and put it at 1 million men for the Army; 1 million men for the Army, and 225,000 for the Marines with the best hardware that American science and ingenuity can produce, as my friend, the gentleman from Florida [Mr. SIKES], told you, that we have not done. Soviet Russia has modernized her army since World War II almost twice. There have been two generations of modern armament for the Russian Army since World War II. You have in your Army over 60 percent of World War II equipment today. Imagine that. Sixty percent of the 13 divisions you have left are equipped with World War II junk, to fight a Russian Army, God forbid, modernized twice. Why, the Russian satellites have the result of the first Russian modernization. It will take 8 years to put the new rifle into the Army, imagine that, starting last month, 8 years before your Army has the new rifle.

On the airlift, you have heard me on this floor for a decade plead and pray and implore you for an airlift. I have indicted everybody I ever saw in the witness chair before this committee except General Gavin, General Ridgway, Secretary Brucker, and now General Lemnitzer, every Secretary of Defense and every Secretary of all branches of the service, and the Assistant Secretaries and Assistant Assistant Secretaries. Like Gilbert and Sullivan with the brothers and the sisters and the uncles and the aunts, you can count them by the dozen. They come by buses into this town.

The Chiefs of Staff, all the members and the chairmen, have said, man after man, year after year, that the airlift is adequate. The President said it, that our airlift is adequate. They have all sworn that is so. Now overnight they come in on the 24th of April with no notice to us at all and they say that is not so. The airlift is not adequate, the airlift is obsolescent, most of it is obsolete.

If I were the President I would ask the Congress or I would empanel a Presidential commission, and I would put under subpena every civilian official of

the Department of Defense who testified in the last 7 years that the airlift was adequate, I would put them under oath and I would order back into uniform every retired officer of the Department of Defense, and call in those who were still in the service, and put them under oath, and ask them under oath, "Why did you say, all of you, every one of you, that the airlift of this Nation was adequate when it was not?" That is criminal. Why did they say that? Well, I do not know.

I was going to go into the MATS problem. For 6 years I have been trying to shoot down that part of the MATS which is no good, this lace-curtains, fancy-pants airlift they have been running all over the world for the admirals and the generals and the VIP's, everyone you can think of, in competition with the taxpaying civilian airlines. They took the money we gave them to buy transport aircraft and they bought aircraft you could not put a wheel in. The doors were too small. Did you know that MATS had 10 percent of the uniformed force and a good part of the budget? That part of MATS which is good is the best and that which is bad, just like the little girl with the curl in the middle of her forehead, is very, very bad.

We have got them trimmed down and we have got handcuffs in the report to make these MATS people fly the Army and the Marines and the hardware in their transports throughout the world today. We have taken the hot and cold running water out of the stewards' kitchens, all this fancy equipment, and the beautiful Persian rugs for the generals and admirals. We will have an airlift for the Army and the Marines—for fighting men. Aircraft of the kind and configuration which will carry the small antitanks, the small tanks, the rifles, the hardware, and all that we need all over the world to fight the kind of wars that you and I know we are going to have to fight. Yes, I helped shoot down Bomarc. I do not know if I have the time to get into that. The gentleman from Michigan [Mr. FORD] said very kindly that it probably would not work. He is a nice fellow. Well, I guess I am not. He said some people will tell you a lot of things about it. I will tell you what I think about it. From beginning to end, the thing was a fake. I say now with $1,700 million sunk into Bomarc, you cannot take it out here and shoot the starlings off the Supreme Court building in the next 10 minutes. And that is for $1,700 million, and you want to put $2 billion more into it? That is all I am going to say because I have a high regard and affection for my friend from the State of Washington [Mr. MAGNUSON] who was rather burned trying to restore this program, which means so much to his State and to his district. And coming from a district like mine with 20,000 people out of work, I know how he feels. I will not say any more. But, I say this as only a warning to anybody else who wants to fight about it—count me in. If you want to know about Bomarc. I will leave "MAGGIE" alone. He is a good fellow.

Mr. Chairman, those are some of the things that should be done about this bill that I would do. I say, as nearly every member in the subcommittee is saying, you are looking at a plateau of, perhaps, a decade—of this much money in defense bills—no matter who the President is next year or what party is in power. Make no mistake about that. Be sure you understand that. But, I believe this House now knows and realizes and will meet its responsibility and I believe the other body will do the same. I believe this is one bill, believe it or not, that the President will not veto.

Mr. FORD. Mr. Chairman, I yield 10 minutes to the distinguished gentleman from Wyoming [Mr. THOMSON].

Mr. THOMSON of Wyoming. Mr. Chairman, the chairman of the subcommittee in his remarks stated that the committee has not approached this defense appropriation bill in a partisan way and that Democrats and Republicans have worked together in harmony. That is certainly true and it is something that I appreciate and other Members on our side of the aisle appreciate. I know the country appreciates it. That is the way it should be because defense is everyone's business. We are going to make available the money that is required to provide for the security of this country. The Congress and all citizens and taxpayers, I am sure, all feel the same, that if there is to be any error, it should be on the side of being sure that the provision is adequate. I think we can go further, and I know we do, in saying this is a joint program and it was worked out in harmony with the Executive. The Executive has kept us advised of changes in the program originally submitted. The most significant changes are those jointly developed. The Executive has given us all the information we have requested so that we could come up with the best considered judgment of the committee. This, of course, is an area in which there should be, and are, frequent changes. I think one of the most significant things in the committee report is the pointing out of this.

I refer to page 4 in the committee report:

> The adjustments proposed by the Department (referring to the recent adjustments proposed in March by the Executive about which there has been quite a little said) confirm the fact that we continue to live in a period of rapid change and new concepts. Military budgets are hardly more than formalized in the executive branch before changing circumstances, new concepts, or new information encourage a course of modification.

Again on page 6 of the committee report this statement appears:

> The decisions which must be made under these circumstances are most difficult. The problem is complicated by the accelerating rate of technological progress which is making weapons systems almost obsolete or at least obsolescent before they become operational.

In this rapidly developing situation, I have been concerned also with those who have suggested that the Russian system is moving faster than ours. I do not refer to this debate, but to those outside of the Congress, those who have suggested that the Russian system is outstripping the free enterprise system. References are made in the general economic sector as well as in the military sector.

I think that the U.S. News & World Report did a great service when in their May 2 issue they laid out facts which on the basis of information coming to me I believe are remarkably accurate, and I hope the public both in America and abroad will take heed of them, for they effectively debunk the suggestions of some that the government-controlled economy of Russia is outstripping our free enterprise system. It is pointed out that Russia's rate of production in steel is comparable to that of the United States in 1940; in petroleum, to the United States in 1929; in electric power, to the United States in 1943; in shoes, to the United States in 1936; in refrigerators, to the United States in 1928; in trucks and buses, to the United States in 1923; in automobiles, to the United States in 1910; and in meat, to the United States in 1907.

Most commonly used to distort has been the percentage technique. It is said that the Russians are increasing their gross national product at the rate of 9 percent per year, whereas our annual rate of increase is only 4½ percent. We must not be misled by this tricky use of figures. Today the Russian economy is 40 percent that of America; 9 percent of 40 percent is 3.6 percent; 4½ percent of 100 percent is 4½ percent. When we subtract the two, the fact is that the gap in our actual output is widened by almost 1 percent of our present economy. Projected to the year 1965, with the present American economy considered at 100, the then American economy would be 130.2, and the Russian economy 67.4—or a gap of 62.8 in America's favor, as compared to the present gap of 60.

This is true, even assuming the Russians could sustain their 9 percent rate of growth. The fallacy of that assumption is apparent. A person who runs a mile in 10 minutes can easily cut 1 minute from his time. A person who runs the mile in 5 minutes is confronted with an entirely different problem.

Even following World War II, Russia was advancing from a horse-and-buggy economy. Their problem becomes increasingly more severe, as evidenced by their cuts in military manpower, in an attempt to sustain their rate of growth.

In the military area attention has been concentrated on comparing our missile program with that of the Soviet. In connection with that I think it would be well to have a graphic picture of that appear in the debate and at this point I insert a chart from page 133 of part 3 of the committee hearings which portrays our missile effort from World War II to present date:

BALLISTIC MISSILE FUNDING

Mr. THOMSON. Then with regard to missiles, Mr. Secretary, I wish that you would state for the record, because I do not believe

it is in the record, separately for both the IRBM's and the ICBM's for the fiscal years 1945 through 1960 the amount that was requested, the amount appropriated, and the amount that was released for expenditure and the amount expended.

Mr. LINCOLN. We will be happy to do that.

(The information requested follows:)

History of IRBM and ICBM funding, fiscal years 1946–61

[Millions of dollars]

Fiscal year	IRBM			ICBM			Total		
	Budget request	Appropriated	Current program	Budget request	Appropriated	Current program	Budget request	Appropriated	Current program
1946				1.9	1.9	1.9	1.9	1.9	1.9
1947									
1948				.3	.3	.3	.3	.3	.3
1949				.1	.1	.1	.1	.1	.1
1950									
1951				.5	.5	.5	.5	.5	.5
1952				.8	.8	.8	.8	.8	.8
1953				3.0	3.0	3.0	3.0	3.0	3.0
1954				13.9	13.9	13.9	13.9	13.9	13.9
1955				40.9	40.9	158.9	40.9	40.9	158.9
1956 [1]	4.4	4.4	107.5	154.9	154.9	418.8	159.3	159.3	526.3
1957 [1]	276.0	276.0	501.9	582.9	582.9	899.0	858.9	858.9	1,400.9
1958 [1]	892.5	892.5	1,151.2	1,044.8	1,044.8	998.6	1,937.3	1,937.3	2,149.8
1959 [2]	1,322.0	1,931.0	1,617.1	1,069.0	1,209.0	1,328.5	2,391.0	3,140.0	2,945.6
1960 [3]	839.8	839.8	1,189.5	1,683.0	1,855.0	2,113.8	2,522.8	2,694.8	[3] 3,303.3
1961	952.2			2,471.8			3,424.0		

[1] No funds appropriated to Army P. & P.; unobligated balances utilized.
[2] $300,300,000 fiscal year 1959 funds utilized in fiscal year 1960 for Polaris submarines.
[3] Fiscal year 1960 estimate refined from those used in tentative table dated Jan. 7, 1960.

NOTE.—Estimates are subject to minor revision due to program adjustments.

Program data reflected in this table cover the development and capital costs involved in missile programs; i.e., the cost of bringing missile systems to operational status plus the costs of procuring missiles and related equipment for operational purposes. These data include all procurement, construction, and research and development programs directly associated with missile programs. These figures do not include military pay, operation, and maintenance costs for operational missile units and sites and include only those shipbuilding and aircraft costs directly associated with providing missile capability.

It is perfectly obvious from looking at this table that we did not seriously commence on a missile research and development program until fiscal year 1954, commencing on July 1, 1953. This has allowed us only 7 years of real effort.

The remarkable thing, to me, is that in this short period of time, we have successfully developed intermediate range ballistic missiles and placed them in operation. Both the Jupiter and the Thor are deployed or are being deployed in oversea bases where, with their limited range, they can be effective.

Even more significant is the fact that we have performed the research and development to have operationally effective and completely successful the Atlas intercontinental ballistic missile. From bases in this country, it will deliver, any place in the Soviet Union, an adequate warhead to effectively destroy any known possible military target, either now or in the future. The Titan is in the test phase. The Polaris capable of being launched from undersea having both mobility and concealment is coming into the inventory.

Sure, we are not stopping. It will be further improved. There will be follow-on missiles, the Minuteman, the Skybolt, and others which, in certain respects, will constitute a technological advance.

Let us not be misled by confusing space capability and military capability. As a military weapon, by any standards, the Atlas is as good or better than anything the Russians have. It will carry all the load we want to carry or have any military reason to carry, and deliver it to any place on the earth we might want to deliver it. There is every reason to believe that it is superior in reliability and accuracy to what the Soviet has now. With us having achieved that in such a short period of time, it is obvious to anyone that continuing with a responsible effort, we will stay out in front and go farther out in front.

Even in the space field there is no reason to hang our heads or to take a back seat. These weapons were never intended for space vehicles, but when that became important, with makeshift modification we have demonstrated our ability and our scientific know-how. Their principal space limitation is that of thrust. They were developed as military weapons, and their thrust is completely adequate for that purpose. To be available soon, and progressing on schedule, will be vehicles intended for space which will have the thrust and other capabilities to far exceed anything that the Russians have done yet, or will, I predict, do in that time, as concerns the size of payload or anything else.

This is truly a remarkable achievement to have been gained in such a short period of time. It is a great tribute to our scientists, both in and out of the Government, to our military, to those responsible for our production facilities, to the free enterprise system, and to our American way.

It simply says that once we set out to do it, we can accomplish more than the Soviets in less than half the time. We should all join, not in bragging about this, but in forcefully pointing out the facts to the whole world.

This is important in deterring any further war by reason of miscalculation, such as brought about World War I, World War II, and the Korean war, and is further important as concerns our bargaining position as we approach summit meetings and in other diplomatic negotiations.

Our sole objective is to preserve the security of this country and our way of life, while maintaining the peace. We fully appreciate that to preserve our own security, we must join in preserving the security of other free nations of the world. For the moment, we accomplish this through military strength. Simultaneously, we sincerely and steadfastly pursue other means. Concurrently, we must exercise judgment, which will adequately provide for the security and the peace, but thwart the plans of those who would lead us into spending our way into a foreign ideology by destroying our system economically. That is just what the recommendation of the President and the provisions of this bill will accomplish.

The military strength required to preserve our security and maintain the peace is referred to as an adequate deterrent. As the chairman of the subcommittee has said, our deterrent capability is the sum total of our overall military force. Now and in the immediate future, this is not determined by a comparison of the number of intercontinental ballistic missiles. The total force and total capacity is what counts. Every responsible and fully informed qualified person agrees that now and in the future, even giving the Soviet full credit for any place in which there is a reasonable doubt as to their capability, we have and will continue to have that overwhelming superiority which amounts to an adequate deterrent.

When I say "responsible and fully informed qualified person," I mean those who know the facts, are professionally qualified to judge, and are completely objective. Naturally, I cannot enumerate and quote all of these individuals.

May I, though, single out one who has assured us of this, knows all of the facts, and is qualified as well as objective. That is our fine Chief of Staff, General Twining, who is now serving, contrary to precedent, a second term as Chief of Staff. General Twining's dedication to duty and country were again proved when, after an operation for lung cancer only about a year ago, when he might very well have done otherwise, he continues to make available his services in this capacity to his country.

His appraisal of our overall capability, now and in the future, is confirmed by the independent judgment of the Chief of Staff for each of the respective services, General Lemnitzer, General White, and Admiral Burke.

The important thing is that we continue to make the decisions that are required to provide for this in the future. I think that the executive is doing that. The Congress is doing that. I repeat, concurrently we should exercise the judgment that will adequately provide for the security of this country, and we must make every effort to be sure that we thwart the plans of any foreign ideology to destroy our system from within economically. I think that is significant and greater than any threat from without.

I think this bill is a well-considered one. None of us may agree with every provision of it, but it is a bill that will provide for the security of our country well within the framework of our economic system.

The CHAIRMAN. The time of the gentleman from Wyoming has expired.

Mr. MAHON. Mr. Chairman, I yield 15 minutes to the gentleman from Washington [Mr. MAGNUSON].

Mr. MAGNUSON. Mr. Chairman, I take this time to protest what this bill proposes to do to the Bomarc missile program.

This bill, if the intent of the committee proposal finally is carried out, would junk the entire Superbomarc or Bomarc B program. Make no mistake about that.

This was not the intention of the Air Force, Mr. Chairman, when it proposed a reduction of $381 million in Bomarc B funds for fiscal year 1961. The committee has gone far beyond the Air Force recommendations. Most importantly, the committee proposes to recover all Bomarc B funds now in the procurement pipeline.

This recovery would total $253,600,000. The committee cut out an additional $40,400,000 in new appropriations requested by the Air Force.

I wonder, Mr. Chairman, if we realize just what is being proposed here. I very much fear that most of the Members of this body do not.

What we are dealing with is a military decision of staggering implications. If we abandon the Bomarc B, we abandon the only promising program of defense against manned aircraft.

Are we—obvious laymen in the scientific and military sense—prepared to make this momentous decision, in the face of opposing recommendations by the experts upon whose judgment we logically must rely for the defense of our country?

Is this Congress prepared to decide that manned bombers no longer pose a threat to our security? Oh, the committee apparently has decided to turn to manned interceptors as our chief reliance against bomber attack.

But I say to you that manned interceptors will not do the job. Bomarc will. Manned interceptors not only will not do the job, but a defense system based on them cannot conceivably be ready within 2 years of the time that Bomarc B would be operational. Also, it would be much more costly.

The committee report offers the criticism that the Bomarc test program has not been progressing satisfactorily. I should like to address myself to this point for a moment.

TEST RESULTS

Although the Bomarc B flight test program has left much to be desired, the adverse newspaper publicity has overshadowed the true gains made. The first missile to contain all components designed specifically for the B missile was the first B missile fired at Eglin AFB last month on the Gulf Test Range. The mission was a 100 percent success—all test objectives were achieved. The simulated target was intercepted. The missile was destroyed by range safety at 150 nautical miles, the present limit of the Gulf Test Range. The ram-jet problems experienced in the early flights at Cape Canaveral have been overcome. The highest risk item in the test program, the solid booster, has worked 100 percent satisfactorily on every test flight. Failures of components which were job shop modifications of Bomarc A hardware were directly responsible for two of the B missile flight test failures.

The Air Force has expressed its confidence in the Bomarc missile. The Boeing Airplane Co., which developed it, has the utmost faith in it.

I call to your attention testimony in the hearings by Brig. Gen. Joseph R. Holzapple, director, systems management, Wright Air Development Division, Air Research and Development Command, starting on page 203 of the hearings.

General Holzapple said:

> The purpose of this brief presentation is to acquaint you with the accomplishments of the Bomarc program—both A and B models—during the past 12 months, and to show how these accomplishments lead to our confidence in the basic integrity of the weapon system regardless of the quantity of either model to be placed in the operational inventory.

Again, on page 207:

> In summary, there are no basic or fundamental defects in the Bomarc B design. Engineering problems have been encountered in the development test program, but these are of a relatively straightforward nature, and there is no doubt in our minds that these problems will be solved. As previously indicated, the principal difficulty is the compressed time scale of the program which was accepted at the initiation of the Bomarc B to meet an urgent requirement. Although the operational readiness date of the first Bomarc B unit may slip from the original schedule, we are confident the readiness dates of the later units will be in accordance with the original schedule.

So what we are proposing to do here today, Mr. Chairman, is to scrap a weapon which the Air Force wants and believes in, and for which it has no acceptable substitute.

If the Bomarc B is not implemented, the Air Force cannot make up the deficiency and provide an equivalent capability in the same period under any circumstances. The Air Force has no weapons available or under development which will provide the low-altitude kill capability of the Bomarc B.

The Air Force has no weapons available or under development which can be maintained on the continuously ready alert basis of Bomarc. All operational Bomarc missiles are automatically maintained ready to repel an attack.

The Air Force has no defensive weapons available or under development which are capable of the cruise speed of Bomarc B to the ranges of Bomarc B.

There is no other defensive weapon available or in development which can provide the firepower or rate of fire of the Bomarc B. The high speed, long range, continuous state of readiness and rapid rate of launch enable the Bomarc B to react quickly and prevent hostile aircraft penetration, thus reducing the detrimental effects of a nuclear battle being conducted overhead.

The earliest that an off-the-shelf fighter such as the F–106A can be made available is a year later than Bomarc B. An improved version of the F–106 could not be made available until approximately 3 years after the Bomarc B.

Cost effectiveness analyses have consistently shown that the Bomarc B provides the most defense capability for the money invested when compared to either manned interceptors or short-range missiles such as Nike.

The cost of an improved interceptor program to provide some of the capabilities of the nine-squadron Bomarc B program, such as low altitude, and a near equivalent weapon density, have been proposed at a cost approaching $1 billion.

Over a long period of operation, the Bomarc B program has a considerable advantage over the other defensive weapon systems. Annual operating costs for a B squadron is $2.8 million, whereas an F–106A squadron, equipped with fewer aircraft, costs $9.4 million. In other words the approximate equivalent fighter force would cost 4 times more to maintain than the Bomarc B force. Over a period of 5 years, $517 million would be required, as compared to $126 million for the Bomarc B.

RELATIVE FLEXIBILITY

Bomarc is fixed to a geographical location, so sited as to provide defensive coverage to the most heavily concentrated complex of population, industry, and strategic force bases.

Although shifting of manned interceptors is feasible, redeployment of our air defense interceptors to cope with limited war is unlikely. Primarily, their capability would be considerably reduced when moved out of the SAGE environment. Secondly, we would not choose to deprive our country of our air defenses, thus inviting unopposed bomber attack and the possibility of flaming a limited war into an all-out war. Thirdly, the Tactical Air Command has modern aircraft and missiles for just such missions as limited war.

The shifting of manned interceptors from one section of the country to another during an air battle to cope with concentrated bomber attacks is unlikely. A bomber attack, to be successful, would by necessity be aimed to strike all of the targets in the United States nearly simultaneously from several directions.

SAVINGS WITH TERMINATION

The savings that could be realized if the Congress forces the termination of Bomarc B has diminished from the $300.8 million of the April 15 termination estimate to less than $50 million with a realistic termination estimate of June 30. Such savings could not equip one 18-aircraft squadron with off-the-shelf interceptors. A trade of 14 operational Bomarc B missiles for one interceptor is far from being operationally acceptable. The $50 million fiscal year 1960 funds retained by the committee to continue Bomarc B testing is insufficient to prove the weapon capability.

SAGE CONTROL

The Semiautomatic Ground Environment provides control for both Bomarc and the manned interceptors. Either could be used in degraded modes without SAGE control. When the ICBM becomes the predominant threat and the SAGE control system becomes a lucrative ICBM target, then an autonomous control for Bomarc, similar to that provided fighters and Nike, becomes attractive. I am informed that developments to provide a capability to launch and control Bomarc B missiles without SAGE control has been developed and is available. The capability can be demonstrated this year and operational implementation would cost less than one-half million dollars.

Although not presently programed to be hardened, the Bomarc B is the only defensive weapon which can be hardened and dispersed to survive a surprise ballistic missile attack. A greater expenditure for ballistic missiles to knock out a hard, dispersed Bomarc system is required than the cost of completing the nine Bomarc B squadron program in a hard dispersed configuration.

ABILITY TO COPE WITH THE THREAT

The threat of mach 2 medium bombers and mach 3 bombers and cruise missiles at 70,000 feet are within the spectrum of the treat which the Bomarc B has been designed to destroy. Similarly, the mach 1.8 air-to-surface missile is a design target for the Bomarc B. The inability of the current manned interceptors to cope with this advanced threat has been long recognized and led to the F–108 program. With the cancellation of the F–108, the Bomarc B remains the only Air Force program capable of meeting the threat without costly additions to the electronic ground and airborne environment. The latest intelligence estimates have advanced this threat into the 1961–62 period, at which time the Bomarc B is planned to be implemented.

The numerous reviews of the Bomarc B program by the scientific community have all validated the technical feasibility of Bomarc B meeting the design goals and thus coping with the threat.

INTERNATIONAL IMPLICATIONS

The international implications of terminating the Bomarc B program have not been fully realized or considered. At best, the Canadian military will lose the confidence of the Canadian Government and set the RCAF contributions to air defense of the North American Continent back in terms of years. Secondly, the production program is being shared by Canadian industry.

At worst, the cancellation of the Bomarc B, in conjunction with the elimination of the SAGE super combat center program, may place the present Government in Canada in jeopardy. Such actions could possibly result in the Canadian withdrawal from Norad and denial of U.S. military use of Canadian airspace. The following excerpt is quoted from the Washington Post:

UNITED STATES WARNED ON BOMARC WITHDRAWAL

OTTAWA, April 29.—Defense Minister George Pearkes today said the United States will be breaking an agreement with Canada if it scraps the Bomarc B guided missiles planned for two Canadian bases. * * * "If the recommendation is approved and finalized," he said, "this will not be in keeping with arrangements made a year ago between our two countries for the air defense plan of North America.

Mr. Chairman, I ask again, are we, as military and scientific laymen, prepared to risk the safety of our country on the assumption that we no longer face a threat from manned bombers?

If so, our best military minds disagree. Permit me to quote General White, the Air Force Chief of Staff:

The Soviet Air Force is the U.S.S.R.'s most dangerous weapon * * * . Approximately 10 percent of its aircraft strength is in its long-range air force of about 1,200 modern heavy and medium bombers.

General White also said:

Nuclear-propelled aircraft armed with such weapons (air-to-surface missiles) would be able to conduct long endurance patrols over the seas, friendly land masses and areas inaccessible by other means—with a capability to launch a devastating attack within minutes.

General White also had this to say:

We have plenty of information that their manned aircraft are continuing to be exercised and maneuvered at a very high rate; in fact, at an increased tempo. * * * According to our intelligence, they are continuing production at a reduced rate of their heavy bombers. * * * We also have intelligence that they are developing new bombers. * * * Central Intelligence reports show construction activity on bomber bases in the Soviet areas mentioned.

Mr. Chairman, from the most reliable estimates available to us, the manned bomber will continue as a serious threat to the security of this Nation up to at least the 1970's. I submit that this Congress will be taking an awesome responsibility upon itself if it should decide that we no longer are required to defend ourselves against manned aircraft. I, for one, am not prepared to assume that responsibility, which goes to the safety of our homes and the very lives of millions of Americans.

It is my earnest hope that the other body will see the dangers inherent in the scuttling of the Bomarc B program and will reverse the recommendations of the bill and report before us here today. When and if that occurs, I hope the House will take a long, hard, second look at what we are being asked to do here today.

Mr. FORD. Mr. Chairman, I yield 10 minutes to the distinguished gentleman from Utah [Mr. DIXON].

Mr. DIXON. Mr. Chairman, I commend most highly my colleague from Washington, Representative MAGNUSON, on his splendid talk. He has covered this field of defense for the Bomarc, I think, very thoroughly.

Mr. Chairman, the additional reduction of $294 million as proposed by the Appropriations Committee in the funds for the Bomarc B missile, beyond the cut already made by the Defense Department, is in my opinion a terrible mistake. My reasons are as follows:

First. The reduction eliminates the production of the Bomarc B missile which leaves an inexcusable void in our Nation's protection against enemy supersonic aircraft.

Second. The tests of Bomarc justify confidence in its fulfilling the purpose for which it is created.

Third. Our President, Department of Defense, and leading scientists and those responsible for our air defense plead for continuation of the Bomarc.

Fourth. The elimination of the Bomarc violates an agreement between this country and Canada.

Fifth. To phase it out by 1962 when we will have a satisfactory number is one thing; to chop it off all of a sudden is another thing—too drastic.

LEAVES INEXCUSABLE VOID IN NATION'S DEFENSE

This cut eliminates all production of the Bomarc B and leaves an inexcusable void in the protection of our country against enemy supersonic aircraft. To leave ourselves wide open to attack and even to invite attack as this public announcement would do is foolhardy.

Now, if the Bomarc is eliminated, what do we have to take its place? Nothing.

The Nike system cannot take the place of the Bomarc. In fact the Bomarc is not a duplication of the Nike system, but is a complement to the Nike system with abilities that the Nike system does not have. The Nike includes three series—the Ajax, which replaces antiaircraft defenses for point defense; the Hercules, which is also for point defense and has a range of 75 to 85 miles. This, of course, is a last ditch effort and far too close for comfort. We must have weapons that will down enemy aircraft long before they get within 75 miles of the city. The Nike-Zeus is designed to destroy intercontinental ballistic missiles, while the Bomarc on the other hand is designed for air breathing vehicles.

The Bomarc A which has a liquid fuel booster and then cruises with ramjet power has a range of 200 miles. The B which has a solid fuel booster has a range in excess of 400 miles. While cruising these can be manuevered to hunt and kill enemy places which the Nike missile cannot.

Well, you say what about manned interceptors, the F–101 or F–106, for example? Manned interceptors will not fill the void caused by the elimination of Bomarc. The Air Force cannot make up the deficiency and provide an equivalent capability in the same period under the circumstances.

First. The Air Force has no weapon available or under development that will provide the low altitude kill capability of the Bomarc B.

Second. The Air Force has no weapon available or under development that can be maintained on almost instantaneous alert basis continually. The Bomarc has this capability.

Third. The Air Force has no weapon available or under development capable of cruising at anywhere near the speed of the Bomarc—more than 2½ times the speed of sound.

Fourth. The Air Force has no interceptor that will reach out in excess of 400 nautical miles at supersonic speed as can the Bomarc.

Fifth. There is no other defensive weapon available or under development

that can provide the fire power or rate of fire of the Bomarc. Each base can release a block of missiles simultaneously.

Immediate defense from manned interceptors cannot be relied upon. First, the aircraft proposed to replace Bomarc would not be available until mid-1962—a year later than the Bomarc B; and an improved version would be 3 years later than Bomarc B. The cost of replacing Bomarcs by F–106's is estimated to approach $1 billion, whereas Bomarc would only cost $294 million that the committee eliminated. The $215 million that the committee transferred for F–106's would only do less than a quarter of the job. A Bomarc squadron is $2.8 million whereas a F–106A squadron equipped with about half as many aircraft costs $9.4 million a year, or many times that of the Bomarc. Over a period of 5 years the total operating cost would reach $517 million as compared with $126 million for the Bomarc.

Opponents of the Bomarc maintain that manned interceptors could be shifted and redeployed. Actually this is unlikely because a bomber attack to be successful would of necessity be aimed to strike at permanent industrial and military targets in the United States. We would not choose to deprive this country of our air defenses to send them overseas to fight a small war.

The chief argument of the opposition is that by the time the Bomarc B is ready, the enemy will have its intercontinental ballistic missile and will therefore not need to use supersonic aircraft. I cannot buy this reasoning. First, because the Bomarc B will undoubtedly be ready and in supply long enough in advance of U.S.S.R.'s ultimate intercontinental ballistic missiles capability; and second, because this very public announcement that the committee is eliminating the production of Bomarc is the best invitation possible for the enemy to strike with supersonic aircraft. This cut lowers the price of admission to an attack. We have already placed any enemy on notice that this is our vulnerable spot. Third, even with the intercontinental ballistic missile, the enemy will undoubtedly throw everything it has at us—supersonic aircraft and all.

I protest with all my heart not only the committee's action making us defenseless in certain areas, but the committee's open invitation to the enemy to attack us in a vulnerable place.

THE TESTS DO JUSTIFY CONFIDENCE

The committee report made the following statement in regard to the Bomarc:

> The Bomarc missile in its final configuration is at best highly controversial and as yet unproven, and tests have done nothing to justify confidence in the program.

Brig. Gen. Jos. R. Holzapple, Director Systems Management, Wright Air Development Division, Air Research and Development Command, made this declaration to the Military Appropriations Subcommittee:

> In summary there are no basic or fundamental defects in the Bomarc B design. Engineering problems have been encountered in the development test program but these are of a relatively straightforward nature and there is no doubt in our minds that these problems will be solved.

And I would like to add that this has been characteristic of every military program ever attempted.

There have only been eight Bomarc B flights to date. With this small number of development flights one has already been completely successful in all objectives. This was the flight from England Air Force Base April 13. The test was 100 percent successful. See letter read by Representative SIKES in his speech preceding this statement. It proved the missile is capable of achieving its objective. This completely successful flight took place after the Military Appropriations Committee took its testimony on the Bomarc B.

Dr. A. H. Flax, Chief Scientist, Office of the Chief of Staff, U.S. Air Force, similarly favored the Bomarc. He said—hearings report, page 212:

> I had no prior connection with the Air Force or Bomarc and I received no instructions to give any weight whatever to this historic factor. I think my conclusions are based entirely on technical matters and the feasibility of doing the job.

It was Dr. Flax' recent investigation that helped intensify the support of the President and the Air Force Chief of Staff.

Gen. Laurence S. Kuter, Chief of North American Air Defense, told a Senate Armed Forces Subcommittee that Russian bombers know intercontinental missiles will be the chief danger to this country for the next 3 years. He made clear that the Bomarc B was absolutely essential and feasible to meet this threat.

THE AUTHORITIES PLEAD FOR BOMARC

Those who are responsible for America's defense want the Bomarc. A persuasive case was presented for the need for the Bomarc B by leading military authorities from the Defense Department, including Brig. Gen. Joseph R. Holzapple, Director, Systems Management, Wright Air Development Division, Air Research and Development Command; Maj. Gen. H. M. Estes, Assistant Deputy Chief of Staff, Operations, U.S. Air Force; Dr. A. H. Flax, Chief Scientist, Office of the Chief of Staff, U.S. Air Force.

I would like to quote from statements made by General Estes to show further that the commander of Norad, the man directly responsible for North American Air Defense, is anxious to have the Bomarc. General Estes declared:

> The commander of Norad on being queried with reference to Bomarc on several occasions has invariably stated that he considered Bomarc the prime air defense weapon system. He is the man who has to fight the battle and who has to run the air defense of the country. I would feel, therefore, we should be most concerned with what the commander who has to do the job—how he feels.

In addition to these Air Force officers who have the responsibility of our air defense the Bomarc missile has been studied and restudied by military and scientific committees established by the Secretary of Defense and the development and procurement of the missile has been consistently recommended. The Weapons System Evaluation Group headed by Admiral Sides recommended that Bomarc be stepped up. The Joint Chiefs of Staff, the Secretary of Defense and the President have all supported the green light on Bomarc development and production. Money is recommended in the 1961 budget and appropriated funds are on hand to do the job.

KEEP FAITH WITH CANADA

The international implications of terminating the Bomarc B program have not been fully realized or considered. At best the Canadian military will lose the confidence of the Canadian Government and set the RCAF contributions to air defense of the North American Continent back in terms of years. Secondly, the Bomarc B production program was being shared by Canadian industry. The buy-American policy was negated for the Bomarc program. At worst the cancellation of the Bomarc B in conjunction with the elimination of the SAGE Super Combat Center program may place the present government in Canada in jeopardy. Such actions could possibly result in the Canadian withdrawal from Norad and denial of U.S. military use of Canadian air space.

The following excerpt is quoted from the Washington Post:

UNITED STATES WARNED ON BOMARC WITHDRAWAL

> OTTAWA, April 29.—Defense Minister George Pearkes today said the United States will be breaking an agreement with Canada if it scraps the Bomarc B guided missiles planned for two Canadian bases. * * * "If the recommendation is approved and finalized," he said, "this will not be in keeping with arrangements made a year ago between our two countries for the air defense plan of North America. * * * Pearkes' statement was the first in which he has been critical of any U.S. actions in the Bomarc's struggle for survival. * * * The U.S. House committee recommendation, if followed, would trim development of the Bomarc and place more emphasis on building F–107 jet interceptors.

Mr. KING of Utah. Mr. Chairman, will the gentleman yield?

Mr. DIXON. I yield gladly.

Mr. KING of Utah. Is it not true that this proposed cut has come virtually without warning on the heels of the cut already offered by the Air Force some 2 months ago, and by virtue of its being virtually unannounced it has caught many of these corporations completely unawares and it is going to cause great injury with an adverse impact upon local economies.

Mr. DIXON. That is exactly correct; it has come just like lightning out of a clear sky. The Bomarc people did plan to phase out by 1962 after they had produced the reduced number of missiles the Department wanted.

Mr. KING of Utah. Mr. Chairman, will the gentleman yield further?

Mr. DIXON. I yield.

Mr. KING of Utah. And is it not further true that all of these companies engaged in the manufacture of the components of the Bomarc weapons system have brought together scientific teams, teams of specialists that have now been working together for several years and

with this cut coming virtually unannounced many of these scientific teams will be broken up and dispersed around to the disadvantage and loss of our national defense effort?

Mr. DIXON. That is why I think it would be a terrible mistake to chop the appropriation off abruptly. It will work a real hardship on communities such as mine—Ogden, Utah. This is especially true now that we have this successful test of April 13. This proposal is really a ruthless undertaking, and I cannot conceive of our country taking such a drastic step.

I hope the Senate restores the appropriation.

Mr. KNOX. Mr. Chairman, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from Michigan.

Mr. KNOX. Mr. Chairman, I listened with a great deal of interest to the remarks of my colleague from Utah and also to the remarks made by the gentleman from Washington.

I have been somewhat concerned since the information was made available to the press that the Committee on Appropriations was studying the question of eliminating the Bomarc missile from any further development, and the possibility of the recapture of funds that had already been appropriated.

I am somewhat confused to sit in the Chamber today and hear that this thing has happened in spite of the recommendation of the committee 2 years ago when we were told as Members of Congress that the Bomarc missile was necessary, that it was one of the recent developments in the missile field, and would be used as one of the prime weapons in the defense of our country. If I recall correctly the remarks of the gentleman from Pennsylvania [Mr. FLOOD], we have spent $1,700 million on this Bomarc missile, and if we continue we will spend something over $2 billion.

It is hard to conceive that the people of this Nation have been led down a dead end street in the expenditure of this amount of money. It is disquieting for a committee to come before the Congress and tell this Congress that this weapon is of no further use, that it is obsolete, that it does not meet the tests that it should meet after we have gone forward on the recommendations of the committee, the recommendations of the Congress to spend this amount of money for a weapon that we all felt was in the best interests of the Nation.

Mr. DIXON. If I may intrude to say, the committee report has failed to mention that the Bomarc A missile is achieving its purpose, that it is in production except that it has not the speed, nor does it carry out beyond 200 miles as the B missile will do.

Mr. KNOX. If I have been properly informed, I believe the Bomarc missile was developed for the purpose of the interception of fast bombers that possibly could be used by an enemy, not specifying any particular enemy, that may attack this country.

It has been said here by the gentleman from Washington [Mr. MAGNUSON], in accordance with the report he has read, that the Soviet Government does have bombers the same as the United States has bombers. If that is the fact, and I have no reason to doubt it, we should have in this country a facility to keep aloft weapons of destruction in case of attack.

Mr. DIXON. May I support that statement by a quotation. The chief of the North American Air Defense told the Senate Armed Forces Subcommittee that Russian bombers, not intercontinental missiles, will be the chief danger to this country for the next 3 years. He made clear that the Bomarc B was absolutely essential and feasible to meet that threat. If Russia attacks, they will throw their bombers, ICBM's and everything else it has at the same time, and we will have no defense against those bombers beyond the range of the Bomarc A, as I understand it.

The CHAIRMAN. The time of the gentleman from Utah has expired.

Mr. FORD. Mr. Chairman, I yield the gentleman from Utah 5 additional minutes.

Mr. KNOX. I should like to request from the chairman of the subcommittee that made the recommendations to the full committee recommending this legislation to the Congress, relative to the cutback from the $421.5 million recommended by the President within the last 6 months, an explanation. The President and the Bureau of the Budget agreed to this amount. It is cut back now to some $50 million. This $50 million, according to the report, is for further development, tests and evaluation, if necessary.

The question I would like to ask is this: Is the gentleman somewhat doubtful in the case of the Bomarc missile that we should eliminate it?

Mr. MAHON. I may say to the gentleman from Michigan that we have been troubled for many years over the slow progress made with development on the Bomarc missile, and especially the Bomarc B. It could be that the program has not been well managed. It may be that the state of the art, so to speak, in developing this type of missile is not such that the system can be made effective. At any rate, a majority of the members of the committee have lost confidence in the Bomarc missile. The Defense Department apparently has lost considerable confidence in it because the Department asked for a major scaling down of the program on April 6. Not only that, the demand for this type of defense appeared to be much greater 2 or 3 years ago, than it does now. We are moving out of the manned bomber period, not completely, of course, but we are going to rely more heavily on the intercontinental ballistic missile. Bomarc A and Bomarc B do not fit very well into the future. They would be better missiles to have today, but we now have only a few Bomarc A's and no B's.

Mr. KNOX. May I further ask the gentleman relative to the request of the administration for, I believe, some $65 million to keep SAC airborne.

Mr. MAHON. I believe the request was $60 million for spare parts and a total request of $85 million to enable us in the event we desire to do so to keep a portion of our Strategic Air Command bombers aloft so they would be less vulnerable during an emergency period.

Mr. KNOX. Is it not also true that the committee has approved $200 million now for that project?

Mr. MAHON. The committee has approved an additional $115 million for preparation for an airborne alert—for the procurement, principally, of spare parts. These same parts will be required within a few years for normal operations even though we never had an airborne alert, so I do not consider this money as being wasted.

Mr. KNOX. Is it not also true that the Department of Defense stated that they should have over $600 million to do an effective job?

Mr. MAHON. The Strategic Air Command had requested a much larger sum. The Air Force itself would like to have had more money for the airborne alert, but it was not possible to get the concurrence of the Joint Chiefs of Staff and the Secretary of Defense and the Bureau of the Budget with respect to the request for additional funds.

It must not be said that we are completely free from any danger of a manned bomber attack. There is always that danger, and very devastating blows could be delivered upon this country through an all-out manned bomber attack, especially if the attacker resorted to the one-way mission type of attack. This is a serious problem, and we all share—at least I do—to some considerable extent the concern of the able gentleman from Michigan.

Mr. DIXON. Would the gentleman please describe what we have to fill this void to protect us from attack by Russian supersonic aircraft? You see, we are building ours up and probably they are theirs, too. Surely if they hit, they will hit with everything they have, not just ICBM's. We will need interceptors for bombers and need them for a long time.

Mr. MAHON. Well, there is no void now, because there is no Bomarc B. We do not have Bomarc B. We would have it, we hope, in a few years.

Mr. DIXON. We had one very successful test on April 13.

Mr. MAHON. Generally it has been a very disappointing program. There would be no void because there is nothing in its place now, except we do have seven squadrons of Bomarc A, partially in existence, and we have Nike-Hercules for short-range or point defense and we have manned fighter aircraft, and we provide in this bill $215 million for additional F–106 aircraft to use in our defense.

Mr. DIXON. Your improved F–106's are not ready yet. They cannot be ready as soon as Bomarc will be ready.

Mr. MAHON. We have other types which are ready, which are on station. The F–106 was the aircraft which the Air Force said it would rather have in the event Bomarc was canceled.

Mr. DIXON. You are taking money from Bomarc to put in F–106, and they will not be ready until after Bomarc would be ready.

Mr. MAHON. The fact is that the F–106 will be more flexible. They can

be used anywhere. They can be used in limited warfare overseas, and it was thought by the members of the committee, that this would be the better investment.

Mr. KNOX. I should like to ask the gentleman another question, whether or not the committee in its deliberations and determinations felt that this Bomarc missile now is an obsolete weapon.

Mr. MAHON. Well, the Bomarc B is not really in existence except in research and development, so, of course, it is not obsolete. But, by the time it would come into the inventory in operational quantities, the need for it would not be nearly so great as previously anticipated. The time we have need for the Bomarc B is now and the next year or so.

Mr. KNOX. Is it the gentleman's opinion, then, that so far as any potential enemy is concerned, they are not taking a close look at what is happening in the United States today insofar as the operation of the Congress is concerned?

Mr. MAHON. There is no doubt but that every significant word will be studied and weighed. But it would seem to me, as I have said in the discussion here today, that the great threat to the United States is the ICBM, because we would have warning of a manned bomber attack and we would be able, certainly, to salvage enough to destroy if not completely obliterate any opponent who would attack us by manned aircraft.

Mr. Chairman, I yield 5 minutes to the gentleman from Michigan [Mr. O'HARA].

Mr. O'HARA of Michigan. Mr. Chairman, I rise for the purpose of discussing and bringing to the attention of this House the effect of certain Bureau of Budget policies upon our national defense posture and upon the level of appropriations generally. The Bureau of the Budget, in a bulletin dated last September, applied to Government-owned, contractor-operated facilities, the principle that Government work, wherever possible, should be placed in private hands rather than having the work done by Government. A Government-owned, contractor-operated facility is a facility, such as an arsenal or a missile plant, that is owned by the Government but operated by a private contractor, an aircraft company or an automotive company, to perform a Government contract.

Mr. Chairman, it has been the consistent policy of the distinguished gentlemen on the Committee on Appropriations of the House and of various administrations of our Government for a number of years to attempt to procure the most defense for the least money. Mr. Chairman, I submit that the policy of "more bang for a buck" has now been replaced by a policy of "more noise for a nickel." If the Department of Defense or any other Government agency is confronted with two bids from private contractors, one by a private contractor who proposes to use his own facilities and one by a private contractor who proposes to use a plant the taxpayer has already bought and paid for, they must award the contract to the bidder proposing to use his own private facility, even though his bid may be a good deal higher.

Mr. Chairman, I believe that this policy is one that is not in the best interests of the United States nor in the best interests of the private enterprise system. It is not giving an advantage to a private contractor as opposed to Government in business. It is giving an advantage to one private contractor over another, giving an advantage to the private contractor who does not wish to use a facility the taxpayer bought and paid for many years ago. At the appropriate time I am going to offer an amendment to this bill which would prevent the use of funds appropriated under this bill for the purpose of paying a differential on any contract for the purpose of having the work done in a private facility when a Government facility is available. My amendment shall read as follows:

SEC. . If any contract is made after the date of enactment of this Act which is to be performed in a facility not owned by the United States even though a lower bid was made for such contract by a person who proposed to perform such contract in a facility owned by the United States, no funds appropriated in this Act shall be used to pay any amount under such contract which exceeds the amount of such lower bid if such contract would have been awarded to the person submitting such lower bid but for the application of any policy which favors the award of such a contract to a person proposing to perform it in a facility not owned by the United States.

I testified before the Appropriations Committee on this subject and I should like to call your attention to my testimony which appears at page 430 of part VII of the hearings on the Department of Defense appropriations for 1961. I shall at the proper time ask unanimous consent to have my testimony before the committee printed at the close of these remarks.

I ask the Members of this House to give this matter their serious attention. I think it is one that will have a great effect upon the national defense, upon the cost of military hardware and, to be more realistic about it, on the amount of military hardware we will be able to get for a given amount of dollars.

PROCUREMENT POLICIES

(Witness: Hon. JAMES G. O'HARA, a Representative in Congress from the State of Michigan)

Mr. MAHON. We will resume our hearings. Mr. O'HARA, we are pleased to have you before us. Will you proceed in your own way.

Mr. O'HARA. I will first identify myself. I am JAMES G. O'HARA, Representative in Congress from the Seventh Congressional District of Michigan. I am here this morning to speak to you about certain procurement policies of the Government which I believe have a serious impact upon defense procurement, Government costs, and the level of appropriations generally.

Mr. MAHON. I know of your great interest in the overall field of defense and in procurement policies, and of your efforts to be of service to the Government and to the country with respect to these matters. I hope you will proceed and give us your best views.

Mr. O'HARA. Thank you. I would like to give a little background first.

COMPETITION BETWEEN GOVERNMENT AND PRIVATE ENTERPRISE

The matter I speak to you about arises from Bureau of the Budget Bulletin 60–2 issued September 21 of last year. The purpose of that bulletin was to clarify existing policy regarding competition between the Government and private enterprise in the light of executive branch experience under earlier Bureau of the Budget Bulletins No. 54–4 of January 15, 1955, and No. 57–7 of February 5, 1957.

The policy enunciated in those earlier bulletins is quoted in Bulletin No. 60–2 as follows:

"It is the general policy of the administration that the Federal Government will not start, or carry on, any commercial-industrial activity to provide a service or product for its own use if such product, or service, can be procured from private enterprise through ordinary business channels."

Mr. Chairman, this is on its face a rather laudible policy and one which I would not wish to criticize. When you are faced with a question of whether the Government should in the first instance produce some goods or service that could be purchased from private industry, it is quite conceivable that there are certain advantages in having it done by private enterprise. It is also quite conceivable that it could be done just as cheaply, or more cheaply by private enterprise. The facet of this policy to which I strongly object is its extension to Government-owned, contractor-operated facilities by Bureau of the Budget Bulletin No. 60–2.

As the committee knows, there are a number of production activities which take place under the direction of a private contractor in a Government-owned facility, such as an arsenal. An example is the Army Ordnance missile plant, located in my district, which is operated by Chrysler Corp. and has been the site of production of Redstone and Jupiter missiles for the Army. Also located in my district is the Detroit Tank Arsenal which has been operated by Chrysler, but likewise is a Government-owned facility.

BUDGET BULLETIN 60–2

Now, Bureau of the Budget Bulletin No. 60–2, in implementing the policy of which we spoke, and applying it to Government-owned, contractor-operated facilities, had this to say:

"The continuation of Government operation on the ground that procurement through commercial sources would involve higher costs may be justified only if the costs are analyzed on a comparable basis and the differences are found to be substantial and disproportionately large."

A "comparable basis" requires that an appraisal be made of "elements not usually chargeable to current appropriations such as depreciation, interest on the Government's investment"—and I might add that is interest at current rates regardless of when the Government's investment was made—"the cost of self-insurance even though it is unfunded, and exemption from Federal, State, and local taxes."

Mr. Chairman, the effect of BOB Bulletin No. 60–2 can be summed up in this way: The Bureau of the Budget has said to all Government agencies that when they issue invitations to bid on any Government work, if bids are received, first, from a private contractor planning to use or construct private facilities for the performance of the contract, and second, from a private contractor planning to use existing Government facilities, that they should not simply award the contract to the lowest qualified bidder. Before they award the contract they are to add to the bid of the contractor who was offering to use the Government facility (1) a figure equal to the depreciation of the plant, (2) a figure equal to the interest at current rates on the Government's total investment in the

Government-owned facility, (3) the amount insurance of the facility would cost if the Government were indeed insuring it, and (4) the amount of State, local, and Federal taxes that would have to be paid upon that facility if the Government had to pay such taxes.

Then after this has been done they still are not to award the contract to the lowest bidder, even after the bid of the contractor who wants to use the Government facility has been adjusted upward, as described. If they find that the bid of the contractor offering to use the Government facility is still lower they are, nevertheless, to make the award to the contractor who is going to use facilities that he himself has or will construct, unless the difference in price is "substantial and disproportionately large."

Now, Mr. Chairman, I have serious questions about the validity of these "add ons" in the first place. In the second place, even granting the validity of these "add ons," I seriously question awarding the contract to the person planning to use private facilities unless his bid is "substantial and disproportionately" higher than the upward adjusted figure of the bidder proposing to use the Government facility.

Mr. Chairman, I would like to point out to the committee that these items which are added on to the bid of the contractor who wants to use the Government facility are continuing cost items. They are not created by the presence of the contractor in the plant. A building depreciates just as fast, or faster, if it is not being used as when it is being used. Taxes would be levied upon such a structure whether or not it was in use. Insurance would cost the same on the structure itself whether or not it was then being used by a private contractor. The interest on the Government's investment would continue whether or not a private contractor was using the facility. These charges are wholly fictitious. If a contractor is not using the facility and it is standing idle, they are still a charge against the Government if you want to look at it in any real sense.

Government-owned, contractor-operated facilities do not lend themselves to the application of this policy in favor of private enterprise.

There is nothing about a private contractor using a Government facility that makes him any less of a private enterpriser than one who chooses not to use the Government facility. It is in effect giving an advantage to a private contractor, no better than his competitor in any sense of the word, who proposes not to use the Government facility. It does not give an advantage to private enterprise as against Government. It is giving an advantage to one private contractor against the other. These are facilities that the taxpayer has bought and paid for. It is not like the question that arises when the Government is considering going into some new activity and we say—should the Government build a plant and turn it over to a contractor to use or should we let the contractor build his own plant and then give him the contract? This is an entirely different situation. The taxpayer has already bought these facilities once. If they are not used in the production of military equipment, or other items for the Government, they are going to lie idle and they are going to lie idle at great cost to the taxpayer.

INCREASED COSTS RESULTING FROM PROCUREMENT POLICY

The cost of maintaining the tank arsenal at Detroit in near idleness is approximately $700,000 a year. The cost of maintaining the arsenal at Lima, Ohio, in idleness is approximately $250,000 a year. All this is charged to the taxpayer. If contracts were awarded and these buildings were being used for actual production of military equipment, the purpose for which they were designed and the purpose for which they were built, these maintenance costs would be avoided. Maintenance would then become the business of the contractor using the facility and part of his normal operations expense. He would be required to maintain the facilities while he was in them.

The eventual result will be to greatly increase the cost of military procurement. The cost of every tank, gun, missile, or what have you to the taxpayer will be increased to carry out a theory wrongly applied to such operations.

Or, to put it another way, we are going to obtain less defense for the same amount of dollars than we would otherwise. This misguided policy first came to my attention in connection with the award of a contract for the production of the M–60 tank, the new tank which the Army wants and needs. Now, the M–60 tank, I find from testimony already released by your committee, is considered by the Army to be an extremely important addition to the Defense Establishment. The Army desperately wants and needs modernization; yet, if this policy is followed, the result will be that each one of these tanks will cost more, or again to put it in more accurate terms, the Army will get less M–60 tanks for the same amount of money than it would have had this policy not been applied to such contracts.

In the world of today I do not think we can afford this kind of luxury. Perhaps it would have been better if the plants had never been built; or if the Government had not owned them in the first place, but the fact of the matter is they are sitting right there today. They are built for the specific purpose of manufacturing military equipment. They are ideally suited to that purpose, and if not used they will remain Government property. They will be subject to large maintenance costs, and we will pay more for getting the same thing from some other source. I would like to call to your attention what I understand to be the case in connection with the naval arsenal in Pocatello, Idaho. I have not made a personal investigation of this, and I give you the information secondhand for what it is worth. I am told that the naval arsenal there some time ago was being used for the production of rocket fuel by the Thiokol Corp.; that further contracts were to be let for this same purpose; that Thiokol submitted alternative bids, one for the use of the naval arensal at Pocatello, Idaho, the other for the production of this fuel in a private facility to be constructed. I understand that the Navy accepted the higher bid; the one that provided for Thiokol constructing its own facility. They accepted it in pursuance of this policy. The end result has been that Thiokol has built a separate establishment for manufacturing rocket fuel 90 miles away from the Pocatello Arsenal, where they could have done the job. This plant has been built at the cost of some $50 million, and the difference in the total contract prices over the years is evidently enough to make Thiokol feel it is economically justified in building a new plant, and the naval arsenal at Pocatello, Idaho, lies idle at great expense to the taxpayer. When the contract is completed, the taxpayer, who has already paid for a naval arsenal where the work could have been done, will have ended up paying for another plant to do the same job which will be owned, not by the taxpayer but, by a private corporation. In effect, you will be adding to the cost of this military equipment the cost of building plants to produce it which will be owned at the completion of the contract, not by the taxpayer but by the private corporation, and at the same time you will be doing so in preference to using an existing establishment already bought and paid for by the taxpayer.

SUGGESTIONS

Mr. Chairman, I have some suggestions for the consideration of the committee.

I wish the committee would seriously consider whether or not this policy which in some circumstances may be entirely justified should be applied to Government-owned contractor-operated facilities?

Second, I would ask the committee to inquire into the statutory authority of the Bureau of the Budget to exact compliance with this policy by all Government agencies. I have serious doubts as to the authority of the Bureau of the Budget and of the administration to require Government agencies to accept a higher bid for production in a privately owned facility. The only authority mentioned in the Bureau of the Budget bulletin is a Cabinet meeting of April 24, 1959, and to the "general policy of this administration."

I should also appreciate it if the committee could discover the justification for adding to the proposal of a contractor proposing to use a Government-owned facility fictional costs such as depreciation, interest on the Government's investment, cost of self-insurance, and exemption from State, Federal, and local taxes.

I also request that the committee inquire into the justification for procuring goods and services at substantially greater cost to the Government than is necessary even after fictional charges have been added. And I should like to ask the committee if it could determine whether extension and implementation of the policies enunciated in this Bureau of the Budget bulletin would not, in fact, discourage use of Government-owned contractor-operated facilities, greatly increase the cost of military hardware, or conversely diminish defense capability for a given amount of appropriations?

At any rate, this matter requires the serious scrutiny of the Congress. I am convinced that this policy will result in higher costs without corresponding benefit to the Government, to private industry, or to anybody else. I would most like very much to see, as part of this Department of Defense appropriation bill, a limitation imposed to prevent the expenditure of any funds appropriated under the act to pay a differential to a private contractor who is using a private facility over the amount that would have had to be paid to a private contractor to do the same job in a Government-owned facility. The very least this committee can do is to insist upon reports from the Bureau of the Budget and the Department of Defense on specific instances where application of this policy has resulted in any change in cost, and get an accounting from the Bureau of the Budget and the Department of Defense to determine just what the cost of this policy is to the American public and to the American Armed Forces. Then we can appraise whether or not it is justified in the light of the precarious world situation in which we today find ourselves.

Mr. MAHON. Mr. Chairman, I yield 5 minutes to the gentleman from New York [Mr. STRATTON].

Mr. STRATTON. Mr. Chairman, I rise to support in general the bill recommended by the committee. I believe the committee has done an outstanding job, particularly in the field of looking over carefully and critically the recommendations that have come to this Congress from the executive branch of the Government. In this way Congress is carrying out its responsibility in a field that is tremendously important to the Nation and to our future.

I particularly commend the committee for the recommended increases in the funds available for the Polaris missile submarine. I testified myself in support of that increase. I would personally have preferred to see an even greater increase than the committee recommended, but I realize that we cannot

have everything. I think the committee by making the increase has recognized not only the importance of Polaris as an invulnerable nuclear deterrent weapon but also one that utilizes the particular type of military strength in which the American people have traditionally excelled, namely, the utilization of seapower over the vast water reaches of three-quarters of our globe.

I also commend the committee for the increased funds they have provided for modernization of the Army. Again, I do not think this increase has gone quite as far as it should have, but the committee has certainly recognized and moved to correct an important gap in the recommendations made to us from the executive branch of the Government.

For too many years we have placed our full reliance on a strategy of massive retaliation, and have shamefully neglected our conventional ground forces. The Army, with the largest share of our defense manpower, has, for the past 6 years, been allotted less than one-fourth of the defense budget. While we have been spending vast sums on so-called glamour weapons, the Soviets have, as the gentleman from Pennsylvania [Mr. FLOOD] has already mentioned, completed an intensive modernization of their Army—which is three times the size of ours.

I feel it is incumbent on this Congress to provide adequate funds, in this and future years, to assure that our ground forces have the best and most modern equipment that our Nation can provide. The weapons and equipment to modernize our Army have been developed and accepted—the Army lacks only the funds to procure them. I would hope that my colleagues join me in recognizing this basic need, and lend their support to the continued acceleration of Army modernization.

There is just one point on which I should like to take issue with the committee, and feel it is important that this issue should be presented in the course of this debate because it goes so vitally to the heart of the whole defensive strategy on which we are basing the tremendous sums of money included in this bill.

If I understand the thinking of the committee at all, it is that the Polaris submarine, as the distinguished chairman of the subcommittee pointed out a moment ago, represents an invulnerable deterrent force which will be almost impossible for the Soviets to destroy, in contrast to the land-based missiles on which we are also spending our sums. But it seems to me there is one thing we are failing to recognize, and that is that the Polaris submarine cannot stand alone. In fact we are told that the Soviets themselves, if they do not have a Polaris submarine, may well have it before long, and we all know of course that in terms of numbers alone the Soviet submarine fleet is already tremendously greater than our own. So how can we hope to achieve superiority over the Soviets with increased production of Polaris submarines unless we recognize that the effectivness of the Polaris submarine depends in turn upon our overall ability to support it across the sea, which means our ability to control the sea?

I am amazed that one of the outstanding leaders in this body has taken the floor of this House many times in recent months to claim that we no longer have to be worried about the control of the seas, that we no longer have to worry about the surface of the seas, that if we have the submarines that is all we need.

In the first place, we do not have the number of submarines in comparison with the Soviet Union. And the second thing, which is absolutely essential, is that unless we do control the surface of the seas to back up the Polaris submarines we have on station, we cannot hope to achieve any lasting superiority in this type of weapon that would justify the money we are putting into it.

Now what am I saying? I am saying that in order to get the most out of the money we are putting into the Polaris submarine, the one weapon where we are unquestionably far ahead of the Soviet Union, we must continue to support a surface Navy capable of controlling the surface of the sea at any point in the world. And the key to a surface Navy these days, Mr. Chairman, is the attack carrier. Command of the seas is the one area today where we have great superiority over the Soviets. Unless we keep this superiority, and the surface ships that make it possible, we can never expect to get the full benefit out of the Polaris submarine, in view of the much larger numbers of Soviet submarines that are in existence.

Mr. Chairman, by eliminating a new carrier from the 1961 Navy budget the committee has made, in my judgment, a grave strategic error. It has tried to draw a line I do not think you can draw between the Polaris submarine and overall American sea power. As long as we keep our command of the seas we need have no fear of any numbers game with the Soviets in total submarine strength. But let us give up that control of the seas and we can be in real trouble.

Mr. Chairman, the committee report has said that we do not need any more carriers because we already have 14, and have 3 more building, and after all, they say you only have a couple on station in the Mediterranean and you only have 3 on station in the Pacific at any one time.

Mr. Chairman, there are two important things to remember with regard to the attack carrier. In the first place, no commander commits all of his troops or all of this weapons in the line at once. Some of them have to be held in reserve. The people who are the experts in this field have told us that 14 attack carriers is the absolute minimum that we must possess in order to carry out our present commitments and keep the necessary numbers on the line. The three new carriers that are building are needed to replace three that are wearing out. After all, carriers wear out just like automobiles, shoes, or golf balls. You have to replace them regularly unless, of course, you want to stop using them.

Mr. ANDERSEN of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. STRATTON. I am sorry, I have only an additional minute.

Mr. ANDERSEN of Minnesota. Will the gentleman yield so that I may agree with him?

Mr. STRATTON. If the gentleman can get me a couple of more minutes, I will be happy to yield. I apologize to him, and I am most grateful for his support. I am trying to develop one point here, which I think the gentleman will agree with me on, and that is this. We need a new carrier in this budget first of all to continue to replace those which are wearing out. Many of our present carriers are nearly 20 years old. But there is another even more important consideration. Experience has demonstrated that the Forrestal type carriers, with the longer decks, reduce the overall accident rate from carrier landings by 50 percent, and reduce fatalities from carrier landings by 20 pecent. Does not that fact mean something Mr. Chairman?

Are we going to stop building new carriers and give up our traditional ability to exploit the seas for our own defense? Are we going to stop building new carriers and just tell the boys who fly the advanced jets that they will have to land a 1961 plane on a 1946 landing strip? Are we going to authorize killing off 20 percent of these boys because we refuse to give them the modern equipment they need? I do not think we should take this kind of economy, Mr. Chairman. I think we have got to replace our carrier fleet, year after year, as time wears it out. And I certainly think we have got to remember we have an obligation to protect the lives of our pilots. If you have ever tried to land on a carrier, and I landed on one once—in a plane that was piloted, fortunately, by somebody else—last November, for one does not know how they land them on the decks as it is. Now if we are going to tell our Navy carrier pilots that they have to continue landing these advanced planes on landing strips of a size that were helpful in 1944 and 1945, then we are condemning a number of these boys unnecessarily to a fate that I do not think we ought to condemn them to, or that we want to condemn them to.

Mr. Chairman, I shall not move to add funds in this bill for the carrier, because I am hopeful the other body will act to correct this deficiency. But I have tried to demonstrate my profound belief that a carrier deck is not just a patio for Navy admirals to let the sunshine sparkle on their gold braid, but plays a most vital role, not only in our overall military power, but in the power of the Polaris submarine, for which the committee has wisely provided increased funds. I hope, Mr. Chairman, that members of the committee will support the action of the other body if it does see fit to add this important and essential replacement carrier.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. MAHON. Mr. Chairman, may I inquire of my colleague, the gentleman from Michigan, how he stands as to speakers?

Mr. FORD. Mr. Chairman, we have only one additional speaker this afternoon, the gentleman from California

[Mr. LIPSCOMB], and I am prepared at this time to yield him such time as he may desire.

The CHAIRMAN. The gentleman from California is recognized.

Mr. LIPSCOMB. Mr. Chairman, as a member of the Defense Appropriations Subcommittee, I want first of all to express thanks to Congressman MAHON for his capable and conscientious leadership as chairman of the Defense Subcommittee. It is a pleasure to work with him on this vital assignment because of his dedication and his thorough knowledge of our Defense Establishment and defense needs.

I also consider it a privilege to work with all the other members of the subcommittee, each one of whom is completely dedicated to the urgent task we face of maintaining an adequate level of defense for the protection of the Nation.

In general, I am in agreement with the bill as it has been reported to the floor. In my view, it will provide ample funding to maintain a strong, balanced defense posture, and at the same time enable the United States to place into effect needed advancements in such vital fields as missile procurement and development, Polaris submarine procurement, antisubmarine warfare, and other significant areas. While I do not agree with the bill in every respect, it does in an overall sense constitute the considered judgment of the membership of the committee.

When proven items are to be procured for our arsenal, costs can be pretty well assessed. In some areas however funds are granted to the military in sort of a blank check method, and the amount given is at best an approximation of what might be the actual requirement. Because of the need to maintain our defenses as modern and up to date as possible it is necessary to proceed in that fashion in some areas. It is a calculated chance. As in previous years, this bill contains various appropriations in this category. Constant study and evaluation of the programs in this nature are of course necessary.

As in past years, the bill provides large amounts of funds for the military departments. However, just the placing of a lot of money in our defense programs is not in and of itself sufficient to provide an adequate defense at a minimum of cost to the taxpayers. Full cooperation of the military services, both in utilizing the available funds to the fullest extent and to eliminate waste wherever possible, is absolutely necessary.

The committee probed deeply into the way the services have operated their respective programs. The findings indicate, I believe, that considerable improvements are needed.

For example, inexcusable instances of extravagance and improper administrative practices were found in the area of procurement and supply management and contracting. In one case, discussed in the report on page 51, a misshipment of footlockers resulted in a needless expenditure of $100,000.

In the area of procurement, needless expenditures were found because of unsatisfactory contracting practices. This is also discussed in the report in the section beginning on page 51. It was found that during fiscal 1959, only 15 percent of total procurements were on advertised bids. The rest was on negotiated bidding, often, in the findings of the committee, at higher prices.

Because of the examples of wasteful practices such as these, the committee has recommended an overall reduction of 3 percent for each procurement appropriation. In the contracting field, it has served notice that all contracting officers administering suspect contracts will be called upon personally to explain their actions.

In these and other areas, I believe helpful actions have been taken by the committee to bring about improvements in the operation of our military programs. Much more will undoubtedly need to be done but I believe we have made some meaningful progress.

Mr. MAHON. Mr. Chairman, I should like to say that the gentleman from California [Mr. LIPSCOMB] has been active and helpful in defense matters. He has made a very distinct contribution to our knowledge of antisubmarine warfare problems which confront us.

I yield such time as he may desire to the gentleman from Colorado [Mr. JOHNSON].

Mr. JOHNSON of Colorado. Mr. Chairman, 1960 may truly be a year of crisis. A crisis is a decisive turning point in the progress of a disease. Following the crisis, the patient either recovers or he takes a turn for the worse and dies. Our national efforts to achieve true security are approaching such a crisis. The weapons now in our arsenal, especially when coupled with the delivery systems now being added to our arsenal, make possible the kind of short war that is discussed in such novels as "On the Beach" and "Alas, Babylon." We were told just a week ago by President de Gaulle that "should the occasion arise, aggression brings death to the aggressor even if it must at the same time cause the death of the defender." More bluntly, given our present technology, war is suicidal. How can we truly do our constitutional duty to provide for the common defense when in fact there is no defense, and probably can be no defense, against modern weapons?

In the war we now prepare for, the casualty lists will not simply carry the names of individual servicemen who gave their lives for their countries—it will be made up of whole cities which were destroyed in a millisecond. Moreover, the casualty lists will grow, not merely during the days and weeks following an attack, but the casualty lists will grow for all future generations, blighted by the radioactivity of modern war.

Under these circumstances, it is our patriotic duty to reexamine how best we may truly provide for the common defense and insure that we have any posterity to enjoy the blessings of liberty. We are caught in a mental rut from which we must escape if we are to avoid certain doom, for in pursuing without change the arms race in which we are engaged is to play Russian roulette—not merely with our own lives—with the lives of the whole human race. Now when a man plays Russian roulette, you know he is ultimately going to have to put the gun down. What you do not know is whether he is going to put the gun down before he has fired the fatal bullet, or afterward.

But how shall we break out of this mental rut when we appear to believe that the threat which faces us is one of military aggression. In this case, as so often in history, we are preparing to fight the last war and not the next one.

After reading one of the staff reports of the Senate Foreign Relations Committee, I tried to review this dilemma of defense against communism in a letter to Senator FULBRIGHT, which he inserted in the proceedings of the Senate on March 28, 1960:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., January 28, 1960.

The Honorable J. WILLIAM FULBRIGHT,
Senate Office Building.

MY DEAR SENATOR: I am tremendously heartened to have cross my desk the series of studies which have been prepared at the request of your committee. It is like a breath of fresh air to see a sober, conscientious, competent review both of the present condition of our country and the challenges and opportunities which face it in the future. I hope that these documents will be more than committee prints so that they may secure the wide distribution they do in fact deserve.

This letter is especially prompted by the report "Basic Aims of U.S. Foreign Policy," a committee print dated November 25, 1959. At only one point do I find difficulty with the analysis, and it is a point that is a very thorny one for all Americans and both political parties. It is evident at pages 14–17 of the report.

We frankly recognize that "military measures will not provide security, nor will they guarantee victory in the cold war." We recognize that "undue emphasis on military aspects can be an obstacle to cooperation with other nations." We recognize "there are really no sound alternatives to negotiation," and that the Soviet proposals for complete disarmament have to be taken seriously and fully explored. We recognize that "nuclear warfare has made the arms race, with its dangers of total catastrophe, a matter of commanding concern to the man in the street as to the expert and the statesman." We recognize the need for settlement or attenuation of conflicts to help "reduce the dangers and burdens of the arms race."

And yet at the same time we say "we have serious doubts" whether the military requirements of the United States are being met. This suggests that the United States is not doing enough in its military effort and in its military technology. It seems to me that the dollar emphasis of our budget and the intellectual attention of our minds is far more quickly and effectively mobilized on the last point than on the other points. As a result the reminder that we "should proceed simultaneously on both fronts" has tended to be a somewhat empty phrase because we in fact proceed more vigorously on the military front.

We can put $45 billion on that side and wonder whether we have done enough, but when we put a few hundred million dollars into true economic assistance (other than defense support) we wonder whether we can afford to do more. In face of the generosity toward our military posture and the timidity of our support for multinational long-term assistance in economic development, it seems to me other nations must be confused. Our deeds speak so much more loudly than our

words that they might well conclude that where our money is, there perhaps our heart is also.

Any change in the policy we have been following in the past must be an act of reason, and a demonstration of our hopes for achieving a more peaceful world. Creative good will actively and faithfully expressed will bear more acceptable fruit than acts of fear and hatred can ever bear. Each of us in our personal life knows in fact that his exercise of creative good will, once undertaken, bears magnificent fruit. How can we then refuse to recognize that the same principle applies to our common behavior as representatives of national governments? Moreover, we must recognize that we are prevented from pursuing the creative program wholeheartedly because of our fears, which make us place so heavy a part of our budget into military programs.

At the root of this conflict in national purposes is a basic difference in fundamental premises. Nations historically are tempted to prepare to refight the last war. In the last war we faced Fascist aggression, and much of our present mentality seems to be heavily conditioned by that experience. If we really believe that our adversary may be planning further military aggression against ourselves or our allies, then our heavy outlays for military measures are understandable. But suppose we take as a first premise that communism will continue to use revolutionary opportunities to convert or subvert additional portions of the world toward communism, rather than act like a Fascist aggressor. This reading of world history recognizes the immediate importance of taking steps to reduce the likelihood that additional nations will turn in desperation to communism as the answer to their yearning to eat quickly of the fruits of the industrial revolution.

Our very richness is an ever-present demonstration of the blessings of modern technology. However, our timidity in sharing the technical skill and making the heavy basic investments which would enable other nations to find their own way to prosperity helps to keep those blessings well beyond the reach of half the world. Our heavy spending on military programs under these circumstances becomes not a tool to success in our policy, but a major handicap in achieving the very aims we seek to serve. It is a handicap against securing more constructive use of our own national resources. The military emphasis also handicaps our aid program because of our confused purposes, for recipient nations are given the feeling that our nonmilitary aid is dependent on the recipient nation's acceptance of our military posture.

Nineteen hundred and sixty ought to be a year in which Americans undertake the great debate and reexamination of both our national purposes and of our methods for achieving thse purposes. I feel your committee could make an even greater contribution to this debate, if it could sharpen the issue so that we might choose wisely, knowing fully the dimensions of our problems.

In closing, I only want to say again how much I appreciate the remarkable contribution these documents are. I wouldn't want my remarks to take anything away from my sincere appreciation of the many significant contributions that this and the other documents make to better public understanding of the demands upon us in the years ahead.

Sincerely yours,

BYRON L. JOHNSON,
Member of Congress.

Thus if we start with a clear view of the progress of communism since 1945, we will recognize that our need, and the world's need, is primarily for defense against the opportunities for Communist revolutions to take place. The military budget which is here proposed does nothing to reduce the likelihood of the occurrence of such revolutions, nor of Communist exploitation of such revolutions.

We remember very well the successful Communist revolutions. We need to remember that the world has had successes in its defense as well. Nearly 15 years have gone by since VE Day. In those 15 years, we and the world have done many wonderful things. We have built institutions of international cooperation. These institutions have been instrumental in bringing more than a score of new nations into the family of nations without civil war, bloodshed, or even violence. In only a handful of cases, since 1945, have new nations been born on the battlefield of civil war and rebellion. The positive programs we have pursued thus have significantly helped to extend the blessings of liberty to nations which had not previously known freedom. I submit that we underestimate the very real extent to which these agencies of international cooperation really do help provide for our common defense. We can strengthen our defense by strengthening them.

Mr. Chairman, there are many who recognize that the major powers are indeed at a turning point in history. The number of nations in the nuclear group have now grown to four, with the advent of France to membership. Competent nuclear physicists have suggested that we may shortly expect nuclear tests from yet another nation: The People's Republic of China may be able to begin tests within a year, or at most 2 years. Dr. Davidon has estimated in his paper on "The Nth Country Problem" that as many as a dozen countries may be competent to make nuclear weapons. This is why General de Gaulle told us last Monday:

> We have reached the last moment when an agreement appears possible. Failing the renunciation of atomic armaments by those states who are provided with them, the French Republic obviously will be obliged to equip itself with such armaments. In consequence, how many others will attempt to do the same? In the state of increasing uncertainty in which fear throws the peoples of the world, the risk grows that, one day, events will escape from the control of those who obey reason and that the worst catastrophes will be unleashed by fanatics, lunatics, or men of ambition.

The time for a preventive agreement is rapidly running out. The hour of crisis is at hand.

The President leaves in a few days for a session at the summit. He needs the understanding and sympathetic support of all Americans, regardless of party, and, indeed, of all human beings everywhere. It lies within the hands of the President and the other national leaders to pass this crisis successfully. The other nations of the world are now speaking soberly, through their national leaders, not merely of a nuclear-test ban and the abolition of nuclear weapons, but of total and universal disarmament, with suitable inspection and control. Certainly the Congress should now affirm its deep and abiding concern that our national leaders do everything within their powers to turn the world's feet down the path to peace and away from the path that could make the prophecy of Armageddon an all too immediate likelihood.

Mr. Chairman, I submit that providing for the common defense in this day and age calls for us to modify our policies along the following lines:

First, as an administrative matter, we should immediately begin to study a true unification of the Department of Defense, as our colleague the gentleman from Connecticut [Mr. KOWALSKI] has proposed. Even assuming there may be complete success at the forthcoming summit conferences, the Nation will continue to have a Defense Establishment, and it should be unified, preferably under a single uniform. The immense waste now occasioned by competing services under the Defense Department and the tremendous waste which is necessarily involved in the Appropriations Act now pending before the House more than justifies a concern for Armed Forces unification, regardless of the outcome of the pending summit conferences. Our Defense Establishment will be strengthened and its cost reduced by such unification. This will be equally true whether we maintain the existing levels of defense requirements or in the event that negotiations call for a reduction in the levels of the Defense Establishment in future years.

Second, we need to strengthen our defense through appropriate political and diplomatic actions. The Russians say that the existence of the arms are the occasion for the world tensions. Our Nation holds that the existence of the tensions in the world are largely responsible for the level of our Armed Forces. Certainly, in the light of our own history since 1945, our response was to tensions. We had reduced our Military Establishments to a cost below $15 billion a year within 3 short years after VE day. The tensions that gave rise to the cold war also gave rise to our present level of defense spending. Such tensions as the Czech coup d'etat, the Berlin blockade, the Korean incident, the troubles in the Balkans, difficulties in the Middle East, revolutions in southeast Asia, and shelling of the islands off southeast Asia, have all contributed to the feeling of tensions in America, which held account for the present high level of defense spending. But now the arms race has poised the world on a precipice, and the arms do heighten the tension.

It is a tragedy that in the 7½ years since the President promised to go to Korea he has not truly brought peace to Korea, nor indeed has he diligently protected or advanced the chance for democracy in South Korea. We all hope and trust that the present tragedy of South Korea can be constructively utilized by democratic forces for freedom. But this is only the most recent evidence of our failure to use political and diplomatic measures constructively to preserve the peace of the world and avoid the spark that might ignite world war III.

Our Government should seek to help all of the peoples of Africa to have the opportunity for self-determination. This

means the people of central Africa, of northern Africa, as well as of South Africa. American diplomatic representations should be ever mobilized on the side of freedom, else we betray our own heritage and destroy the very goals we claim to be fighting for.

Political and diplomatic action is clearly needed to secure a normalization of relationships in southeast Asia. While no single step will be sufficient to accomplish this purpose, the United States might very well prepare a package proposal from which it could negotiate successfully with other nations concerned, looking toward a reduction of tensions in this area.

For some time representatives of the United States have been meeting with representatives of the Soviet Union at Geneva, discussing methods of detection of nuclear tests, working toward the possibility of a nuclear test ban. More recently, in response to a U.N. resolution, nations have begun negotiations working toward universal disarmament. Certainly, we must recognize that any test ban or disarmament treaty to which the People's Republic of China is not a party, is not worth the paper it is written on. To secure peace in the world requires that the family of nations be universal—that its prodigal sons be invited to rejoin the family. Our national defense requires something more than missiles. It requires patient and persistent diplomatic efforts which will help to develop conditions such that the nations of the world will never again wish to resort to instruments of terror and mass murder.

The American people are willing to pay high taxes and accept heavy spending, in the belief that this is required for their defense. I submit that neither the administration nor the Congress have been fully faithful to our constitutional duties because we have not devoted adequate attention to the reduction of these tensions. Moreover, we have not devoted adequate attention to strengthening the institutions of international cooperation that are an essential part of our defense against the threat of war.

Third, our defense requires sound planning for new eventualities. Assuming that the administration is indeed serious about its commitment to seek universal disarmament, I ask how extensive are the steps now being taken in the Department of Defense or in the State Department to examine the problems and prepare for the possibility that an initial disarmament agreement might be signed by the nations of the world? Are we ready to police such an agreement? Can we undertake inspection and enforcement?

Or, to take another question, pessimists have suggested the possibility that some nation might violate such an agreement and develop anew the instruments of war. Or some have suggested that one or another nation might cheat and hold back a store of nuclear weapons, or of other weapons of mass destruction, for even a poor nation can afford to join in the chemical and biological warfare game. The pessimist's fear is that such a nation might then be able to blackmail other nations of the world into some kind of capitulation or unfair concession. This threat is not wholly unrealistic, because madmen and fools can become, temporarily, national leaders. Does this budget contain funds, or has the State Department the funds and the staff to carry on research and program development looking toward providing the United Nations with a suitable police force that could immediately arrest any blackmailer? I am not aware that any study of such problems is actively in process at this time, even though negotations at Geneva have already commenced and will resume after the summit conferences.

We have only recently seen appointed a Deputy Assistant Secretary of Defense for Disarmament. For this I am grateful. But will he be adequately supported in the necessary studies?

A few weeks ago, that distinguished American, Adlai Stevenson, at Charlottesville, Va., commented to the effect that disarmament is finally our only true defense. In this year of crisis, of fateful decision, we should therefore have already completed, not merely initiated, studies showing us how we might effectively secure the gradual disarmament of all the nations of the world. Similarly, we should have developed programs to effectively police the actual disarmament and assure that no nation could develop an arsenal in some clandestine fashion. If we would be providing truly for the defense of America and for peace in the world, we would now be actively and earnestly engaged in this research. I find nothing in this budget or report suggesting that such research is projected for the coming fiscal year. The failure to have such a program now underway or provided in this budget for next year suggests either that we are not serious about our negotiations at Geneva or else that we are negotiating without having done the planning for all eventualities.

Finally, we will also help provide for the common defense by accepting the De Gaulle restatement of President Truman's point 4. On May 24, 1951, President Truman said:

> The only kind of war we seek is the good old fight against man's ancient enemies—poverty, disease, hunger, and illiteracy, for that is the only war in which all mankind can be victorious.

President de Gaulle has reminded us both last year and again last week of the nearly 2 billion unfavored masses of Asia and the awakening populations of Africa.

> Aid offered to the countries that lack everything, is, for those who do not lack anything, both the greatest human duty and the most fruitful policy. How much less the chances of war if the great modern states should choose as a common aim such an undertaking. What a sigh of relief would pass across the globe if, in this field, above their rivalries, these great states established practical cooperation were it only, to begin with, limited to a few matters.

This was the language of De Gaulle, here in this Chamber.

Mr. Chairman, the Congress annually flinches at the cost of a mutual security program which has never, for economic purposes, exceeded $4 billion a year and is currently less than $2 billion a year. This represents our global investment in the unfavored nations, and is less than $1 per capita per year. Yet we will vote, almost without hesitation, a sum approximating $40 billion a year, almost 10 percent of our total national product, for military men and machinery that represent no great contribution to increasing the productivity of our own Nation or of any other nation. Indeed the arms race represents for those nations which choose to engage in it a substantial handicap to the creative and constructive processes which should be the first order of business for every government.

I was trained on the classic phrase that "what you do speaks so loudly I cannot hear what you say." What we do as a Nation is to make it clear that our fears are strong but that our faith is weak. In this year of crisis, in the face of the apocalyptic risks to the human race, we need a faith which is stronger than our fear. That faith can be best expressed in the constructive actions of the Congress. Let us accept the de Gaulle proposal, and expand and internationalize the economic development program.

Mr. Chairman, as passionately as any Member of the Congress, I seek to provide successfully for the common defense of my family, my neighbors, my fellow citizens, and indeed, of humanity. I have the highest regard for the patriotism and the devotion to the same cause of my colleagues in the House and in the Senate. I am equally sure that the committee reporting this bill believes this bill to be a most significant contribution to our common defense. I recognize and appreciate the earnestness and the sincerity of their view.

It is with the greatest reluctance that I find myself in the position I take here today.

Because I believe that 1960 is a year of crisis; because I believe that crisis calls for us to reassess realistically the dangers that we face and prepare to prevent Communist revolutions or Communist exploitation of revolutions; because I think we should even now strengthen our defense by a unification of our Armed Forces; because I think we can only really strengthen our defense in the present world situation as we strengthen the prospects for peace in the world by constructive political and diplomatic negotiation, not merely over Berlin, but over all of the other areas of tension in the world; because I believe that our defense requires that the Department of Defense and Department of State more adequately and earnestly study the problems of disarmament including inspection, control, and policing; and because I believe that our defense activities should include the strengthening of the economies of other nations of the world in a far more vigorous manner than we are now doing, I find myself compelled to cast my vote against the passage of this bill. In raising my voice against the bill, I hope to call wider attention to these words of mine. It is my sincere hope that in the days and months ahead the administration, the Congress and the people will

examine these arguments, meet the crisis constructively, and will take such steps as will help to assure that mankind will turn its feet onto the path toward lasting peace, in fulfillment of Isaiah's prophesy that—

They shall beat their swords into plowshares, and their spears into pruning hooks. Nation shall not lift up sword against nation, neither shall they learn war any more.

Mr. MAHON. Mr. Chairman, I promised to yield time to the gentleman from Vermont [Mr. MEYER] to discuss the airborne alert problem, but I think that can be better done on Thursday when we take up the further consideration of the bill.

At this time I yield such time as he may desire to the gentleman from Utah [Mr. KING].

Mr. KING of Utah. Mr. Chairman, much has been said this afternoon about the Bomarc program. I cannot let this debate close, however, without adding my opposition and protest to the manner in which this cut has been offered by the committee.

My colleague the gentleman from Washington [Mr. MAGNUSON] has discussed the merits of the Bomarc program and I shall not add anything to that; but I do, Mr. Chairman, object vigorously to manner in which this cut has been proposed. I object to the fact that it has been made virtually without any warning. It is leaving many of our corporations that are engaged in the manufacture of component parts for this missile program in a very, very dangerous and awkward position which I think should be taken into consideration by the Members of this House in discussing this legislation.

Just recently I had the opportunity of visiting the Marquardt Corp., in Ogden, Utah. I use them as an example, and I believe they are typical of many other companies and installations that find themselves in a similar situation.

The Marquardt Corp. was induced about 4 years ago to locate in Ogden as part of the policy of diversification and decentralization that had been worked out. They had been engaged in building and implementing the plant and had been given reason to believe they would remain in production at least through the last quarter of 1963. They are engaged in producing the ramjet engine, one of the components of the Bomarc system.

Now they are confronted with the proposition that they may well have to shut down or phase out completely by the end of 1960 and that they will have to suffer at least a 50-percent cutback in their personnel almost immediately. At the present time they employ some 1,740 men and women, and all of them have acquired specialized skills. Some 400 of them have enrolled in courses offered by the various universities in the State of Utah, and they worked for years in perfecting themselves in specialized areas. There are, for example, in the Marquardt Corp. 40 precision grinders. I am told it takes 7 years to develop a man to use a grinder efficiently.

As a result of this cutback it means that this great team that has been building up over the past 4 or 5 years or more will be disassembled, that those who have acquired these specialized skills for the benefit of the United States and of our defense effort now will be turned out unceremoniously without any prospect of employment in their particular field or profession.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. KING of Utah. I yield to the gentleman from Texas.

Mr. MAHON. I feel myself quite sympathetic to the problem which has been presented so ably in the remarks of the gentleman from Utah [Mr. KING]. No one likes to see industries close and workers lose jobs, yet this is frequently necessary and the overall interests of the country must be served. Technically, this is not the final action of the Congress on the issue of the Bomarc missile, as the gentleman well knows. The House can work its will on Thursday when we proceed with consideration of the bill under the 5-minute rule.

Regardless of what this body does, the other body is free to take independent action. Much may depend on the presentation of the Secretary of Defense to the other body as the result of the action of the House. These issues have been very well raised and very well presented by the gentleman from Utah and the other gentlemen who have discussed this problem today.

Mr. KING of Utah. I thank the gentleman for his remarks.

Mr. DIXON. Mr. Chairman, will the gentleman yield?

Mr. KING of Utah. I yield to the gentleman from Utah.

Mr. DIXON. May I join with my colleague from Utah in thanking our committee chairman, the gentleman from Texas [Mr. MAHON], for the encouragement he has given us, because this is a sad situation, and I sincerely hope we will do everything we can to restore this cut in the Senate.

Mr. KING of Utah. I thank the gentleman.

The CHAIRMAN. There being no further requests for time, the Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sums are appropriated, out of any money in the Treasury not otherwise appropriated, for the fiscal year ending June 30, 1961, for military functions administered by the Department of Defense, and for other purposes, namely.

Mr. MAHON. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. KEOGH, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 11998) making appropriations for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes, had come to no resolution thereon.

GENERAL LEAVE TO EXTEND REMARKS

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members who have spoken on the Department of Defense appropriation bill today may have permission to revise and extend their remarks and include necessary extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

POLISH CONSTITUTION DAY

Mr. LANE. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. LANE. Mr. Speaker, there is a strong spiritual kinship between the United States and Poland because of our faith in freedom under God.

On May 3 of each year, Americans welcome the opportunity to honor Polish Constitution Day. We do this to hearten our friends behind the Iron Curtain, and, speaking for them, to tell the Communists that the American people will never recognize their authority over the captive nations.

The Communists hope that we will forget the silent victims of their treachery. In this they are completely mistaken.

We shall celebrate Polish Constitution Day in 1960, and in every year thereafter, certain that a free and self-governing Poland will celebrate it with us in the not-too-distant future. And there is nothing that the Communists can do to stop us. Time is working against them.

When the people of Russia acquire an education, they will insist upon the enjoyment of those human rights that belong to all men. And they will thank their neighbors in Poland for the inspiring example of faith in freedom, when all seemed lost.

In spite of all their power, the Communists are afraid. They are afraid of their own people, and they are afraid of freedom. The Iron Curtain is a desperate effort to prevent the free and the slave worlds from meeting in that common area of understanding where the truth must prevail. For where there is freedom of choice, communism is doomed.

The Polish people were living by the redeeming truths of Christianity, and were winning the early struggle for social justice and political independence long before the Western World succeeded in liberating itself from despotic rulers.

Stirred by the American Colonies' Declaration of Independence, many Polish freedom fighters made the long journey to the New World in order to serve under Gen. George Washington. By their skill and their bravery they helped our forefathers to win the Revolutionary War that established our free and sovereign Republic.

Our Constitution Day is September 17, 1787. Poland's Constitution Day is May 3, 1791. So close in spirit as well as time, that there is a lasting affinity between the United States and Poland in our mutual devotion to freedom under God:

We hold these truths to be self-evident that all men are created equal, that they are endowed, by their Creator, with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed, that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or abolish it, and institute new government, laying its foundation on such principles, and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness.

This great human hunger, and right, as expressed in our Declaration of Independence, speaks for all men.

Constitutions are drawn up and ratified to secure those rights.

The Polish Constitution was betrayed by the Russian Communists and their agents in Poland. But it lives on in the hearts of the Polish people, ready for the day when it will be the law again, restoring and protecting their freedoms.

On this anniversary of their Constitution Day, we the people of the United States send our greetings and our moral support to the Polish people, assuring them that we shall not rest until they and all other oppressed peoples enjoy the blessings of freedom.

DEPRESSED AREAS LEGISLATION

Mr. WIDNALL. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include two documents, a White House disapproval of the previous depressed-area bill and also an analysis of the administration proposal.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

Mr. WIDNALL. Mr. Speaker, in order that the position of the administration on depressed areas legislation will be perfectly clear, I ask permission that two documents be included at this point in the RECORD. The first document is the President's memorandum of disapproval of S. 3683, dated September 6, 1958. The other document is a brief section-by-section analysis of the administration's proposal as embodied in H.R. 4278 as introduced by Congressman KILBURN—by request—on February 9, 1959.

MEMORANDUM OF DISAPPROVAL

I am withholding my approval from S. 3683, the area redevelopment bill.

Every year for the past 3 years I have strongly urged the adoption of a program of Federal assistance to communities of substantial and persistent unemployment for the purpose of assisting those communities to develop a sounder and more secure economic base. I regret that no action along these lines has been taken by the Congress until this year and, needless to add, I am greatly disappointed that I find myself unable to approve the present bill.

My disapproval need cause no unnecessary delay in initiating a sound area assistance program. Even the unsound program contemplated by S. 3683 could not be of immediate help to any community because the Congress, before adjournment, failed to provide any money to carry out the bill's purposes. Until the next session of the Congress, the needs of areas of severe and persistent unemployment can be met in part through the new program of loans to State and local development companies under the Small Business Investment Act of 1958 which I recently approved.

The repeated recommendations of the administration recognized that the major responsibility for planning and financing the economic redevelopment of communities of chronic unemployment must remain with local citizens if Federal programs are to be effective. The present bill departs from this principle, and would greatly diminish local responsibility. In doing so, and in including other undesirable features, it defeats any reasonable chance of giving effective help to the communities really in need.

S. 3683 provides for less local participation in the costs of local development projects than is proper or necessary to stimulate and assure the continuing interest and support of local governmental and private interests. The administration recommended loans, for periods of 25 years, in amounts not exceeding 35 percent of the cost of redevelopment projects. S. 3683, on the other hand, provides for loans for such projects for periods of 40 years, at artificially low interest rates, in amounts up to 65 percent of the total cost of a project.

S. 3683 proposes in addition a program of Federal grants for public works in redevelopment areas under which it would be possible to have no local participation whatever. Moreover, the criteria for making these grants are so loosely drawn that, without indiscriminate use of funds, administration of these provisions would be almost impossible. This is a field in which, if the Federal Government participates at all, it should be able to rely upon local judgments backed by significant local contributions.

S. 3683 is also defective in my judgment because its assistance in certain instances, would be available in areas in which unemployment is traceable essentially to temporary conditions. Federal assistance to communities where unemployment is not clearly chronic would necessarily mean the assumption of responsibility by the Government for the direct support of local economies—an assumption of responsibility that would have the most profound consequences.

I also believe it would be a grave mistake to establish, as this bill would, an area assistance program in the Housing and Home Finance Agency. Such a program should be lodged, not with an agency concerned with residential housing and related matters, but rather with the Department of Commerce which has primary responsibility for business and industrial development and a long experience in extending to local areas technical aid for economic development.

S. 3683 also contemplates a Federal redevelopment assistance, including loans, in rural areas. There is serious question as to whether Federal loans for the construction of industrial buildings in rural areas would be a proper or effective approach, much less a permanent one, to the problems of surplus labor in essentially agricultural communities.

It is my intention next January when the Congress reconvenes to request the Congress to enact area assistance legislation more soundly conceived to carry out the purposes which I have repeatedly stressed as being in the national interest. It is my hope that Congress at that time will move with all possible speed to enact such an area assistance program.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *September 6, 1958.*

SECTION-BY-SECTION ANALYSIS OF H.R. 4278 (KILBURN BILL) (ADMINISTRATION PROPOSAL)

TO ASSIST AREAS TO DEVELOP AND MAINTAIN STABLE AND DIVERSIFIED ECONOMIES BY A PROGRAM OF FINANCIAL AND TECHNICAL ASSISTANCE AND OTHERWISE, AND FOR OTHER PURPOSES

Section 1 sets out the title of bill.

Section 2 states the declaration of purpose.

Section 101 outlines the responsibility of the Secretary of Commerce in the program authorized by the bill and defines certain terms used in the bill.

The Secretary would designate areas of substantial and persistent unemployment after certification thereof by the Secretary of Labor. These areas would be eligible for loans and grants hereinafter described in some detail.

The Secretary would also provide technical advice and consultation and would conduct special studies of assistance to all areas in furthering the use of local resources and bettering economic conditions, on a coordinated cooperative basis with any Federal agency which may make a significant contribution to the solution of an area's difficulties. In addition to grants for benefit of areas designated by the Secretary as areas of substantial and persistent unemployment, he may provide grants to decrease the economic vulnerability of towns predominantly dependent on one industry, small towns which could serve as centers for economic diversification of rural areas of underemployment, and rural low-income areas.

Section 102 authorizes the Secretary of Labor to certify that certain areas conform to criteria established by the section and therefore may be designated as eligible for grants and loans under the program. In addition, he is authorized to make studies which he finds are necessary to provide the data required in administering the criteria and to make studies or to help others to make studies of the characteristics of the labor force in a certified area and to provide technical assistance in the use of a labor force. The Secretary of Health, Education, and Welfare would assist in the vocational training or retraining of such labor force.

Section 103 would amend title I of the Housing Act of 1949 by adding a new section 112 which would make the provisions of that title applicable to a municipality when (1) the area is certified by the Secretary of Labor as being an area of substantial and persistent unemployment, and (2) the Secretary of Commerce certifies that there is a reasonable probability that with the assistance provided under the bill and other undertakings the area will be able to achieve lasting improvement in its economic development. Such assistance would be made available without regard to the existing limitation of section 110(c) of title I of that act which requires that the project areas be predominantly residential in character or be redeveloped for predominantly residential uses. The section would expressly make eligible for rehabilitation a project area involving primarily industrial or commercial structure.

It would also authorize the disposition of land in a project area planned for industrial or commercial uses to a public agency or nonprofit corporation at fair value and the public agency or nonprofit corporation could hold the land for subsequent disposition as

promptly as possible for redevelopment in accordance with the urban renewal plan.

Section 104 would amend title II of the Housing Act of 1955 to give first priority in public-facility loans to counties, cities, and other municipalities in areas of substantial and persistent unemployment if the Secretary of Commerce certifies there is a reasonable probability that with the assistance provided under the bill such areas will be able to achieve lasting improvement in their economic development.

Section 105 would amend the Housing Act of 1954 to authorize planning grants to counties, cities, and other municipalities having a population of 25,000 or more in areas designated as areas of substantial and persistent unemployment.

Section 106 authorizes the Secretary to make grants of $1.5 million annually for technical assistance, including studies evaluating the needs of, and developing potentialities for, economic growth to areas of substantial and persistent unemployment.

In addition, the Secretary would be authorized to make similar grants for towns and rural low-income areas described in section 101.

Section 107 would authorize a loan program with up to $50 million outstanding at any one time. Loans could be on a second mortgage basis, could be for terms of 25 years, and would cover up to 35 percent of the cost of purchase and development of land and facilities including construction or rehabilitation of buildings for industrial use. Interest charged would be at a rate which would include amounts paid for money used, amounts necessary for recapture of administrative expenses of the loan program, and amounts to provide a reasonable reserve for losses.

No less than 15 percent of the cost would be provided locally with security therefor subordinate to security for Federal loans. No loan would be extended unless there has been submitted and approved by the Secretary an overall program for the economic development of the area and a finding by the State or local subdivision thereof that the project for which loans are sought is consistent with such program.

No loans would be extended for working capital, for purchase of machinery or equipment, or to assist establishments relocating from one area to another when such assistance will result in substantial detriment to the area of original location by increasing unemployment.

Section 108 authorizes establishment of a revolving fund in the Treasury of the United States, to be available to the Secretary for expenses in connection with loans; appropriation of an amount not exceeding $50 million without fiscal year limitation, for making advances to the fund; and provides for deposit of receipts from loans and return of funds in excess of current needs.

Contributions would be made from the fund to the civil-service retirement and disability fund and to the employee's compensation fund.

Section 109 provides for preparation and submission of an annual budget program, in accordance with the Government Corporation Control Act, and for an annual audit of accounts by the General Accounting Office.

Section 110 provides for appointment of an area assistance administrator in the Department of Commerce, including a rate of compensation equal to that received by Assistant Secretaries of Commerce.

Section 111 sets forth powers and duties of the Secretary, including adoption and use of a seal, use of officers and employees, holding of hearings, finality of Secretary's findings, sale of property or security held in connection with payment of loans, collection of loans, acquiring of property deemed necessary to conduct of activities under section 101; and procurement of attorney's services.

Section 112 creates an Area Assistance Advisory Board, consisting, ex officio, of the Secretary of Commerce, as chairman, the Secretaries of Agriculture, Health, Education, and Welfare, Labor, and Treasury, and the Administrators of the Housing and Home Finance Agency and of the Small Business Administration; participation, by invitation, of officials of other agencies from time to time would also be authorized.

Section 113 authorizes Federal Reserve banks to act as custodians and fiscal agents for the Secretary, to be reimbursed for all expenses incurred as such fiscal agents.

Section 114 states conditions under which penalties would be imposed—i.e., fine of not more than $10,000 or by imprisonment for not more than 5 years, or both. It also defines the term "Secretary" to mean, with respect to lending activities of the Housing and Home Finance Administrator under this act, the Housing and Home Finance Administrator.

Section 115 authorizes the Secretary to use available services and facilities of other agencies of the Federal Government on a reimbursable basis and with their consent.

Section 116 sets per diem for consultants at rates not to exceed $75.

Section 117 directs the Secretary to make a comprehensive annual report to the President for transmission to the Congress at stated times.

Section 118 authorizes appropriations for carrying out provisions and purposes of the act not specifically authorized by other sections.

COMMENDATION OF THE HONORABLE KATHRYN E. GRANAHAN

Mrs. BLITCH. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentlewoman from Georgia?

There was no objection.

Mrs. BLITCH. Mr. Speaker, the parents of children and teenagers in every community of this Nation are faced with a truly serious problem. It is a problem which they, alone, are powerless to cope with completely. I refer to the growing menace to the morals of our youth which is presented by the widespread production and distribution of obscene and indecent literature and materials.

Recent years have seen a rash of filthy publications introduced on the magazine racks in places where young people congregate. In addition, the purveyors of filth have been abusing the mails to transport their wares and their equally obscene advertising come-ons, despite the able efforts of the Post Office Department to stop them.

I am happy to say that my State has assumed a leading role in formulating State action against the modern menace of printed filth. The State Literature Commission of Georgia, created by the General Assembly of Georgia in 1953, has been instrumental in formulating legislation which may well serve as a model for other States.

I should like to take this opportunity to pay tribute to one of our colleagues, the Honorable KATHRYN E. GRANAHAN, for the wonderful contributions she has made in the fight against smut peddlers. The distinguished gentlewoman from Pennsylvania [Mrs. GRANAHAN], the chairman of the Postal Operations Subcommittee, has been untiring in her efforts not only to foster legislation to strengthen our Federal antiobscenity statutes but also to awaken the people of this country to the enormity of the half-a-billion-dollar pornography trade that is flourishing in the United States.

Under her competent direction, the Postal Operations Subcommittee has conducted a series of hearings, beginning in April of last year, to determine the nature and extent of the obscenity industry and to find out what has been done as well as what can be done in the future to control the spread of this social cancer. The subcommittee issued an interim report last fall, setting forth its findings in these matters. The report also contains a suggested program for community action which serves as an excellent guide for citizens in local communities who are interested in cleaning up the newsstands in their neighborhoods.

In addition to these actions, the Congresswoman from Pennsylvania has introduced and guided legislation through the House designed to strengthen the administrative authority of the Post Office Department in keeping the mails free from obscene materials. She introduced two separate bills designed toward this end, both of which passed the House and are now pending before the Senate Post Office and Civil Service Committee.

The first of these bills, H.R. 7379, passed the House September 1, 1959. It strengthens the authority of the Postmaster General to cut off the return mail of a violator of the law against mailing obscene matters. Under present law the Postmaster General is authorized to return this incoming mail to its senders by issuing an unlawful order. The purveyor is thus deprived of payments for his illegal merchandise. In order to carry out this function, the law also authorizes the Postmaster General to issue an interim impounding order which allows him to hold up delivery of this return mail for a period of up to 20 days, during which time the unlawful order is being processed.

Experience has shown that there are certain weaknesses in the Postmaster General's authority to issue an interim impounding order. H.R. 7379 would correct these weaknesses in a number of ways including extending the period of an interim impounding order from 20 to 45 days and by giving the Postmaster General greater discretion in deciding when to issue such an order.

The Congresswoman's second bill is H.R. 11516, which passed the House April 19 of this year. This bill provides for the creation of a judicial officer for the Post Office Department. The purpose of this legislation also is to strengthen administrative proceedings in obscenity—as well as postal fraud cases. The legislation is made necessary as a result of a decision last year by the Federal district court in New York City,

to the effect that the Post Office Department's judicial officer was without power to preside at the taking of evidence in a postal fraud case, or any other hearing conducted under the Administrative Procedure Act. H.R. 11516 provides the judicial officer with all the authority necessary to conduct the Department's adjudicative hearings, as a special statutory hearing officer.

Obscenity is a problem which has always plagued society, and probably always will. This does not mean that it is a hopeless problem, however, which cannot be controlled. On the contrary, like any other pest control, it calls for constant vigilance and action. So long as the gracious Congresswoman from Pennsylvania remains in her present post of chairman of the Postal Operations Subcommittee, the fight against obscenity in the mails will be in good hands.

INCONSISTENCY IN HIGH PLACES

Mr. EVINS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. EVINS. Mr. Speaker, no man is immune to some inconsistency; and, indeed, in the field of politics it is sometimes impossible to avoid a certain amount of inconsistency. Therefore, a little inconsistency possibly can be forgiven as a perfectly normal and natural human failing. However, Mr. Speaker, when inconsistency in high places is carried to extremes it can approach and even reach hypocrisy. An example is provided by the news in this morning's papers.

On the front page in the Washington Post we read the headline: "Ike in Foreign Aid Plea Makes All-Out Attack on $1-Billion Cutback."

On page 10, in the same paper, we read this headline: "Ike Urges Chamber (of Commerce) To Oppose Spending."

In the past the President's press secretary, Mr. Hagerty, has evidenced a talent, amounting to genius, for reconciling presidential inconsistencies and trying to make sense out of presidential ambiguities; and I am sure that somehow or other Mr. Hagerty will manage in this case also to mix the black ink and the red ink so that the mixture will appear to be lily white to those who wear the right kind of glasses.

Mr. Speaker, I do not wear that kind of glasses. I see the President telling one group in the morning that he is for economy and against spending—and another group in the evening urging more and more spending—in the billions—in an area where waste has been demonstrated.

How inconsistent can one be?

Yesterday, as for several years in the past, the President tried to give the impression that he has stood for economy in government while a Democratic Congress has tried to spend the Nation into bankruptcy. He does not seem to see any inconsistency between this position and the plain, the simple fact, that every year, but one, the Democratically controlled Congress has reduced his budget by amounts ranging to billions of dollars each year. Last year alone, the Congress cut the President's spending proposals by nearly $2 billion. During the past 6 years, the Congress, on the recommendation of the Appropriations Committee, has cut $12½ billion from the President's spending proposals—Senate Document No. 67, 86th Congress.

How inconsistent can one be?

PEACE OFFENSIVE BY WOMEN AND MOTHERS

Mr. KING of Utah. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Utah?

There was no objection.

Mr. KING of Utah. Mr. Speaker, I speak out today to renew my plea that this Nation launch a new peace offensive, led by the women and the mothers of the 50 States.

I propose, as I proposed a year ago, that we carry out a grassroots peace offensive by negotiating and carrying out an annual exchange of visits between delegations of mothers from this country and from the Soviet Union.

This body could successfully launch such an offensive, I am convinced, by enacting the resolution which I introduced on May 14 of last year, designed to express the sense of the House that an exchange of mothers be initiated and carried out.

This resolution, which is House Resolution 265, was referred to the Committee on Foreign Affairs, and I wish, at this time, to both respectfully request and strongly urge that the distinguished chairman and members of this committee determine now to hold hearings on the resolution, and to give the 86th Congress an opportunity to vote upon it.

Content of the resolution is both simple and brief, and I commend it to the attention of all of my colleagues by reading it now, as follows:

Resolved, That it is the sense of the House of Representatives that, in order to promote a better understanding of the United States in Russia, and to increase mutual understanding between the people of the United States and the people of Russia, the Secretary of State should exercise his authority under existing law, including the United States Information and Educational Exchange Act of 1948, to initiate and, if necessary, to sponsor an international exchange of delegations of mothers between the United States and Russia.

SEC. 2. It is further the sense of the Congress that the Secretary should, in initiating or sponsoring such an exchange program, make suitable provisions to assure that any such United States delegation comprise a true cross section of typical, rather than distinguished or prominent mothers representing a wide range of community and farm life, and that nominees from each State for any such delegation be objectively selected by a panel composed of the chief executive of such State, the dean of women of a State university in such State, and the State president of the League of Women Voters in such State. The final choice of delegates should be limited to not more than two delegates from each State, selected (from among the nominees proposed by the State panel) by a four-member national committee composed of prominent women of the United States designated by the Secretary (not more than two of whom should be members of the same political party).

Since I introduced this resolution, the approach to peace which it suggests has been endorsed by two of the foremost citizens of the world.

An exchange of mothers was proposed last fall by Mme. Nikita Khrushchev during the visit which she and Premier Khrushchev made to this country. And in the current May issue of Good Housekeeping magazine, Gen. Carlos P. Romulo, the Philippine Ambassador to the United States, has enthusiastically endorsed Mrs. Khrushchev's proposal of such an exchange.

The Ambassador's article makes it apparent that Mrs. Khrushchev's proposal has closely paralleled my own.

I must point out, as I did a year ago, that the idea of a mothers' exchange was not original with me. It originated, as far as I know, with one of the prominent women of my own State of Utah.

As some of you may remember, the exchange was suggested to this body 10 years ago by a former Member, the Honorable Reva Beck Bosone, who, as a devoted mother and dedicated public servant, has long dreamed of the day when mothers of various nations would exchange visits and talk peace and understanding at the people-to-people level.

It is apparent that Mrs. Khrushchev, with many other mothers and leaders of the world, shared the same dream.

In speaking out a year ago to urge this exchange, I voiced the opinion that the Soviet Union would agree to it. Mrs. Khrushchev's pronouncement of last fall convinces me that this is true.

I am sincerely grateful and at the same time deeply impressed that General Romulo has endorsed such an exchange. As former head of the Philippine delegation to the United Nations, who served as president of the Fourth General Assembly of the U.N., he is one of the distinguished statesmen of the world.

My conception of such an exchange differs from General Romulo's in only one respect. I do feel that it should be a genuine grassroot, people-to-people exchange, among the typical homemaker-citizens of the two countries. The Philippine Ambassador has suggested that the American delegation comprise such distinguished mothers and leaders as Eleanor Roosevelt, Anne Morrow Lindbergh, Marian Anderson, and Helen Hayes. As my resolution shows, I would prefer that the distinguished American women whom General Romulo names, who undoubtedly would have other opportunities to visit the Soviet Union and communicate directly with the Russian people, if they have not already done so, serve as a selection committee in naming a delegation each year of 100 American women—two from each State—to visit the Soviet Union and other Communist countries.

I am confident that the Ambassador would agree that, whatever the details

employed to work out such an exchange, this Nation and world could profit immeasurably by giving women and mothers a greater voice and a more active role in our efforts to promote and establish a lasting peace. I ask permission to include at this point in the RECORD General Romulo's article which appeared in the May 1960, Good Housekeeping magazine, under the title, "Women Peace Envoys? Why Not?"

WOMEN PEACE ENVOYS?—WHY NOT?

(By Gen. Carlos P. Romulo)

Out of the avalanche of print attending the visit of Russian Premier Khrushchev to the United States last year one small paragraph stood momentarily before the public eye, attracted little or no notice at the time, and apparently has not been mentioned since. To my mind it offered one of the most practical suggestions to come out of that mighty meeting of Russia and America. Its value was enhanced by the fact that it came from the distaff side of the Russian cavalcade and from a woman who has not before spoken publicly—Mme. Nikita Khrushchev.

The brief statement of Nina Khrushcheva, who won many friends during her visit here, offered a simple plan in simple terms. Why not, she asked, send groups of women from America to Russia and from Russia to America, to meet and mingle, share experiences and opinions, visit one another's homes, and try to work out together valid suggestions for accomplishing world peace?

It seems to me this wholly feminine suggestion is as sensible as any that has come from any world conference in a long time. I should like to see America be the first to pick up Nina Khrushcheva's suggestion and choose a group of representative American women, send them to Russia, and let them travel about to share insights with chosen Russian women. Surely Nina Khrushcheva would welcome such a delegation and do her best to make the plan succeed.

I am heartily in favor of this plan because I have often been in a position to see how the most violent antagonisms can melt when adversaries sit down together and share opinions, experiences, and good cheer.

I think it is a practical plan because I have a great deal of faith in women. I have seen something of the power they wield in politics. Many have worked miracles because of their skills in the art of politics; many others have made valuable political contributions through the influence they have brought to bear on their husbands.

As a lecturer, I try never to turn down an invitation that comes from a women's group. I value their power for doing good.

The American woman is far from being "the cat that walks alone." She organizes, she works on committees and in clubs and political party groups, and she has learned that by working together women can achieve almost any objective. What can a woman desire more at this time than to protect the lives of those close to her and to preserve the freedom of her country?

There are wonderful women in America, famous and successful women who have won distinction with their brains, beauty, and charm. They represent the finest of democracy. A carefully chosen delegation of such women could serve to carry into Russia the spirit of the country that has permitted them to be what they are.

Here is the list of American women I should like to see sent in friendly delegation to Russia and perhaps to other countries where they could serve the cause of peace. Some of these women are my friends; others I know only by reputation. I selected them for a variety of reasons, the principal one being their unquestionable faith in America's democratic ways. Added to this conviction must be the ability to express their faith in effective terms, their willingness to listen with courtesy to opinions contrary to their own, and their dexterity in carrying on an exchange in ideas with intelligence and without venom.

It seems to me that these women, who would serve as developers of goodwill in another country, should be women of distinction. They should represent all fields of achievement—art, science, medicine, politics, industry, education, labor, and law.

Above all, though, they must possess social experience and personal charm. They must be adaptable, poised, not easily ruffled, able to hold respect and to win admiration, possessed of good intent and sound common sense and must have a generous understanding of the human heart.

In my group of women, all have achieved distinction, and nearly all have had children. Therefore their stake in the future peace is personal and deep. Every woman on my all-American team has made a success of her American life and, in so doing, has won a great deal of credit for America.

Here are the names that came to me most readily. Given time, I could think of many more.

My first choice for the American women's delegation to Russia: Anna Eleanor Roosevelt. In her own right and as the widow of America's best-known contemporary President, she has the respect of Russia. Her outgoing personality and her all-around knowledge of the world and of human relationships insure her a warm welcome wherever she goes. Significantly, among the many books she has written one bears the provocative title "It's Up to the Women."

Mrs. Oswald Lord: As Mary Pillsbury, she was heiress to the wealth of the Pillsbury Mills industry, but she has inherited an even richer gift—a respect for the rights of men. She has traveled everywhere and has achieved and maintained close communication with people of many lands. She has worked in civic and social welfare, in recreation, and is an authority on the participation of women in civic and world affairs. She played important roles in presentation of the 1939 New York World's Fair and in the Eisenhower-for-President campaigns. As the representative for the United States in the U.N.'s Commission on Human Rights, she won the respect and affection of every delegate in the United Nations.

Marjorie Merriweather Post: Finest of hostesses, always gracious and well poised, she is well known in Russia, where she entertained on an ambassadorial level as the wife of the late U.S. Ambassador Joseph Edward Davies, sharing with him all of the political hazards of his famed "Mission to Moscow."

Anne Morrow Lindbergh: Brilliant and attractive, she has gained world recognition in the fields of writing, aviation, and exploring. She won Russian hearts while traveling with her husband and could do it again with her wisdom, gentleness, and fortitude.

Catherine Marshall: Her works can be just as inspiring to Russian women as they have been to women in this country. She has never allowed adversity to conquer her spirit or lessen her devotion to her loved ones or to her beliefs. Eternally concerned with the welfare of other people, she is a true woman of good will.

Mrs. Roswell Garst: You will not find her name in any American "Who's Who." But she became an important figure in American-Russian relations when, with her husband, she entertained the Khrushchev entourage on the Garst farm at Coon Rapids, Iowa. Competent housekeeper and farm wife, Mrs. Garst sailed through the harrowing operations of that visit with the assurance of a President's wife. She knows Russia, likes Russians, and possesses those rare qualities that helped build pioneer America—good neighborliness, the will to work, and an extraordinary amount of common sense.

Marian Anderson: One of the world's greatest artists and most beautiful souls and one of America's very great women. As a U.S. delegate to the United Nations, her queenly dignity, aura of artistic supremacy, and rare spiritual qualities refuted all the hackneyed racial charges communism has hurled against America. At the sound of her heavenly voice the hardest hearts would melt, and the Russians, passionate lovers of good music, would certainly be no exceptions.

Pearl S. Buck: Outstanding author, traveler in many lands. Mrs. Buck is unique in her comprehensive maternalism as expressed in her love for people of all races. She is a definite "must" on my list.

Perle Mesta: No woman has done a better and gayer job of developing friendly relations for America. Former Ambassador to Luxembourg, her all-embracing capacity for enjoying life and helping others enjoy it and her genius for sharing her friendships would make her an invaluable delegate. American politics is her "dish" which she shares with all she meets.

Helen Hayes. First lady of the American stage. Infinitely talented, tender, helpful, blessed with human understanding, love surrounds Helen Hayes like a halo. Stardom has never lessened her success as a personality or her dedication to public service.

Lillian Gilbreth. Scientist and consulting engineer. Among other notable achievements this extraordinary woman mothered the large, merry family that became famous in the book "Cheaper by the Dozen."

Frances Perkins. Government official and authority on all problems relating to labor and industry. As Secretary of Labor under President Roosevelt, she gained keen understanding of these problems through times of war and times of peace.

To represent the women of the American press and the broadcasting industry, I would send Dorothy Thompson and Mary Margaret McBride for their good sense, skill in expressing thoughts and feelings, keen understanding of people, and their ability to give and take. In addition, Mary Margaret McBride is perhaps the best saleswoman of our times.

I know my list will not meet with everyone's approval. I will be interested in learning what American women think about this idea of an American women's delegation. I would also like to know which women the readers of Good Housekeeping would select as America's emissaries for peace.

Mr. Speaker, I want to say in conclusion that I feel it would be a mistake to lose the initiative to the Russians on an exchange of this kind. They might score a propaganda triumph by beating us to the punch and officially proposing the exchange themselves. At the present time, we find ourselves looking hopefully toward the forthcoming summit conference, just as we were looking hopefully toward a proposed summit conference a year ago. I am convinced that lasting agreement will be achieved at the summit level only when genuine understanding has been established between the peoples themselves. An annual exchange of mothers would surely speed and promote that understanding and eventually would help this Nation and the Soviet people achieve full disarmament and other mutual beneficial treaties on which a lasting peace can be built.

ISRAEL'S INDEPENDENCE DAY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, the birth and the phenomenal growth of the State of Israel is one of most remarkable facts in the troubled, postwar Middle East. The story of its birth, its anxious days during its formative years, its miraculous recovery from the ravages of war, its almost unbelievable ability to absorb and settle more than 1 million destitute and homeless Jewish refugees, and its success in making these refugees useful and patriotic citizens, all these achievements are rare in the annals of modern nations. But the State of Israel has done all these things with success and pride, and in face of insuperable difficulties in its relations with the Arab countries surrounding it. Here too, in foreign fields, Israel has more than held her own, and in every encounter with her foes she has come out undaunted and with honor.

Israel has increased its area by more than 50 percent and has trebled its population, raising the total in the course of 12 years from 650,000 to nearly 2 million. By turning its arid desert areas into blooming and blossoming fields, it has increased the country's arable land by 500,000 acres. Industries have been developed to make Israel the most industrialized and technically advanced country in the whole Middle East. It has succeeded in raising the standard of living of most of its people to the level of West European countries. In short, in the course of a dozen years of its existence, the State of Israel has become the most prosperous and the most progressive country in the Middle East. Judged by any standard, it is the most democratic, the most dynamic, the most youthful state there, and possesses the strongest fighting force in the entire region.

In mid-May 1948 when Israeli leaders proclaimed the birth of Israel and became masters of their own destiny, the portion of Palestine allotted to them by the partition plan was about 5,000 square miles. During the ensuing Arab-Israeli War of 1948–49, that area was augmented by about 60 percent, thus some 3,000 square miles of area was gained. With heavy investments and intensive and scientific development of the country, the enlarged Israel was able to absorb successfully more than one million Jewish immigrants. This part of Israel's work, the rescuing, shipping, and settling, providing gainful employment to them, and making them productive citizens of the new state, has surpassed all expectations, and today these refugee immigrants have become its most valuable asset. They have provided the necessary labor, the leadership in peaceful and wartime industries, and also the sinews of a fighting force that is certainly the most efficient and the best balanced unit in the Middle East. In the building and recreating of the State of Israel the part played by these immigrants has been most valuable. They have worked in the construction of a fine network of roads, opening canals, and laying pipelines, both for irrigation purposes and for transporting oil, thus helping Israel to become, in a real sense, a modern and highly industrialized state.

As a democratic force in the Middle East the State of Israel has indeed become a model. In social, economic, educational, scientific, and cultural fields it has made tremendous progress. With its democratic system of government, efficiently and honestly administered by highly trained, skilled, and public-spirited men, many of Israel's institutions deserve to be models for all other countries in the area. In matters of health and sanitation, in social welfare and labor conditions, in child care and medical services, Israel is certainly an untiring pioneer.

Because of the necessarily large sums earmarked and spent for defense purposes, people often seem to overlook Israel's amazing achievements in other spheres of activity. It is true that, because of her fears from her numerous foes, who have never recognized her existence, Israel has become an armed camp, and remains such in order to safeguard her existence. But even under such conditions of austerity and financial hardship, and under constant threats from one or more of her implacable foes, Israelis ceaselessly labor and struggle in their building and creative work. And, even though Israel is sometimes faced with acute fiscal problems, her finances are in good order, and are improving. By careful husbanding of their resources, and by building credits abroad, especially by carrying out a kind of barter agreement with certain newly developing and friendly countries in Africa and Asia, they are doing exceedingly well in balancing their national budget and in remaining quite solvent.

Of course with all these glorious achievements in nearly every phase of their activity, Israeli leaders do not consider their present task an easy one. The prime difficulty stems from the chronic Israeli-Arab troubles. All their efforts, and those put forth by their friends, have been of no avail in this respect. That of course is the reason why Israel today is like an armed camp, a beleaguered fortress. Unassailable and impregnable it may be, and at present at least, it certainly is, still it is a fortress surrounded by foes and enemies. Even here, however, the present-day leaders of Israel have been successful in befriending a large number of new states in their attempt to neutralize the Arab enmity.

In this politically and internationally uncertain world, Israel is facing its future with confidence and hope. But Israel's confidence is not just complacency. Her citizens, most of them brought up in the school of adversity and inured to all sorts of hardship, are prepared to make all kinds of sacrifices for the maintenance and preservation of the freedom which they enjoy in their new home, in the State of Israel. Inspired by such hope and possessing such firm confidence, and under able and skillful leadership, the State of Israel is destined to play a major role in the modern Middle East. We wish peace and prosperity to the hard-working, patriotic, and hopeful citizens of the State of Israel on the 12th anniversary of the state's independence day.

SELECT COMMITTEE ON SMALL BUSINESS

Mr. YATES. Mr. Speaker, I ask unanimous consent that Subcommittee No. 3 of the Select Committee on Small Business may have permission to sit during general debate tomorrow.

The SPEAKER pro tempore (Mr. STRATTON). Without objection, it is so ordered.

There was no objection.

ANNOUNCEMENT

Mr. FOLEY. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Maryland?

There was no objection.

Mr. FOLEY. Mr. Speaker, I take this time for the purpose of clarifying the RECORD. On yesterday afternoon there were two rollcalls in the House. May I say for the RECORD that I was with the three District of Columbia Commissioners and the Governor of Tokyo in a helicopter survey trip over the Washington and Baltimore areas. Had I been present at the time of rollcalls numbered 62 and 63, I would have voted "yea."

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. FOLEY. I yield to the gentleman from Massachusetts.

Mr. McCORMACK. Mr. Speaker, in connection with the remarks made by the gentleman from Maryland [Mr. FOLEY] I want the RECORD to show that any Member who was absent yesterday was justified in feeling that no rollcall votes would take place. I am making no complaint about anyone. On the other hand, it was most unfortunate that we could not carry out our usual practice in connection with a presidential election year of protecting Members who are away on primary day, and the day preceding. I want the RECORD to show, speaking as the majority leader, that any Member who was not recorded on either rollcall yesterday was justified in feeling that no rollcall would take place, but in view of Calendar Wednesday and the fact that we are resorting to it to bring up the depressed areas bill, there was nothing else that the leadership on this side could do under the circumstances that presented themselves to the leadership yesterday. So, I make this statement in justice to all Members of the House on either side who are not recorded on either or both of the rollcalls yesterday.

ONE HUNDRED AND SIXTY-NINTH ANNIVERSARY OF POLAND'S CONSTITUTION

The SPEAKER pro tempore. Under previous order of the House, the gentle-

man from Illinois [Mr. PUCINSKI] is recognized for 60 minutes.

Mr. PUCINSKI. Mr. Speaker, I ask unanimous consent to revise and extend my remarks, and I also ask unanimous consent that all Members desiring to do so may extend their remarks in the RECORD at the conclusion of my remarks.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. PUCINSKI. Mr. Speaker, it is again my honor this year to participate in the discussion paying tribute to the 169th anniversary of Poland's constitution adopted on May 3, 1791.

The honor we are paying to this great charter today is particularly significant because it comes virtually on the eve of the summit meeting in Paris. Our tribute to this great Polish Constitution, which for the first time in history introduced democratic principles to a European nation, also takes on added significance in light of the fact that only yesterday, this House of Representatives unanimously adopted a resolution urging the President of the United States to seek the restoration of liberty for Poland and the other captive nations behind the Iron Curtain when he meets with Soviet rulers at the summit meeting.

One might quite properly ask why the U.S. Congress, through its Members, should be honoring a constitution adopted by a country thousands of miles removed from our shores. The answer to this question is a most inspiring one.

We Americans, by adopting our own U.S. Constitution, had brought forth a concept of self-government which has endured to this very day. Our own Constitution is a magnificent charter which, for the first time in the history of civilization had spelled out a pattern of behavior for a nation under law which guarantees to its people the dignity and freedom for which man has searched since the beginning of the world. Our own Constitution has repeatedly and consistently withstood the most severe tests of an impetuous society and has survived as the guidepost of our Nation.

The tribute we are paying to Poland's constitution today finds its justification in the fact that this Polish Constitution was patterned after our own Bill of Rights and Charter of Freedom. The adoption of the May 3 constitution by the people of Poland in 1791 introduced to the European Continent the same basic concept of freedom and dignity under law for the individual that we in America had adopted just a few years earlier.

It should come as no surprise then, that Poland's Constitution of May 3 was tragically short lived. Poland's despotic neighbors, steeped for many centuries in a tradition of suppressing civil liberties, knew fully well that if the spirit of the Polish Constitution were to take hold firmly in Poland, it would shortly spread throughout the whole European Continent, with peoples of other nations demanding the same liberties. It was for this reason that Poland's stronger neighbors conspired to partition this great nation and, with the tragic partition of Poland, destroy the first significant light of liberty in Europe.

How different the entire world would be today; how much bloodshed could have been avoided; how much grief, sorrow, and tragedy could have been spared the entire world, had this magnificent charter, the Constitution of Poland adopted on May 3, 1791, been permitted to endure until this day.

It is because we Americans have such sacred respect for the principles incorporated in Poland's May 3 Constitution that we here in Congress again today raise our voice in tribute to that doctrine and, at the same time, by our unanimous action yesterday, renew our demands that the people of Poland and the other captive nations be again permitted to choose their own form of government consistent with their traditional respect for liberty.

One fact remains indisputable today, just as it remained indisputable in 1791. If the people of Poland were free to choose their own form of government today, free from the Communist rule that has been imposed upon them against their will, those heroic Polish people would make as their first order of business the restoration of their constitution adopted in 1791.

This is why we raise our voice today. We, as Americans, know there can be no lasting peace until all the people in the world have been given their freedom. Our effort today to restore freedom to Poland is the greatest contribution we can make toward assuring a just peace for generations to come. I fully hope President Eisenhower will accept the mandate voted by the House yesterday and indeed demand from Soviet Premier Khrushchev at the summit meeting that Poland and the other captive nations be given their right to free elections if real peace is to prevail throughout the world.

On this 169th anniversary of Poland's May 3 Constitution Day, may we all find strength and confident hope that this great nation and her neighbors in Eastern Europe will again be free to live under the code which the Polish people introduced to Europe on May 3, 1791.

Mr. YATES. Mr. Speaker, will the gentleman yield?

Mr. PUCINSKI. I yield to my colleague from Illinois.

Mr. YATES. Mr Speaker, I thank the gentleman for yielding. I should like to commend the gentleman for his very eloquent statement.

Mr. Speaker, in 1791 patriotic and farseeing Poles drafted and adopted a constitution which, because of its liberal and progressive features, made a veritable landmark in Polands' political history. With its adoption, Poland emerged from medieval times and stepped into an enlightened modern age. Poland's government was transformed from absolute monarchy to one of limited monarchy. A cabinet form of government, with parliamentary responsibility, was established. Religious toleration was guaranteed. The electorate was enlarged, and the peasantry was brought under the protection of the law. Many intricate and obsolete features of the old and unwieldy system were abolished, and all class distinctions were wiped out. In short, this was a liberal-democratic constitution, one that was not known in that part of Europe until then.

Unfortunately, the constitution of 1791 never became operative and the Poles never experienced any benefits under it, because immediately after its promulgation Poland was invaded again and its existence as an independent entity disappeared. But the spirit of that constitution has been alive since those distant days, and even today it lives in the hearts of freedom-loving Poles. The 169th anniversary celebration of that historic document is an occasion to pay our respects to the memory of the framers of that great constitution of 1791.

It is a very happy coincidence that this year's celebration also marks the birthday anniversaries of two immortal Poles, the 150th birthday of Frederic Chopin, and the 100th birthday of Ignace Paderewski. These twin geniuses in the world of music, these gifted and great sons of Poland, rank among the greatest of the world's musical artists of all time. It is equally true that these Poles were great patriots and lovers of Poland, for whose cause and glory they exerted themselves to the limits of their physical capabilities. On this 169th anniversary celebration of Polish Constitution Day, we pay our respects to the memory of these two illustrious Polish patriots, Frederic Chopin and Ignace Paderewski.

Mr. ROOSEVELT. Mr. Speaker, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from California.

Mr. ROOSEVELT. Mr. Speaker, I, too, would like to congratulate the gentleman on his very fine statement on this most important occasion.

Mr. Speaker, fate has not been uniformly kind to all peoples, and not all peoples have been treated fairly in its hands. Some have been particularly unfortunate in the course of their long history, and this is especially true in the case of Polish people. This gifted and highly talented people, which has enriched the world's arts and sciences by their very significant contributions, have had the misfortune to suffer under an unwanted alien yoke in their historic homeland. It is highly appropriate that this year we recall that the Poles have given to the musical world two geniuses in Frederic Chopin and Ignace Paderewski, who rank among the highest performers and composers in the world of music. For this year is the 150th anniversary of the birth of Chopin and the 100th anniversary of the birth of Paderewski. The celebration of the anniversaries of these very great Poles lends great solemnity to our remembrance of the Polish Constitution of 1791.

The late 18th century history of Poland is quite tragic, but in that tragedy there appeared a gleam of hope and life in the constitution of 1791. That constitution, adopted in that year but unfortunately never put to a real test

because of foreigners' interference in Poland's affairs, marks a real turning point in Poland's political and constitutional history. Polish leaders did by that instrument what revolutionary leaders in other countries hoped to do through revolution and bloodshed. They drafted a constitution which gave Poland a modern and efficient government. The government became one of constitutional monarchy, with a responsible cabinet type of government. Local landlords' arbitrary power over the peasants was abolished, and the peasantry was brought under the protection of the law. Many class distinctions were done away with, and the electorate was considerably enlarged. Religious toleration was guaranteed, and provisions were made whereby the constitution could be amended at periodic intervals. With all its liberal and democratic features this constitution was considered a model instrument for popular government and as such was hailed by all friends of democracy.

We know that since the constitution remained inoperative, the Poles never benefited by its liberal spirit, but the spirit and the ideals embodied in it lived for 169 years and still lives on this anniversary celebration of that great historic document, the Polish Constitution of 1791.

Mr. DULSKI. Mr. Speaker, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from New York.

Mr. DULSKI. Mr. Speaker, I should like to associate myself with the gentleman in the remarks that he has made.

Mr. Speaker, the revolutionary years of the late 18th century gave birth to many grand and good institutions in Europe. One of these was the Polish Constitution of 1791. With that modern, up-to-date Constitution Poland's patriotic, farsighted, and enlightened leaders overhauled the country's old and unwieldy governmental institutions. They also succeeded in making that government popular and democratic. By its provisions the monarch lost much of his authority, and the government became a limited monarchy. The parliamentary system was more firmly established, and a responsible cabinet system of ministry was set up. The electorate was enlarged, and the power of the second chamber was considerably enhanced. The peasants were freed from the arbitrary powers of landlords and placed under the protection of the law. Religious toleration was guaranteed.

With these democratic provisions the Constitution of 1791 was considered a great achievement on the part of its framers, and the Diet which enacted it became known as the Great Diet. Unfortunately this model Constitution did not have the chance to be implemented, but even so the fine ideals embodied in it still live in the hearts of the Polish people. We join them in marking the 169th anniversary of that historic document.

Mr. JENSEN. Mr. Speaker, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Iowa.

Mr. JENSEN. Mr. Speaker, I listened to the gentleman when he made his fine speech last year on this same occasion and I want to compliment him. I have known many Polish people. They are genuine people, they are honorable, hard-working, trustworthy people, and I join with him in this fine tribute which he pays to his people, the Polish people, and say to him that we shall always hold them as our friends as they hold us as theirs.

I thank the gentleman.

Mr. PUCINSKI. I thank the gentleman for his contribution.

Mr. ANDERSEN of Minnesota Mr. Speaker, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman from Minnesota.

Mr. ANDERSEN of Minnesota. Mr. Speaker, I endorse what the gentleman from Iowa [Mr. JENSEN] has said relative to the remarks of the gentleman from Illinois [Mr. PUCINSKI]. I think the program here today in behalf of these fine Polish people is very well deserved and I commend the gentleman in the well who is leading that particular program.

Mr. PUCINSKI. Mr Speaker, I thank the gentleman for his contribution.

GENERAL LEAVE TO EXTEND

Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks at this point in the RECORD.

The SPEAKER pro tempore. Without objection, it is so ordered.

There was no objection.

Mr. McCORMACK. Mr. Speaker, contemporary events always tend to obscure earlier ones, and sometimes, even against our own wishes, they are relegated to relative insignificance. This happens so frequently that often events of cardinal and even significant importance are almost forgotten and buried in our memory. This is especially true in the case of certain historic events in Polish history. We are, for good reason, so seriously concerned with the present fate of the Poles, and so fully preoccupied with current events of momentous importance, that we sometimes think of Poland only in terms of a large concentration camp behind the Iron Curtain effectively sealed off from the free world. That unfortunately and undeniably is true. Today some 25 million unhappy Poles are virtually imprisoned in their homeland, and there they enjoy precious few of the freedoms for which they and their fearless forebears fought so gallantly and courageously.

Yet there are greater and brighter aspects of modern Polish history which should not be obscured and forgotten. Great names and lasting achievements are scattered in Polish history. From the very beginning of the Polish kingdom, late in the 10th century of our era, Poles have been stout champions of Christianity in Eastern Europe. Their enlightened leaders fought continuously for human freedom. They sometimes fought almost alone for the preservation of European civilization, since for centuries they were on the ramparts on the eastern borders of Europe fighting Asiatic hordes there. In 1683 the conquering Turks were advancing into the heart of Europe, and nothing seemed to stop their devastating onslaught. They were really at the very gates of Vienna when Poland's King John Sobieski came to the rescue of the beleaguered city and successfully drove off the Turks. That was a real turning point in modern European history; once and for all, Turkish threats to West European civilization were eliminated. The Poles also made their signal contributions in our war of independence, and the names of their two gallant sons, Pulaski and Kosciusko, have become household words in this country.

Besides being gallant fighters for freedom, and exceptionally able masters in the arts and the sciences, Poles have shown great talents in other walks of life, including the science of government. By their constitution of 1791 they proved to be pioneers of political reform in Eastern Europe. Today is the 169th anniversary of the adoption of that historic document.

The significance of that historic document is sometimes overlooked because before it was put into force Poland was partitioned for the last time and thus had lost its independent existence. The real importance of that constitution, however, lay in the attempt made by its drafters to introduce a responsible cabinet-type of government in that part of Europe. Monarchical authority was considerably curtailed, and that of the people's representatives was enhanced. The Polish peasantry was relieved from the arbitrary authority of local landlords and placed under the protection of the law. Even more significant than any of these changes was the guaranteeing of religious freedom to all sects. All these democratic and progressive provisions made that constitution a model for later times.

Many of these features were embodied in the constitution of the Republic of Poland recreated after the First World War. Of course in today's Poland dominated by Communist totalitarianism, such features have no place, and even their mention is likely to get one in trouble with the governing authorities. But for all that, and however carefully the Communist masters of Poland ignore the constitution of 1791, it marked a great turning point in Poland's political history, and we are glad to observe the 169th anniversary celebration of that historic document.

Mr. KEOGH. Mr. Speaker, as we take note each year of the passing of another anniversary of the promulgation of Poland's Constitution of 1791, we cannot help but lament the ironies of history which have subjected a proud, resolute, and freedom-loving people to totalitarian strictures.

While it may be true that there are those in Poland today who are content with their situation of quasi-freedom under the forbidding eye of the Kremlin crew, we have every reason to believe this no more represents the true spirit of the Polish people than it does the essence

of other peoples now living under repression in an uneasy world.

In addition to the anniversary of Poland's early charter of liberty, this year marks the centenary of the birth of that magnificent Polish patriot and musician, Ignace Jan Paderewski, and the 150th anniversary of the birth of another musician whose place in artistic history is secure, Frederic Chopin.

In its present climate, Poland undoubtedly offers a grim impression to many Americans who are not fully aware of its heritage of culture and independent thought. Any drabness produced by the shadow of the Iron Curtain can be dispelled quickly, though, by the evocation of these towering personalities—Paderewski and Chopin—whose contributions are known and valued highly throughout this country, as in their homeland.

Neither the Polish people nor any other could hope to produce Paderewskis or Chopins in quantity, as the Maker rations genius—but we do well at this time, with Poland forced to languish in an intellectual limbo, to recall these figures of drama and magnetism in the history of a people, for they are symbolic of the fires of achievement which still burn within that people.

Let us not conclude that the Poles have failed freedom, or that they accept with easy grace the order of the day. Few Poles, through the centuries, have worn a yoke with ease.

It is pertinent to recall, too, that the Poles accepted Christianity nearly 1,000 years ago—in A.D. 966; that they embrace a legal principle similar to the English habeas corpus in 1430; that their parliamentary system included a house of representatives as early as 1454; that their first Constitution, limiting the power of the King, was promulgated in 1505.

The great Polish political philosopher, Goslicki, writing in the 16th century, set down principles of law which had acceptance in Poland then, although most of Europe was to remain under absolutism for centuries more:

1. There must be laws which are greater than an individual, including those who rule the state.

2. Such laws must be founded upon the basis of Christian faith.

3. There must be mediation between conflicting points of view.

4. Both the nation and the individual derive their true purpose and dignity from Christian principles, and without them must perish.

These precepts of a free Christian order retain validity, although scorned and dishonored by the Kremlin, but we can look ahead with the freedom-loving Poles and the 7 million Americans of Polish ancestry, to the day on which true democratic government and the laws of Christian reason will be restored to a long-suffering but unbroken people.

Mr. ROONEY. Mr. Speaker, today, May 3, marks the 169th anniversary of Poland's Constitution of 1791. I would like to think of it as a day of great rejoicing. Unfortunately, the sadness of this day is evidenced by the present domination of the Polish people by their ruthless Soviet tormentors. Communism has tried to enslave and break the spirit of the brave Polish people. Yet, in spite of all their trials and tribulations, they have not lost their burning desire for freedom and independence.

There are many happy pages in Poland's long and turbulent history, shining with greatness and glory, which tell of a long chain of events which secure an honored place for the Polish people in European and world history. The constitution which they adopted in 1791 was patterned after our own American Constitution. It was an instrument of democratic government, and it won the admiration of Edmund Burke, who was at that time the most eloquent champion of liberty in Europe.

November 6, 1960, will mark the 100th anniversary of the birth of Ignace Paderewski, who was acclaimed as one of the outstanding artists of the world at the turn of the century. During the First World War he temporarily gave up his artistic career and worked for the independence of Poland. He was instrumental in organizing an independent Polish Army which fought with the other Allies on the western front. At the outbreak of World War II, Poland was invaded by the Nazi hordes and Soviet Russia. Paderewski again accepted the responsibility and task of working for the liberation of his beloved Poland.

In 1940 he arrived in the United States to continue his tireless efforts on behalf of the independence of his homeland. He died in New York on June 29, 1941, and was buried in Arlington National Cemetery by special authorization of President Franklin D. Roosevelt.

He is revered as a great patriot, statesman, and artist, and it is only fitting and proper that we pay special tribute to his memory on the occasion of the 100th anniversary of his birth. A postage stamp in the "Champions of Liberty" series in honor of this great humanitarian and statesman will be issued sometime during the fall.

Mr. BYRNE of Pennsylvania. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include a resolution of the Eastern Pennsylvania District of the Polish American Congress.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. BYRNE of Pennsylvania. Mr. Speaker, 169 years ago the constitution of May 3d was proclaimed. Many devices of democracy were built into this constitution. To the Polish people it offered the means through which they could eventually achieve freedom and a genuinely democratic government. For its time the May 3 constitution was a liberal, progressive, and farsighted legal document.

But the Russians destroyed what hopes the Poles had for the establishment of constitutional government in Poland. The Russians with their allies destroyed this constitution; they also destroyed the Polish state.

Today as we commemorate the anniversary of the May 3d constitution we should be reminded of the great hopes and aspirations of the Polish people today as they are again enslaved by the Russians. And yet despite the awful tyranny under which the Poles live, it is remarkable indeed that they have resisted with almost superhuman will the corrosive effects of the rule by the Communist masters. Periodically in the press, stories are published that show the elements of defiance within the Polish spirit. Only the other day riots broke out in Nowa Huta, a leading Polish industrial city, when Communist officials removed a cross from a site picked 3 years ago for the construction of a new church. This action was taken when the authorities decided the site, at the corner of streets named after Marx and Lenin, was unsuitable for a church. In a spontaneous burst of protest a crowd of 2,000 Poles, many of whom were women, fought the police in a desperate attempt to save what was to them a prize possession. In this instance as in others before, the cross was the symbol of continued Polish resistance to communism in Poland.

On this day of national dedication we join with Poles everywhere in prayerful expectation that Poland will survive the present critical era; that the spirit of the May 3d constitution will once again prevail; and that genuine freedom will be Poland's to enjoy one day in the future.

Mr. Speaker, it gives me great pleasure to include in my remarks today a resolution adopted last Sunday by the Eastern Pennsylvania District of the Polish American Congress where I was a speaker.

The resolution follows:

RESOLUTION OF POLISH AMERICAN CONGRESS, INC., EASTERN PENNSYLVANIA DISTRICT, PHILADELPHIA, PA.

(Resolution adopted at mass meeting held under the auspices of the Eastern Pennsylvania District of the Polish American Congress, at Father Monkiewicz Playground, Richmond Street and East Allegheny Avenue, Philadelphia, Pa., on Sunday, May 1, 1960, with copies to be forwarded to the President of the United States; the State Department; Hon. JOSEPH S. CLARK, JR., U.S. Senate; Hon. HUGH D. SCOTT, JR., U.S. Senate; Hon. WILLIAM A. BARRETT, Member of Congress; Hon. KATHRYN GRANAHAN, Member of Congress; Hon. JAMES A. BYRNE, Member of Congress; Hon. ROBERT N. C. NIX, Member of Congress; Hon. WILLIAM J. GREEN, JR., Member of Congress; Hon. HERMAN TOLL, Member of Congress; the Philadelphia Daily News; the Philadelphia Evening Bulletin; the Philadelphia Inquirer.)

Whereas in the tradition of the Polish nation the 3d of May is tied deeply to the ideals of social progress and the fight for freedom and independence; and

Whereas the creators of the Polish Constitution of May 3, 1791, were guided by the same principles and aims that led the fighters for the independence of the United States in cementing the foundation of American democracy; and

Whereas the principles of the Constitution of the 3d of May were additional evidence of the democratic mind of the Polish nation and a symbol of its indissoluble ties to Western culture; and

Whereas in spite of the heroic resistance of the entire Polish nation under the leadership of Thaddeus Kosciuszko, Russia, by the force of its armies prevented the fulfillment of the constitutional guarantees, and

later, with Germany and Austria, concluded the partition of Poland; and

Whereas the world situation is as menacing today as it was for Poland 169 years ago; and

Whereas the Soviet Union, fired by the doctrine of aggressive communism, will never renounce its main objective, that of dominating the entire world; and

Whereas the slogans of the dictators of the Soviet Union in regard to peace and disarmament are tactical maneuvers designed to lull the vigilance of the American people, to weaken the defense potential of the United States, and to shatter the unity of the free world in opposing further Communist aggression; and

Whereas the Soviet Union seeks to gain time in order to consolidate its grip on the countries which it enslaved after the Yalta Pact, and to overtake the economic leadership of the United States; and

Whereas Poland and the other nations overpowered by the Soviet Union rest their entire hope and sympathy with the United States, as evidenced by the uprisings in Poznan and Budapest, and the spontaneous and enthusiastic welcome given to Vice President RICHARD M. NIXON in Warsaw in the summer of last year; and

Whereas the eagerness of the Soviet Union for meetings at the summit, and its concept of coexistence between the East and the West, are an attempt to draw the United States and the Western Nations into a surrender linked to the recognition of Communist authority over a long list of subjugated peoples: Now, therefore, be it

Resolved at this meeting of Americans of Polish descent under the auspices of the Eastern Pennsylvania District of the Polish American Congress, assembled in the City of Brotherly Love and the Cradle of Independence, on this the 1st of May 1960, for the purpose of commemorating the 169th anniversary of the 3d of May constitution:

1. That we appeal to the President to demand from the Soviet Union at the forthcoming summit conference of May 16, 1960, in Paris, that the Soviet Union withdraw its army and agents from Poland and other East European countries, and that the Soviet Union agree to free and unfettered elections in those countries under an international supervision, to enable these people to choose the form of government under which they desire to live;

2. That we appeal to the U.S. Government for its recognition of the western boundaries of Poland on the Oder and Neisse Rivers, which would void the Soviet argument that only she can guarantee the western boundaries of the Polish people;

3. That since as a result of Soviet exploitation Poland finds itself in a difficult economic situation, the United States provide increased economic and financial aid to Poland in such form as will insure the raising of the meager standard of existence of its people;

4. That we pledge to continue our fight for the full freedom of Poland, and pledge to support the U.S. Government in its determined efforts to combat the infiltration of communism in the United States and Red aggression throughout the world.

Long live the United States of America.
Long live a free and independent Poland.
Long live the Polish American Congress.

HARRY S. CZAPLICKI, Jr.,
President, Eastern Pennsylvania District, Polish American Congress.

WILLIAM F. SIEMION,
Chairman, 3d of May Constitution Celebration.

STEFAN SOKOLOWSKI,
Chairman, Resolution Committee.

Mr. RABAUT. Mr. Speaker, the 18th century is generally known as the century of revolution, but it may also be characterized as the century that gave birth to democratic ideas and to the establishment of democratic institutions. In Eastern Europe the sweep of democratic movement manifested itself in Poland, in the Polish Constitution of 1791.

That historic constitution placed a real check on the absolutism of the monarch. A constitutional form of government was established with a cabinet of ministerial responsibility. The powers of the upper chamber were curtailed, and those of the lower legislative body were considerably enhanced. The electorate was enlarged and the peasants were brought under the protection of the law. Many class distinctions and privileges were abolished and the arbitrary power of local landlords over the peasantry was eliminated. Religious toleration was guaranteed, and provision was made for the periodic amendment of the constitution. With all these sweeping, progressive features the constitution of 1791 was rightly regarded as a momentous document, and as such hailed by the champions of freedom everywhere. The Poles themselves have always regarded it as their charter for freedom and observe its anniversary celebration with due solemnity. On this 169th anniversary celebration I gladly join Polish-Americans in this great Republic.

Mr. GEORGE. Mr. Speaker, today it is my privilege to pay tribute to one of the truly great democracies of our civilization, Poland, on its anniversary of Constitution Day.

Foremost in our minds today should be the Polish people who, through no fault of their own, have been forced to endure Soviet oppression. They live in a twilight zone between the darkness of spiritual and physical tyranny from the East and the rays of encouragement from the West in the form of economic and moral aid.

In order to better understand the anti-Communist resistance of the Polish people it is important to examine Poland's significant contribution to the development of Western civilization. The year 1960 marks the 100th anniversary of the births of Jan Paderewski, a great artist and humanitarian, and the 150th anniversary of the foremost Polish composer, Frederic Chopin. Both were beloved in America as well as in Poland.

Paderewski toured the world and was acknowledged as an artist of the highest stature. In addition he was a very talented composer and his opera "Manru" was played at the Metropolitan Opera House in New York. As his prestige increased, Paderewski exercised increasing influence in Washington's political circles on behalf of Poland. It was largely through his efforts that the 13th of Wilson's Fourteen Points was devoted to the restoration of a free and independent Poland.

On March 18 I wrote the Postmaster General asking issuance of a "Champion of Liberty" postage stamp commemorating the 100th anniversary of Paderewski's birth. I was delighted to receive, only yesterday morning, a reply from the Postmaster General indicating that the stamp will be issued sometime during the fall of 1960.

Chopin was one of the great contributors to Poland's enrichment of arts and sciences. His entire life was devoted to the preservation of Polish nationality and ideas. Throughout the inspiring 39 years of his life, Chopin's music rose as a hymn of liberty. His contribution to his beloved Poland was so great that the significance of his life is just now beginning to receive proper recognition.

Poland's contribution to the develop-the danger. Under that constitution, ranks high among all the nations of the world. The significance of this day to all Americans is great and we wish to emphasize that we have not forgotten our pledge to help Poland restore her freedom and independence and facilitate her return to the Western family of free nations.

Mr. LESINSKI. Mr. Speaker, on this, the 169th anniversary of Polish Constitution Day, I should like to present again today, which I had resubmitted for your consideration, H.R. 12041, the proposal I have previously advanced to establish a special assistance fund from which economic aid would be given to those central and eastern European countries which seek to establish independent governments after having liberated themselves from Communist Russia.

I am aware that the President does have a measure of power to grant some economic assistance, as has been granted to Poland in recent years, to those nations, but I believe enactment of a program such as I am suggesting would be concrete evidence to the enslaved peoples of Europe that we in the United States are ready and willing to help them in their efforts to regain freedom and independence.

Under my proposal, when it has been determined that free and unfettered elections have been held in a country which had been under Soviet control and that the newly elected government is truly representative of the people in accordance with democratic principles, the President would be authorized to furnish such nation with technical assistance and services, agricultural and other commodities, and such other assistance as will strengthen that government and promote the continuation and growth of freedom and security within the nation.

I believe it is in keeping with the spirit of this day to call for action on my proposal at this time. You will recall that when the Polish Constitution of 1791 came into existence, Poland was being threatened with enslavement by her neighbors, and her leaders hoped, with that democratic document, to stave off the danger. Under that Constitution, the country embarked upon a period in which her people enjoyed new freedoms and liberties.

With my proposal I am seeking to encourage the restoration of freedom and liberty to the present-day people, not only of Poland but also of all the nations enslaved behind the Iron Curtain.

In conjunction with my proposal, I believe our President should, during the discussions at the summit conference, insist that the Russians live up to the promises made under the Yalta agreement and permit "free and unfettered

elections on the basis of universal suffrage and secret ballot" in Poland and in the other enslaved nations. He should insist that the Russians take this positive action to show their good faith and sincerity in cooperating with us in the pursuit of peace and disarmament.

It is fitting, I feel, that today, as we commemorate the birth of democratic processes in Poland, we also give serious consideration to these proposals which I have made in the interests of freedom and liberty for the people of the enslaved nations.

Mr. STRATTON. Mr. Speaker, I am happy to join today with my distinguished colleague from Illinois [Mr. PUCINSKI] in paying proper tribute to the Polish people and to the great community of Americans of Polish descent on the occasion of the anniversary of the Polish Constitution. This famous May 3 constitution of 1791 is a fitting symbol today of the long and splendid flame of freedom that has always burned so brightly in the hearts of the Polish people and that still burns there today. Mr. Speaker, tyrants and dictators may momentarily stamp out the machinery of free government in Poland as indeed they have done so in years past, and, as in Communist form, they are doing today. But these tyrants and dictators can never stamp out the genuine burning desire for freedom from the hearts and minds of the people of Poland and of Americans of Polish descent.

In the words of that famous hymn which I have sung so often, and always with a thrill running down my back:

Our fathers, chained in prisons dark
Were still in heart and conscience free.

Mr. Speaker, as we pause today at this late hour to commemorate the undying desire for freedom of the people of Poland, let us also pledge ourselves again to the determination that we in America will never be content until Poland is free once more, and until the great principles of the Polish Constitution of May 3, 1791, are once again allowed to be incorporated into the daily, operating governmental structure of the Polish people.

Mr. MORGAN. Mr. Speaker, it gives me great pleasure to participate once again in this annual acknowledgement by the Congress of the United States of Poland's Constitution Day.

This has become an event in this Chamber which enables us to pay special tribute to the gallant people of that still beleaguered country.

It serves to remind us and the Polish people first that Americans have not forgotten their pledge to help Poland to restore her freedom and independence and to facilitate her return to the Western family of nations.

Moreover, it gives us the opportunity again to note the remarkable contribution of this country to the development of Western Civilization and culture.

We are reminded, for example, that this year marks the 100th anniversary of the birth of that great artist and humanitarian, Ignace Jan Paderewski, on November 6, 1860, at Kurylowka. Beloved in both America and Poland, this fine pianist and statesman will always live in our hearts.

It is also this year, Mr. Speaker, the 150th anniversary of the birth on February 22, 1810, at Zealazowa Wola, of the famous Polish composer, Frederic Chopin, whose music still rings in our finest concert halls from the fingers of our best musicians.

We are reminded further of the heritage of the 7 million Americans of Polish ancestry as they begin to point to Poland's forthcoming millenium of her acceptance in 966 of Christianity and her irrevocable union with Western Civilization and Latin culture.

As we think back on these great events and figures in the glorious history of this sturdy country in the heart of central Europe, we realize what forces exist in this people driving it to rise once again from the mire of external suppression of her liberties and to join in the wealth of freedom which we cherish in the Western World.

Mr. Speaker, Poland will rise again just as certainly as we sit here today. For the forces of good will triumph over the forces of evil when the fires of liberty burn bright in the breasts of a people. And we know they burn bright in the breasts of the people of Poland.

Mr. MACHROWICZ. Mr. Speaker, I join with my colleagues in their remarks commemorating Polish Constitution Day.

We are celebrating today the 169th anniversary of the adoption of the memorable May 3 constitution. This historic Polish national holiday is observed solemnly throughout the world and above all by the 7 million Americans of Polish descent in the United States.

We can stress with pride that this great national holiday is not observed only by those of Polish origin. For many years, by traditional custom, the U. S. Congress observes this anniversary and many Members of Congress express their respect for the 3d of May constitution. Many State Governors and mayors of large cities, by proclamation, recognize the importance of this day.

What caused the fact that this Polish May Constitution has found such a strong echo and response in so many countries of the free world and particularly here on the free soil of the United States of America?

The constitution of May 3, 1791, was a great accomplishment of deep minds of the most brilliant contemporary Polish law experts, politicians, and philosophers, who based this important act on the highest contemporary ideals of freedom and democracy that have enlightened the minds of the authors of the present American Constitution and the French Declaration of the Rights of Man and Citizen.

Unfortunately, Poland at that time was nearing its fall and was soon to succumb to the force of the greater potentials of the enemies who surrounded her on all sides.

Within 4 years after the adoption of the May constitution, the third partition of Poland and the long era of slavery ensued. In the years that followed Poland had the benefit of full independence for barely 20 years, from 1918 to 1939. Twice, namely in the times of the so-called Congressional Kingdom, from 1815 to 1830 and lately, from 1945 to 1956, Poland was governed by envoys or ambassadors of Moscow. All the remaining years of that period, beginning with the third partition 110 years ago, were days of absolute slavery.

But what are these years in the context of the 1,000 years which have elapsed since the founding of the Polish State, since the adoption by Poland of Christianity and which 1,000th year anniversary will be celebrated during the next few years?

Truly these 110 years are only a small fraction of the glorious and brilliant 1,000 years of the history of Poland. These 1,000 years of the Polish State are brightened by such historical facts as the victory of Boleslaw Chrobry over the Germans, as the foundation of one of the first universities in Europe, the Jagiellon University in Krakow, the victory of Jagiello over the Crusaders at Grunwald, the epical discovery by Nicholas Kopernik that the earth revolves around its axis and around the sun, the victory of Jan Sobieski in Vienna.

A nation with such traditions and such historic and scientific accomplishment is truly a great nation. The greatness of a nation and a country is not measured by the greatness of its lands or the size of its population. A nation's contribution to the world culture and civilization on one hand and, on the other, its participation and its position in international politics, the weight of the voice of its representatives in negotiations deciding on the fate of nations on the world scale, these are the factors that determine a nation's greatness.

Poland today does not play a great role in the international arena, but in the past 1,000 years there were long periods when not only was the Polish position and the Polish voice considered but when it was a deciding factor in the formation of the fate of the world.

And even in the period of those sad days when Poland was practically erased from the map of the free countries of the world, the Poles were not forgotten as a nation and they played their important role in the history of the culture and diplomacy of the world.

Above all, the Polish people never acquiesced in their lot as an unfree people. In their own country, as in all parts of the world, the Pole fought insistently on the fields of battle and did his share for his own freedom and the freedom of others. Kosciuszko and Pulaski in America, the Dabrowski Legions in the Napoleonic Wars, Prince Jozef Poniatowski who paid with death in the waters of the Elster for his title as French Marshal, the glorious but bloody Polish insurrections of 1830, 1848, and 1863, the participation of Poles in the last two World Wars on all fronts of the world, the victory over the Soviet armies of Lenin and Trotsky in 1920, and that memorable battle of the Vistula, which has been rated as one of the seventeen decisive wars determining the date of the world, the defeat of the Hitler forces at Monte Cassino in 1944, all of these are but a few of the bright

milestones on the road of Poland to independence and freedom.

And in the same period, the contribution of the Polish nation in the field of progress and general world culture is also great. The great names of the Polish poets of Poland, Mickiewicz, Slowacki, Krasinski, Norwid, Wyspianski, are among the names of the greatest poets of Europe. The two Nobel awards to Sienkiewicz and to Reymont are proof of the world renown of Polish literature. The music of Chopin, the 150-year anniversary of whose birth was celebrated this year throughout the world and at the International Festival in Warsaw, is accepted today as a treasured property of the entire world. Ignace Paderewski, a great composer and Polish pianist of international fame is particularly remembered in America, where this year there are being memorials organized to celebrate the 100th anniversary of his birth. In the field of science, Marie Curie-Sklodowska, a Nobel Prize laureate, by her famous discovery of radium was the initiator of the development of the studies which led to all the present accomplishments of the atomic era. These few names should suffice to state in all earnestness that a nation that gave to the world such people, is undoubtedly a great nation.

The Polish nation does not demand for itself any special rights or privileges. It asks simply only for that article of first need as necessary for life as bread is for every individual and for every nation regardless of its size. It demands freedom and independence, the right to decide in its own matters without foreign interference.

This same freedom and independence is today demanded by many nations and countries in great areas, not only in Europe, but also in Asia and Africa. Without doubt the chief oppressor of these nations is Soviet Russia. Soviet Russia today is the visual symbol of bloody tyranny on earth. On the other hand, the leader of the free countries of the world today is the United States of America, and this American leadership is today generally acknowledged. The eyes of millions of people remaining in Soviet or Chinese enslavement are directed toward the symbol of freedom, the Statue of Freedom at the entry to the port of New York.

The solution for many of the great international problems facing the world depends on the results of this struggle and on the conditions of the coexistence on one side of the free world, led by the United States, and on the other side, Soviet Russia, a country that intends to force upon others its communistic system. The policies of America inaugurated immediately after World War II by President Truman and consistently followed thereafter are policies of peace. There is no cause for which America would take to arms, excepting only in its own defense and in defense of those allied with her against direct attack. The policies of Soviet Russia, on the other hand, are directed toward control of the world. They consist of constant efforts to bless other nations with a forced communization even though these nations avoid such blessings, refuse them, and beg to be freed from such blessings. Such a nation upon whom a Communist system was enforced by Soviet Russia, contrary to its will, is Poland. Ironically, the Communists have called this liberation and the Polish nation, much against its public will, finds itself now in the Soviet orbit.

What will this peaceful struggle of the ideology of freedom with the doctrine of forcible communism bring to the world? Will coexistence result and how will it be set up? We know that one alternative to coexistence would bring dire results to the entire world, which tragic results we cannot even fully visualize.

There arises the question as to what, in this situation are the policies of the United States toward the nations upon whom the Soviets have forced communism, among these, Poland, as one of the largest communized nations.

In the past, these policies were labeled in many ways. In the period of the presidential elections of 1952 and 1956, the present administration, liberal in its slogans which were intended to draw the votes of Americans of Polish descent, called their policy a policy of liberation. Soon after, however, they had to add to this label "by peaceful means." This policy of "liberation by peaceful means" is actually a policy of liberation by contradiction. How can any country behind the Iron Curtain be liberated by peaceful means contrary to the Soviet will? The present policy of the administration in the shape of "policy of liberation by peaceful means" is simple hypocrisy. This hypocrisy was completely unmasked in an important tragic manner during the recent Hungarian revolt for freedom. In a heroic revolutionary uprising, the Hungarian nation attempted to liberate itself from its enforced Communist control and to free itself from Soviet Russia. The revolutionary Hungarian troops led by the Hungarian Government with communistic Imre Nagy at the head, demonstrated their unrequited will by the fire of cannons, guns, and grenades, and above all, by the steady stream of the Hungarian youth. The Hungarian revolution was preceded by a few days by the bloodless Polish revolution in October 1956 and by the earlier revolt in Poznan in June of that year, which was led by standards bearing the words "bread and freedom" written in blood of workers.

The present administration has loudly proclaimed the slogans of "liberation" for nations behind the Iron Curtain. This was particularly true during the election campaigns. Has this policy of liberation contributed to the liberation of at least one country behind the Iron Curtain? Has our Government pursued sufficient peaceful means during the revolution for freedom in Hungary? Hundreds and thousands of refugees from Hungary bring us the revelations of how the verbal hypocrisy of "liberation" was unmasked with catastrophic results for American prestige.

The revolution in Poland of October 1956 relied completely and solely on the strength of the Polish people themselves and was directed toward very limited accomplishments, namely, the independence of the Polish Communist Party and of the Polish State from the Soviet Party and the Soviet State. It was actually an internal Communist revolution not directed toward the freedom of the Polish nation from communism, but only toward the freedom of the Polish communism from the influence of Soviet communism. What lesson can we derive in relation to Eastern Europe from the errors of our administration? A desire for general peace based on the principles of freedom and justice to all nations is a main and basic policy accepted by the entire American Nation. This goal is an indivisible part of the history of the United States and of our great traditions, and it stands high among the highest ideals which we have inherited from the past leaders of our Nation. Every American acknowledges with pride the principle that every nation has a natural and undeniable right to decide for itself regarding its internal matters without terror from the minority within and without force and threat of force from without. This means simply that in the internal matters of Poland, as of any other country of central and eastern Europe, and for that matter, the entire world, neither America nor Soviet Russia nor any other country should be allowed to interfere. Only the Poles should have the right to make free decisions regarding their internal problems, just as in the internal problems of America only Americans should freely decide for themselves, and in the internal matters of Soviet Russia the Russians should decide freely for themselves. In equal measures this concerns all the other nations of Europe, Asia, and Africa. Let this principle become not only a beautiful slogan without action to implement it just as a policy of peaceful liberation was, but let this be a basis of actual deeds. Let us systematically adopt a policy not only to make declarations but to insistently demand their enforcement by all the others who also proclaim these principles. Such a policy, above all, would demand a necessity of refusal of international sanction of any situation contrary to the principles of self-determination and would call for diplomatic implementation of this principle at every occasion.

Abraham Lincoln once said that the American nation was born of freedom. May the future historians be able to say with equal justification about our generation that the American Nation, born in freedom, was always faithful to the cause of freedom, not only in its own country but also in relation to other countries and nations of the world.

If our Government adopts such a policy and consistently stands by it uncompromisingly, I can assure you that the dreams for a free Poland and the desire of all people of goodwill for a permanent peace and justice in the world will soon become not only a fond dream, but a real actuality.

Mrs. GRIFFITHS. Mr. Speaker, Poland will rise again. That is the goal of all freedom-loving peoples throughout this world. Today, we are solemnizing Poland's May Constitution of 1791. This

is the opportune time to reassure the people of Poland that we have not forgotten our solemn promise to help Poland regain her freedom and independence.

Poland has a long and proud Christian heritage. Today, Poland stands on the threshold of its millennium under the yoke of the barbaric and tyrannical forces of the European East.

We must help Poland today and tomorrow as we did yesterday until she has once again taken her rightful place in the family of free and independent nations. With our help, Poland can rise again.

Mr. FORAND. Mr. Speaker, today, May 3, is a memorable day in the history of Poland. It is the birthday of the great Polish Constitution, and on this occasion I am happy to join my colleagues in this tribute to the Polish people.

I congratulate the people of Poland for the continuing struggle they are waging against communism within their own country and wish for them full and lasting freedom in the not too distant future.

We proudly join the Poles in their rededication to the cause of peace and freedom. We pay tribute to them as a brave people, a people that has suffered much in their fight against tyranny. Their determination to preserve freedom and justice against overpowering odds should be an example to all of us who take these privileges for granted.

For her many sons and daughters who have settled in the United States, and have become outstanding citizens in their respective communities, we say thank you because they have contributed much to make America great.

We pray and we hope that they may someday soon begin to enjoy the freedom and liberties that we are privileged to enjoy.

God bless them and give them strength to carry on.

Mr. OSTERTAG. Mr. Speaker, today marks the anniversary of Poland's Constitution Day. In Poland's history, this day is comparable to our Fourth of July. It was on May 3, 1791, that Polish patriots adopted the constitution which assured important political, social, and educational reforms for the Polish people. The constitution was imbued with the same spirit which inspired our own forefathers in the cause of American freedom.

As we see, the Polish Constitution was adopted only a few years after our own Declaration of Independence. In fact, many great Polish patriots like Pulaski and Kosciuszko had aided our own struggle for freedom.

Sadly, Poland's vital constitution was cast aside by the present Soviet-imposed Communist regime in 1953. But the Polish people have not abandoned the ideals and aspirations embodied in their 1791 constitution. Events have made it clear that despite the waves of ruthless Communist oppression, the people of Poland have maintained their patriotic and moral resistance and their love for freedom. They have remained stout defenders of their religion against atheistic communism. They have maintained their desire to associate with Western culture and thought. If any reminder of all this was necessary for us, it was furnished dramatically last year during the visit to Poland by Vice President NIXON. The visit brought forth tremendously enthusiastic expressions and demonstrations of affection and regard for the United States. The country had not witnessed such enthusiasm since the Poznan demonstration against the Communist government.

Since Pulaski and Kosciuszko came to this country, millions of their countrymen have immigrated to our shores and contributed their strength and vigor to the building of America. As a result we enjoy a special bond with Poland, even during these times. That is why we join today in marking this 169th anniversary of Poland's Constitution Day, and pledge our efforts to see this great document restored once again to a position where it will play a vital role in Polish political and social progress.

Mr. FINO. Mr. Speaker, for 169 years May 3 has been a national holiday for the Polish people, and they celebrate it just as we celebrate our July 4. Such is the significance of the constitution of 1791 which was enacted by the Great Diet, or Parliament, in that year.

This constitution may be termed a kind of charter of freedom for the Poles. Though it was a means for the overhauling of Poland's governmental institutions, yet it had so many liberal and progressive features that it could be termed a "charter." Heretofore Poland's King had unlimited power; by this constitution, he was shorn of much of that power and he became a monarch of limited powers. A cabinet-type of government with parliamentary responsibility was instituted. Many class distinctions were practically eliminated. The peasants were freed from local landlords' arbitrary rule and placed under the protection of the law. The electorate was considerably enlarged, and religious tolerance was guaranteed.

In the year 1791 any of these changes would have been considered radical in many parts of Europe, and the fact that Polish leaders made all these changes in one stroke testifies to their progressive and democratic views. On the 169th anniversary clebration of that constitution, we pay tribute to the memory of those wise and farsighted Polish patriots and statesmen.

Mr. ANFUSO. Mr. Speaker, for the past two decades, ever since the Polish Republic was invaded by Nazi Germany and its independence was subsequently destroyed by Soviet Russia, it has been customary to solemnize Polish Constitution Day on the floor of both Houses of Congress. Polish Constitution Day occurs on May 3 of each year. This year marks the 169th anniversary of the adoption of the Polish Constitution on May 3, 1791.

Our expressions of hope and encouragement on this day are made for a number of reasons. We wish to associate ourselves with the Polish people in their struggle for freedom and independence. We seek to encourage them morally, spiritually, and in other ways not to lose faith in God and man. We want to reassure them that the people of America have not forgotten their pledge to help Poland in every possible way to regain its rightful place among the free nations of the world. We review Poland's magnificent role in the development of Western civilization and culture. We underscore our warm friendship for the Polish people, a relationship which has a long history and has always been appreciated by the people of Poland.

Today, nearly every vestige of freedom has been suppressed or destroyed in Poland. Its people are a captive nation enslaved by communism. They are faced with the threat of physical, cultural, and religious extinction. They live in a twilight zone between the darkness of a ruthless tyranny hovering over them from the East, and the rays of hope reaching them from the West with their promise of aid and ultimate freedom.

When the U.S. Congress last year adopted the resolution on Captive Nations Week, we struck a hard blow against communism. All of us surely recall the violent reaction of the Soviet leaders to this resolution and its effectiveness in molding public opinion in many areas of the world. Moscow's reaction proved the uneasiness existing in the Kremlin concerning its subjugation and domination of the captive peoples.

Within a few short weeks the "Big Four" are scheduled to meet in Paris at an East-West summit meeting. This would seem to be a logical time, place and occasion to bring up the question of the captive nations. We cannot permit the Soviet Union to ignore this problem any longer. Every opportune moment must be utilized for positive action in order to try to regain for these nations the fundamental freedoms and the human rights to which they are entitled, to enable them to live under governments of their own choice, and to continue to develop their culture and to worship their God without fear of reprisal.

In the meantime, in the face of all adversities, I feel it is of utmost importance for the American people to express their sympathy for the Polish nation and to encourage the Poles not to lose faith or hope for the future, no matter how long or difficult the road to freedom and independence may be. On this historical, though sad, day we join with them in prayer that a free Poland will soon rise and its people will enjoy genuine democracy and will know the full meaning of human dignity. To Americans of Polish descent we extend our best wishes that their kinsmen in Poland will survive this tyrannical oppression and will once again resume their religious, cultural and national life in full glory.

Mr. LIBONATI. Mr. Speaker, Poland has been under Soviet rule the last 15 years. The vast majority loathe it; but are not afraid. The Polish as a people are of a very happy disposition. It is this quality that has contributed much to their guarded patience since 1939; to withstand the rigidity of foreign domination. Their carefree, romantic and cultural elegance has not changed over the centuries.

Poland is not a happy country today but since 1956 she has enjoyed, because of the indifference of her population to the pressure of the Communist grip—but the widespread activities of the population in discussing and dreaming of lost causes—had the opposite effect and they have enjoyed more liberties through the relaxation of government controls. To be sure there is still the censorship of newspapers and the difficulty of passports, as well as spy practices—yet the government that rules them is not that of a police state. At least if despotism is present—it is not practiced.

It can be honestly said that the Polish people love their liberties and hate the form of government that rules over their land but her citizenry has schooled their minds to accept with relaxed emotions the Communist powers of control.

She is not frightened but is intellectually active—her people bubbling over in debate and discussions of ideas and clashes of the differences of opinion on all subjects of the day.

Poland is a Christian nation of Western ideology. Western culture of every variety finds fertile minds ready to accept all panaceas.

Western literature is there for the asking. Western plays by the score in every tongue are given strong patronage.

Artists of all talents known to culture of art are at work, inking, painting, drawing, and charting on boards or canvas their impressions of their subject. Architects evaluate with sour distaste the new designs born of infiltrated ideas.

Yet with all these disordered arrangements, unorganized programs, and distorted ideas, the Polish people are an intensely religious country of the Catholic faith. True the intellectuals as nearly everywhere are for the most part free thinkers and agnostics but Poland is more solidly Catholic than any other nation. The church is a sole bulwark of continued opposition to the Soviet regime.

It is the strongest protagonist with such tremendous power than even the Soviets realize that it reflects the honest, patient, inflexible attitude of the millions of the faith.

The Russian military forces time and again in complete control at places where a million of the faithful were at prayers looked passively on a frustration; the throng of those unyielding dissenters in disregard of their masters without a moment's hesitancy continued saying aloud their prayers.

The soft chants were as a measured cadence for the troops to retire from the scene, defeated in whatever satanic purpose was intended.

So the people in a listless acceptance of these conditions go through the motions of living in a deft silent manner. In their eyes can be seen the sad stare of indecision. Yet much has been gained by this go-along policy. The years of suffering at the hands of conquerors through the ages have taught the people how best to accept the alien rules for the governed.

Poland is a poor and somewhat backward country in some respects. But much has been accomplished in the rebuilding of its war-torn cities and its recaptured independence in an enslaved economy.

Their political tolerance has paid off with the vaulting into Communist leadership of Wladyslaw Gomulka, a plain workingman who lives a plain simple life and has ruled his nation as a realist should rule.

In 1956 with the end of Stalinism policies, Gomulka and Khrushchev realized the Polish people could be better appeased if their political bonds were relaxed and a system sans secret police interference would change the grim attitude of the Polish people.

It is said that the Polish worker has no heart in his tasks and does them badly—partly due to communism and the cruel treatment suffered over the centuries by their conquerors in the past.

Communist discipline has achieved some regularity of order in the economy but the lack of incentive brings disgruntled apathy on the part of the worker.

There is fear that the regime will become harsher in its rule in order to bring about uniformity of productive action. There is a growing fear of their complete absorption by Russia.

The Poles are suffering in pathetic silence. It seems the soul of the brave patriot is dying. The sadness of the nation is like a malady of hopelessness.

It is to the credit of the United States that we have not forgotten the plight of Poland. Our good Government responding to the pleas of millions of Americans to give aid to Poland has resulted in extending assistance to Poland in the sum of $300 million in the last 3 years.

Our food credits alone recently a 40-million deal—of surplus wheat. Also some 61 million for machinery. Certainly we have contributed much to the bolstering of the Polish economy.

Good relations with Poland have had a very salutary effect in accordance with reports from our tourists. Our good enjoyment of business factors with Poland are ready to pay off. She is ready to pay $40 million in settlement for U.S. properties in Poland confiscated in World War II.

The bursts of liberalism streaking out of Poland's aura of social, spiritual, and cultural activity, wherever and whenever possible, is the soul of Poland's masses speaking out—she may be captured but not a captive in chains. She lives to fight again to regain her freedom and independence.

We pray with other millions of Americans of Polish antecedents to see the day when this seething strength, building up now, noticed only within conservative limits of outward manifestation, will bring about the nationalization of a free Poland under its great freedoms enunciated in the sacred constitution of May 3, 1791—only 3 years after the adoption of our own and so modeled after it with God-given rights inherent in man.

Mr. KLUCZYNSKI. Mr. Speaker, ever since I have been a Member of this great democratic assembly, I have never missed an opportunity to extend my remarks on the occasion of the anniversary of the Polish Constitution of May 3, 1791. In my speeches, year in and year out, I have stressed in detail the democratic character of this great Polish document. I have mentioned the historical background which became the inspiration for this constitution, and I have talked about the great patriots who had drafted it. I have done so because the constitution of May 3 was a symbol of the ideals of democracy and liberty. It clearly defined the direction of development which Poland should take. Once more the nation had a signpost pointing the road to freedom and equality, a guide for the future.

The constitutional reformer did not violate the foundations of the previously existing system. They were closely linked with the existing traditions and institutions. They created a new and more democratic alinement of social forces.

The constitution of the 3d of May became a model of measured progress; it created a system founded on modern principles. The constitution of the 3d of May was of import beyond purely Polish bounds. It was an event of great human significance, as Edmund Burke, a great English statesman and orator, truly remarked:

> It possessed a value of no mean importance to the progress of mankind.

It is even more remarkable that such a progressive constitution was created without any violence or social disruption. To stress this, we quote the dispatch printed in the Gazette of the United States of July 27, 1791:

> "Well," said the King (Stanislaus Augustus of Poland) at the close of the evening, "Thank God, not a single drop of blood has been shed. Perhaps one of the greatest misfortunes that has happened today has lighted upon myself, for I lost my hat in the crowd."

Today, 169 years after this great event, I ask permission to talk on present-day Poland—that unfortunate country that was sold down the river in 1945, at the conference table in the Livadia Palace at Yalta.

A month ago a news story in the New York Times under the title "Cubans and Poles Sign Trade Treaty" told us that:

> Cuba announced last night a far-reaching trade pact with Poland. Cuba will receive industrial plants and equipment: ships, planes and helicopters in exchange for goods.

The story further states that:

> The Cuban-Polish agreement also carries provisions for technical and scientific assistance to Cuba by Polish experts.

Tad Szulc, the Times' correspondent in Havana, told us further that:

> The list of products Poland will deliver includes seagoing ships and fishing vessels, planes, helicopters, complete industrial plants, food-processing plants, powerplants, roadbuilding equipment, textile machinery, tractors, diesel and electrical motors and tools.

The irony of this "apparently innocent" announcement can be realized only by one who has been in Poland today and who has witnessed what the Soviet Russians, through the few Communists of the regime have done to this brave

nation. This once rich and fertile country was turned into a large barn supplying the U.S.S.R.

What Russia cannot absorb, she orders to have exported with a twofold purpose in mind: First, to gain world prestige through the policy of good will, at somebody else's expense; second, to drive a wedge between the United States and the Polish people, and prevent the efforts of the latter for any normalization of Polish-American relations.

Poland was ordered to sign a treaty with the Castro regime, precisely at the time when the American-Cuban relations have hit the alltime low point, as a result of the unfounded and irresponsible attack of Mr. Castro on the United States.

What right has the Polish regime, knowing the road conditions in the country, to export roadbuilding equipment, depriving their own people of traffic arteries so essential to their own existence?

What right has the Polish regime to export food processing plants and textile machinery, while for years now, Americans of Polish descent have been sending food and clothing packages to Poland in an effort to help the Poles to maintain their subsistence-level standard of living. Poland, once the greatest granary of Europe, has to get its food from abroad. The Polish textile industry used to be one of the largest in the Eastern Hemisphere. Lodz, Pabjanice, Tomaszow, Mazowiecki, Bialystok—were only a few of them. Today an average worker has to work 1 month or more in order to buy a readymade suit from one of the government stores.

Time and again I have asked the reason for the long lines standing in front of Polish grocery shops, or stores selling essential goods. Ever since Poland lost its independency in 1939, long queues have marked every town and city. At first it was due to the German occupation which had robbed Poland of everything there was on the market. But why should there be a queue for milk, butter, and bread after the Germans have left? Granted that at the beginning it was hard to bring the war-devastated economy to normal, but that was 15 years ago. I can see that Communist rule can wipe out people by mass arrests, annihilation, and extermination in slave labor camps, but can anyone explain to me how Communist rule affects the fertile soil, or the grazing, and the life of cattle—for centuries in abundance in Poland?

In view of the Polish needs for food and textiles, as exemplified by the present state of the Polish agriculture—which was heavily affected by last year's drought, and the ever-present needs of the people for secondhand clothing, it is paradoxical enough to be forced by Soviet Russia to export food-processing and textile machine, in return for sugar, which is being produced by Poland in great abundance. All that, on top of it, to prejudice any future American loans, which could give Poland a little leeway in her international trade pattern, and perhaps obtain for her greater freedom to trade with the West.

In spite of the disastrous economic conditions at the Kremlin's orders, over one-half of the Polish national income goes for national defense. Defense against whom? Lwow has been nabbed by the Russians already and so has Wilno. We know too well that Russia is building a buffer zone with the help of Polish military strength, but will the Pole fight for those who have taken away one-half of prewar Poland and who have coldbloodedly shot some 14,000 Polish officers? I doubt it.

It is true, however, as the reports from Poland indicate, that the Communist rulers of the country are heavily capitalizing on the ever-present memory of the grave losses sustained by the Poles at the time of the German occupation of Poland during World War II when 6 million Polish citizens—20 percent of the nation—lost their lives through Nazi terror.

Being perfectly aware of that tragic history, and of Poland's determination to gain the formal recognition of the Polish western boundary, Soviet Russia presents herself as the only champion of the Oder-Neisse line, falsely accusing the United States of conspiracy with Western Germany, directed toward revision of Poland's rights to its western territory.

This is meant to justify the expenses for national defense and to offset the sentiment of the Polish people toward the United States, which is daily expressed in the cordial receptions accorded by Poles, not only to high ranking Americans visiting Poland, but to all American tourists.

Any diplomatic move which would deprive Soviet Russia of her alleged monopoly, as a guarantor of the Polish western countries, would also deprive her of an argument that the maintenance of an oversized Polish army is necessary to protect vital interests of the Polish nation.

We know that the real reason for this national defense army is to keep the minority group in the saddle, so that they can please their Soviet masters and supply them with the coal, grain, and livestock for the years to come.

The political situation in Poland today does not look any better than the economic one. Three years ago when Gomulka came to power, people talked about a thaw. Things will get better, they said. Gomulka made great promises. As his first step, he liquidated the infamous UB—Polish counterpart for the MVD—but it actually happened only on the paper. The documents of the secret police were handed over to the Central Committee of the Communist party and although many people were released from jails and even some began to voice their opinions on political matters, many have been rearrested and persecuted once again. At first free enterprise was reestablished. The regime advocated the opening of small shops by private individuals, and optimists in Poland thought it was the beginning of normal times.

Soon the dream was over. The Government put such high taxes on them that consequently they had to close shop and work for months in order to pay back taxes.

The regime organizes thousands of informers who work a regular job around the clock and squeal as a part-time job on their fellow workers. Terrorists of the old Beirut times are in the position of power and are able to keep their grip on the once again disillusioned Polish people.

Today, on this 169th anniversary—which will certainly pass unnoticed by the Warsaw Communists—I would like to stress the fact that the Polish nation, in spite of the Communist oppression, remains faithful to the principles of the Constitution of the May 3 we are honoring today. One has to affirm the truth that a distinction has to be drawn between the democratic, freedom-loving Polish nation and its Communist Kremlin-led rulers. Any action which helps our friends from behind the Iron Curtain sustains them in their fierce opposition toward the Communist system.

If the United Nations are as sincere about the future of the Polish people as they are about the future of so many new states growing up in the jungles of Africa or in Asia, then it is up to this international body to force free elections and supervise them in a country which proudly can claim a civilization and culture for over 1,000 years.

Mr. BURKE of Massachusetts. Mr. Speaker, there are many bright pages in Poland's long, uneven, and turbulent history, sparkling with greatness and glory, with heroism and noble deeds. They testify to a long chain of events which secure an honored place for the Poles in European and world history. The empire which their first great king, Boleslav the Great—A.D. 992–1052—established, was the first formidable barrier in eastern Europe against invading Asiatic hordes. In the 15th century it was King Casimir IV—1447–1492—who made Poland a huge empire, extending from the Baltic almost to the Black Sea. In the 17th century Poland's John Sobieski—1674–1696—the bravest of all European rulers of his day, saved Europe from the hitherto undefeated Ottoman Turks, by inflicting a crushing defeat upon them at the very gates of Vienna in 1683. These are only a few illustrative cases showing the importance of Poles and Poland in Europe's history. In addition to the brave and heroic deeds of these gallant warriors, Poles have also been pioneers in eastern Europe as political reformers. The constitution which the Polish Diet adopted on May 2, 1791, is a great poltical landmark even in the revolutionary late 18th century.

As a result of the first partition of Poland in 1772 the Poles had lost more than half of their country but none of their national spirit of independence and freedom. Late in the 1780's the presence of a new spirit was felt all over Poland, and nearly all Polish leaders were fully conscious of it. This was the new reformist spirit, which manifested itself in numerous constitutional changes. The Great Diet, known also as the Four Years' Diet, which has assembled on October 6, 1788, was made up of various elements, but the Polish Constitution of 1791, was really the handiwork of the so-called patriots in the Diet, for this was the party "rich in men of integrity and intellect and fervent patriotism." It

has been stated that whatever talent Poland had at that time had gathered within this patriot group.

The memorable document drafted and adopted by that group represented a decisive and definite advance over anything of the same nature yet attempted in central and eastern Europe. What the French revolutionists tried to attain in a national bloodbath, the patriot group in Poland attained by a stroke of the pen. By this Constitution Poland became a limited monarchy. Ministerial responsibility was introduced; the intricate and obstructive features of the old system were abolished and many class distinctions were eliminated. The towns were given administrative and judicial autonomy, and a measure of parliamentary representation. Personal privileges formerly enjoyed by the gentry alone were made available to all townsmen. The peasantry was placed under the protection of the law, and religious toleration was established. Provisions were also made whereby periodic reforms could be introduced and other alterations enacted. Judged in the light of current ideas of full, unhampered freedom, and compared with the long list of present-day human rights, the Polish Constitution of 1791 might not be considered too liberal or fully progressive, but still it was a real instrument of democratic government. It won the admiration of a great liberal of the day, Edmund Burke, who was considered the most eloquent champion of liberty in Europe. But it also brought down on its framers the fury of those powers which were getting ready for a second partition of Poland.

Unfortunately, before the Constitution was put into full force, Poland's grasping neighbors carried out their evil designs. The second partition of Poland took place in 1793, reducing the country to one-third of its original size. However, the autocrats of Austria, Prussia and Russia would not even allow this small Poland to go unmolested. Having only whetted their appetite on the first two partitions, they took one more step in 1795 by which they partitioned what was left of Poland, and divided it among themselves.

This final partition became effective in 1796 and Poland ceased to exist politically as an independent entity. But that cruel fact did not, fortunately, diminish the spirit of independence among the Poles. That did not deter them from their goals. They were determined to fight against all three oppressors for the attainment of their freedom, their national independence. For more than a whole century they carried on their fight against heavy and forbidding odds. It appeared that they could not attain success without outside help, for on all sides the oppressed Poles were hemmed in by greedy, powerful and ruthless adversaries. Their revolt in 1830 was ruthlessly crushed by superior forces. The rising of 1863 ended in a veritable bloodbath for the callous Russians proved to be most cruel in their repressive spirit. Even then the unhappy Poles did not despair; they still dreamed of and worked for their cherished national independence.

Toward the end of the First World War, as Poland's oppressors and enemies were being defeated, the Poles saw their golden opportunity. On October 6, 1918, Poland was proclaimed an independent, united country. At once, her independence was internationally recognized. For the next 20 years the history of Poland is mainly concerned with reconstruction and revival. She took her place not only as the leading power in Eastern Europe but her voice was heard in the leading Councils of Europe. Toward the end of that period, however, as Poland's implacable enemies to the East and West—Soviet Russia and Nazi Germany—gathered strength, her security was increasingly threatened. Finally, when the two rival enemies joined hands in the fall of 1939, then it seemed that Poland was marked for destruction.

The worst fears and suspicions of Poland's friends came true when on September 1, 1939, Hitler's forces invaded Poland without a declaration of war. That was the beginning of the Second World War, one of the most tragic days in the history of Western civilization, and one of the darkest days in the history of the unhappy Poles. In a few weeks the Polish armed forces were eliminated from battle areas; they were literally decimated by Hitler's superior strength. On September 17 Stalin's Red armies began to move into Poland from the East on the pretext that the Polish nation had ceased to exist. On September 28 almost all of Poland lay prostrate under the occupation of her two enemies, and on that day Poland was partitioned, in a Fourth Partition, between the two conquerors. This event proved to the world that in the destruction of Poland's independence Communist Russia was as guilty as Nazi Germany. Under both German and Russian invaders the fate of Polish citizens was the same—their liberties were destroyed. Stalin's henchmen literally drove out millions of Poles from their homes to the far-off corners of the Soviet Union, to northern Russia and Siberia where some of them are still toiling under most abominable conditions. They also massacred the cream of Poland's army, more than 10,000 officers, in the Katyn Forest in 1941. In this holocaust it is impossible to say how many innocent and helpless Poles lost their lives at the hands of their cruel conquerors.

No country in Europe was more tragically and fundamentally affected by the last war than was Poland. After its legal government fled the country, after its regular fighting forces were destroyed by the invaders, and after millions of Poles had been uprooted from their native homes, millions of others carried on an underground fight against the enemy within Poland. For more than 4 years these valiant souls, undaunted by the terrible punishment imposed upon them, kept the fire of freedom and independence going in the hearts of their unfortunate countrymen. Dispersed and refugees, Poles reorganized themselves under General Anders and fought aggressors side by side with the Western Allies.

In the end it seems that all these sacrifices were in vain, for even before the end of the war Poland was being dismembered by the Soviet Union, Poland's "liberator" from the East. One-third of the country was annexed outright by the Soviet Union, and its Polish inhabitants were cruelly sovietized. As the Red Army moved into Poland, a Moscow-sponsored and Kremlin-dominated regime was set up in the country, and this regime, safe under the protection of the Red Army, proceeded to eliminate all opposition and proclaimed itself the true representative of all Poles. The Western Allies only hoped that a new and genuine democratic regime would soon emerge, but that has not happened.

With the passage of the years all such expectations were dashed to the ground. All political, religious, and economic and other freedoms were systematically eliminated. Sovietization of the country was put through with an iron hand. Dissenters and opponents have been either eliminated or shipped off to concentration camps. Today's Poland under Communist totalitarianism, with its 25 million Poles, is not completely sealed off from the free world as it was a few years ago. People now seem to be more openly critical of certain things, such as the country's economy, working conditions, social services, and so forth. But there is no real freedom as we understand it in the West, and therefore they suffer from its absence. They cannot freely celebrate the 169th anniversary of the Polish Constitution Day. But we in the free world do so and thus echo their genuine spirit of freedom.

Mr. FLOOD. Mr. Speaker, Poles are known for their courage and daring, and are particularly noted as gifted, great masters of the arts and sciences. But their contribution to the art of government and statesmanship is not as well known as it should be. Their constitution of 1791 shows that they were second to none as thinkers and legislators.

That constitution, with its broad, liberal, democratic, and progressive provisions, was and remains a great landmark in Poland's political history. By that historic document Poland accomplished, by orderly process and in a democratic way, what many other countries had hoped to accomplish through revolution and bloodshed. The king's autocratic and unlimited powers were sharply curtailed, and a constitutional government was instituted with a responsible cabinet. The upper chamber lost some of its powers, while the lower and popularly elected chamber gained considerable legislative power. Religious toleration was guaranteed, and the peasants were taken under the protection of the law. For these and for many other progressive features this constitution was hailed as a great forward step. It was most unfortunate for the Poles, and also for the peoples of eastern and central Europe, not to have been allowed to put that democratic document into force, for only then could its great advantages and merits have become plain to everyone. As we know, soon after its promulgation, Poland was attacked and overrun, and finally partitioned among its three grasping neighbors. Thus the demo-

cratic spirit that was manifested in Poland 169 years ago came to life only in 1918, after the First World War, when the Poles regained their independence. And today, because of untoward international events, the Poles still yearn for their freedom and for the realization of the ideas embodied in their great constitution, the constitution of 1791.

Mr. PRICE. Mr. Speaker, here in this Congress today we quite properly set aside a time to celebrate the anniversary date of Poland's May 3d constitution—the republican and democratic constitution under which the Polish state reasserted its right to existence as the symbol of a free and sovereign people.

This is a year of great coincidence in the matter of Poland's heroes. It was 150 years ago that the Polish composer, Frederic Chopin, was born. It was just a century ago that the Polish pianist and statesman, Paderewski, was born.

In the year 1810, when Chopin was born in a little village, Poland had been split and fragmented by the great powers pressing in upon her. It was the time of the Napoleonic wars, just before Napoleon flung himself into new military adventures, and Poland was prostrate under the occupying armies.

In the year 1860, when Paderewski was born, Poland still existed only as an idea and an ideal—a people held under foreign rule for more than half a century, but a people nevertheless who clung to their inner faith.

We can well imagine the feelings of the young men growing up in their occupied and dominated country. Each of them—Chopin and Paderewski—was destined to become in his lifetime a legend, a symbol and spokesman of Polish nationalism. But neither could have known, in advance, how greatly he would serve his people.

I cite this, Mr. Speaker, because of the fact of the Iron Curtain, and because it seems wise for us to take into account the almost certain rise of new Chopins and new Paderewskis in that great nation that lies now under the shadow.

We do not know the names of the young men who will be Poland's future leaders; we do not know in what cities or villages they were born. But we must never forget that for more than a hundred years, between the third partition of the Polish state early in the 19th century and the nation's revival in 1919, Polish nationalism survived through all these generations. Is it not natural that we should expect Polish patriotism to survive again? Should we not expect new leaders, unknown though their names are now?

Poland's geographical situation in the continent of Europe is not an easy one. But the Polish people are brave and long-enduring. They have made a contribution not lightly to be dismissed in the long history of the Western World.

We rattle no sabers in paying our tribute to the great Polish tradition. There is more than a thousand years of history behind it. We wish the Polish people well, and it is right that we join in paying our tribute to them in their present time of trouble.

Mr. DERWINSKI. Mr. Speaker, many thoughts come to mind this afternoon as we observe the 69th anniversary of Polish Constitution Day. The first point for us to recall is the absence in Poland of the observance of this holiday, banned since the Soviet imposed Red regime has seen fit to scrap this day of commemoration, that symbolizes the traditional spirit of freedom that exists among the Polish people.

We know, however, that the mere banning of a commemoration does not eradicate its memory from the minds of people. Certainly the floor of the House of Representatives is an effective sounding board by which we can remind the people in Poland, patiently waiting for freedom, that those of us representing the free people of America continue to maintain the principle that all nations, all peoples, have a right to a government of their choice.

Polish Independence Day, the 3d of May 1791, was the culmination of an evolutionary process of government from an autocratic monarchy to a true democratic form of government. Shortly thereafter, Poland was partitioned, but the spirit that was personified in this great constitution, along with the religious strength the people maintained and their determination to once again be free eventually culminated in the rebirth of Poland at the close of World War I.

Then, after having suffered the physical effects of World War II, and due to the tragic consequences of the Yalta Agreement, which cost Poland and other nations their political freedom, the Polish people suffer inwardly as well as externally under the domination of the Soviet empire.

Mr. Speaker, many words will be uttered here this afternoon, but they symbolize one fact—our determination to serve the cause of freedom throughout the world and to remind, in this case, the people of Poland that their faith and national aspirations will some day be rewarded with a rebirth of political, religious and economic freedom in their presently oppressed nation.

Mr. ROSTENKOWSKI. Mr. Speaker, today marks the 169th anniversary that Poland adopted a constitution which closely follows our own form of representative government. And yet, the people of Poland, today, are unable to enjoy their freedom, for they are enslaved by the Soviet Union under the guise that the Communists are their big brothers protecting them from aggression by stronger nations.

There are almost no peoples on the face of the earth who have struggled more consistently for independence and democracy and who have enjoyed less of it than have the Poles. But the spirit of freedom remains in their hearts, as it had with their ancestors, and by continuing to maintain this patience and fortitude, the day will once again arrive when they can take their place in the world as a free nation dedicated to the love of mankind instead of the destruction of mankind.

The odds that face the present day Poles, for independence, are much greater than they have ever experienced in the past—for they are subject to many untruths and malicious propaganda being circulated throughout their land by the biggest aggressor known to modern history—the Soviet Union. It will take great courage on the part of the present day Poles to withstand this onslaught and keep the desire for liberty and justice strongly embedded in their hearts.

Poland's history is little known to the English-speaking world. We only know it in a rather cursory fashion, that the Poles were magnificent in defending Christendom against the onslaught of the barbarian East; in contributing to American freedom through the services of Kosciuszko, Pulaski, and countless Polish immigrants; by creating the first Commonwealth of Nations in Europe.

In addition to the great generals and statesmen that Poland has given to the world, you will also find the names of accomplished masters in the arts and sciences. This year marks the 150th anniversary of the birth of their foremost composer, Frederic Chopin, who was born on February 22, 1810, in a small village near Warsaw. It is ironic that in Chopin's youth, he was forced into exile by the Russians because of the revolutionary character of his music. Even then the Poles suffered under the iron hand of Russian rule, as they are dominated today, but they managed to free themselves of these shackles for a short period of time, only again to be chained to communistic aggression.

This year also marks the 100th anniversary of the birth of another great Polish artist, humanitarian, and statesman, Ignace Jan Paderewski. This great Pole is well known to the world for many contributions to music as well as his fight for freedom and equality amongst nations. His love for his native land has been a symbol for his people to follow. He dedicated his life for a free Poland and his last words, gasped with his dying breath, "Poland will rise again," signifies the true meaning of the desire for independence by the Polish people.

Why should we concern ourselves so greatly with the plight of the Poles? Surely their nation is no larger than a number of our own States. Their history shows that they have always been the target of tyrants and aggressor nations. Because of their geographic location, in the heart of Europe, it is certain that they are in a key position and must be conquered by any aggressor nation desiring world domination. Why not just say that it is unfortunate that their position is such, and they will always be dominated by stronger nations and powers, and therefore let them be victims of this faith.

Why, gentlemen? Because of this strong love for the freedom of mankind, they have given our Nation—when in its infancy—and other free nations the courage to fight for what is right. Had it not been for this spirit, it is quite possible that we would not be enjoying our own freedom today.

We have a moral obligation to fulfill to the polish people. The people of this nation as well as the people of other free

nations must unite to encourage this strong desire of the Poles. We must assure them that all is not lost and they will once again enjoy freedom if they continue their resistance to communistic domination.

Let us tell them and the other enslaved nations that we believe in their right to enjoy the fruits of liberty and justice just as we have enjoyed them for so many years. The moral and economic support, that we can provide to the Polish people and the people of other enslaved nations in the most difficult days they now endure, will carry them through until they can again lift their heads high and breathe the fresh clean air of a free nation.

Mr. DENT. Mr. Speaker, for the past 20 years the U.S. Congress has been solemnizing Poland's May 3 Constitution of 1791 with a twofold purpose: First, to remind the Polish people that Americans have not forgotten their pledge to help Poland restore her freedom and independence and to facilitate her return to the Western family of nations; second, to review and place in proper perspective Poland's contribution in the development of Western civilization and culture.

These annual observances in the august halls of our Congress have a tremendously beneficial impact on the hopes and aspirations of the Polish people who, through no fault of their own, have been forced to endure Soviet oppression and to live in a twilight zone between the darkness of spiritual and physical tyranny from the East, and, as yet, the unsteadily flickering rays of encouragement and moral and economic aid from the West.

In spite of the fact that an ill-boding process or restalinization is in progress in Poland, the situation there is, and will remain fluid due to anti-Communist resistance of the Polish people.

For this reason the 1960 observance of Poland's May 3 Constitution by the U.S. Congress could be of special importance to the Poles.

I am taking the liberty of reminding you that this year marks the 100th anniversary of the birth of one of the greatest Poles, Ignace Jan Paderewski, a great artist and humanitarian, patriot, and statesman, beloved in America and Poland, who was born on November 6, 1860, at Kurylowka in Poland; that this year marks the 150th anniversary of the birth of the foremost Polish composer, Frederic Chopin, who was born on February 22, 1810, at Zelazowa in Poland; and also that the Americans of Polish origin, under the guidance of the Polish American Congress, have begun preparatory work to commemorate Poland's millenium which in 966 accepted Christianity and irrevocably joined her destiny with Western civilization and Latin culture.

Poland's history, often described as tragic and magnificent, is little known, in the English-speaking world. We only know in a rather cursory fashion, that the Poles were magnificent in defending Christendom against the onslaughts of the barbarian East; in creating the first Commonwealth of Nations in Europe; in contributing to American freedom through the services of Kosciuszko, Pulaski, and countless Polish immigrants.

We know too, that this majestic panorama of heroic, civic virtue and political wisdom, is interspersed with many tragedies, due largely to geographic position, predatory neighbors, and many errors in internal affairs—errors from which no nation has ever wholly escaped.

This general, and rather hazy knowledge, however, precludes proper evaluation of the role this truly great nation played in the history of Europe and of Latin culture, which, in its final analysis is our most previous heritage.

The Polish heritage of civic rights reaches back to the 12th century, when the Royal Council evolved into the Senate of the Royal Republic. By the 15th century, the parliamentary system reached such high standards of development that the creation of a House of Representatives, or the "Sejm" was possible under the Act of Nieszawa in 1454.

Still earlier, Polish jurisprudence promulgated the law of Neminen Captivabimus—1430—very similar to the English Habeas Corpus which has been codified in 1679.

The first Polish Constitution, limiting the power of the King, had been enacted in 1505, during a parliamentary session in Radom. It states that "hereinafter and forever nothing will be decided by us—the King—or our successors without concurrence of the counselors and deputies" or the Senate and the House of Representatives—Sejm.

Both the nation and the individual derive their true purpose and dignity from Christian principles—and without them must perish.

The king—

States Goslicki—

can do no public act of government without the advice and authority of the state.

The King of Poland, in the administration of his Government, is obliged to make law the sole guide and rule of his conduct. He cannot govern according to his own will or pleasure, nor make war or peace without the advice and consent of the Senate.

This was written by a Pole and accepted in Poland as a fundamental principle of politics in the XVI century, when France, Germany, Italy, Spain, Russia, were to remain under absolutism for centuries to come.

The modern character of Goslicki's concepts of social philosophy are reflected in the following statements:

It is better in framing law to aim them rather at the preventing than suppressing evil.

In my opinion, all our counsel and wisdom ought first to be employed in bringing men to justice rather than to execution.

Goslicki's precepts survived all attempts to destroy them, especially in the England of those times. They were incorporated into the May 3 Constitution of Poland, and influenced constitutional movements in other countries.

They were known, as is historically ascertained, to Robert Cardinal Bellarmaine, to Blackstone, Rouseau, Locke and Algernon Sidney. Thomas Jefferson learned them from Cardinal Bellarmaine and Sidney.

Such is the political and sociological heritage of Poland, which must now suffer under the yoke of the barbaric and tyrannical forces of the Euro-Asian East.

This heritage of political wisdom and civic virtue proclaims to the world the right and the will of the Poles to be again free and independent.

In passing a few facts on the lives of Ignace Jan Paderewski and Frederic Chopin are in order at this time, to demonstrate again and again the Polish contributions in fields other than law and order.

IGNACE JAN PADEREWSKI

This year's observance of Poland's May 3 Constitution coincides with the 100th anniversary of the birth of one of the greatest Poles of all times, Ignace Jan Paderewski.

Paderewski, great artist, humanitarian and statesman, immortal interpreter of Chopin and composer in his own right, beloved in America and in Poland, does not belong exclusively to his native land. By virtue of his greatness as an artist, a humanitarian and a statesman who fought for freedom and equality among nations, this genius represents humanity's best aims and endeavors.

Paderewski was born on November 6, 1860, at Kurylowka, Poland. When still a child he started his musical studies. At the age or 12 he entered the Warsaw Conservatory and afterward continued his studies in Berlin and Vienna. Paderewski's career as a virtuoso began with his great concert in Paris on March 3, 1888. After that concert he was given the nickname, the "Lion of Paris." Following his successes in London he arrived in the United States where he gave concerts all over the country and the American press of 1891 was full of enthusiastic reports on his concerts. He was acclaimed by the American public as the "king of pianists."

In the next few years, Paderewski toured almost the whole world and was acknowledged as an artist of the highest degree. He was also recognized as a very talented composer. His opera "Manru" was played at the Metropolitan Opera House in New York.

George J. Olszewski of New York in a glowing tribute to Paderewski writes as follows:

At the beginning of the First World War, I. J. Paderewski gave up his artistic vocation and set himself the task of laboring for the liberation of his native Poland. He did much to enlist world support for the restoration of Poland as a member of the community of nations.

The simple words of Paderewski on the lecture platform endeared him to Americans everywhere. Through his dominating personality and the eloquence of his speeches, Paderewski coordinated the work of Polish-Americans who formed the Central Committee of Assistance to aid the resurrecting Poland. As honorary member of the Polish National Committee, and as the friend of President Woodrow Wilson and his adviser, Colonel House, Paderewski exercised increasing influence in the political circles of Washington on behalf of Poland. It was largely through his efforts that the 13th of Wilson's 14 points was devoted to the restoration of a free and independent Poland.

Unofficial ambassador of a liberty loving oppressed people, Paderewski received official

recognition from our Department of State on many occasions. Paderewski represented the Polish people at Washington during 1917 and 1918; he assisted in organizing the Polish Republic in 1918 and 1919. Paderewski was president of the Polish delegation to the Paris Peace Conference in 1919 and together with Romain Dmowski signed the peace treaty by which Poland regained her independence. He was the first Polish delegate to the Council of Ambassadors at the League of Nations in 1920. In addition Paderewski was at one time Minister of Foreign Affairs for Poland, president of the Council of Ministers of the Republic of Poland and at the time of his death, chairman of the National Council of the Republic of Poland.

FREDERIC CHOPIN

While the observance of Poland's May 3 Constitution is primarily a tribute to the remarkable contribution of the Poles toward the development and evolution of political philosophy of freedom, based on law and order of a true democracy, we should also remember Polish participation in the enrichment of our arts and sciences.

Poland gave us many great scientists, writers, and artists. Throughout this year we observe the 150th anniversary of the birth of her foremost composer, Frederic Chopin, who was born on February 22, 1810 in a small Polish village of Zelazowa Wola near Warsaw.

In his youth Chopin was forced into exile by the Russians because of the revolutionary character of his music. Some 20 years before his birth Poland was partitioned by Russia, Prussia, and Austria and at the time of his birth, was dominated by occupying forces of these three powers as it is dominated today by the Communists.

Chopin found safe haven in Paris, where he continued to live and to compose in the freedom which France has traditionally extended to the persecuted of all nations. In exile Chopin was kept informed by family and friends of the dire plight of his native land. Throughout his life an urn of Polish earth remained in Chopin's room to remind him of his origin. He breathed into his music the undying love of an exile for his homeland.

This Polish son was not only an ardent and intense patriot but was God's chosen musical spokesman for a Poland ravaged by occupation forces. He devoted his life to the perpetuation of the spirit of freedom, liberty, and independence. For more than a century the voice of this patriot has inspired and guided his tortured nation through the pangs and ignominies of bloodshed and brutal occupation. His voice was the voice of music. It was the undying voice of Frederic Francois Chopin.

Mr. Speaker, all of us this day should reflect upon the conditions in Poland today and in the light of our aims as a nation, make it ours and the world's business to reawaken all men to the needs of freedom, peace, and justice.

Mr. ZABLOCKI. Mr. Speaker, I wish to commend my distinguished colleague and good friend the gentleman from Illinois [Mr. PUCINSKI] for obtaining time for the commemoration of the 169th anniversary of the Polish Constitution of May 3, 1791. He has always been deeply interested and active in all matters relating to the plight of the captive nations, and keenly alert to the threat and the true aims of communism. It is a distinct pleasure and privilege for me to join him and my other colleagues in these remarks.

The Polish Constitution of May 3 is one of the historical documents of the Western World, marking the attainment of a new milestone in man's advancement in freedom. The peaceful adoption of this remarkable document by the Polish nation will always serve as an inspiration to all men who respect the principle of self-determination, champion the rule by wise laws, and seek just and lasting peace in the world.

This is a propitious occasion to recall that just yesterday, the House of Representatives unanimously approved House Concurrent Resolution 633, which I introduced, reaffirming our belief in the inalienable right of the people to live under governments of their own choice and calling for the restoration of fundamental freedoms and basic human rights to the people of the Communist-dominated nations.

I know that the freedom-loving people of Poland, in observing the anniversary of their famous constitution, will take heart and draw new encouragement from this action of the U.S. House of Representatives. I earnestly hope that their aspirations for complete national independence may soon be realized

Mr. CURTIS of Massachusetts. Mr. Speaker, I join other Members in remembrance of the anniversary of Poland's Constitution of 1791.

A strong friendship has long existed between America and the freedom-loving people of Poland. Polish patriots and cultural leaders have been an inspiration to our people. Sons of Poland have become esteemed citizens of our land and made their special contributions to its culture.

Under their present Communist oppressors, the Polish people do not enjoy the freedom to celebrate this date. We, in America, gladly do honor to their glorious past; extend sympathy in their present suffering; and express our unwavering hope and confidence in their future liberation when they will again take their rightful place among the free nations of the world.

Mr. MURPHY. Mr. Speaker, revolutionary and reforming zeal was the hallmark of the 18th century. New ideas were everywhere throughout the Western World. In this country the American Revolution produced the Declaration of Independence and a constitutional form of government. Then the idea of "liberty, equality, fraternity" was echoed in France. And in Poland a new spirit of freedom was born, represented in the constitution of 1791.

That constitution was a revolutionary move in Poland without bloodshed. It placed a real check on the absolutism of the king. Irresponsible cabinet government was cast aside and ministerial responsibility was introduced in its place. Many intricate and obsolete features of the old system were abolished, and all class distinctions were wiped out. Personal privileges formerly enjoyed by the few were made available to all townsmen and the peasantry was placed under the protection of law. All these progressive features represented a decided advance over anything yet known in that part of Europe.

It is sad, almost tragic, that the Polish people cannot commemorate the anniversary of this truly democratic constitution today. We in the free world in observing the 169th anniversary of that historic document echo their genuine patriotic and democratic sentiment.

Mr. CANFIELD. Mr. Speaker, we pay tribute today to the 7 million Americans of Polish ancestry who carry in their hearts the memory of a brave, free country whose enduring contributions to Western civilization we can never overestimate.

From 966 when Poland accepted Christianity and joined the West through its 1,000-year struggle against tyranny and oppression, the groundbreaking ideas and accomplishments of Poland have benefited our own democracy. For example, we have inherited the Polish insistence on civil rights which dates back to the 11th century. And we have inherited the social and political thinking of such men as Adrzej Grzymala Goslicki, whose 16th century writings so influenced later liberal thought.

On this day, the annual salute to Europe's 1st written constitution proclaimed by the Polish people in 1791, we also pause to note the 100th anniversary of the birth of Ignace Jan Paderewski—artist, statesman, and humanitarian. I have just received word from Mr. Arthur E. Summerfield, postmaster general, that the Post Office Department will issue this fall a Champion of Liberty stamp commemorating Mr. Paderewski's anniversary. This world performer, composer and spokesman for Poland and liberty now reposes in our Arlington National Cemetery where he will remain until his body can be returned to a free and independent Poland.

We also celebrate this year the 150th anniversary of the great Polish composer Frederic Chopin, whose music expressed so well the depth of his patriotism to Poland and his belief in mankind.

Thus, it is especially fitting today to recall the contributions of the Polish people to our civilization and culture. We heartily join the free Polish people everywhere in hoping that someday their country will be able to return to the family of Western nations.

Mr. DANIELS. Mr. Speaker, in the chronicles of those who have highly valued and valiantly fought for freedom, few stand out as prominently as do the people of Poland. In their long and turbulent history, there have been far too many periods when the liberty prized by the Polish people has been partially or totally extinguished by aggression and tyranny from beyond their borders. Yet through these darkest periods, they have never ceased to hold to their ideals and to struggle to realize them. That Poland today retains perhaps the greatest measure of self-determination of any country behind the Iron Curtain is testimony

to the courage and persistence displayed by the Polish people in the face of tyranny.

Today marks the anniversary of one of the brightest points in Polish history, the proclamation of the constitution of 1791. At a time when other continental nations were either still buried under medieval despotism or able to gain governmental reforms only through revolutionary means, the Polish Parliament peacefully produced a new constitution that was hailed as a model for its era. The king, the feudal landholders, and the political and social reformers were able through discussion and negotiation to compromise their differences and draft a document that greatly increased the representation of the majority of people in the governing process. Unfortunately, the great power politics of the period prevented this enlightened constitution from going into effect, as Poland was cruelly dismembered by her neighbors.

The fact that the constitution of 1791 still lives in the hearts of the Polish people and is yearly celebrated by them marks the strength and devotion with which they rededicate themselves to the ideals of freedom and democracy. Today we join with them in looking forward to the time when these goals shall again be realized in peace and security.

Mr. IRWIN. Mr. Speaker, at this time we are commemorating the 169th anniversary of the Constitution of Poland which was adopted on May 3, 1791, and saluting the people of Poland and the 7 million Americans of Polish ancestry. This year's observance is particularly significant in that it coincides with the opening year of the 1000th anniversary of Poland as a Christian power in east-central Europe. It is also the 100th anniversary year of the birth of that great artist, humanitarian, patriot and statesman, Ignace Jan Paderewski, whose contributions to freedom are being saluted by issuance of 4-cent and 8-cent stamps of the Champions of Liberty series bearing his image. This year also marks the 150th anniversary of another great Polish artist, Frederic Chopin.

For the past 20 years, the Congress of the United States has joined freedom-loving peoples of the world in expressing sympathy for the enslaved Polish nation and offering moral and material support to Poland. Again we renew our expression and offer, and in voicing hope for eventual restoration of Poland's freedom, we are heartened by what we hear from that enslaved nation.

Just recently, proof was again provided that no indoctrination can cause the Polish people to cast aside their Christian beliefs. The Russian Communists built a new city, Nowa Huta, and boasted that this would be a symbol of a new Poland, a Marxist Poland, a Godless Poland. There would be no church in this symbolic city, the Soviet dictators declared. But something went wrong with the Red scheme. The people of Nowa Huta selected a site for a church and in defiance of their dictatorial masters marked it with a cross. The Communists removed the cross but the result was as if they had ripped down a church. The press described the protest as the greatest since the Posnan demonstration.

Once more the Russians have learned that they cannot separate the people of Poland from the religion of their Polish ancestry, that all of their suppression cannot snuff out the spirit of the Polish people.

It is this devotion and this spirit that we salute today and that we hope to keep alive through our expressions of sympathy and hope for Poland.

Mr. VANIK. Mr. Speaker, on this occasion of the 169th anniversary of Polish independence I join my colleagues in paying special tribute to the framers of the Polish Constitution of 1791. The people of Poland and those Americans of Polish descent can be proud of this rich heritage of freedom which stemmed from the adoption of their constitution. This document was inspired by the American Declaration of Independence, and it included within its framework the fundamentals of freedom written into the U.S. Constitution several years earlier. It is fitting and proper that we remember each year this document of freedom which symbolizes with our own the will of man to achieve liberty.

While the people of Poland have been less fortunate than we in preserving their freedom in their homeland, they have persevered in their efforts to regain liberty each time it was taken from them by war and political partitions. In addition to their brave resistance to tyranny at home, they have sent to our own shores their sons and daughters who have made a major contribution in our own struggle to maintain the institutions of democracy. Americans of Polish descent who live in Cleveland as well as in other American communities have been stable, prudent, and reliable citizens. They have contributed in every line of endeavor. They have been a part of the greatness of our country.

It is to be hoped that a relaxation of artificial barriers which exist in Europe will permit greater communication between citizens of the free world and Iron Curtain countries. Communism cannot long survive in its present tyrannical form if it is thus exposed to the free exchange of ideas which would result from increased personal contacts between citizens of our countries.

Mr. FALLON. Mr. Speaker, nationality groups everywhere have their peculiar characteristics and they proudly cling to their traditional beliefs. The Polish people are no exception. In and out of Poland they venerate certain things Polish, either in origin or in application. But in the present case they observe and solemnly celebrate an event which is of international significance, for the constitution of 1791 embodied, in its own way, ideas and ideals common to all mankind.

That constitution was a great historic document, marking a definite break in Poland's political history, between the Middle Ages and modern times. It was a democratic and progressive document. It provided for the elimination of old and obsolete ways of transacting government business, and instituted new methods. The monarch's powers were sharply reduced and Poland became a limited monarchy. Parliamentary system of government was strengthened by vesting more authority in the popularly elected second chamber of the legislature. The arbitrary power of local landlords over the peasantry was eliminated, and the latter brought under the protection of the law. Religious toleration was guaranteed.

With such liberal and progressive provisions the Constitution of 1791 became a landmark in Poland's constitutional history, a historic document whose 169th anniversary celebration falls on this day.

The fine and noble ideals embodied in that historic document lived on and still live in the hearts of freedom-loving Poles in and out of their homeland. I gladly join them in the 169th celebration of the Polish Constitution Day.

This year marks the 100th anniversary of the birth of one of the greatest Poles, Ignace Jan Paderewski, a great artist and humanitarian, patriot and statesman. He was beloved in America and Poland. He was born on November 6, 1860, at Kurylowka in Poland.

This year marks also the 150th anniversary of the birth of the foremost Polish composer, Frederic Chopin, who was born on February 22, 1810, at Zelazowa Wola in Poland.

To the Polish-American Congress representing 7 million Americans of Polish ancestry I wish to say that I am pleased and honored to participate in the discussion taking place today on the floor of the House. They have my full support and sympathy in their relentless struggle for freedom and independence.

Mr. McDOWELL. Mr. Speaker, the Poles are a gifted and intelligent people and they are rightly proud of the way they used their natural talents. Not only have they a reputation for diligence and skill as workers, but they are equally well known as accomplished masters in the arts and sciences. They are no less famous as brave and courageous warriors for human causes. The names of all the Poles who have staked their lives for freedom and liberty are too numerous to mention here. Pulaski, Kosciuszko, and Paderewski are perhaps the great Polish leaders best known to us.

Toward the end of the 18th century when part of Poland was under alien rule Polish leaders tried to save the remainder from sharing such a fate. Mostly for that reason they remodeled their governmental machinery, hoping thereby to increase their power of resistance against aggressors. The constitution of 1791 was drafted and adopted with that in mind. By this document the old abuses of monarchical government were eliminated and a type of limited monarchy was introduced. Parliamentary representation was expanded and the peasantry was placed under the protection of the law. With such liberal provisions the Constitution of 1791 was regarded as a very significant document in Polish history. It was a pioneering document and, as such, a landmark. It is unfortunately true that, because of international complications, the Constitution of 1791 never was given a trial, and it never went into effect. But that fact itself does not deprive that his-

toric document of its great merits. It represented an ideal of a progressive, orderly government in Poland's history, and even though that government did not survive, the idea has remained as vivid today as it was 169 years ago. Long live the memory of great Polish patriots who drafted this democratic constitution of 1791.

Mr. FOGARTY. Mr. Speaker, it is a privilege for me to have this opportunity to participate with my colleagues, here in the House of Representatives in commemoration of Poland's Constitution Day. I am particularly pleased to join in this celebration for it permits me to salute the Polish people of my own State of Rhode Island as well as those throughout the length and breadth of the Nation.

All of us who know Americans of Polish stock know that they are a people who serve their God. The establishment of the constitution which we commemorate today, is testimony of the desire of the Polish people to set up a democratic state in which the authority of government is derived from the consent of the governed.

The Polish people are a people who believe as we do, that every man has the right to worship his God according to the dictates of his conscience. They will accept no domination in this sphere just as they will freely accept no domination in the sphere of the type of government which has been imposed upon them. That they have been forced to accept this domination remains a source of great sorrow to all free peoples.

Today marks the 169th anniversary of the adoption of one of the immortal and imperishable documents in all of history. It was on May 3, 1791, that the Polish Constitution was signed and thus became the first written democratic constitution to be adopted by a European nation. The Polish Constitution expressed a guaranty of freedom of religion and provided for a division of authority among the executive, legislative, and judicial branches of government. It thus paralleled the Constitution of the United States which had come into being less than 3 years prior to the adoption of the Polish Constitution.

Sorrowfully, history records that no expression of a freedom-loving people has ever been subjected to more severe and cruel tests than has this great Polish document. This great country was a symbol of the viciousness of Communist and totalitarian brutality. It is still a symbol, a symbol of the small nations, without strength in themselves to withstand the onslaught of powerful nations. Poland is a symbol of what the small nations want—the right to govern themselves and live in peace and security.

Some years ago, on this same floor and on this same day, the 3d of May, I stated that the future freedom of the Polish people would surely come. We know that because we know something of the spirit of Poland. We must, however, let her know that she does not fight alone. We in America must pray for her and incessantly work for her eventual freedom. Let men who cry "peace" also cry "justice"—the two are inseparable. Let the voices of honest men everywhere shout their loyalty to the cause of brave Poland and we can have justice. When that is done Poland will throw off the shackles of her oppressor and take her rightful place once more among the family of free nations.

Mr. MOORHEAD. Mr. Speaker, it is truly one of the ironies of history that those countries which have known the most tragedy have often contributed so much to the noblest thoughts of men.

It is equally true that those lands most frequently under the harsh hand of the despot have often added mightily to man's love of freedom.

Poland has done both of these things, Mr. Speaker.

She has known centuries of deep tragedy, yet she has given the world some of the greatest music it has ever heard.

She has been often enslaved, yet her sons have fought throughout the world in the cause of freedom.

Today marks the 169th anniversary of the Polish Constitution. Therefore, it is fitting that we in the United States whose earliest struggles for freedom were aided by great Poles such as Kosciusko and Pulaski, speak and think about Poland's past, her present and her future.

We could remember Poland's great Christian knights who 10 centuries ago fostered and protected Western civilization in Central Europe against barbarian invaders from the East in an early example of one nation contributing to the welfare of many others.

We could recall that, as early as the 16th century, Poland had produced some of the most advanced political thinkers in the world. The books of Goslicki, for example, were confiscated in Elizabethan England because of their extremely liberal thought. Later, however, these same works were to influence the thinking of Thomas Jefferson.

We could remember Poland's four centuries of deep influence upon Central European affairs from 1300 to 1700, her bondage of the 1800's and her happy democracy between the two great World Wars.

For the past two decades tragedy and foreign tyranny have again been Poland's lot. Yet, in this darkness, we should remember, as Poles everywhere surely remember, that Poland has always been able to produce men of spirit and brilliance to nurture the hope of freedom.

Paderewski, concert pianist and statesman, did this. Chopin kept the hope of freedom alive with his "Polonaise Militaire," more effectively than many men have done with words or arms.

Such a history tells us the flame of freedom will burn more brightly in Poland in the future. We whose Nation was aided in her youngest days by great Poles should now, from our strength, aid the hopes of the people of Poland with technical and material aid and with our strongest moral support and most earnest prayers.

Mr. RODINO. Mr. Speaker, I wish to join all Americans of Polish descent in the celebration of the 169th anniversary of the Polish Constitution.

One hundred and sixty-nine years ago a group of patriotic and forward-looking Polish leaders wanted to inaugurate a new era in Poland. They felt that some basic changes in the machinery of the government were needed, and to meet that need they drafted a constitution. It was adopted, promulgated, and went into force on May 3, 1791.

The constitution was a democratic and liberal document, and by its promulgation, the government became a limited, constitutional monarchy, based on fundamental principles of freedom and social justice.

The promulgation of these principles, it should be noted, was not a new and unusual development, but one which had its roots in centuries of Polish tradition. The Polish heritage of civil rights dates back to the 12th century, when the Royal Council evolved into the Senate of the Royal Republic. By 1454, Poland had a "Sejm," or House of Representatives; by 1505 the first Polish Constitution was promulgated, which made it clear that the monarch was no longer all powerful, but had to seek the concurrence of Parliament. It is interesting to note, also, that Poland granted to her citizens the right of habeas corpus some 2½ centuries before that right was granted in England.

Such theories and liberal principles were stimulated and carried forward by political thinkers such as Goslicki, whose development of the concept of the supremacy of the law during the 16th century was incorporated in the May 3 Constitution and was undoubtedly a major influence on other political philosophers throughout Europe.

This tradition of freedom and social justice explains not only why the May 3d Constitution came into being, but why the Polish people today cling to that tradition and refuse to accept the yoke of Soviet oppression. Despite Soviet tyranny, despite persistant attempts at forceful Russification, the Polish nation retains her invincible will to be free. We take this occasion to assure the people of Poland that we are with them in spirit, and that we hope and pray that Poland's aspirations may soon be fulfilled and her freedom speedily restored.

Mr. FRIEDEL. Mr. Speaker, on this, the 169th anniversary of their constitution day, we here in the Congress of the United States wish to join the people of Poland in their observance of this great event in their fight for freedom.

Poland asserted its right to freedom more than 1,000 years ago but, today finds itself under the heel of a tyrannical ruler. During the regime of Prussia and Austria, it felt the rule of an absolute dictatorship but afterward the Polish people looked toward the Western World for its independence.

The independence it gained was only a short-lived victory. Soon after its freedom was declared, it was forced under the domination of Russia, as one of the bloc countries. In this capacity, Poland sought to free itself from another dictator but again it fell—and again the cries of its people for freedom were heard throughout the world.

Today, we in the free world pause to take cognizance of the fact that Poland

has, for centuries, fought for the principles put forth by its leaders and is today fighting for its independence, if not its very life.

Even in the 15th century Poland reached such high standards of development that there was the creation of a senate and house of representatives under the act of Nieszawa in 1454. Poles have made other great contributions to our civilization in music and the arts. America will recognize the great contributions of Ignace Jan Paderewski this fall by the issuance of a special Champion of Liberty stamp commemorating the 100th anniversary of the birth of this great humanitarian and statesman. The Polish people can well take great pride in his efforts to liberate his native land and the world shall not forget the debt we owe him for his courageous work in the cause of freedom.

It behooves us to pause today to renew our pledge to the Polish people that Americans have not forgotten their plight and will help this brave nation restore her freedom and independence and facilitate her return to the Western family of nations. There are many ways in which we in Congress can help the Polish people in their struggle for freedom. The Poles desire more cultural exchange with the West and they hunger for more modern knowledge evolving in the West. We can help them in such matters so vital to their nation.

In the words of the immortal Pole, Ignace Jan Paderewski, "Poland will rise again," and we in America can help this valiant people to rise again to enjoy the freedom and independence which we take so much for granted.

Mrs. CHURCH. Today, Mr. Speaker, marks the 169th anniversary of Poland's Constitution Day. Sons of Poland in their native land and Americans of Polish descent commemorate this day, May 3, with just and enduring pride. At home and abroad, indeed, all those who love freedom rise in solemn prayer for the restoration of freedom in that great land.

The constitution brought forth on May 3, 1791, as the fruit of Poland's tradition of democracy and liberty was the first of its kind in all Europe. It was the first in giving recognition to the equality of all men. It was the first to establish freedom of thought, speech, and religion. The very dedication of the Polish people to the principles of democracy and individual freedom embodied in that early constitution has made them a bulwark of Western civilization. Through that dedication the light of liberty has burned bright in East Europe for centuries. To keep that light so bright has not been done without great sacrifice and even greater endurance. Since its Constitution Day in 1791, this great and valiant nation has successively been the victim of bitter suffering and humiliation. It has endured invasions, occupations, partitions, and tyranny at the hands of its aggressive neighbors. And today, Poland is suffering under ruthless Communist despotism.

Whatever and however has been the usurpation of the Government of Poland, her Constitution remains invulnerable. The ideals of freedom to which the Polish people have aspired for so long have not been and cannot be stifled. No nation with faith so strong and belief in human dignity so high will long remain quiescent under oppression. We anticipate the day when once more the Polish people will come into their heritage of freedom and self-determination.

On commemorative occasions of this nature, however, Mr. Speaker, there is a poignant lesson for all of us. The tragic history of Poland—and, indeed, of other lands behind the Iron Curtain—points out unerringly the fact that the struggle for freedom is unending; that freedom itself remains a precious possession that can never be taken for granted but must be continually guarded by those who would not live without it; and that indeed freedom cannot be truly safe until all people of the world have tasted the full essence of its gift.

And so today, as we pay tribute to the ideals, to the courage, and to the endurance of the Polish people and hail the survival in spirit of that early constitution, dedicated to freedom, it is fitting that we once more assure this friendly people of our continued support and of our sustaining efforts to uphold the cause of freedom and justice for all men.

We have been delighted to note that at least partial recognition of our debt to Poland has been demonstrated by the recent granting of the request by me—and by other interested friends—that the Post Office Department issue a stamp to commemorate the 100th birthday of Ignace Jan Paderewski. I was happy yesterday to receive a letter from the Postmaster General, Arthur E. Summerfield, stating that he had given a great deal of thought and study to our request; and that such a stamp would be issued during the fall of 1960 in recognition of Mr. Paderewski as "an eminent statesman, patriot, and a true champion of liberty for his native country of Poland and the Western European nations."

In particular, Mr. Speaker, we take pride today in hailing not only the brave people in Poland but the 7 million Americans of Polish ancestry who have helped build into this Nation the ideals of strength and endurance through individual freedom. With them we rise today to hail their motherland and to reassure her people that we march with them in a common cause of freedom and human dignity.

Mr. FENTON. Mr. Speaker, I want to direct attention to the fact that today marks Poland's Constitution Day, and free men and women everywhere are looking forward to the day when the yoke of Communist tyranny is broken and the brave Poles will again enjoy the freedom and independence which is still ringing in their hearts and minds.

We must never forget our pledges to the Poles, and other enslaved people, that we will ever be alert to any and all opportunities to reestablish their freedom so they can again live in the sun of self-respect and independence—that they will be free to work and worship as their hearts and conscience dictate.

In the anthracite coal regions of Pennsylvania, which I have the honor and privilege to represent, we have thousands and thousands of fine American citizens of Polish ancestry. They have established themselves in our communities as God-fearing citizens who take pride in their accomplishments, especially in the many outstanding contributions they have made to the progress of America—the land they love and cherish. Yet the enslavement of their families and friends in their native country of Poland is a sadness which is always present in their hearts, and they look forward, as we do, to the day when Poland's freedom is restored and her independence reestablished to facilitate Poland's return to the Western family of nations.

The Polish-American Congress, representing 7 million Americans of Polish ancestry, has begun the preparatory work to commemorate Poland millenium in 1966, when this great country accepted Christianity and irrevocably joined her destiny with Western civilization and Latin culture.

Our Polish-American citizens are amongst our leaders in business, industry, civic, cultural, and religious life. They are our neighbors—our friends. We are proud and happy to join them in the common cause of reestablishing the freedom and independence of Poland.

It is fitting to note that two of Poland's famous sons are having notable anniversary events this year.

Frederic Chopin, the famous composer, was born on February 22, 1810, in a small Polish village of Zelazowa Wola, near Warsaw. So this year of 1960 marks the 150th anniversary of his birth.

I am particularly happy to direct attention to the current 100th anniversary of the birth of one of the greatest Poles, Ignace Jan Paderewski, a great artist and humanitarian, patriot and statesman, beloved in America and Poland. He was born on November 6, 1860, at Kurylowka in Poland.

I, among many other Members of Congress, have been urging our Post Office Department to issue a champion of liberty postage stamp to commemorate the 100th anniversary of the great Paderewski. I am very happy to state that I have just been advised by Postmaster General Arthur E. Summerfield that the commemorative stamp will be issued sometime during the fall of 1960 as a tribute to this great Polish patriot for his service to the Western World in the struggles for freedom and independence of all mankind.

This recognition by the Government of the United States to the great Paderewski, at this time, will again fire the hearts of Poland's heroic citizens and will be an added stimulus for them to know that their freedom and independence is close to our hearts at all times.

Our common objective, and that of free men and women everywhere, should be to hope, work, and pray that Poland will soon be liberated from Communist tyranny and oppression, and that this great nation will again be able to live in the sun of self-respect and independence. This our renewed pledge to these great and heroic people.

Mr. CONTE. Mr. Speaker, today the Polish-American community commemorates the constitution of 1791. Unfortunately, this important holiday will be

ignored by the current Government of Poland; however, I am sure the captive people of Poland will, in their hearts and minds, tacitly observe this event.

At the time of its acceptance, 169 years ago, this constitution was the only other such document in force besides our own. Such an instrument of government was the logical outgrowth of the profound desires and intense love the Polish people had, and still have, for freedom. The volunteers from Poland, notable among them the leaders and brave fighters Thaddeus Kosciuszko and Casimir Pulaski, displayed an inherent will to identify themselves in the cause of liberty by their sacrifices during our own War of Independence. The constitution of 1791 was the natural expression of a people who cherish the same ideals and concepts of freedom as we Americans.

Unfortunately, the constitution of 1791 was short lived. In 1792 the rapacious neighbors, Russia and Prussia, occupied the country by force of arms. Consequently, in the next year, Poland suffered the ignominy of the second partition. Although its identity as a nation was effaced from the maps of the world, the brave Polish patriots continued to persevere in their struggles against overwhelming odds for independence. The strong roots of freedom in Polish tradition and national character and their never-ceasing determination to achieve it, motivated the many gallant attempts they made throughout the years to secure this objective.

It is a tragedy that, on this day, a dismembered Poland ruled by a government whose philosophy is the very antithesis of the principles enunciated in the constitution of 1791, should be forced to ignore the feast of its promulgation and, worst of all, live under an imposed rule of alien origin. I am certain that the hope for independence, from internal and external oppression, is still alive in the hearts and minds of the courageous Polish people and that, someday, it will find fruition in their liberation and in the restoration of a constitution which will embody the immutable principles which recognize their dignity and rights as free men.

To the Polish-Americans who have contributed so much to the preservation of the Constitution of the United States, and to the people of Poland, our congratulations on this 169th anniversary, and a pledge that our firm faith shall never change in the eventual renascence of a free constitution for Poland.

Mr. BYRNES of Wisconsin. Mr. Speaker, Polish Constitution Day provides us an opportunity to pay tribute to a group of people who have done much to advance the cause of freedom in the world yet are prevented from enjoying freedom themselves.

The Polish Constitution of 1791 whose proclamation is commemorated today is one example of the many contributions made by the people of Poland to liberty and democracy. It marked a far-sighted attempt to peacefully move away from the medieval system of government toward a constitutional monarchy and parliamentary type of government.

The Polish people have demonstrated their devotion to independence and democratic institutions on many other occasions. They proved it when they resisted stubbornly for many decades attempts of Imperial Russia to replace the language and customs of Poland with those of Russia. They proved it when Polish military heroes such as Kosciuszko and Pulaski came to the United States to help our new Republic in its fight for freedom.

They proved it in the period between the two World Wars when Poland flourished as an independent state and also at the beginning of these two wars when the great Polish pianist and composer, Ignace Jan Paderewski, gave up his artistic efforts to labor for the cause of a free Poland. It is fitting that the Postmaster General, in reply to many requests including my own, has just approved the issuance of a Champion of Liberty stamp commemorating the 100th anniversary of this great patriot.

The constitution of 1791 also symbolizes the tragedy which has frequently befallen the Polish nation. There was no opportunity for the ideals expressed in this constitution to be put into practice. Scarcely had it been proclaimed when Imperial Russia under Catherine the Great invaded Poland with the result that Poland underwent a long partition between Russia, Prussia, and Austria.

However, the memory of the constitution of 1791 and all it stood for lives on in the hearts of Polish people everywhere. The oppressive occupations of Poland in the past have never succeeded in stifling the Polish love of freedom. We can have faith that their spirit of liberty will also outlive the current Communist tyranny.

Mr. FORD. Mr. Speaker, the people of Poland have experienced the greatest national glory and have known the extreme in misery and degradation. In the past 1,000 years the Polish nation has had its golden age, but it has also been partitioned out of existence. It has known peace and war, freedom and slavery, democracy and dictatorship, culture and savagery. It is one of the great nations of man, and as such has experienced all the joys and all the sorrows of mankind. But the Polish people, whenever or wherever they lived, have kept alive the spirit of freedom, the essence of culture, the zest for life, and the best of qualities which we admire in all people.

It is fitting that the U.S. House of Representatives should take a few minutes today to pay special tribute to this people and nation. One hundred and sixty-nine years ago today, on May 3, 1791, a new constitution was proclaimed in Poland. This constitution provided for a heredity limited monarchy and a Cabinet of Ministers which was to be responsible to the Central Legislature. It so impressed and frightened Poland's neighbors that a second partition of Poland in 1793 followed the first of 1772.

When the third partition occurred, in 1795, Thaddeus Kosciusko led a movement against the partitioners, but his forces were defeated. This was the same Thaddeus Kosciusko who served as an officer in George Washington's Revolutionary Army and was the engineer in charge of the construction of fortifications at West Point from 1778 to 1780. He was a freedom fighter both in Europe and America, and we Americans owe a special debt of gratitude to this Polish patriot.

Coming into the 20th century, we are all familiar with the speech of the Polish Foreign Secretary, Josef Beck, on May 5, 1939, when he said, "The Poles do not know the concept of peace at any price." Subsequent history is all too well known. But the aspirations and ideals of the Polish freedom fighters of a thousand years remain. The American and the Polish peoples are one in these aspirations and ideals.

We all endorse, therefore, I am sure, the recent announcement of the Postmaster General that there will be issued this fall a U.S. Champion of Liberty postage stamp commemorating the 100th anniversary of the birth of Ignace Jan Paderewski, another eminent Polish patriot and champion of liberty. As a statesman and a musician, Paderewski exhibited anew the true spirit of Poland.

Mr. WALLHAUSER. Mr. Speaker, I consider it a most solemn honor to join today in commemorating the 169th anniversary of the Polish constitution.

It is a most sacred anniversary to all of us who believe in liberty and freedom, for the adoption of the Polish Constitution on May 3, 1791, was an outstanding milestone in the evolution of democracy in Europe. It is a compelling landmark in the centuries-old struggle of mankind for liberty and freedom.

Those who have spoken before me today have reviewed the tragedies visited upon the brave and freedom-loving people of Poland throughout the history of their nation by oppressors and tyrants of varying stripes.

The relating of these tragic events should give us all pause for thought and from us bring the offering of humble prayers to Almighty God that freedom and liberty soon be restored to the people of Poland.

Mr. PHILBIN. Mr. Speaker, I am greatly honored to join once again, in hailing and celebrating Polish Constitution Day.

Every year it is the practice of the House to set aside a special time for this purpose, and the occasion invariably is typified by solemnity of spirit, and unflagging resolution on the part of many who participate to continue their interest and their vigorous work for liberation of Poland and other afflicted and oppressed nations.

I express my warm thanks to my good and distinguished friend, Mr. ROMAN C. PUCINSKI, who has arranged for these exercises this year, for his sustained and able leadership in this great cause, and for the thoughtful, impressive manner in which he has conducted the discussion of this vital question so dear to the hearts of millions of Americans.

Time and time again, I have recited here in this House and elsewhere various chapters in the glorious history of the Polish nation and its dedicated, loyal people. But there always seems to be some phase of the illustrious history and background of this great people that has

not been previously noted in a way that would stress and compare the tragic suppression and bondage of the present with the magnificent contributions and achievements of the past.

The Polish nation has been noted, first and foremost, for its spiritual and religious devotion. Throughout the centuries, the Polish people have clung with undiminishing tenacity to their beliefs in the Supreme Being, to their confidence in and love of free democratic institutions, the preservation of highest standards of family life and their deep interest in cultural development.

I was gratified yesterday, therefore, to receive word from the distinguished Postmaster General, Arthur B. Summerfield, following requests that I and other Members of Congress had recently made, that the Department had authorized a special stamp to commemorate one of the greatest of all Poles, that outstanding statesman and artist, the late Ignace Jan Paderewski, about whom I recently addressed the House.

It is significant indeed that this honor in commemoration of the lifework of this great man should come at a time when we are celebrating Polish Constitution Day because there are few, if any, Polish patriots and leaders more famous, more distinguished, or more appreciated and beloved by the Polish people and the world, than the great Paderewski.

If he were with us today he would beam with approval to note our celebration of the Constitution Day of his native land, and he would urge us to continue our work for liberation of Poland and other oppressed nations.

As Americans, we have a special obligation, I think, to render heart service to the cause of self-determination and freedom for Poland and other peoples.

Organized communism is challenging the whole world, and is threatening the very existence of human liberty. We must not only indomitably resist this menace to Western civilization, but we must help the oppressed nations to resist it, and to recover the freedoms they have lost and that they deeply cherish.

We may speak of peace, but there can be no peace until men are free. There can be no peace until the shackles of communism, slavery, privation, poverty, and disease are lifted from the human family.

Let us reaffirm here today the principles of the Polish Constitution which are essentially the principles of our own great Constitution.

Let us reaffirm our interest in the suffering and oppressed peoples of the world held in bondage by Marxist communism.

Let us express once again with fervor, enthusiasm and determination our resolution, not only to sympathize with and encourage Poland and the other oppressed peoples, but to work for their early liberation and freedom.

The summit conference is the place to consider and try to settle these questions of oppression because in large measure these unsettled questions are responsible for great tension and uneasiness in the world. They are responsible for untold distress, restlessness, and revoluntionary spirit.

Any summit conference, so-called, that does not discuss and try to resolve these questions will merely be trifling with the hopes of mankind.

If such a conference does not consider the very issues that are creating tension, unrest, and contributing to the growth of a warlike spirit in the world, then it would be far better if it were never held, because in the end it will prove nothing more than a hoax, a sham, a deceit, and a disillusionment to the peoples of the world who are seeking disarmament, control of nuclear energy, self-determination, and peace.

Such a conference can never be justified in the hearts of men, in fact it could wreak great mischief, if it merely confines itself to trade advantages, face saving and material things rather than tackling boldly the real, deep-seated spiritual questions that relate to man's dignity, liberty, and peace.

If the summit conference is to be a success it must be on the level.

Long live free Poland, and may the day of its deliverance from tyranny soon be at hand.

Mr. BECKER. Mr. Speaker, the Polish Constitution of 1791 was a liberal document embodying rather advanced views for its day. It was framed by the gifted patriots of Poland, adopted and promulgated on May 3 of that year as the best means of reforming Poland's internal administration, and also of strengthening her against foreign foes. As such it was deemed well suited to serve this double purpose.

This memorable constitution made Poland a limited, constitutional monarchy. Cabinet form of government, with ministerial responsibility, was instituted. Intricate and obstructive features of the old system were eliminated and many class distinctions were abolished. The towns were given administrative and judicial autonomy, and also a measure of parliamentary representation. Personal privileges formerly enjoyed by the gentry alone were made available to all townsmen. The peasantry was placed under the protection of the law. Religious toleration was guaranteed. Judged in the light of current ideas of full, unhampered freedom, and compared with the long list of present-day human rights, the Polish Constitution of 1791 might be considered a real instrument of democratic government.

It was a pity that the unfortunate Poles never had the chance to live under this model democratic constitution. Before it could be put into force, Poland was overrun and partitioned among its three neighbors, thus putting an end to her independent existence. But the fine and noble ideas embodied in that historic document lived on, and still lives in the hearts of freedom-loving Poles in and out of their homeland. I gladly join them in the 169th anniversary celebration of the Polish Constitution Day.

Mr. LINDSAY. Mr. Speaker, I rise to join my colleagues in the House in commemorating this anniversary of Poland's Constitution.

May 3, 1791, marked a milestone in Poland's quest for independence. The quest has not been an easy one and even today in spite of Soviet oppression, the hopes and aspirations of the Polish people to be free remain. It behooves us to strengthen this spirit and I deem it most appropriate for us today to reassert our faith in these people in their relentless struggle for freedom and independence.

History reveals that the road of Polish independence has been most difficult. It has paid in blood, untold sufferings and privations; yet Poland's heritage of political wisdom and civic virtue shines bright as a beacon light symbolic of its desire to be free. Let us not become indifferent to Poland's lot. Let us remind ourselves on this day of the courage and determination of these people.

This year also marks the 100th anniversary of the birth of Jan Paderewski, a great Polish artist, patriot, and statesman. We shall likewise mark the 150th anniversary of the foremost Polish composer, Frederic Chopin, whose music truly reflects the indomitable spirit of Poland. I for one am a Chopin devotee. These men, the 7 million Americans of Polish origin, and above all the freedom-loving Polish people give meaning to this day.

Mr. SANTANGELO. Mr. Speaker, today we join the Polish-Americans throughout the country in celebrating the 169th anniversary of Constitution Day. We look back at the brief period of freedom which the Polish people knew under the great liberal constitution of 1791 and we look forward to the day when they will again know individual liberty.

The constitution of 1791 established a limited monarchy along with a biennial parliament and religious toleration. The old class distinctions that helped make life so difficult for the poorer people of the land were abolished. It looked like the dawn of a new day for Poland when she would join the growing ranks of democracies. But later that same year a Russian army marched into Poland and erased all these advances. It was not until the end of the First World War more than 125 years later that Poland regained true independence and once again began to control her own destiny. By 1939 Poland was once again in chains as the invading armies of Hitler's Germany stamped out national independence. The Soviet Red army later replaced the Nazis and kept the Polish people under the harsh rule of still another foreign dictator.

Today Poland has emerged from the most ruthless days of Soviet control and now appears to have some slight degree of freedom of action. Even this sharply modified freedom is precariously held, for Poland still lives under a Soviet domination that continues to impose an unpopular Communist government and prevents Poland from seriously differing with Soviet policy on any important issue.

Nationalism, or the desire for complete independence from foreign domination, is one of the most powerful forces at work in the world today. But we sometimes forget that this kind of nationalism is not restricted to the colonial areas of Africa and the Far East. The people of Poland and of the other states held captive by the Soviet Union, also want their freedom. In fact, their passion for

self-determination may be even stronger than that of the colonial peoples because there is less freedom in Poland today than there is in some African colonies. Soviet Russia poses as the friend of nationalism and the foe of imperialism, but her continued domination of Poland is a living refutation of these Soviet claims. Let Khrushchev give the Polish people their long sought after freedom before he again sings the praises of Soviet anti-imperialism. It is well that we remember these facts today as we pause to celebrate Polish Constitution Day, the symbol of Polish nationalism, the memory and the hope of Polish freedom.

Mr. HALPERN. Mr. Speaker, on this, the 169th anniversary of Poland's Constitution Day, we wish to express our friendship for the people of Poland and our hope that they will once again enjoy a life of liberty under the law, freed from oppressive external tryanny.

Fighting desperately for their existence as a nation, the people of Poland adopted their constitution on May 3, 1791. In Eastern Europe of the mid-18th century, it was a beacon of hope and of faith, a liberal document which reflected the spirit of enlightenment and the ideologies of the English political philosophers then prevalent in Western Europe.

Tragically, the goals of this constitution could never be firmly established as the nation was shortly overrun by its aggressive neighbors.

Through the long decades Poland has struggled to unshackle itself from the iron grip of others. Today, the Soviet Union constitutes a serious menace to the Polish people. Yet, even in the shadow of slavery, they are asserting themselves against efforts to tear down their cherished traditions, their homes and their church. Desperately they are seeking today to prevent the desecration of the cross by the Communist overlords in the industrial city of Nowa Huta, and their feelings have spilled over into riots. This is only the latest evidence of the love of independence that is rooted so deeply in the hearts of the Polish patriots.

The spirit of freedom and independence forms a rich portion of the Polish heritage, and these courageous people must, in time, enjoy once again the principles that are so much deeply engraved in their 1791 constitution.

On this anniversary occasion, we wish them to know of our friendship and of our hope that they will soon again join the roster of free nations.

Mr. RAY. Mr. Speaker, I am glad to join briefly in the ceremonies honoring Polish Constitution Day.

The Polish Constitution of 1791 is of great importance both to Poland and to the historical development of democratic institutions in Eastern Europe. That constitution was the first legal enactment brought about through orderly process by which old and obsolete features of the Polish Government were discarded and new ones were introduced. The authority of the monarch was sharply curtailed. The government became one of limited monarchy, with a responsible cabinet type of ministry. Much of the powers of the upper chamber were taken away and placed in the second chamber, the popularly elected legislative body. The peasantry was relieved from the arbitrary authority of local landlords and was placed under the protection of the law. Perhaps more important than these was the guaranteeing of religious freedom to all sects.

Judged by today's more enlightened and progressive standards, that constitution may be regarded as moderately progressive and not too liberal, but in the days when it was drafted and adopted, the Constitution of 1791 was considered by all concerned as a progressive and liberal instrument, and its drafters as torchbearers for democracy and freedom. Honor to their memory on this 169th anniversary celebration of that historic document.

Mr. ADDONIZIO. Mr. Speaker, all peoples have had their ups and downs, their woes and miseries, their joys and glories. The same can of course be said of the Poles, except that in recent times they have had more woes and miseries than joy and happiness. That is what makes the Polish case stand out, almost in a class by itself. This great and gifted people, constituting one of the larger ethnic groups in Europe, have suffered in the hands of their neighbors and oppressors during most of the time since the middle of the 18th century.

Late in the 1780's, when their independence was under serious threat, patriotic and farsighted Polish leaders drafted a new liberal, democratic constitution which was meant to strengthen Poland internally and thus be in a better position to resist its foes. This was the constitution of 1781 which gave Poland a government of limited monarchy, with a responsible cabinet type of ministry. Many old intricate features were abolished, and all class distinctions were wiped out. Personal privileges formerly enjoyed by the few were made available to all townsmen, and the peasantry was placed under the protection of the law. Religious toleration was also guaranteed. With these advanced and progressive features the constitution of 1791 represented a definite advance over anything hitherto known in Poland and in other countries in central and eastern Europe.

This constitution was drafted and promulgated, but it hardly had a chance to show its merits. There was hardly time for that; soon Poland was overrun by its foes; they partitioned it among themselves and put an end to independent Poland. But the spirit of the constitution of 1791 revived again at the end of the First World War in the reborn Republic of Poland. After enjoying its blessings for about two decades, unfortunate Poles were to lose their freedom again early in the last war. Since then they have been hoping and praying for the recovery of their freedom and independence and we of the free world share the noble sentiments of these brave people. On this 169th anniversary celebration of the Polish Constitution Day we wish them success and happiness in peace.

Mr. O'HARA of Michigan. Mr. Speaker, the Poles are one of the most gifted and versatile people of the world. They are gallant fighters in war, and industrious workers in peace. They are particularly great in the arts and the sciences. Immortal Chopin and Paderewski reign high among the greatest musicians and composers of the world, while Copernicus and Madam Curie—codiscoverer of radium—rank equally high among the greatest scientists of all time.

However, this unfortunate people, with all their gifts and accomplishments, have seldom had the chance, during the last two centuries, to enjoy freely the fruits of their attainments and achievements in their homeland. Toward the end of the 18th century independent Poland was living in anxiety; it was being threatened by its greedy and grasping neighbors. Polish patriots were up against a most serious dilemma. They of course wanted to salvage what they could, and to do this effectively they tried to overhaul the governmental structure of the country. They produced the constitution of 1791.

That constitution, with its liberal, progressive and democratic features, marked a turning point in Poland's political and constitutional history. It made Poland a constitutional monarchy, with a responsible cabinet type of government. Many class distinctions and privileges were abolished, and the peasantry were brought under the protection of the law. The lower chamber of parliament was vested with real legislative powers, and the electorate was considerably enlarged. Religious toleration was guaranteed.

As one can see this was a model constitution with great ideas and ideals in it. Of course we know that it was not put into effect because of treacherous acts of invaders. Soon Poland was overrun by Austrian, Prussian and Russian forces. It was partitioned among these three neighbors and independent Poland ceased to exist. But the spirit of the constitution of 1791 lived on in the hearts of liberty-loving Poles, and it still lives today while they suffer under Communist totalitarian tyranny. The 169th anniversary celebration of this constitution is evidence that the fine spirit of that historic document still sustains the Polish spirit of freedom and independence.

Mr. McDONOUGH. Mr. Speaker, the people of the United States join with the people of Poland and with people of Polish ancestry throughout the world in observing the 169th anniversary of Poland's Constitution Day on this May 3, 1960.

The history of Poland and the Polish people is the history of a nation dedicated to the principles of independence, justice, and individual liberty. It is tragic that this valiant country has enjoyed only brief periods of liberty as a nation since the adoption of its constitution on May 3, 1791.

Last September I had the privilege of visiting Poland when I attended the Interparliamentary Union Conference at Warsaw. I had an opportunity to meet and talk with citizens of Poland and found the Polish people to be resentful of the Soviet domination they were under and to have an inherent determination to obtain freedom and liberty for their beloved Poland.

It is my devout hope that the question of free and unfettered elections for the Polish people may be an important item of discussion at the coming summit conference, and that the restoration of a free Poland may soon be achieved.

The freedom of Poland is a matter of deep concern to the people of the United States who on this anniversary of the adoption of the Polish Constitution join with the people of Poland and those of Polish ancestry everywhere in the fervent prayer for the speedy reestablishment of a free and independent Poland.

Mr. MARTIN. Mr. Speaker, when on yesterday the House unanimously passed a concurrent resolution reasserting the belief of this body in the sacred right of the captive nations to live under governments of their own choice, one of the nations we had in mind was Poland. The passage of the resolution could not have come at a more appropriate time so far as Poland is concerned because today marks the anniversary of the Polish Constitution, which was the charter of liberty of the Polish people.

This date is the 169th anniversary of the signing of that famous document. It was on May 3, 1791, that the Polish Constitution was adopted.

The observance of this anniversary has become an annual event in this body and properly so. It furnishes us with an appropriate vehicle for reminding the people of Poland of our awareness of their distress over the deprivation of their liberties by a Communist-dominated regime which seized the Government of Poland by force.

This observance gives the American Congress an opportunity to let the people of Poland know that we sympathize with their plight and that we share with them the fervent hope that the day of their deliverance from oppression will come and that Poland will be free again.

We do not want the people of Poland to lose hope for the future. The expressions of our moral support should serve to keep alive their aspirations for a better day when the peoples of Poland and the other captive nations will be able to determine for themselves the kind of government under which they wish to live. We know their answer will be that they want freedom and independence.

Mr. SCHWENGEL. Mr. Speaker, in observance of Poland's Constitution Day, which is as important to the Polish people everywhere as July 4 is to Americans, I feel impelled to join my colleagues in paying tribute to this nation and its citizens.

Not only is this year significant as the 169th anniversary of the Polish Constitution, but because it is also the 100th anniversary year of the birth of the great artist, humanitarian, patriot, and statesman, Ignace Jan Paderewski, and the 150th anniversary year of the foremost Polish composer, Frederic Chopin.

Polish Constitution Day marks the celebration of a great landmark in Poland's history. At the same time it marks a significant date in European and the Western World's history, for the real significance of the Polish Constitution far transcends the geographic borders of Poland. As a liberal, democratic, and progressive document it was regarded at the time, and for a long time afterwards, a model constitution in many parts of Europe. The drafting and adoption of this constitution by the Great Diet—or Parliament—169 years ago was also a turning point in the history of the Poles. By it they effected a peaceful revolution in their form of government without resorting to the violent and destructive measures characteristic of the French Revolution. And by adopting a document embodying the liberal spirit of the age, the drafters of this constitution led their countrymen from the feudal paths of the Middle Ages to the broad and progressive highways of modern times.

That momentous and significant document made Poland a constitutional monarchy, by limiting the authority of the king and by introducing a cabinet type of government with ministerial responsibility. The intricate, obstructive features of the old system and many class distinctions were eliminated. The upper legislative chamber lost some of its preponderant powers and the second chamber, which was elective and represented the nation, was vested with genuine legislative authority. Economic barriers between the nobility and the bourgeoisie were broken down; the townsmen recovered their judicial autonomy, and received a number of political rights. The peasantry was taken under the protection of the law, and religious toleration was guaranteed. The constitution of 1791 abolished abuses from which Poland had been suffering for centuries.

With these and many more fine features the constitution was hailed by all lovers of freedom and progress, and true friends of Poland. And, though it never had the chance to be implemented, yet because of its generally democratic character and the noble ideals embodied in it, the spirit of that constitution has always lived in the hearts of the Polish people. They have always regarded that instrument as a highlight in their modern constitutional history and have always observed its anniversary. In this 169th anniversary celebration of that important document, I gladly join Polish-Americans in this country.

Mr. WOLF. Mr. Speaker, I am deeply honored to join with my colleagues today in observing the 169th anniversary of Poland's Constitution Day.

I have been long an admirer of the people of this nation who have with steadfast courage clung tenaciously to the ideals of freedom while being forced to live under spiritual and physical tyranny.

The sons of Poland have left an indelible imprint on the culture and on the social and political development of the United States. Who among us has not thrilled to the beautiful music of Chopin and Paderewski? The concept of representative government was evolved in Poland when America was yet an infant. Our own fight for independence received much-needed aid through the services of Kosciuszko, Pulaski, and countless Polish immigrants.

I am happy to join with Americans of Polish descent in letting the people in Poland know that we care—that we have not forgotten them in their hour of darkness—and that we share in their hopes for liberation.

Mr. GRIFFIN. Mr. Speaker, people of every nationality with faith in democratic institutions join today with those of Polish ancestry in commemorating the anniversary of Polish Constitution Day. It is entirely fitting that we pause a moment in this body to pay tribute to a document which stands beside the Magna Carta and the Declaration of Independence as landmarks in the constant struggle for liberty.

This is the 169th anniversary of the day in 1791 when Polish statesmen signed a constitution that inaugurated significant reforms in Poland's Government. While it was a monarchy, all power in civil society was stated to be derived from the will of the people. The principle of ministerial responsibility was established, the exclusive prerogatives of nobility were reduced, and it was provided that townsmen could acquire rank of nobility as well as property, become officers and hold office in the civil service and the church. Peasants were placed under the protection of law, thus laying the groundwork for subsequent abolition of serfdom.

Although free men rejoiced at the founding of a democratic state in Eastern Europe, Russia became alarmed at the liberal Polish ideas. Russian troops invaded Poland and the small army held out a short time against great odds before going down to defeat. Naturally the Polish Constitution of May 3 was abolished.

While it was short lived, the influence of the 1791 constitution refused to die. Its spirit has moved the Polish people to valiant deeds in defense of their freedom and independence. We will never forget their valor when Nazi troops marched into their homeland in 1939. Tragically, however, the defeat of Nazi Germany, instead of bringing liberation, meant a new type of enslavement. The Soviet Union, in imposing its ideology on the reluctant Polish people, ruthlessly liquidates political opposition and mercilessly eliminates religion. Nevertheless, the brave hearts of the Polish people cling to the ideals of liberty and independence established so courageously 169 years ago. The constitution of 1791 remains an inspiration always.

Mr. Speaker, I trust the day is not far off when Poland will shake off the chains of Communist tyranny and enjoy the freedom to pursue her own destiny alongside of the nations of the West whose cultural, religious, and political heritage she shares so fully.

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks, I wish to join all Americans of Polish descent in the celebration of the anniversary of the Polish Constitution. At this particular time in history when communism dominates half of Europe, it is essential that the United States and the free Western Powers give all possible support to the Polish cause for freedom and independence.

One hundred and sixty-nine years ago a group of patriotic, liberal and far-seeing Polish leaders wanted to inaugu-

rate a new era in Poland. They felt that some basic changes in the machinery of the government were needed, and to meet this imperative need they drafted a constitution. It was adopted, promulgated, and went into force on May 3 of 1791.

Let us not be cajoled into imagining that the Gomulka government is the government of the Polish people. This is merely a shabby compromise instigated at the direction of Moscow as an attempt to mollify a country whose free existence has been erased and sense of nationalism offended.

Last fall, it was my privilege to spend several days in Warsaw as a tourist and I personally witnessed the friendliness and the warmth of the Polish people who have been so oppressed for so many years and felt the spirit of hope that still survives for independence and freedom.

Mr. Speaker, I believe it is particularly fitting at this time to know that the Postmaster General of the United States, the Honorable Arthur E. Summerfield, has just announced a champion of liberty postage stamp commemorating the birth of one of the greatest Poles of all times, Ignace Jan Paderewski, will be issued this fall.

Mr. BOWLES. Mr. Speaker, I would like to add my voice to those raised today in commemoration of the 169th anniversary of Poland's Constitution Day.

One of the great wonders in the long history of Western civilization is the durability of Poland and the Polish spirit. Politics and geography have militated against Poland's survival. Caught between Russia and Germany, Polish territory has been an age-old battleground for vast contending armies, and its people have been threatened time and again with extinction.

And yet the Polish spirit lives on, the Polish people survive to build again, and the Polish state is once more reconstituted.

The anvil of history has made of Poland an indestructible nation. And it has made of Poles a dynamic, creative, artistic, and devout people.

Today, living under the direct rule of a Communist minority, the Polish people are once again proving their survival power. Nowhere in Eastern Europe is the flame of liberty burning brighter; nowhere are men and women more constantly living daily lives of courage.

How can we help but admire such people? And our admiration is grounded in something closer to home as well, for here in America we have learned to know the best of the Polish spirit through our citizens of Polish descent. Their contribution to our Nation is a great and continuing thing.

Poland's gifts to American life began with Kosciusko at the time of our own Revolution. It was carried on by the great Ignace Paderewski, the 100th anniversary of whose birth we commemorate this year, during his visits to our country. And it is maintained today by millions of able, dedicated Polish-Americans in all parts of the Nation, many of whom have given distinguished service to the Congress.

In my own State I might point out that this great tradition of public service is being maintained in Congress by my esteemed friend and colleague, Col. FRANK KOWALSKI.

It is a privilege and an honor, therefore, to add my hearty congratulations to the people of Poland and the people of Polish descent throughout the world on the great occasion of their Constitution Day.

Mr. BARRY. Mr. Speaker, on this anniversary of Poland's Constitution Day, May 3, it is fitting that we in the Congress of the United States should pay tribute to the centuries-old struggle of that great country for freedom and independence. By doing so we wish to remind the Polish people, both in this country and in their homeland, that Americans have not forgotten the pledge to return Poland to the Western family of free nations. We must keep up the hopes of these millions behind the Iron Curtain who now live under the repressive regime imposed by a foreign power. However, as she successfully threw off the yoke of the czars, so someday I know Poland will be freed from the yoke of communism.

The history of these people is both magnificent and tragic. Geography has placed them at the edge of Western Europe. So from ancient times it has been her role to defend against conqueror's from the East. Always, the heart of the Polish nation has beaten for independence and freedom. And not only in Poland, but wherever men struggled for these priceless possessions. Koscuisko, Pulaski, what significance these names have in our own struggle for independence here in America.

The constitution of 1791, the anniversary of which we commemorate, is a monument to past hopes which live on today. So I wish to join with the people of my district in New York of Polish descent in paying tribute to Poland and to echo the dying words of her great patriot Paderewski, the cry of Poland's sons throughout her periods of occupation and oppression, "Polska powstanie," Poland will rise again.

Mr. BOLAND. Mr. Speaker, unhappy Poles have seldom enjoyed the benefit of their own handiwork; nor have they been privileged to live under the free institutions conceived and devised by their patriotic and farsighted leaders. It is sadly ironic that just as in war when they and their allies win, they do not quite obtain the just reward that is the usual share of the victors, so in peace, when they attain something through their ingenuity and industry in their homeland, they have often been denied much benefit from it. The constitution of 1791 and its fate amply demonstrates this aspect of Polish history.

Late in the 18th century the Government of Poland seemed unwieldy and inefficient to carry on and face the imminent dangers threatening the country. A band of courageous, zealous and farsighted patriots in the Diet, or Parliament, thought that if Poland's governmental machinery could be overhauled and democratic principles introduced into its workings, then it would become infinitely more efficient and perhaps capable of facing dangerous threats. So they proceeded to draft a constitution, the constitution of 1791, which was adopted by the Diet in 1791 and became a great landmark in Poland's political history.

By this constitution Poland became a constitutional monarchy, with a parliamentary government. Many of the old class distinctions were eliminated, and the peasants were brought under the protection of the law. The basis of the electorate was expanded, and religious freedom was guaranteed. Provisions were also made for the periodic revision of the constitution. Taken with all these democratic and progressive features, the Polish Constitution of 1791 was a liberal, model constitution at the time, and may still be so regarded in our day.

Unfortunately, as we all know, the Poles did not have the chance to put the constitution into force and enjoy its exceptional provisions. For more than 100 years they lived under alien rule in their homeland, but they kept the spirit of that constitution to themselves, and when at the end of the First World War they regained their freedom, the spirit of that constitution came to life. During the interwar years the Republic of Poland was governed under a constitution modeled after the constitution of 1791. Today in observing the 169th anniversary of that historic document we make homage to the memory of its dauntless drafters, the patriots of Poland.

Mr. FARBSTEIN. Mr. Speaker, today is the 169th anniversary of the Polish Constitution of May 13, 1791. It is our pleasure and duty to pay tribute to this honorable document because it is the cherished symbol of a people who, throughout history, have fought to preserve their national integrity.

The heroic struggle waged by the peoples of Poland on behalf of liberty, freedom, and independence must of its nature gain the undying admiration of all freedom-loving people.

We are proud to know that the same spirit which inspired the adoption of the Polish Constitution, granting the Polish people rights and freedoms similar to those contained in our own Constitution, is still an integral part of the Polish national character despite the fact that her Communist neighbors have placed her in bondage.

Poland exists now only in the hearts of her countrymen, but her people have kept alive their spirit of freedom and shall continue their struggle, I am confident, to thwart the Soviet oppressive system.

Today, under Communist totalitarianism, the Poles do not enjoy any of the benefits found in the constitution of 1791, but they still cling to the spirit which represents that historic document. On this 169th anniversary celebration of that constitution, we ardently hope that the spirit of that constitution will again prevail in a free and independent Poland.

Mr. VAN ZANDT. Mr. Speaker, it is a privilege to join my colleagues and especially those of Polish descent in the well-deserved tributes of praise and affection tendered to the valiant people of Poland on the 169th anniversary of the adoption of Poland's Constitution.

It is my good fortune to number among my friends many persons of Polish descent and they yield to no one in their loyalty and patriotism to our great Republic. In my congressional district in Pennsylvania there are many sons and daughters of Polish immigrants who by their character, diligence, and deep faith in God are among the highest type of American citizens, as they occupy prominent positions in various professions and in the industrial and business life of central Pennsylvania. Motivated by a firm faith in God and devoted to the lofty principles of freedom and justice the Polish people in America, whether naturalized citizens or native-born Americans of Polish descent, have never abandoned their hope that Poland will eventually be liberated from the tyranny it endures at the hands of Red rulers in Moscow.

Therefore, on the 169th anniversary of Polish Constitution Day, I unite my prayers with the supplications of the Polish people everywhere that Almighty God will hasten the day of full deliverance of the Polish people from the shackles that bind them in virtual slavery behind Russia's Iron Curtain.

Mr. FEIGHAN. Mr. Speaker, as we commemorate the 169th anniversary of the independence of Poland, it is well for us to reflect upon the action of Congress last July in passing the Captive Nations Week resolution, Public Law 86–90.

The Captive Nations Week resolution gives new meaning to this year's commemoration of Polish Independence Day. The Congress of the United States has taken official recognition of all nations enslaved by Russian imperial communism. This law heralds the beginning of an awakening of the true nature of Russian imperial communism. Without such an understanding, our country has been floundering and confused in its efforts to meet the bluff and challenge of imperial Russia.

This resolution recognizes the right of all nations to be independent, and to determine their own destiny by free and unfettered elections. As the coming summit meeting, to be held on May 16, approaches, it is fitting that President Eisenhower and the American delegation to the summit meeting bear in mind the full meaning of the Captive Nations Week resolution, and cause to be considered at the meeting the question of the right of all nations, by their own will, to be free and independent.

There is no question that the freedom loving people of Poland would vote to relieve from their backs the heavy Russian Communist yoke of slavery. Given an opportunity by free elections, the God-fearing people of Poland would again be able to determine their own destiny under the terms of the declaration of May 3, 1791, and their constitution, which closely parallels the American Declaration of Independence.

It will be recalled that the Polish Constitution of May 3, 1791, in its basic elements, was patterned after the American Declaration of Independence and our Constitution. On several occasions in the recent past, I have singled out article 5 of that constitution as worthy of review in light of the present world situations and particularly in view of the present plight of the Polish nation. Article 5 of the constitution reads as follows:

> All power in civil society should be derived from the will of the people, its end and object being the preservation and integrity of the state, the civil liberty, and the good order of society, on an equal scale and on lasting foundation.

From this reading it is clear that the founding fathers of the modern-day Polish nation intended that all power in civil society should be derived from the will of the people. This guarantee has as much if not more meaning to the people of Poland today as it did to those Polish patriots who enunciated the basic constitution in 1791. Today the Polish people are denied this basic right of civilization. This right is denied them by the alien power which now controls their civil affairs and which remains in control only by virture of the military presence of the Russian Army.

President Eisenhower would strike a terrific blow for the cause of human freedom and independence by insisting upon consideration, at the summit meeting, of the right of all nations to free and unfettered elections. Under the provisions of the Atlantic Charter, to which the United States, Great Britain, France, and the U.S.S.R. were signatories, such action is called for.

I strongly urge President Eisenhower to insist on placing this vital matter on the agenda at the Paris Conference beginning May 16.

Mr. O'HARA of Illinois. Mr. Speaker, we pause today to celebrate the 169th anniversary of the adoption of the Polish Constitution in 1791. This is an important date in the history of Poland. It marks the beginning of modern Poland with a limited monarchy, ministerial responsibility, and biennial parliaments. Much of the obstructive machinery of the old system was abolished and invidious class distinctions were done away with. Absolute religious toleration was established. No sooner was it adopted, however, than it was overthrown by the force of invading Russian armies. Since then Poland has known little freedom except for the period between the two World Wars.

Today, 15 years after the ending of the terrible agony that saw the defeat of Hitler's nazism, Poland is still not free. During the war Stalin promised to see that free elections were held in Poland but this pledge was cynically brushed under the rug and a Communist government was forced onto the Polish nation by its Soviet masters. Poland still has a Communist government that lacks genuine public support and still lives in the shadow of Soviet domination.

Americans have not forgotten the people of Poland and their long history in pursuit of liberty. We look forward to the time when Poland may once again know true freedom and independence. It is the policy of the United States to keep alive the close personal relationship between the people of our two countries. We also seek through political, economic, and cultural means to do what we can toward realizing the goal of Polish national freedom.

After many years of foreign domination Poland still keeps its national identity. As one journalist put it recently, "Red Poland is still blazingly Polish." The people pursue their individual personal interests and diverse tastes without succumbing to an alien uniformity that marks some Communist countries. Above all it is obvious that Poland remains an intensely religious country, where the Communist dogma has been impotent before the deeply rooted Christian faith of the people. Christianity was established in Poland almost 1,000 years ago, in A.D. 966. Poland's first historic ruler, Mieszko was converted by Jordan who became the first bishop of Poznan. And Boleslaus, Mieszko's son, worked hard to secure the independence of the Polish church. This faith nurtured now for nearly a millennium is a sure ground for belief in the unique worth and dignity of each individual person in the sight of God. The faith of the Polish people is also one of the vital links that unites them as a distinctive nation as they face the uncertainties of today and of the future.

This year there will also be celebrations marking the birth of two famous Polish musical artists, Frederic Chopin and Ignace Jan Paderewski. Both men have been honored throughout the civilized world for their musical genius. But in their native Poland they are also symbols of the great national history and the remembrance of their art helps bind together the Polish people in this day.

Chopin was born 150 years ago, in 1810. Within the brief compass of his 39 years he established himself as the greatest of Polish patriots in the realm of music. He was forced into exile by the Russian occupation forces because of the revolutionary character of his music. Although the oppressors used every means at their disposal to destroy Polish culture and decimate the people, Chopin's music spoke for Poland and helped bind the nation together. His entire life was devoted to the preservation of Polish nationality and ideals. We all remember how important Chopin's music was in firing the resistance of the Polish people to Hitler's onslaughts during World War II. Chopin's inspiring "Polonaise Militaire" symbolized the united response of a nation in the face of the savage oppressor.

This year also marks the 100th anniversary of the birth of Ignace Jan Paderewski, the great Polish artist, humanitarian, and statesman. Although a devoted musician Paderewski gave up his career at the beginning of the First World War and set himself the task of liberating his native country. It is widely recognized that he made a great contribution to increasing world support for the restoration of Poland as a free and independent nation. As honorary member of the Polish National Committee, and as the friend of President Woodrow Wilson and his adviser, Colonel House, Paderewski was also influential in the United States. It is believed that it was through Paderewski's efforts that the 13th of President Wilson's 14 points was devoted to Polish independence. Paderewski's service to Poland extended

far into his old age. In 1940, after Poland had fallen in the Second World War, Paderewski came to the United States once again to encourage aid for his distressed homeland. He was then 80 years old. In the midst of these labors he contracted pneumonia and died in the service of his country.

It is fitting that we join together today the great Polish Constitution of 1791, and the Polish patriot musicians—Chopin and Paderewski. All three are important in the history of Polish freedom. All three are today an inspiration to the Polish people who do not yet enjoy full freedom and national independence.

Mr. MULTER. Mr. Speaker, 169 years ago a group of patriotic, liberal, and wise Polish leaders wanted to inaugurate a new era in Poland. They felt that some basic changes in their government was necessary; and to meet this imperative need they drafted a new constitution, which was adopted and promulgated on May 3, 1791.

Since that year the constitution day has been celebrated annually, and the event has been regarded a great landmark in Poland's political history. The constitution of 1791 was a liberal, democratic document, and as such it aimed to reduce the power of the monarch without impairing the authority of the central government. The government became a limited, constitutional monarchy.

The constitution did away with the old class distinctions and class privileges, and guaranteed religious freedom. In this respect it embodied some of the ideas of the American Revolution, as well as the French Revolution. The constitution of course aimed at strengthening Poland by uniting all its citizens more firmly in defense of its independence.

In embracing these twin aims of liberalizing and strengthening the Polish Government, the constitution was a major democratic instrument, and to this day it serves as a symbol to the Poles in their tireless struggle for freedom and independence.

I heartily join all Americans of Polish descent in the celebration of the anniversary of this great event, the Polish Constitution Day.

Mr. GALLAGHER. Mr. Speaker, historic documents reflect the spirit of the age in which they were drafted, just as they reflect the character of those who have drafted them. At the same time, if they contain ideas and ideals of universal validity, then they are ageless, they are universal. Such we believe is our Declaration of Independence, and also our Constitution. Naturally the Poles regard their constitution of 1791 in such a spirit. And they are quite justified in doing so, for when all is said and done, that historic document, with its limitations and shortcomings when judged by today's standard, remains as one of the brightest landmarks in Poland's modern political history.

By that constitution Poland leaped from medieval days to modern times, and thus took a long forward step. Its government became one of limited monarchy, and a responsible cabinet system of government was established. Religious toleration was guaranteed, and class distinctions were considerably reduced. The electorate was enlarged, and certain privileges formerly enjoyed by the few were made available to the many, the peasantry was brought under the protection of the law, and the landlords' prerogatives were sharply reduced. Nearly all of these provisions would have represented sweeping political innovations for any country in central and eastern Europe. The promulgation of the constitution was a symbolic assertion of Poland's determination to link her fortunes with the liberal West.

Unfortunately we know that the Poles never had the chance to live under this model constitution. Soon after its adoption, Poland was partitioned emong her three neighbors and thenceforth Poles were to live under alien rule in their land for more than a century, until in 1918 they regained their independence. Though the implementation of the constitution was thwarted by Poland's enemies, yet the spirit of that document lived in the hearts of freedom-loving Poles for more than 100 years, and that itself testifies to the timelessness of the ideas and ideals embodied in that historic document, the constitution of 1791.

This year's anniversary celebration of that document coincides with the centenary birthday of perhaps the greatest Pole in modern times, that of Ignace Paderewski. As we well know, he was the greatest piano musician of his day, and one of the greatest of all time. But few of us realize that he was also among the eminent statesmen of World War I days. His humanity and his patriotism was so intense and so sensitive that when his countrymen needed his leadership, he simply pushed aside his piano, as if to say goodby to it indefinitely, and plunged into the task of working, with heart and soul, for the Polish cause. He was fortunate to have his efforts bring freedom and independence to his countrymen, and for that service he will always be remembered by his loving countrymen. He was, however, unfortunate to see his liberated homeland once more overrun and be raped by its inveterate enemies, and naturally, he died in grief. But the world of music and of freedom remembers him, and pays tribute to him on the centenary of his birth.

We have always been keenly interested in the fate of the Poles, and have often exerted ourselves to the utmost to secure and safeguard their independence. Of course we had our share in bringing about the rebirth of Poland in 1918. We also hoped to have a large share at the end of the last war. To our disappointment and shock, we could not prevail upon the Soviet Union to allow the Poles to have a government of their own choosing, without the Kremlin's direct interference. In the end, unhappy Poles were saddled with a Moscow-oriented Communist regime under which they have no freedom to speak of, not even the freedom to celebrate their Constitution Day, or the centenary of Paderewski's birth.

I can think of no more fitting day to announce and make part of this RECORD a letter which I received from Postmaster General Arthur Summerfield. In it he states that the 100th anniversary of Ignace Jan Paderewski will be commemorated by the issuance of a stamp in his honor as a champion of liberty. Let us hope that liberty and freedom will soon be, once again, the blessings of Poland.

OFFICE OF THE POSTMASTER GENERAL,
Washington, D.C., April 30, 1960.

Hon. CORNELIUS E. GALLAGHER,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN GALLAGHER: Since I received your letter urging the issuance of a "Champion of Liberty" postage stamp commemorating the 100th anniversary of the birth of Ignace Jan Paderewski, I have given a great deal of thought and study to your request.

Your letter and the many resolutions I received from the leading American fraternal and civic organizations stating the numerous historical facts and qualities of Mr. Paderewski lead me to conclude that he certainly was an eminent statesman, patriot, and a true champion of liberty for his native country of Poland and the Western European nations.

I personally have always had a great admiration for Mr. Paderewski as a world-known personality in the field of music and for his service to the Western World in the struggle for freedom and independence of all mankind.

I am therefore very happy to announce to you that the stamp will be issued sometime during the fall of 1960.

I was delighted to know that you and so many of your colleagues in Congress have such a high regard for Mr. Paderewski.

Sincerely yours,

ARTHUR E. SUMMERFIELD,
Postmaster General.

I recently had occasion to visit Poland. I found that despite the determination of the Communist rulers the Polish people still possess the fervor for freedom that is nowhere surpassed in the world.

They share a warm feeling of friendship toward America and are contemptuous of communism as a way of life.

The courage, patience, and hope that the Poles display in the cause of freedom should make this day a time of rededication of our own determination to secure freedom everywhere in the world, with the firm belief that no one is more deserving of freedom than the people of Poland.

Nowhere on earth has the contest for a way of life been more fierce than in Poland. Here the issue between Christianity and communism has been joined and fought—the battleground being the mind of man. Despite the dominant position of the Communists and the closeness of Russia, the fierce faith of the Polish people has made communism back down on many occasions. They have made the Communists realize that the soul of man is more precious than the materialistic blandishments of communism.

Mr. KOWALSKI. Mr. Speaker, it is entirely fitting that the Congress of the United States should today be paying tribute to the great nation of Poland on the occasion of Poland's Constitution Day.

Not only did Poland make a great contribution to the very birth of the United States, and not only did Poland give to America so many of her precious sons and daughters to play important roles

in the tremendous growth and development of this great land, but, even more importantly, Poland today stands before the world as the symbol of man's unconquerable desire for freedom.

Poland today lives under the will of a foreign oppressor, but in the hearts of her people still burns unquenchably the fire of liberty. Poland has known oppression; her people have suffered persecution before, but the faith of the nation and her citizens has always reconquered in the end.

"Poland will rise again." These last recorded words of the indomitable Polish patriot and statesman, Ignace Jan Paderewski, are the banner under which the cause of Polish freedom marches today. Dignity for the individual will not come today, or tomorrow, but its eventual return cannot be stopped by any Communist dictators. It is beyond the comprehension of the Soviet mentality, but the human spirit is powerful, too.

This year's observance of Poland's Constitution Day has a special significance in that the year 1960 also marks the 100th birthday anniversary of the great Paderewski, to whom not only Poland but the whole Western World owes so much.

I was happy to be informed yesterday by the Postmaster General that approval has been given the request made by a number of Members of the Congress for the issuance of a special commemorative stamp honoring Paderewski. Appropriately, the stamp will be issued as one of the "champions of liberty" series, for Paderewski was certainly a true champion of liberty and a foremost fighter for freedom for all men.

The Paderewski Stamp, to be issued in conjunction with the centennial of his birth next November 6, will be another shining symbol of Poland's contribution to the cause of human freedom.

Our 1960 observance of Poland's Constitution Day is also significant for another reason. We are approaching Poland's millennium.

It will be surprising to many who are not familiar with the history of Eastern Europe, but Poland's history goes back far beyond that of many Western nations. She was already an established nation when, in 966, Poland embraced Christianity and for the first time joined her progress and her destiny with those of the Western World.

In just 6 years Poland and those of Polish heritage all over the world will be celebrating Poland's millennium. It will be a most historic occasion, and the world cannot help but give thought to the permanency of this liberty-loving land which has withstood the vicissitudes of time and fortune for 10 full centuries.

The spans of today's aggressor nations are as nothing when compared to the thousand years of Poland as a Western nation.

Mr. Speaker, as we observe Poland's Constitution Day, it is hardly necessary for me to review the great achievements of the Polish nation or the great contributions which Poland and her people have made to American democracy.

In war and in peace, Americans of Polish ancestry have served their country well. They have made their mark in the arts, the sciences, and the professions; they were among the men and women who have built America into the great Nation that she is.

From their heritage they brought to this land of liberty a fierce and burning love of independence and hatred of oppression. There have been no more loyal Americans, nor none more ready to fight for the preservation of democracy and democratic ideals.

In my own State of Connecticut, sons and daughters of Poland have played a most important part. They worked unceasingly for the betterment of our cities and towns; they built churches and schools in every corner of the State; they established newspapers; they struggled to provide every possible educational advantage for every child.

No one can pay enough tribute to the Polish immigrants whose faith, self-reliance, love of family, and determination enabled them to perform feats of almost superhuman accomplishment. To their sons and daughters they not only taught the lessons of good citizenship, but they themselves were shining examples of what they taught.

Mr. Speaker, the cause of Polish freedom is the cause of free men everywhere. We should take every possible opportunity to let the people of Poland know that we have not forgotten them, that we still know how strongly they yearn for a return of liberty.

It is for us to inform them, and show practically in every way possible, that we in America are their friends, and that our hearts are stirred by their plight. We must demonstrate our conviction that the days of Soviet tyranny will end and Poland can again take her place among the free nations of the world.

In these sad and bitter days in Poland, the zeal for liberty which still burns in Polish breasts should serve as an inspiration for all peoples everywhere.

Let us pray that the day will be soon when Poland will again join the community of free nations and her people can walk with heads high in a land that once again is an independent nation. Let us pray that the people of Poland can soon again enjoy the freedom for which they have fought for centuries and which they so richly and justly deserve.

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of the speech I made Sunday, May 1, in Boston at impressive exercises conducted by the Polish-American citizens of the Greater Boston area in observance of the 169th anniversary of Poland's Constitution Day.

The anniversary ceremonies were held under the auspices of the Polish American Congress, Eastern Massachusetts District, in the quarters of the Polish American Citizens Club, South Boston.

The material follows:

POLISH CONSTITUTION DAY

Reverend Fathers, Mr. President, and friends, it is a very high privilege and a genuine pleasure for me to join you on this very inspiring occasion honoring Polish Constitution Day and to meet with the members of your outstanding Polish-American organization, your officers, spiritual advisers, and friends.

At the outset, I heartily congratulate each and every one of you for the interest you have shown, the work you have done, and the support you have given to the ideals of American liberty and the preservation of freedom and justice throughout the world.

Loyal citizenship like yours is the most precious political contribution that you can make to protect and defend our free way of life, because it is just as true today, if not more so, as when first uttered by a great American that "eternal vigilance is the price of liberty."

You are blessed with a great and proud heritage indeed, which we so fittingly honor today. You are the descendants and the successors of a noble people who throughout the long centuries of history have never faltered in their devotion to God and their allegiance to the principles of freedom.

Time and time again the gallant Polish nation has been battered and torn by the ravages of war and its people have suffered indescribable torment under the cruel bondage of tyrants and oppressors who visited upon them every indignity, every persecution, and every torture known to man.

Right down to this very hour, your brave and noble people still suffer under the lash of a brutal tyranny, perhaps the most ruthless, the most barbarous, and the most unspeakable of recorded time.

Other peoples shackled in slavery and whiplashed in brutality and torture by this most efficiently organized of all tyrannies have been weakened in body and spirit by the great lie, the great conspiracy of world communism, and finally became too weak, too forlorn, to fight back.

But not the Polish people. They have been beaten, flogged, and imprisoned, stripped of their loved ones, denied their rights as free men, deprived of their right to worship the God of their choice, compelled to see their priests and nuns insulted, cast into jail, driven from pillar to post, forbidden to practice their holy calling.

They have been forced to stand by unarmed and helpless while their constitution was scrapped, churches were desecrated, their sacred personages and their dear ones were cruelly attacked and slaughtered before their very eyes, and yet they have never given up.

They have never thrown in the sponge.

They have never surrendered their birthright.

They have never permitted bondage, persecution, torture, or any other horrible affliction upon their persons, their dignity, and upon their common rights as free men to swerve them from their unflinching purpose to stand up bravely and courageously before their tormentors and say to the whole world, "We will never give in; we will die first."

You know the background and the shameful story of betrayal, broken promises, and breach of trust that lies behind the delivery of sacred Polish soil, the Polish nation, and the Polish people to the bloodthirsty tyrants of the Kremlin and I need not recite it in detail here.

It will suffice to say that the illegal and unmoral surrender of Polish territory, the Polish nation, and the Polish people to Russian domination was one of the blackest pages in history, so shockingly devoid of moral principles, ethical doctrines, legal validity, and ordinary political rights as we have known them in the past as to constitute a gross violation of international law, and a calloused abandonment of a faithful, courageous ally.

But there is hope, believe me, and there will be hope so long as there is a Poland, so long as there is an America, and so long as there is justice in the world and a Divine Ruler governing the affairs of mankind.

Some misguided people who do not know the Polish people, and apparently do not know the American people either, although they profess sometimes to speak for them,

have been of the shallow belief that after a while Russian mastery of Poland would not only become an accomplished fact, but would be accepted not only by other nations but by the Poles themselves.

Such people are totally lacking in any understanding of the loyalty, the religious faith, and the fierce determination of the Polish people for self-determination and freedom.

And these same people certainly overlook and have greatly miscalculated the attitude and purpose of the American people who in such large and overwhelming numbers are not only sympathetic with Poland in its sorrows and its enforced political and economic slavery, but are determined to do everything in their power to speed the day when Poland will be liberated from its shackles and restored to its rightful and former proud place as a member of the society of free nations.

Yes, the American people are deeply concerned about helping Poland, and the Congress of this great Nation has time and time again on Constitution Day and at other times expressed its intention to help Poland secure its liberation from unspeakable Communist tyranny, and in the spirit of humanity and justice it has extended the warm hand of encouragement, succor, and assistance to the sorely afflicted Polish people.

Now we approach another summit conference, so-called, to try to settle some of the problems, and to try to ease some of the tensions, that are afflicting the world because of the nefarious policies and aggressive threats and actions of the Soviet Government.

We have had summit conferences before, you will recall, and many of us are wondering whether the end results of this one will differ in many respects from the ones that have been held in the past.

There are some of us, indeed I think this embraces the strong majority of the American people, who are not willing to trust the further promises, nor endure the additional threats and blandishments of a national leadership like that of the Kremlin which has littered the fields of international diplomacy with broken promises in the past, and which even now as the allied nations are solemnly and hopefully preparing for a new summit conference continues its tirade of insult and abuse of our chosen leaders, its campaign of infiltration of helpless peoples, its stirring up of revolution and insurrection in many places, and its brazen, repeated threats of aggression against and nuclear destruction of the entire free world.

To those leaders who pursue such a course, I will say that they neither understand the temper of the American people, nor do they properly estimate the strength and power of this great Nation.

There will always be those, to be sure, of a weak and vacillating nature or of definite leanings toward the Communist system itself, who may urge and try to direct this Government to pursue the shameful, spineless way of appeasement.

But the American people do not favor and will never tolerate such a craven policy.

We are free men and women, not cowards and cringers. We well know the difference between freedom and slavery, and we are not going to stand by while misguided leaders in our own country, or in any other part of the world, lead us down the road to appeasement, to Communist domination of additional nations, and the almost certain loss of our own liberties that would be the final result of a policy of appeasement.

This Nation does not seek political aggrandizement, territorial gain, or domination and exploitation of other peoples, nor do we intend to remain silent and unmoved while the Soviet pursues these objectives.

Let the Soviet Government take due notice of that fact. Let their leaders know that while we ardently desire, zealously seek, and earnestly work for peace, a peace based on justice and equity, that we will never under any circumstances forfeit any part of our great heritage of liberty, nor will we remain impassive and inert while any other nation or any other political system moves by deceit and force to enslave mankind.

Just a word about our present posture. This Nation has great and powerful strength, let me assure you. We have an unequalled, effective, military and defense system equipped with the latest, largely unmatched, most devastating nuclear weapons and adequate means of using them against any aggressive force that dares to attack the United States, or attacks the security of the free world.

This Nation has the greatest economic strength, developed resources, and economic productivity that this world has ever seen. It is unrivaled and unmatched by any nation.

We hope and pray that these great resources of ours will never be used in warfare, certainly they will never be used for aggression.

But let those who have their eyes on the security, independence, wealth resources, and freedom of this Nation be fully notified and advised that we will fight to the death to defend our great heritage against communism or any other aggressor.

Though some would have us believe otherwise, the fact is that Russia is not the all-powerful and invincible nation that they would have us believe. We do not underestimate its progress and strength which has been impressive in some limited areas. But neither do we overestimate its potential.

Never in its 40-year history has the Soviet Communist regime faced such difficult and challenging problems, both internal and external.

It has staggering financial, economic, and social problems at home involving diminishing food productivity, industrial inefficiency, short consumer goods supply, and need, want, and low standards of living stalking through its so-called geophysical heartland and plaguing its collectivist system.

For the first time since its unconscionable acquisition of other small, helpless nations in continental Europe, it is confronted with the most serious satellite trouble in the vigorous unrest of enslaved nations intent upon breaking away from the Soviet police state orbit of armed might and economic deficiency.

Worst of all from the Soviet standpoint, it views with great apprehension the great ogre of Red China looming up to threaten her from the east, and I doubt very much that with all these gigantic problems of mere survival of the Communist system and threats to its own security, and the security of its debased system on its hands that the Soviet is looking for, or intends, to start a world war. Only extreme fanaticism would cause such catastrophe.

I am not suggesting for a moment that we can rely on the good will, good faith, or peaceful purpose of the Kremlin.

Knowing the Marxist aim of world conquest, we must be prepared for every contingency that may arise, militarily, economically, and above all spiritually, because it will be largely in the realm of moral principle, spiritual belief and the continued high faith, patriotism, and loyalty of the American people, as well as armed and economic strength, during the immediate years ahead that the triumph of freedom over slavery can best be assured. In this contest with serfdom, the Nation must renounce and reject the threatening softening influences of crass materialism and licentious paganism and rigorously apply our time-tested spiritual and moral values to every part of American life.

Just another brief reference. I recently introduced in the House of Representatives a resolution once more bringing to the attention of the Congress and the American people and the leaders who will represent us at the summit conference the urgency of the liberation of Poland and other subject nations being held in the ruthless vise of communism. This resolution is short and I will read the essential parts urging you to give it your wholehearted and most vigorous support.

"The Congress of the United States also urges the President to open up for discussion and settlement all those questions pertaining to the sovereignty, the control, the independence and the freedom of Poland, Lithuania, Latvia, Rumania, Bulgaria, East Germany, and other nations which remain unsettled by virtue of failure to consummate any major, comprehensive treaty of peace following World War II; and

"To express to the Soviet Union the sense of the Congress of the United States that no lasting peace can be established until:

"(a) The principle of self-determination is applied to all nations, great and small, so that the enslaved may be liberated; and

"(b) the Soviet Government ceases and desists from threats of aggression, encouragement to aggression, and conspiracy to excite aggression in other nations, and from the material and ideological support of revolutionary and subversive movements designed to supplant free governments with Communistic depotism in the Western Hemisphere and throughout the world.

"(c) Proposals for international disarmament and control of nuclear weapons and energy by proper inspections safeguards."

I hope this will be done. It would strengthen our chances for a just peace.

Before I close, however, I want to leave with our glorious Polish allies this message. Stand firm. Don't be dismayed or discouraged. Continue your fight for the Polish cause, which is a holy cause if there ever was one, because it is the cause of freedom and justice and the God-given rights of man.

Continue to stand upright, fearless, courageous, and zealous in your love of God, and in your devotion and loyalty to America. Stand loyally and gratefully in support of great outstanding leaders like Monsignor Sikora, Monsignor Lekarczyk, Father Skoniecki, and the others in the lofty, spiritual field who have directed your loyalties, your efforts, and your objectives so wisely and so well.

Above all, let us all have the faith, and, God willing, the strength and purpose, to preserve and perpetuate our great free government, and to speed the day when brave, noble Poland may enjoy its own constitution day and join us in freedom and peace.

Thank you all.

Mr. MILLER of New York. The greatest hope of Western civilization for the emancipation of the millions who now are slaves of communism rests in something wholly removed from hydrogen bombs, intercontinental missiles and space weapons—although we must maintain these deterrents because of the aggressive nature of our enemies who are dedicated to world domination.

The true hope for a free world rests rather in the hearts of men—men whose devotion to principles of freedom and liberty burns fiercely.

I say this, Mr. Speaker, because this is the flame which licks most insidiously at the foundations of communism. It is a fire which cannot be extinguished even by the most awesome and cruel force the world has ever known.

Today, as it has for centuries, this blaze burns brightly in Poland, despite an oppression so heartless, so savage as

to make the mere suggestion of true liberty seem ridiculous.

We, who are descended of those who spilled their blood in the cause of human freedom at Lexington, at Chateau Thierry in France, on the sand beaches of the Pacific, and in the mountains of Korea, appreciate and understand the centuries-old desire for dignity and human freedom which burns within the hearts of all civilized men. We, who have fought so long and bitterly to defend our own freedoms, cannot help but feel these blessings should be available to everyone everywhere.

Along with our strong feelings about freedom is an acute awareness that the time must come when those gallant peoples, who still are held prisoners within the Poland of their birth, may see their indomitable homeland break free of Red shackles and resume its proper place among the nations of the free world.

History has proved that nowhere in the world is the love of freedom and independence stronger than in Poland. The intense patriotism of the Polish people is not confined to any single class, or group, but is common to all people of Polish birth or descent, whether they are captives within the Soviet-erected prison of international communism or are among the 7 million Americans in whose veins flow Polish blood.

Indeed, Mr. Speaker, two of Poland's greatest patriots were better known to the rest of the world for their musical genius, and others of Polish birth, such as Thaddeus Kosciusko and Casimir Pulaski, so intensely were devoted to freedom that they crossed oceans to fight tyranny.

Kosciusko, who contributed so much to the American fight against the British during the Revolutionary War, and Pulaski, who died for the United States in the Battle of Savannah, were military men. Kosciusko was a distinguished Polish general and became one of that nation's greatest heroes when he led an unsuccessful but valiant revolution against Russian and Prussian oppression in 1794. Pulaski was well known as a military man before he organized cavalry units for the American military cause. To both of these, fighting was a profession and patriotism and freedom were principles. It was fortunate for America that each possessed great military ability and was so devoted to the cause of independence.

In short, both Kosciusko and Pulaski, two of the greatest military men in the history of two nations—Poland and the United States—could be expected to lead men in warfare because that was their profession. What was unusual about them was that they used their professional ability wherever it could help the cause of freedom and independence.

But even more unusual were the contributions made by Frederic Chopin and Ignace Jan Paderewski, who belonged to the world of music—not one of fighting and political principles.

And yet, even though such causes entailed the greatest possible sacrifices, each threw himself wholeheartedly into the battle for freedom, each gave his life to the Poland of his birth.

Chopin, because of his intense patriotism, lived in exile most of his life, but everywhere he went, he carried an urn of Polish soil.

In all his music, there was either the sadness of an oppressed people or the stirring strains which could arouse men to rise up against their oppressors.

Today, most of us recognize the works of this ascetic and physically tortured patriot only as the greatest piano compositions ever written. We listen in rapture to his Revolutionary Etude, his Polonaise Militaire as the products of a true genius.

But we forget that these were the works so hated by the barbarians who, more than a century ago, held Poland in bondage as she today is held.

We forget that this was the music which stirred Polish people to attack, even when hopelessly outnumbered, those who held her in slavery.

We forget that because of this music, the Russian forces occupying Poland took Chopin's piano, hurled it into the streets and smashed it into bits. They silenced his piano, but not his soul.

We forget, too, that when this great pianist, composer, and patriot died, his heart was sent to the little Church of the Holy Cross in Warsaw to rest.

Just as the greatest composer of piano music devoted his life to Polish freedom, so did the greatest concert pianist of his day—and, according to many critics, the greatest of all time.

The immortal Paderewski gave up his beloved piano at the beginning of World War I to battle for Polish freedom.

During 1917 and 1918, he served as Poland's representative in Washington and was primarily responsible for swinging American support behind Polish independence. In 1918 and 1919, he assisted in organizing the Polish Republic. As president of the Polish delegation at the Paris Peace Conference in 1919, he signed the treaty through which Poland regained her independence. He served Poland with the League of Nations, as minister of foreign affairs, as president of the Council of Ministers and as chairman of the National Council of the Republic.

While living in retirement in Switzerland in 1939, Paderewski again saw his beloved homeland threatened by its traditional enemies—Germany and Russia. Despite his age and infirmity, Paderewski came to the United States to enlist aid for his people. He arrived here November 6, 1940, his 80th birthday, and immediately began an extensive speaking tour, against the advice of his physicians.

A few months later, while addressing a group of Polish war veterans, he was stricken with an attack of pneumonia which took his life.

His last words, uttered as his brilliant and devoted battle came to an end, were: "Polska powstanie"—Poland will rise again.

Today, as we observe Poland's Constitution Day, let us pledge ourselves anew to the task of fulfilling the last expressed wish of a great man. We must assure the world that our people cannot live in peace while our Polish brothers are held in slavery. We must reassert our determination to support in every way possible independence for the Polish people.

In this pledge, I feel we can give the oppressed and the exiled some degree of hope on the 169th anniversary of Poland's Constitution Day.

In it, we may also express our appreciation to Poland in the 150th anniversary year of Chopin's birth and the 100th of Paderewski's birth for the contributions each made to music and human liberty.

In such an action, we may rekindle the flame that burned so brightly in the hearts of Chopin, Paderewski, Pulaski, and Kosciusko.

For this flame can ignite the fires which inevitably must destroy the monster of communism and cremate the last vestiges of oppression.

Mr. NELSEN. Mr. Speaker, in the last decades of the 18th century unhappy Poles were having internal as well as international troubles. Their governmental system was autocratic and unwieldy, and the country was surrounded by three powerful neighbors, always ready to overrun it. These three powers—Austria, Prussia, and Russia—had already grabbed part of Poland, and were preparing to partition it once more. Poles were fully aware of such dangers. They felt that if their governmental system could be reformed, and old obstructive methods could be abandoned, then internally the country would become stronger, and thus better prepared to face external dangers. With that definite purpose in mind they began the reforming and reconstructing move in 1788, which culminated in the Constitution of 1791.

This Constitution forms a great landmark both in Poland's history and also in the history of liberal, constitutional government in Europe. It was one of the earliest efforts, put forth without resorting to revolutionary means, in which the unlimited and autocratic authority of the monarch was reduced. Responsible cabinet form of government was established and the popularly elected legislature took on real importance. Townsmen were given certain political rights, and the peasantry was brought under the protection of the law. For all these important changes the Constitution was hailed as a real charter for the liberties of the underprivileged. It is true that the unfortunate turn of international events prevented the carrying out of the provisions of the constitution, but the fine ideas and ideals embodied in it became the political creed of freedom-loving Poles. To this day they cherish those ideas as fervently as did their forebears 169 years ago.

Mr. PIRNIE. Mr. Speaker, on May 3, friends of a free Poland and Poles everywhere will celebrate Poland's Constitution Day.

Only 2 years after ratification of our own Constitution, the Polish Constitution of 1791 was adopted. This document, like our own, was born of a battle for independence fought against overwhelm-

ing odds. Unfortunately, Russian arms duplicity deferred the cherished hope that Poles might govern themselves as free men.

Today, in Poland, freedom-loving citizens again are resisting Russian domination and are drawing deep inspiration and hope from the celebration of this significant anniversary. May they be strengthened in their determination by the knowledge free men everywhere sympathize with them in their struggle.

It is fitting that we commemorate such glorious moments of history so we may preserve the noble traditions of democracy which are the heritage of every American and the goal of repressed peoples.

Mr. COLLIER. Mr. Speaker, today 7 million Americans of Polish descent are celebrating Polish Constitution Day. I know all Americans join with them in the hope that someday the people of Poland will again live under the free spirit in which the Polish Constitution of 1791 was conceived.

Judged by any standard and measured by any yardstick, that historic document remains as one of the most liberal, democratic, and quite progressive instruments of government of the 18th century. The Polish Constitution made a real landmark in Poland's political history and it also had great significance in Europe's constitutional history.

By that constitution Poland overhauled its old and unwieldly governmental structure and not only brought it up to date, but it also strengthened the country internally by uniting all classes of the people behind the rejuvenated government. Poland became a limited constitutional monarchy, with a cabinet type of government responsible to parliament. The popularly elected legislative chamber was vested with real legislative powers, and the basis of the electorate was considerably broadened. Townsmen were given considerably more share in the government, and many class distinctions were abolished. Religious toleration was guaranteed. With these and many progressive features the constitution of 1791 was justly hailed by all liberals and lovers of ordered democracy. Of course, we are painfully aware that the Poles never had the chance to live under this constitution because of the destruction of their country by their rapacious neighbors, but they fervently cherished the fine spirit embodied in that document, and on this 169th anniversary celebration they still cling to that spirit.

Mrs. WEIS. Mr. Speaker, it is indeed a privilege for me to join with my colleagues in the House and Senate in paying tribute to the brave people of Poland on their Constitution Day.

Today, it is a sad fact that Poland is forced to suffer under the yoke of the barbaric and tyrannical forces which rule all of Eastern Europe from behind the walls of the Kremlin. But despite constant Communist pressures and renewed efforts to re-Stalinize the Government, the faith of the people of Poland has not been shaken and I am confident that no amount of religious and political persecution will ever destroy the will of the Poles to be again free and independent.

In 966, a full 500 years before the discovery of America Poland accepted Christianity and irrevocably joined her destiny with Western civilization and Latin culture. I am not disposed to believe that the transitory power of a godless dictatorship such as that which now prevails in Russia will long alter the course of Polish history.

However, the present plight of the Poles is a difficult one, and we who cherish freedom as they do must grasp every opportunity to demonstrate to the people of Poland that we are their friends, that their lot is not a matter of indifference to us, that their cause stirs our minds and hearts.

This session today will serve to assure the Polish people that Americans have not forgotten their pledge to help Poland and enslaved peoples everywhere regain their freedom and independence, and I am proud to be able to participate.

Mr. CAHILL. Mr. Speaker, I am happy to be able to join my many colleagues in the House of Representatives in noting this day of May 3 as one of hope for all Polish people throughout the world.

This country which is marking the anniversary of their May 3, 1791, Constitution, is now more determined than ever to rid themselves of the tyrant of communism and once again return to the free world as a peace-loving nation.

The Polish people throughout the world are to be commended for their fervent fight and continued hope in this struggle against the imperialistic powers of the Soviet Union, which have constantly since 1939, schemed to envelop this country in so-called peace treaty maneuvers.

As the Representative from the First District of New Jersey, I send hope and courage to these people who are ceaselessly endeavoring to throw off the yoke of suppression and wish to let this day stand as a constant reminder to those of us here who enjoy democracy and peace of the evils and pitfalls of the Communist regime.

Mr. HOLLAND. Mr. Speaker, the Poles are a great and gifted people, and they have great deeds and accomplishments to their credit. They are known not only as diligent and conscientious workers, but they are also admired as accomplished and great masters in the arts and the sciences. They are no less famous as brave and courageous warriors for great human causes. We can easily testify to this when we recall the role played by Kosciusko and Pulaski in our War of Independence. And they have also been great improvisors of institutions and governments. The Constitution of 1791 is a case in point.

Late in the 18th century when their country was under threats of aggression, and they were about to lose their independence, Poles did a splendid job in remodeling their governmental machinery. They then hoped that by such important and impressive changes, they could strengthen their government and thus be in better position to resist the aggressors. This constitution made Poland a limited monarchy, and introduced a responsible cabinet system of government. Parliamentary representation was expanded, and the many class distinctions were wiped out. At the time, and even in later years, this constitution was regarded a liberal, democratic, and progressive document, the first of its kind adopted in any country in central and eastern Europe. As such it marked a great step in Poland's political history.

We know that the Poles did not have the freedom and the privilege to live under the provisions of this Constitution. Soon after its promulgation Poland was invaded by its aggressive neighbors, and then partitioned among them. Polish independence was gone, and the spirit of the Constitution of 1791 lived in the hearts of the Polish people. It was the working of that spirit which recreated the Polish Republic in 1918, and we can confidently hope, on this 169th anniversary celebration of that historic document, that through the working of that same spirit Poles will regain their full freedom and independence once more.

Mr. GIAIMO. Mr. Speaker, it is with great pleasure that I join my colleagues in paying tribute to the heroic Polish people who, on May 3, observed the 169th anniversary of the adoption of the Polish Constitution. It is with equal feelings of great sadness that I think of the many years since the promulgation of this Constitution during which it lay unused while tyrants enslaved the Polish people. Since the first partition of Poland in 1772, with the exception of a brief period between World Wars I and II, the Poles have known only strife and oppression.

The Polish people today live in hope; in hope of peace, liberty, and justice. Despite all adversities, such high hopes have never diminished in their hearts. Their desire for freedom and independence has been nurtured by the brilliance and devotion of Poland's patriots. In the vanguard of such patriotic heroes, Poland proudly boasts the great composer Frederic Chopin.

This year, in addition to commemorating the birth of her Constitution, Poland observes the 150th anniversary of the birth of Chopin, one of her noblest citizens. Therefore, I wish to insert into the RECORD a brief tribute to Chopin which was written by George J. Olszewski of New York and was distributed by the Polish American Congress. Mr. Olszewski's article follows in part:

In his youth Chopin was forced into exile by the Russians because of the revolutionary character of his music. Some 20 years before his birth Poland was partitioned by Russia, Prussia, and Austria and at the time of his birth, was dominated by occupying forces of these three powers as it is dominated today by the Communists.

Chopin found safe haven in Paris, where he continued to live and to compose in the freedom which France has traditionally extended to the persecuted of all nations. In exile Chopin was kept informed by family and friends of the dire plight of his native

land. Throughout his life an urn of Polish earth remained in Chopin's room to remind him of his origin. He breathed into his music the undying love of an exile for his homeland.

This Polish son was not only an ardent and intense patriot but was God's chosen musical spokesman for a Poland ravaged by occupation forces. He devoted his life to the perpetuation of the spirit of freedom, liberty, and independence. For more than a century the voice of this patriot has inspired and guided his tortured nation through the pangs and ignominies of bloodshed and brutal occupation. His voice was the voice of music. It was the undying voice of Frederic Francois Chopin.

Throughout the intense 39 years of his life, the voice of Chopin's music rose as a hymn of liberty. It swept from his tiny cell on the island of Majorca in the Mediterranean. It spread throughout France, England, and all of continental Europe. It penetrated the most remote corners of his native land to plague the oppressors.

The occupation forces sought to suppress the compelling, arousing voice of Chopin's music. The Germans forbade its playing; the Russians crashed his piano into the streets of Warsaw. But the jangled crashing of Chopin's piano became transmuted into noble strains of the Revolutionary Etude itself. What a supreme weapon. The voice of Chopin could not be silenced, for music was the weapon beyond compare. The oppressors could not grasp it; they could not silence it; they could not tear it from the hearts of a people seeking liberty.

Throughout the years this vital weapon has retained its mystic potency. During World War I and again when pagan hordes invaded Poland in World War II, it was the music of Chopin which majestically sounded the call to battle from the Warsaw radio and triumphantly led the resistance. Throughout the bitter struggle which followed, Polish sons and daughters were inspired to untold feats of heroism. They rose from prisons and concentration camps; from hidden caves and dugouts in the woods; from the sewers, rubble, and ruins of Polish cities. They struck a last blow for Polish independence to the penetrating, commanding, and inspiring themes of the "Polonaise Militaire." Chopin's music symbolized the united response of a nation which resisted the onslaughts of its oppressor.

The militant nationalistic spirit is but one facet of the genius of Chopin. He speaks not only for the physically and spiritually oppressed of his own nation but for all humanity. His music carries a message of spiritual tranquillity to the oppressed of all nations, for its appeal is varied—to some it may be emotional or spiritual, to others artistic and intellectual. All agree, however, on its benign influence, for the power of Chopin's compositions stems from the very foundation of music which is an expression of life itself. It stems from the forces of creation and the depths of the human soul. His music lives in the breath of the wind, in the murmur of the forests, and in the flow of the rivers. It lies in the very blood of our veins reflecting every sensation of joy, grief, sorrow, happiness, anguish, delusion, and ecstasy which grips the heart and soul of man. The melodies of Chopin's music flow unbroken across the starry pathway of the sky. They flow unbroken above the range of human speech and sweep the entire universe.

Chopin's music shall live on through the endless eons of time, its voice shall carry his message to countless unborn generations. As the heroes of the past have fought for their precious ideals and inherent rights, may Chopin's clarion message inspire the generations of the future.

Let us recall the words of another heroic Pole. Speaking at the opening ceremonies of the Chopin Centenary Festival in Poland in 1910, the great Ignace Paderewski said:

"Here, at this moment, there rises amid us, above us, the radiant spirit of one who was. What light, what valor, what energy were his. What strength of endeavor he showed in the midst of suffering. Through trouble and affliction, through heartache, through creative pain, he marked to his country's glory the burning trace of his existence. By a bloodless fight on the plains of peace, he assured the victory of Polish thought.

"Blessed be the past, the great, the sacred past, which brought him forth."

Today Poland hopes that once again it may be free. We share that hope. We hope, indeed we pray that Poland and all the nations of the world might enjoy that freedom and liberty which was, and is, embedded in the music of Frederic Chopin and in the spirit of the 3d of May.

Mr. REUSS. Mr. Speaker, the 3d of May 1960, marks the 169th anniversary of the adoption of the Polish Constitution.

I join with my colleagues in the Congress, with Americans of Polish descent, and with the countless friends of the Polish people everywhere, in celebrating this great document's adoption. The Polish Constitution, patterned after our own Constitution, remains even today a symbol of man's eternal struggle for freedom and justice.

The Polish people, ruled today by a government subservient to the Soviet Union, have never lost their sense of nationalism and their dedication to the principles of liberty.

And this observance today in the Congress of the United States will, we devoutly hope, serve as a message to these brave people that we in America have the deepest sympathy and concern for them; that we do not accept the present condition of Poland; and that we shall work constantly toward the goal of total freedom for the Polish people.

The Polish people have been forced before to relinquish their rights. But I am confident that, as in the past, the Polish love of liberty, justice, and freedom will prevail over despotism.

Mr. DONOHUE. Mr. Speaker, on this 169th anniversary of Polish Constitution Day all Americans of every racial descent join with the people of Poland in a prayer for Polish independence and a renewed pledge to continue to work for the restoration of liberty and freedom to Poland and the rest of the enslaved Christian world.

No one who understands the great contribution to our own independence of the immortal Polish heroes of the Revolution or who has read of the glorious history of Poland in defense of Christian principles can help having tremendous admiration for the courage, patience, and fortitude of the Polish people in their current struggle to regain independence.

Heroic Poland gave us the best and most inspiring modern example of sacrifice for Christian principle in that terrible engagement with the Communists in 1920. The Polish people proved then to the world that they were among the very, very few who early recognized the planned and determined Kremlin objective of reducing the free world to pagan slavery. Would that we had wisely learned from their example and the recent years of too much appeasement and too often retreat, of developing world confusion and of increasing turmoil, might well have been avoided.

The price the Polish people paid for their early courageous resistance to Communist attack was catastrophic and the blow was even more severe when it appeared that their supposed allies turned their backs upon and heads away from their cruel plight under Soviet subjugation and tyranny. The debt the free world owes to heroic Poland for her courageous struggle against the Communist horde 40 years ago still remains unpaid and will remain a blot upon the moral integrity of this country and the United Nations until it is paid.

That is why we as Americans must never relax our efforts to help the Polish people to reestablish their freedoms under their own chosen government. As a nation dedicated ourselves to the democratic principles of personal liberty and individual freedom, the U.S. Government has an obligation to unceasingly maintain the right of Poland to her independence and perseverance, both as an individual nation and as a member of the United Nations, in demanding that the Communist leaders grant freedom and independence to Poland. We can do no less and still call ourselves a Christian democratic country while we join in prayer that the day will soon come when Poland, and all the other enslaved nations, will once again happily enjoy their personal and national freedom.

Mr. DADDARIO. Mr. Speaker, we Americans should feel a deep shame because of our ignorance of Poland's history, especially since Poles like Pulaski and Kosciuszko were so instrumental in framing our own. Although we are familiar with names like Chopin and dates like September 1, 1939, we fail to realize that Poland's history spans 10 centuries of national existence. It began when the Western Slavic tribes of the Wartha and Oder Valleys were consolidated into and duchy of Poland. Soon after, with the acceptance of Christianity, Poland took her place alongside the other nations of Europe and strived to secure her place in the balance of powers. Historians can give us many reasons why Poland's history was punctuated by invasions, but the one that stands out is her geographic situation at the junction of East and West. For 10 centuries Poland has had to live in constant fear of German expansion from the west and barbaric conquests from the east. That final German aggression of September 1939 shocked the world into realization of Poland's importance. From Hitler's nazism Poland was delivered into Stalin's communism and she was once again a pitifully tragic nation.

As her history shows, however, oppression never survives for long within her borders. Even under the overwhelming might of Soviet Russia, the Poles dared to stage open revolts at Poznan. The Poles have the inspiration and the courage to overthrow their Communist foes.

Poland has always been a respected contributor to the arts and sciences. Her Constitution of 1791 is an example of her philosophy that freedom must be based on Christian standards. As we commemorate the anniversary of this document let us join with the millions of Polish-Americans in expressing sympathy with the plight of the Poles and pledging to work toward the restoration of freedom and independence.

Mrs. DWYER. Mr. Speaker, for the past 20 years the Congress has taken time out each year to recognize the anniversary of the May 3 Polish Constitution of 1791.

Beginning shortly after the infamous Nazi-Soviet invasion of Poland, which led directly to World War II, this commemoration has become one of Congress' most important traditions. Not only does it provide us an opportunity to appreciate Poland's irreplaceable contribution to the development of Western civilization, but it has become for Congress its major annual occasion for restating American policy favoring the restoration of freedom and liberty for the people of Poland and the other Eastern European nations overwhelmed by the armies of the Soviet Union.

The celebration of this anniversary in 1960 is especially significant for several reasons. This year, for instance, marks the 100th anniversary of the birth of one of the world's greatest musicians, Ignace Jan Paderewski, beloved in America and Poland as a great patriot, statesman, and humanitarian as well as artist.

One hundred and fifty years ago, Frederic Chopin was born in Poland, and the world will never cease its gratitude for the glorious music of this gifted composer.

The year 1960 also inaugurates the preparation of plans by Americans of Polish descent, under the auspices of the Polish American Congress which represents over 7 million Americans of Polish origin, for the commemoration of Poland's millennium, the 1,000th anniversary of Poland's acceptance of Christianity in the year 966, which settled the destiny of that country as an integral part of Western civilization.

For more immediate reasons, however, this year's anniversary is particularly timely and important.

First of all, it occurs just the day after this House has approved a concurrent resolution dealing with the fundamental freedoms and human rights of the people of the captive nations.

This legislation, for which I was proud to vote, expressed the sense of Congress that respect must be accorded to these precious freedoms and rights. It reaffirms the belief of Congress in the inalienable right of the people of the captive nations to live under governments of their own choosing. And it expressed Congress' hope that the President will pursue energetically at the forthcoming summit conference the restoration of the fundamental freedoms and basic human rights of the people of the captive nations.

You will be interested to know that this measure was passed by the House of Representatives without a single dissenting vote. It reflects, I believe, the deep understanding of the Congress of the tragic situation in which Poland and her sister nations have been placed, and a continuing firm resolution to speed the day when freedom will return.

This resolve is especially meaningful, I believe, in the case of Poland. As we all know so well, the people of Poland have never accepted the dictatorial and foreign rule of communism. The Polish people's unyielding devotion to national freedom and personal liberty has been displayed over and over again for all the world to see and admire. Seldom, however, has Poland's resistance to Godless communism been so dramatically demonstrated as it was last week in the new city of Nowa Huta.

The story began with the decision of Poland's frantic Communist rulers to build at Nowa Huta a new city to be a symbol of the new Marxist Poland. Dedicated to the production of steel, the new city was—by official Communist fiat—to be deprived of even a single church.

But, even while Nowa Huta was being built, the Polish workers wore around their necks a little string, carrying the cross of Czestochowa. When the city was completed, its people selected a site for a church, in defiance of their Communist rulers, and marked the site with a cross. Last week, the Communists removed that cross. But, in doing so, they brought upon their heads the wrath of the people of Nowa Huta, who rose up in rebellion in the mightiest demonstration since Poznan to protest the removal of their cross.

So once again the Communist bosses of Poland learned an unforgettable lesson—that nothing has changed the devotion of the great majority of the Polish people to the religion of their ancestors. At the site of Nowa Huta's cross last Wednesday the people of Poland showed that their devotion to their religion far exceeds the impact of Communist dogmas, even after 15 years of steady indoctrination.

Nowa Huta has reminded the world that there is much unfinished business in Poland—business that will not be finished until freedom has been restored and communism abolished from the homeland of a great and courageous people.

Mr. BENTLEY. Mr. Speaker, it is a great privilege to join many of my colleagues who have called attention to the fact that last Tuesday, May 3, marked the 169th anniversary of Poland's Constitution Day. This is indeed a great day for all peoples of Polish origin as well as for the many other friends of Poland who are desirous of assisting the Polish people in their efforts to regain their liberty and independence.

It was most fitting and timely that Postmaster General Arthur E. Summerfield saw fit to announce that the "champion of liberty" postage stamp in commemoration of the 100th anniversary of the birth of Ignace Jan Paderewski will be issued some time during the fall of 1960. I was equally happy to join many of my colleagues on both sides of the aisle in pointing out to the Postmaster General the numerous historical facts and qualities of Mr. Paderewski and in urging that appropriate recognition be given to this eminent statesman and patriot who was a true champion of liberty for his native country of Poland and the Western European nations. It was gratifying to know that the Postmaster General confirmed our admiration for Mr. Paderewski as a world-known personality in the field of music and for his service to the Western World in the struggle for freedom and independence of all mankind. Both the memory of Ignace Jan Paderewski and our deep regard for Poland and its brave people have been amply shown by this significant commemoration. It should also be pointed out that 1960 marks the 150th anniversary of the birth of another great son of Poland, Frederic Chopin.

In calling attention to this memorable day in Polish history, it is indeed inspiring to learn that the next half-dozen years will serve to prepare the appropriate celebrations to be held in 1966 on the millennial adoption by the Polish Nation of the Christian religion. The faith of the Polish people in our common Christian heritage has served to support this brave nation throughout her long and troublesome history and, I am convinced, will again serve to bolster the fires of freedom in the hearts of the Polish people until that day comes when they may again know true liberty and independence.

Mr. CURTIS of Missouri. Mr. Speaker, throughout the world people of Polish descent celebrate May 3 with a spirit that shows their true feelings for freedom and democracy, for May 3 is Polish Constitution Day. On that day in 1791 a Polish Constitution was promulgated, enunciating the principles of human liberty as the governing law of the country.

The constitution of the 3d of May summed up a complete scheme of reformed social, political, and administrative structure for the country. In its political and administrative provisions it accomplished a true, peaceful revolution. The organization of the Polish Government was based on the principle, included in the U.S. Constitution which had been written but 4 years previously, of the separation of the executive, legislative, and judicial powers of the Government.

That old Polish Constitution was a truly heroic effort of national will to reach full political health. But because the constitution proved Poland's capacity for vitality, it aroused the antagonism of Russia whose interest, then as now, lay in perpetuating Poland's weakness. The Constitution of the 3d of May, expressing Polish dreams of liberty and democracy, fell as Russian troops entered Poland to begin the second partition of Poland.

But the love of the Polish people for democracy did not die with the fall of this constitution. Such spirit dies hard in these people—people like Pulaski and Kosciusko who fought side by side with our American revolutionaries—and neither the ravages of Nazi occupation nor the oppressive yoke of communism can still it.

This Polish spirit lives in this country among the 9 million persons of Polish

descent who live among us. It lives also in the hearts of 20 million Poles left behind under Communist domination in the mother country. It is up to us to do our best to see that this spirit, this drive for democratic self-determination, is eventually realized.

"GREEN ACRES" PROGRAM

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Minnesota [Mr. ANDERSEN] is recognized for 60 minutes.

Mr. ANDERSEN of Minnesota. Mr. Speaker, the gentleman from Iowa [Mr. JENSEN] and I have introduced identical bills to authorize a "green acres" program which we sincerely believe will in large measure alleviate the major problems of farm people and our farm economy. These bills are H.R. 12000 and H.R. 12001, and I want here and now to invite every interested Member of Congress who cares to do so to join us in the sponsorship of this proposal.

We seek in every possible way to set aside completely any partisan, sectional, or other considerations in our approach to a solution of the farm problem. We urgently welcome additional sponsorship, and I personally stand ready to support any bill by any author which contains the basic, essential provisions of our bills.

I personally seek nothing more than an answer to the economic and supply problems which now plague American agriculture. I believe every responsible Member of Congress, regardless of party or district represented, is genuinely interested and would prefer a solution many times over any possible benefits that might accrue as a political issue from the failure to resolve these great difficulties. If an answer to the problems of farm people and rural businessmen is available, it would be unconscionable for the Congress or the administration to fail to act during this session of the Congress. In the final analysis, the responsibility for action rests right here in the Congress of the United States and there is no escaping the duty that lies clearly before us.

Before going into a detailed analysis of the Andersen-Jensen "green acres" program, I would like to briefly describe the background of our proposal.

At the outset, I want to say very frankly that our bill contains numerous provisions previously advanced by other able and distinguished Members of Congress. The payment-in-kind features, for example, may be found in literally scores of bills now pending before the legislative committees. My cosponsor, the gentleman from Iowa [Mr. JENSEN], along with his Iowa colleague [Mr. HOEVEN], some time ago introduced payment-in-kind bills for corn. The distinguished chairman of my Subcommittee on Agriculture Appropriations [Mr. WHITTEN] and my very able farm colleague from Minnesota [Mr. MARSHALL] recently introduced bills to authorize a payment-in-kind program covering all feed grains and wheat.

After studying many of these constructive proposals and gaining from them a number of worthwhile ideas, Mr. JENSEN and I felt that something additional was needed to accomplish a balance between production and market demands and the "green acres" feature was conceived for this purpose.

Having crystallized our own thinking on the general outlines of a farm measure, we deemed it advisable to take the idea directly to the farmers who would be affected for their counsel before introducing a bill. This proved to be a very fortunate decision as the farmers themselves gave us the answers to several questions for which we had been unable to find the answers.

Four weeks ago yesterday I left Washington for the Midwest. I drove more than 4,000 miles and discussed the green acres proposal with more than 400 farmers, ASC committeemen, county agents, conservationists, livestock men, and others representing a cross section of midwest agriculture. As a result of these discussions, the initial idea was considerably modified and several very valuable improvements were made. For example, we were concerned about the collateral effects our proposal might have upon the livestock industry and I found the answer in a suggestion made by an ASC county committeeman at the last meeting held on the subject.

The Andersen-Jensen green acres program we have proposed is in a major sense the result of the combined thinking of a cross section of farm people and the leaders of responsible farm organizations. I could literally devote all of my time this afternoon to a rollcall of the men and women who have contributed to the development of this measure and I want at this time to acknowledge their help and express my deepest personal appreciation.

Now, Mr. Speaker, I would like to take a few minutes to describe briefly the various sections of our bill, and then I will be happy to yield for further discussion.

Section 2 of the bill provides for a nationwide referendum to permit farmers to determine for themselves whether or not they want this program to go into operation. Since every farmer in the United States who produced wheat, corn, oats, rye, barley, grain sorghums, soybeans, and flaxseed would be immediately affected, all of those producers who produced one or more of these commodities in at least 3 of the last 5 years would be eligible to vote in the referendum. If two-thirds or more of the producers voting in the referendum favored the program presented to them, it would be in effect the following crop year and thereafter unless the Congress authorized and the Secretary of Agriculture conducted another referendum on this or a modified program.

I will discuss the other sections of the bill upon the assumption that the entire program would be approved in the referendum. If farmers voted to the contrary, the entire measure would be inoperative.

Section 3 covers the green acres provision and is the cornerstone of the entire proposal. Beginning with the 1961 crop, all producers of the commodities enumerated earlier would be required to put at least 20 percent of their total cropland under green cover. Farmers would receive no direct compensation for so doing, and they would be free to do anything they wanted to with these green acres other than the production of nonconserving crops. They could graze it, cut hay off of it, put it into wildlife cover, and so forth. The principal stipulation would be that it must be under green cover and not in the production of nonconserving crops.

The 20-percent figure in our bill is not a precise figure which we have determined to be the exact minimum cropland needed in green acres on each farm to do the job. It is, however, the best possible estimate we can make as to a percentage reasonably expected to accomplish the objective we seek of balancing the production of these commodities against consumer needs and market opportunities.

Because this is such an important feature of the bill, you may be interested in the basis for the 20-percent provision and some of the reasons for its importance.

It should be obvious to all that American farmers are producing too much. They were called upon to increase production during the war years, and farm programs in effect in recent years have provided no alternative. We now have in Government ownership $9 billion worth of agricultural commodities and it is costing us about $600 million a year for storage and handling. We are simply producing too much and all previous efforts to achieve the desired balance have failed.

The best advice we can obtain together with our own study of official statistics leads us to the conclusion that we have nationwide about 32.6 million too many acres currently producing wheat, rye, corn, oats, barley, grain sorghums, soybeans, and flaxseed. This is a composite figure which takes into account an estimated deficit, for example, of about 3.6 million acres of oats and 0.9 million acre of flax last year.

Assuming the accuracy of this figure, and we believe it is reasonably accurate, the next step was to devise a sure means of taking this much land out of production at no cost to the taxpaying public.

Nationwide we have about 430 million acres of cropland now in production. About 136 million acres of this cropland is in hay and pasture, or 29.6 percent of the total. However, this percentage of total cropland in hay and pasture ranges from a statewide average of 13.1 percent in Kansas to 85.8 percent in Vermont. North Dakota averages 15.6 percent of its total cropland in hay and pasture; Washington, 18.9 percent; Georgia, 20.2 percent; Montana, 20.8 percent; Illinois, 21 percent; Colorado, 21 percent; North Carolina, 22 percent; South Carolina, 23 percent; Delaware, 23.1 percent; Texas, 24.3 percent; and Minnesota, 24.3 percent.

Within the States the percentage of cropland in hay and pasture also varies widely. I have listed the States in ascending order up to and including Minnesota because I have more details about

my own State. In my district, for example, I have two big-producing counties which have an average of 7 and 9 percent of their cropland now in hay and pasture. Obviously, the range within these counties is from zero to a few dairies with substantial acreage of hay and pasture.

The point I want to make is that we calculated this as best we could and came to the conclusion that 20 percent was about as reliable a figure as could be determined without intensive study of the latest census data when it becomes available. Experts in the field gave us estimates that ranged from a low of about 15 percent to a high of about 25 percent and from this we conclude that our 20-percent figure is fairly accurate. In addition, we anticipate that hearings on the bill would develop information which would either confirm this figure or lead to a more precise percentage for the green acres program.

It is our considered judgment that the establishment of this minimum figure of 20 percent of the cropland on every farm would probably raise the national average about 8 percent which would take out of crop production about 34 million additional acres. If so, and allowing for the fact that a good farmer would often select his poorer land for the purpose, we believe we would be within striking distance of balance production.

One further point on this section. Everyone we discussed this with advised us that it must be absolutely enforceable. To make it effective we have put some real teeth into it by providing a penalty of 50 percent of the total production on any farm not in compliance with the green acres provision. This penalty would be in the amount of one-half the value of the violator's total production the year of his noncompliance and we believe there will be little or no noncompliance.

Section 4 provides a vital incentive insofar as farmers and our rural economy are concerned. Under this section price supports on all the commodities listed would be set at 80 percent of parity the first 2 years, at 85 percent the next 2 years, and at 90 percent of parity thereafter. If our calculations are accurate, and we believe they are, the market will rise steadily in the next few years and the level of price supports will follow it up. In this section we propose in 5 years to restore the general level of farm commodity prices to the level from which they have fallen steadily in the last 10 years. The step-by-step increase will avoid sharp disruptions in our whole agricultural economy and we believe it is entirely practical to move back up in this manner.

Section 5 contains the provisions for the liquidation of present surpluses; the maintenance of an adequate supply for the protection of consumers, world markets, and food for peace programs; and the balancing of farm production in the future. The payment-in-kind program is to be entirely optional with the producer, but we have purposely set the rate at 80 percent of average, normal yields to make it attractive to producers. In addition, we have set a maximum of 50 percent of any farm which may be temporarily retired from production in the interests of farm families and the local economies. I have never wanted to see whole farms retired from production for any reason and we propose to prevent that in this program.

As one of the original coauthors of the conservation reserve program, I have consistently opposed the retirement of whole farms via this program.

As is provided in most of the other payment-in-kind proposals, our bill calls for a complete retirement of the acreage for which 80 percent of normal yield certificates are issued. These certificates will be valued as of the time of issue and will be completely negotiable. They can be used as collateral for credit. They can be surrendered in exchange for CCC stocks. They may also be sold to a neighbor or a local elevator for cash. When finally surrendered, these certificates would be exchanged for surplus stocks owned by the Government. However, these stocks would not be eligible for price supports. The retired land may either be put under protective cover with ACP assistance, left black if that is the proper thing to do from a conservation standpoint, or put under wildlife cover. However, no harvest of crops or hay would be permitted except in emergencies authorized by the Secretary of Agriculture.

There is also another payment-in-kind feature in this section relative to the green acres retired from grain production under section 3. To protect the livestock economy against a flood of cheap hay, we authorize an optional 25 percent of normal yield payment in kind for the complete retirement of this land. This has been set at this particular rate so the farmer who has livestock and needs the hay can utilize his green acres and the farmer who does not need the hay or pasture can completely retire that land in return for the 25 percent of normal yield payment in kind. We also have reason to believe that once the present surpluses have been liquidated this feature alone might well serve to maintain the balance in production we seek under the terms of our bill. If so, the total cost would be very low because of the relatively low payment rate of 25 percent.

In this section we also afford a measure of protection to the grain trade and storage industry by directing that commodities redeemed with payment-in-kind certificates shall to the maximum extent practicable be from CCC stocks in bin sites or other Government facilities before withdrawing from commercial warehouse facilities. In addition, I would like to report that our Agriculture Appropriations Subcommittee held several meetings in the Midwest on the storage question and we were told by responsible country elevator operators that they very much preferred the movement of free grain to the storage of CCC stocks as the trade in free grain is more profitable to them. From our inquiries we came to the conclusion that the elevators will find the increased supply of grain in trade channels more to their liking than long-term storage of Government stocks.

This section includes the usual penalty for violations equal to forfeiture of all payments and an additional penalty equal to 50 percent of the amount otherwise due.

Section 6 provides that the acreage diverted either into green acres or by payment-in-kind shall be in addition to any acreage already in the conservation reserve. In other words, if part of a farm is now in the conservation reserve the balance of the farm would be considered as an entity for the purposes of this legislation and the green acres would have to come out of the remaining cropland in production.

Section 7 assures producers eligibility for ACP cost-share payments on their entire farms, including the green acres and land diverted under payment-in-kind.

Section 8 provides that the proposed program shall be administered by the farmer-elected committees which are already in existence.

Section 9 directs the Secretary of Agriculture to transmit annual reports to the Congress in order that the operations of the green acres program may be constantly reviewed. In addition, it provides that any increase in the percentage of cropland required under the green acres provision shall first be approved by Congress and then submitted to producers in another nationwide referendum. However, if we have been reasonably accurate in the determination of this percentage, it is unlikely that such action would be necessary at any time in the near future.

Section 10 guarantees to cotton, peanut, rice, tobacco and wheat producers that no terms of this measure shall in any way affect their present programs of acreage allotments, marketing quotas, or price supports except for the 80 percent of parity price support floor under wheat.

In the first place, I would not undertake to offer legislation affecting these commodities as I know there are better authorities in the Congress representing these particular producers. However, I do want to call attention to the fact that the "green acres" program would be of considerable economic value to the producers of cotton, peanuts, rice, and tobacco, from the standpoint of higher price supports for the grains they produce on their farms.

That, Mr. Speaker, is a section-by-section summary of the bill. I would now like to call our colleagues' attention to the four charts we have prepared which illustrate the prospective impact of this proposal upon the production and income of a representative 320 acre Midwest grain farm. These charts may be readily adjusted to various crops as well as larger or smaller farms. The 320 acre farm is simply illustrative of the program.

The first chart shows that farm in virtually all-out production in 1960 under the present program. You will note that we have estimated 25 acres for buildings, lots, roads, wastelands, and so forth, and, to be conservative, have shown 35 acres already in alfalfa. On the balance we show 160 acres of corn producing 9,600 bushels worth about $1

per bushel this year; 50 acres of soybeans producing 1,500 bushels worth about $1.73 per bushel; and 50 acres of barley producing 1,500 bushels worth about 70 cents a bushel. In the lower left-hand corner of the chart we show an approximation of the surplus produced on that farm and these figures are based on the actual percentage of each commodity now in surplus production. On the right hand side of the chart we show the total, gross income in the amount of $13,800 for this all-out production.

CHART 1

ESTIMATED 1960 PRODUCTION AND GROSS INCOME UNDER PRESENT PROGRAM WITH 60-PERCENT OF PARITY PRICE SUPPORTS ON A REPRESENTATIVE 320-ACRE MIDWEST GRAIN FARM

One hundred and sixty acres of corn, 9,600 bushels, at $1 per bushel.

Fifty acres of soybeans, 1,500 bushels, at $1.73 per bushel.

Fifty acres of barley, 1,500 bushels, at 70 cents per bushel.

Thirty-five acres of alfalfa.

Twenty-five acres of buildings, lots, roads, wasteland, etc.

Estimated surplus produced on this farm:

	Bushels
Corn	1,344
Soybeans	150
Barley	150

Gross income	
Corn	$9,600
Soybeans	2,600
Barley	1,050
Alfalfa	550
Total gross income	13,800

The second chart shows that same farm in 1961 under the green acres program with 80 percent of parity price supports. Since this is primarily a grain-producing farm we assume as an illustration that the farmer will take full advantage of the program. First, he will have to put a total of 59 acres into the green acres program. For this he may elect to receive the 25 percent of normal yield payment-in-kind for wildlife cover, or 885 bushels of CCC corn. Then, he will be eligible to retire an additional 88.5 acres completely for which he will receive a payment-in-kind certificate worth 4,228 bushels of corn. On his remaining acres we assume he will plant 100 acres of corn, yielding 6,000 bushels, with a price support of about $1.30; 27.5 acres of soybeans yielding 825 bushels with price supports at about $2.25 per bushel; and 20 acres of barley yielding 600 bushels with price supports at about 96 cents a bushel. At present rates of consumption this farm would not be producing enough to meet current market demands and we would begin to eat into the surplus stocks held by the Government at public cost. From the income standpoint, you will note that the total gross income on that farm would rise to about $15,856—an increase of $2,000 above the previous year with reduced costs of production.

In addition, may I point out in all of these charts that the payments-in-kind made available to producers would in every instance assure that much minimum cash income regardless of weather or crop conditions. Since these certificates will be issued in the early spring, this cash income will contribute greatly to the whole rural economy and will help insure against local economic disasters as a result of crop failures.

CHART 2

ESTIMATED 1961 PRODUCTION AND GROSS INCOME UNDER ANDERSEN-JENSEN GREEN ACRES PROGRAM WITH 80 PERCENT OF PARITY PRICE SUPPORTS ON A REPRESENTATIVE 320-ACRE MIDWEST GRAIN FARM

Twenty-seven and one-half acres soybeans, 825 bushels, at $2.25 per bushel; 88.5 acres completely out of production under green acres program at 80 percent of average yield payment-in-kind (4,228 bushels of corn out of CCC stocks).

Twenty acres barley, 600 bushels, at 96 cents per bushel.

One hundred acres corn, 6,000 bushels, at $1.30 per bushel.

Fifty-nine green acres wildlife cover, at 25 percent of average yield payment-in-kind[1] (885 bushels of corn out of CCC stocks).

Twenty-five acres, buildings, lots, roads, wasteland, etc.

Estimated surplus produced on this farm: At present rates of consumption, this farm would not produce enough to meet normal market needs and deficiencies would have to be met out of Government stocks.

Gross income	
Green acres certificate for 885 bushels of corn at estimated market value of $1.10 per bushel	[1] $973.50
Payment-in-kind certificate for 4,228 bushels of corn at estimated market value of $1.10 per bushel	4,650.80
Guaranteed gross income regardless of crop conditions	5,624.30
6,000 bushels of corn at loan rate of $1.30 per bushel	7,800.00
825 bushels of soybeans at loan rate of $2.25 per bushel	1,856.25
600 bushels of barley at loan rate of $0.96 per bushel	576.00
Total gross income	15,856.55

(NOTE.—1961 costs of production have been materially reduced below 1960 because of the acreage taken out of production under the green acres program.)

Now, if you will refer to the third chart you will find that farm producing the same crops as shown on the second chart but this will be in 1963 when price supports go up to 85 percent of parity and the total gross income goes up to $17,139—another $1,300 with no increase in costs of production.

CHART 3

ESTIMATED 1963 PRODUCTION AND GROSS INCOME UNDER ANDERSEN-JENSEN GREEN ACRES PROGRAM WITH 85 PERCENT OF PARITY PRICE SUPPORTS ON A REPRESENTATIVE 320-ACRE MIDWEST GRAIN FARM

Twenty-seven and one-half acres soybeans, 825 bushels, at $2.40 per bushel; 88.5 acres completely out of production under green acres program at 80 percent of average yield payment-in-kind (4,228 bushels of corn out of CCC stocks).

Twenty acres barley, 600 bushels, at $1.04 per bushel.

One hundred acres corn, 6,000 bushels, at $1.40 per bushel.

Fifty-nine green acres wildlife cover, at 25 percent of average yield payment-in-kind[1] (885 bushels of corn out of CCC stocks).

Twenty-five acres buildings, lots, roads, wasteland, etc.

Estimated surplus produced on this farm: At present rates of consumption, this farm would not produce enough to meet normal market needs and deficiencies would have to be met out of Government stocks.

Gross income	
Green acres certificate for 885 bushels of corn at estimated market value of $1.20 per bushel	[1] $1,062.00
Payment-in-kind certificate for 4,228 bushels of corn at estimated market value of $1.20 per bushel	5,073.60
Guaranteed gross income regardless of crop conditions	6,135.60
6,000 bushels of corn at loan rate of $1.40 per bushel	8,400.00
825 bushels of soybeans at loan rate of $2.40 per bushel	1,980.00
600 bushels of barley at loan rate of $1.04 per bushel	624.00
Total gross income	17,139.60

(NOTE.—1963 costs of production have been materially reduced below 1960 because of the acreage taken out of production under the green acres program.)

Then, if you will refer to the final chart illustrating the situation in 1965 you will find that we have liquidated the surpluses and that farm is back into full production with 90 percent of parity price supports and a total gross income of about $20,766. Since the costs of production are comparable with those shown in the first chart for 1960 under the present program, you can readily see that the gross income on this farm will have risen a total of about $7,000 or more than 50 percent with no additional costs to the producer or the taxpayers. With the surpluses liquidated and supply in balance the operator of this farm will contribute to the total output approximately his proportionate share of the market need and the 90 percent of parity price supports will function as an orderly marketing device at little or no cost to the taxpayers.

CHART 4

ESTIMATED 1965 PRODUCTION AND GROSS INCOME UNDER ANDERSEN-JENSEN GREEN ACRES PROGRAM WITH 90 PERCENT OF PARITY PRICE SUPPORTS ON A REPRESENTATIVE 320-ACRE MIDWEST GRAIN FARM

Twenty-seven and five-tenths acres soybeans, 825 bushels at $2.55 per bushel.

Twenty acres barley, 600 bushels at $1.10 per bushel.

One hundred and eighty-eight and five-tenths acres corn, 11,310 bushels at $1.49 per bushel.

Fifty-nine green acres wildlife cover at 25 percent of average yield payment in kind.[1] (885 bushels of corn out of CCC stocks).

Twenty-five acres buildings, lots, roads, wasteland, etc.

Estimated surplus produced on this farm: At present rates of consumption, this farm would produce enough to meet normal market needs and an approximate balance between production and consumption would have been achieved.

[1] Optional with producer who may either take 25 percent of average yield payment-in-kind for complete retirement from production, or he may use for hay, pasture, etc., except production of price-supported crops.

[1] Optional with producer who may either take 25 percent of average yield payment-in-kind for complete retirement from production, or he may use for hay, pasture, etc., except production of price-supported crops.

	Gross income
Green acres certificate for 885 bushels of corn at estimated market value of $1.30 per bushel	[1] $1,150.50
11,310 bushels of corn at loan rate of $1.49 per bushel	16,851.90
825 bushels of soybeans at loan rate of $2.55 per bushel	2,103.75
600 bushels of barley at loan rate of $1.10 per bushel	660.00
Total gross income	20,766.15

(NOTE.—With production restored, costs of production in 1965 would approximate 1960.)

Although farmers are at all times to farm as they please under the green acres program, it should be noted that after the surpluses have been liquidated there will not even be a payment-in-kind program for those commodities which are not currently in surplus. The green acres provision will remain permanently in effect, except for national emergencies, to help maintain the overall balance of production with the payments-in-kind operating to adjust imbalances between commodities.

At this point, Mr. Speaker, insofar as practicable, I include in the RECORD at the appropriate place each chart described in my remarks.

I also include at this point an article from the St. Paul Sunday Pioneer Press of April 24, 1960, by Mr. Alfred D. Stedman, whom I consider one of our Nation's outstanding farm reporters. It is entitled "More Farm Surplus Headaches Forecast" and amply proves the point of urgency I hope I have made in asking consideration of the Andersen-Jensen green acres program.

May I also emphasize the fact that the entire program proposed in our bill will cost the taxpayers little or nothing more than the costs of administration and the release of surplus CCC stocks which are worthless for all practical purposes and are actually costing us about $600 million a year to store. I have not had time to calculate the savings that would be accomplished under the terms of our bill but I can assure our colleagues from my years of experience on the Agriculture Appropriations Subcommittee that the savings in total costs would be quite large not to mention the nationwide benefits that would accrue from a prosperous and healthy farm economy.

[From the St. Paul Sunday Pioneer Press, Apr. 24, 1960]

MORE FARM SURPLUS HEADACHES FORECAST

(By Alfred D. Stedman)

The 1960 cropping season got off to a delayed start this week with signs that great new crops will intensify the Government's throbbing headaches with holdover surpluses of corn and wheat.

This region's farmers were exasperated by slow drying of vast fields left unplowed in the wet 1959 autumn and by an immense job of stirring to save from spoilage huge supplies of wet corn—tasks that threatened a general pile-up of spring work.

But from Wisconsin across Minnesota and the Dakotas into Montana, moisture conditions were much improved over the drouthy spring a year earlier.

Nationally, despite the retirement of 28,500,000 acres in the Federal soil bank (an area nearly equal to all the land in all Minnesota farms), the prospects are for Uncle Sam to be plagued by too much of the two major surplus crops; thus—

As to wheat: More than 1,300 million bushels from earlier crops already is in Government hands. On top of this a new crop of around 1,200 million bushels is now indicated. The signs are good moisture in the northern plains, lush stands further south and a new jump in numbers of farmers (690,000 of them in 1959) taking advantage of the 15-acre exemption from Federal wheat crop controls.

As to corn: Farmers are responding to the Government's 1960 repeat of its corn offer of Federal price supports with no limit on production. They plan to plant even more than their large corn acreage of last year. Soil moisture in the Corn Belt has been restocked by rains and snows. Supplies of fertilizer, weed killers, and insecticides to boost yields are starting to move.

The Government's holdings of over 1,700 million bushels of old corn may be augmented in 1960 by the Nation's second 4-billion-bushel corn crop in history.

Washington prospects are dim for passing major new farm legislation this year to cope with surpluses—and even if passed in this session, the bills that are pending wouldn't cut surpluses until 1961. So surpluses promise to grow bigger this year.

This has been a fickle spring of extremes, with the lowest and highest spring temperatures in decades and high winds, deep soil freezing and floods and standing water in fields frustrating anxious farmers.

Roy A. Bodin, State-Federal crop reporter here, and E. N. Duncan and L.S. MacDonald, agricultural chiefs respectively for the Great Northern and Northern Pacific railroads, agreed Saturday that with exception of some spots, subsoil moisture is generally better than a year earlier. "The soil moisture picture," said an official report from North Dakota, "is generally on the bright side."

While that means aggravated Government headaches later over surpluses, it points right now to improving farm income at least for this year as a result of larger crops at Government support prices.

Other favorable factors in the 1960 outlook include the firm price of hogs and late-year prospects for smaller numbers and higher prices for swine as compared with those last fall; rather firm prices and low Government holdings of dairy products; sharp improvement in egg prices; prospects of another year of great production of turkeys in the Minnesota-Wisconsin-Iowa turkey belt; and strong prices for calves, beef cattle, lambs and sheep.

One shining feature of the Northwest farm picture is a prospect for a jump of more than one-third in the acreage of durum or macaroni wheat. Next jump is to be shared in by Minnesota, the Dakotas, and Montana. This is one kind of wheat of which there's far too little instead of too much. Through its leader, Henry O. Putnam, the Northwest Crop Improvement Association has been urging a big increase in plantings to maintain supplies of the golden grain needed to provide enough of the best macaroni and spaghetti for the Nation in the year ahead.

HOUSE OF REPRESENTATIVES,
Washington, D.C., May 3, 1960.

HON. HAROLD D. COOLEY,
Chairman, Committee on Agriculture,
House of Representatives,
Washington, D.C.

DEAR HAROLD: As you know, on May 2, 1960, we introduced H.R. 12000 and H.R. 12001 which were referred to your committee for consideration.

These are identical bills which were developed by lengthy study and discussions with more than 400 farmers and farm leaders in the Midwest. While undertaking to present a new approach to the farm problem which would hold real promise of success, we have also taken care to avoid introducing a measure which might jeopardize the present rights and interests of any class or element of farmers.

We have considerable confidence in this proposal and, in addition, it has the virtually unanimous endorsement of the cross-section of farm people with whom it was discussed. Because of the great urgency of the farm problem and the limited time remaining in this session, we respectfully request that a hearing be scheduled on these bills at the earliest possible date.

Thanking you for your consideration, and with best personal wishes, we remain,

Sincerely,

H. CARL ANDERSEN,
Seventh District, Minnesota.
BEN F. JENSEN,
Seventh District, Iowa.

Mr. JENSEN. Mr. Speaker, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield to the coauthor and cosponsor of this bill, my friend of many years standing, and one who has probably done as much for agriculture as any other man in the Congress, the gentleman from Iowa [Mr. JENSEN].

Mr. JENSEN. I thank my colleague from Minnesota for those kind words. It has been a pleasure these past 22 sessions of Congress to work with the gentleman from Minnesota on farm legislation. He is a farmer in his own right. He has proven to this House, to the Congress, and to the American people that when he speaks about the farm problem he knows whereof he speaks. I am happy and proud to join with him in the introduction of this bill.

Mr. ANDERSEN of Minnesota. I thank the gentleman sincerely.

Mr. JENSEN. We hear a lot about the family-size farm. I know everybody wants to maintain and preserve the family-size farm for America because it is good for America. This bill, our green acres farm program, puts great emphasis on the family-size farm not by talking about it a lot but in the provision in this bill which, one will find if he reads it, is in effect a 100-percent family-size farm program. Does the gentleman agree?

Mr. ANDERSEN of Minnesota. The gentleman is absolutely correct. This bill will do one thing, ladies and gentlemen. It will help to restore the economy of the depressed areas that we hear talked of in other points of the Nation. But, we have depressed areas in agriculture as well. This will give to the small family-sized farm the very same consideration as is given to the big producer. It will help the small producer, whether he be a cotton farmer or a wheat farmer, to give him that added gross income which he must have if he is going to survive. The passage of this bill will have an immediate uplifting effect on our entire agricultural economy and it will bring into the lifeblood of our economic stream untold millions of dollars to help create jobs all along the line throughout

[1] Optional with producer who may either take 25 percent of average yield payment-in-kind for complete retirement from production, or he may use for hay, pasture, etc., except production of price-supported crops.

our economy. But, especially, it will help that little man, Mr. JENSEN, about whom you are properly speaking today.

Mr. QUIE. Mr. Speaker, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield to the gentleman from Minnesota.

Mr. QUIE. Is it not true that a prosperous agriculture would do more for the economy of this country than any type of depressed area bill that could possibly be passed by the Congress?

Mr. ANDERSEN of Minnesota. I will say to my colleague, if we pass this type of legislation and if we can get the economic wheels in our farm areas turning, as they should, it would create jobs all the way up the line and we could create more real wealth with a bill of this type to help people throughout America than anything else that we could do today. Personally, I cannot see, after my 22 years in the Congress, why the Congress of the United States has not lived up to its responsibility and has not tried to do something of this nature before now. There is no reason why the farmer should be a second-class citizen. There is no reason why my fellow farmers should not have the necessary funds to buy the new tractors that they need, tractors that are manufactured in Chicago and in Milwaukee and in other places, but they simply do not have the money because we have lowered the prices of our basic farm commodities down to such a low point that farmers simply do not have the money to buy the products of the factories in the East. The gentleman is absolutely correct. I want to say this to the gentleman also. I appreciate very much the fact that the gentleman has remained on the floor until this late hour to listen to this discussion on these agricultural problems.

Mr. QUIE. Mr. Speaker, will the gentleman yield further?

Mr. ANDERSEN of Minnesota. I yield to my colleague.

Mr. QUIE. I would like to state that I speak not only as a Member of the Congress from the State of Minnesota, but as a farmer as well. I want to commend the gentleman from Minnesota and the gentleman from Iowa for the great work they have done for agriculture in developing this piece of legislation. I have discussed this with our two colleagues from Minnesota, Congressman NELSON and Congressman LANGEN, and both have stated how impressed they are with the fine work you two gentleman have done. The three of us have talked of this approach to agriculture where we can really be of some benefit. I think you will agree with me that American farmers have the ability to produce more than we can consume and more than we can sell overseas and more than we could give away under our present giveaway program. It would not be possible under any type of conservation reserve program to bring supply and demand in line. The only way we could possibly do it quickly enough to be of help to agriculture is in the approach that you have developed here. The other two gentlemen to whom I referred and I have offered legislation as well along similar lines. We want to join with you in the very fine work that you have done.

No one farmer can ever do anything that would have any impact on reducing production. The Government will have to help us to work together to bring supply and demand in line. I believe the legislation I have looked at and the testimony I have heard in the 2½ years I have been in Congress all lead to this one conclusion, that this is the only way of using the surplus so there can be a percentage reduction in production on the part of everybody. That will bring up the income of the farmers to a level where the entire economy would prosper.

Mr. ANDERSEN of Minnesota. My colleague is absolutely correct. I am sure the gentleman will agree with me that the major problem in agriculture is that the general price level of farm commodities is too low. Why is it too low? One of the reasons is the fact we have this $9 billion of Commodity Credit stocks overhanging the market; and never, Mr. Speaker, will we get a decent price for the farm commodities of this Nation unless we devise some practical means without added cost to the taxpayers to melt away this huge surplus. Then you will see the terminal grain markets of the Nation gradually bring up the price level on these farm commodities.

That will return hundreds of millions of dollars to the economy of the Nation, and it will create jobs all over the Nation.

I now yield to my friend who so patriotically brought out the idealism of the Polish people a short while ago upon this floor.

Mr. PUCINSKI. I thank the gentleman for his kind remarks. I raise this question but I hope I misunderstood my distinguished colleague from Minnesota; however, I thought he suggested that this farm program was the panacea for all the problems of unemployment in the distressed areas of our industrial cities.

I come from a large city. Obviously we do not have any farm problems in the city, but I am most mindful of the fact that the plight of the American farmer, particularly the small American farmer, affects the future of my district in a large city; and even though I was just a young man at the time, I know that the big depression of the thirties started on the American farm. I would therefore think it would be wiser to approach this problem in a two-way direction than one, in recognizing that the American farmer needs assistance and needs it badly, but at the same time recognizing that we have to bring help to these economically depressed areas of the large cities and work together. I think by working together we can solve the problem.

Mr. ANDERSEN of Minnesota. I do not look upon this as a panacea for all of our ills, but I do say it will help you folks in the depressed areas to the extent we can buy more automobiles and consumer goods. This will mean more employment in the manufacturing areas, the cities. So this help that we need back in the great grain-producing areas is going to reach you folks in the cities, and that I am certain is what my colleague, the gentleman from Minnesota [Mr. QUIE], had in mind. This is not an absolute cure-all, but it is going to help and I assure you I will do everything in my power to help you solve your problem.

Mr. JENSEN. Mr. Speaker, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield.

Mr. JENSEN. I feel a little explanation should be made for the benefit of the gentleman who mentioned the matter of depressed areas.

I wonder if the gentleman knows that when the farmer's dollar is 100 cents at the counter the farmers of America buy 2½ times more manufactured commodities than do the rest of us? The farmer's dollar for many years has been worth only 80 cents at the counter; hence we have a situation where many manufactured commodities are not enjoying the business they would enjoy if the farmer's dollar were worth 100 cents at the counter.

That is the main purpose of this bill. It is to bring about that position where the farmer's dollar is worth 100 cents in buying power. When that time comes, then the farmer will really be a great asset in the depressed areas because of his great buying power.

Mr. PUCINSKI. I am in full agreement with the gentleman in that statement, and reaffirm what I said, because we in the big cities recognize you cannot ignore the problems of the American farmer because we happen to live in big cities. We have supported farm legislation consistently here. I only hope that the Members of the Congress from rural areas, those who have for the most part the farmer vote in their district, will understand that we in industrial areas have problems when we come before the Congress pleading for a depressed area bill. We are faced with the same problem, and we are trying to find the same solution that the gentlemen who are supporting agricultural legislation are trying to achieve. We are all working for America. The big depression in America started on the farm. We owe it to these people to bring them some relief if we are going to avoid another depression in this country.

Mr. ANDERSEN of Minnesota. I thank the gentleman.

Mr. JENSEN. Mr. Speaker, will the gentleman yield?

Mr. ANDERSEN of Minnesota. I yield to the gentleman from Iowa.

Mr. JENSEN. I think it should be pointed out that the facts, figures, and charts which the gentleman has prepared apply to a 320-acre farm.

Mr. ANDERSEN of Minnesota. That is correct.

Mr. JENSEN. A calculation can easily be made by any farmer, regardless of the size of the farm, in proportion to the figures which the gentleman has stated.

Mr. ANDERSEN of Minnesota. That is correct. May I say that next Tuesday when we will have the agricultural appropriation bill under general debate, I shall go more fully into this matter, and lay it before the House. I regret it has been impossible at this time to do more than briefly describe the proposal as I have done this evening. I appreciate the attention of those who have been so kind

as to be here, and welcome the remarks they have made. In the final analysis, what I am proposing is good for the entire nation and it merits national consideration. The farm problem may appear to some to exist only in the rural areas but the truth is it is having its effect today on our entire national economy. The farm problem is a national problem demanding a national solution, and that is exactly what we propose.

Mr. ANDERSEN of Minnesota. Mr. Speaker, I ask unanimous consent to revise and extend my remarks, and to include certain charts, also to include an article from the St. Paul Pioneer Press of Sunday, April 24, 1960, by Alfred D. Steadman, one of the outstanding farm reporters; the article being entitled "More Farm Surplus Headaches Forecast"; also copy of a letter sent to the Honorable HAROLD D. COOLEY, chairman of the Committee on Agriculture of the House, dated May 3.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

THE NEED TO AMEND THE LABOR BILL OF 1959

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Oregon [Mr. PORTER] is recognized for 30 minutes.

Mr. PORTER. Mr. Speaker, early last September I, along with many other Members of Congress, was faced with a difficult dilemma. After 2 years of protracted debate the Congress was about to pass a labor reform bill. The vast majority of my colleagues in Congress recognized the need for effective legislation in order to help unions get rid of racketeers and hoodlums. For 2½ years the McClellan committee disclosed the wrongdoings in high places in part of the labor movement. I was aware that the McClellan committee investigations were largely one-sided and emphasized malpractices on the side of labor and largely overlooked wrongdoing in management.

A year earlier we had the chance to vote on an excellent bill, the Kennedy-Ives bill, which was approved by the Senate. I favored that bill, but it failed in the House because of a strange combination of forces. A number of influential labor leaders, including John L. Lewis, of the United Miners, opposed any legislation at all.

At the same time conservative Members in Congress wanted to use the McClellan committee disclosures as a vehicle for enacting antilabor legislation to weaken the position of unions in collective bargaining. This combination of forces prevailed in the House Education and Labor Committee, which failed to report out a labor reform bill. When the Kennedy-Ives bill was brought to the floor of the House under suspension of rules, the combination of conservative Republicans and Democrats as well as some Members who were against any labor legislation won the day. The 85th Congress thus failed to enact any legislation. The stage was set by default.

In 1959, a coalition of Southern Democrats and Republicans succeeded in passing the proposed antiunion Labor-Management Reporting and Disclosure Act of 1959, commonly called the Landrum-Griffin bill. I voted against this bill when it came up before the House the first time. The Senate had, however, passed a strong and effective antiracketeering bill. Only Senator GOLDWATER had voted against it.

The House-Senate conferees in ironing out the differences between the better Senate bill and the strongly antilabor bill, as enacted by the House, succeeded in eliminating a great many of the inequities that the original so-called Landrum-Griffin bill contained. What emerged cannot be properly called the Landrum-Griffin bill.

CONFERENCE IMPROVED ORIGINAL BILL

How did the conference improve the original bill? Let me cite the improvements:

First. The Landrum-Griffin bill would have virtually eliminated organizational picketing. The conferees agreed to permit such picketing for 30 days.

Second. The bill reported by the conferees exempted the garment and construction industries from the ban on hot-cargo agreements.

Third. Under the Landrum-Griffin bill the right of unions to advise the public that the distributor was selling goods produced by a manufacturer with whom the union has a dispute would have been banned. The bill reported by the conference specifically retained this union right.

Fourth. The bill that was finally approved limited the areas in which the NLRB could refuse to assume jurisdiction, but even under the amended bill many workers remain outside the jurisdiction of the NLRB. They are denied the protection of Federal law in labor-management relations.

Fifth. Economic strikers were given voting rights in representation elections during the first year after the commencement of the strike.

Sixth. The rights of workers to refuse to work on struck goods was upheld. The Landrum-Griffin bill would have denied them this right.

Seventh. The conference eliminated a provision in the original Landrum-Griffin bill which would have permitted damage suits against unions picketing for legitimate organizational purposes.

These are some of the changes which the conferees made in the Landrum-Griffin bill. For these improvements the liberal Democratic conferees in the other body, Senators KENNEDY, McNAMARA, MORSE, and RANDOLPH, deserve great credit.

But even so there were still several bad features. It was far from being a satisfactory bill. The bill did contain most of the measures considered necessary to help unions to get rid of corrupt leaders, but the antiunion provisions in title 7 were hard to swallow.

THE DILEMMA FACED BY LIBERALS

On September 4, 1959, the conference approved bill came before us. The dilemma before the liberals was whether they should accept the far from perfect bill or vote against it. The vote in the other body on the previous day was overwhelming with only Senators MORSE and LANGER dissenting.

The final approval of the Landrum-Griffin bill by the House showed that liberal Members in the House could not muster sufficient strength to reject the conference bill and to secure a more satisfactory substitute.

The facts that day were clear. The liberal Democrats had lost the opportunity to win approval of a sound, fully acceptable bill. Nobody felt that we had the votes for this.

The real issue was whether liberals would accept the conference bill as an indication that labor reform legislation was necessary and then try in the future to improve the bill or to express dissatisfaction with some of its provisions by voting against the bill.

This legislation, like the other bills, was a compromise, partly good, partly bad, which part depended on your point of view.

Reasonable people could disagree on the way to resolve this dilemma. Originally 201 Members in the House, predominately Democrats, voted against the Landrum-Griffin bill. About one out of four of these Members decided to express their opposition against even the improved conference version. The vast majority, of which I was one, however, decided to vote approval of the conference version of the Landrum-Griffin bill.

In doing this we had some misgivings about the revised bill. But we decided that on balance the bill contained more good than bad. We felt that it was our duty to support the needed legislation.

THE WHY OF LIBERAL THINKING

In voting for the conference bill I shared the feelings of many other liberal Members in both legislative bodies.

Senator HUBERT H. HUMPHREY, of Minnesota, said in connection with his vote for the bill:

> I know that members of the conference committee have struggled with the Senate and House versions of the bill in order to reconcile the differences. Frankly, there are portions of the bill as agreed to in conference which I do not agree with. But we are required to legislate in this field, and therefore, it seems to me we have little choice in the matter at this time. We have before us but one proposal, the result of 12 days of argument, deliberation, and compromise by the conference committee, and its report will, I'm sure, receive an overwhelming affirmative vote in this body.

Senator JOHN KENNEDY, the chief architect in the Senate for sound and positive legislation, stressed:

> We have before us in this conference report what I believe to be the only bill that it is possible to obtain under the circumstances.

He also stated:

> The bill is not the bill I should have preferred to see passed by Congress.

But he concluded:

> I believe that any Senator, regardless of his views on these matters, can vote for the conference report. I do not claim that it is a perfect bill or that it is a model of fairness. But, taking it as a whole, it is the best bill we can pass.

Senator PAUL H. DOUGLAS, of Illinois, said:

I am happy to report that the conference committee greatly limited and modified the worst parts of the Landrum-Griffin bill, which went far beyond any attempt at genuine reform.

I do not want to leave you with the impression that the conference committee came with a perfect bill. There are still some provisions which should be changed or modified, and I hope this can be done in the next session of Congress.

Liberals in the House expressed their views—

My colleague and friend, the able EDITH GREEN, was one of the leaders for sound and effective legislation. An outstanding member of the House Education and Labor Committee, she said on the floor of the House in connection with her vote for the final approval of the Landrum-Griffin Act:

Mr. Speaker, during these last several weeks, I have joined my colleagues in the committee and on the floor in arguing for a labor-management reform bill. It is needed. And I intend to support the conference committee bill—not because it is perfect. It is not, and there are two main provisions I hope we will change next year.

But the good parts—the necessary parts of the bill—far outweigh the bad provisions. And it will at least equip the American people to chase the crooks from one segment of the Nation's economic bloodstream.

Representative STEWART UDALL, of Arizona, another leading spokesman for liberal forces in the House in favor of a strong bill to eliminate racketeering, but against weakening unions, said:

Although, naturally, I have reservations with regard to some of the language in this report, it is my judgment that the compromise worked out by the conferees represents a middle-road approach to the complex problems which confronted the conference.

Responsible labor leaders appreciated the dilemma in which liberal Congressmen found themselves and approved of their action. An editorial in the Oregon Labor Press of October 23, 1959, summarized this view:

A total of 95 Senators and 352 Congressmen voted for the labor law. Whether or not you approve of their vote, you cannot say that all of them are enemies of labor. Many of these Congressmen and Senators have proved, by their voting records over the years, that they are sincere liberals and friends of the labor movement.

PROPOSED AMENDMENTS

Following the approval of the Labor Reform Act by the President, I consulted many responsible labor leaders and labor attorneys in Oregon. I checked with them on their specific objections to the provisions of the act. I appreciate the thoughtful and helpful suggestions they have given me.

I found that spokesmen for labor unions centered their objections about five major provisions of the Landrum-Griffin Act: First, the bill of rights; second, reporting by small union; third, reporting by employer; fourth, no-man's land; and fifth, the provision dealing with picketing and secondary boycotts.

While I was preparing the drafts of my own bills to amend the legislation, I found that Senator MORSE had prepared and introduced appropriate bills which would correct the objectionable features I mentioned above. I have introduced identical legislation in the House. These bills would eliminate the most objectionable provisions.

THE PURPOSE OF THE AMENDMENTS

First, the legislation would eliminate the objectionable provisions in the so-called bill of rights contained in title 1 of the act. My amendments would set up standards for union behavior, and rely upon union constitutions to guarantee the rights of the individual union members. I believe that this would be much superior to detailed standards for union behavior which are now set up in the act.

Second, I believe that employers should be subject to report wrongdoing the same as unions. This legislation would provide for more detailed reporting by employers and their agents, the same as is required of unions.

Third, in order to relieve small unions from the burden of filing annual reports, this proposed legislation would exempt unions with less than 200 members or with gross annual receipts of less than $20,000 from filing any reports with the Secretary of Labor. These small unions do not have paid officials. The present burdens imposed by the act on unpaid officials may discourage union members from accepting positions of responsibility in locals.

Fourth, my amendments would remove any doubts about the present requirements in connection with bonding.

The Secretary of Labor has interpreted the act fairly, even generously, by requiring only position schedule bonding. He deserves credit for this forthright interpretation of the act, but the proponents of strict antiunion legislation have already criticized the Secretary for his action. I believe therefore that the act should make it clear that position bonding is required. Individual bonding as favored by some antiunion spokesmen will in no way provide for greater guarantee of union funds, but will only result in exorbitant costs to bond union members handling funds.

Fifth, the Landrum-Griffin Act permits the NLRB to refuse the protection of collective bargaining to large numbers of employees and smaller employers. I would eliminate this provision and require the National Labor Relations Board to assume the full extent of jurisdiction.

Finally, my bill would restore to unions the traditional right of peaceful picketing and guarantee the right of union members to protect themselves against encroachment by nonunion employers.

I believe that with the enactment of these amendments the Landrum-Griffin Act would be much improved. My amendments would remove the antiunion provisions of the act and at the same time retain those provisions which guarantee the rights of union members and encourage genuine democracy in the American trade union movement.

DAVID DEVINE SPEECH

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Pennsylvania [Mr. QUIGLEY] is recognized for 45 minutes.

Mr. QUIGLEY. Mr. Speaker, I have taken this time to tell the story of David Devine. It has been some 15 years since Adolf Hitler died in his bunker in Berlin. For those of us who had hoped that the evils of nazism had died with him, the recent outbursts of swastika scribbling on the synagogues and churches of the world has indeed given us pause.

It has been half 15 years since the fires of McCarthyism burned brightly in our land and in the name of Americanism threatened to gut the very heart of America. In more recent years we can be grateful that these fires have been banked though, unfortunately, they have not been stamped out completely.

In recent weeks, it has been demonstrated that blind fear of communism—the launching pad of McCarthyism—can still function and that from it, it is still possible for persons within our Government to launch a blunderbuss attack on the integrity and loyalty of thousands upon thousands of devoted Americans and devout Christian gentlemen.

However, Mr. Speaker, my purpose today is not to discuss either these juvenile delinquents who paint swastikas or those irresponsible adults who write manuals. Rather, my purpose is to highlight one more small but significant almost tragic example of what flows from the foolishness which still surrounds would-be security programs in this country.

I am here today to tell you the story of David H. Devine. Mr. Devine is one of my constituents. He lives at R. D. No. 1, Mount Wolf, in York County, Pa. In October of 1958 Mr. Devine was employed by the Bendix Corp. at its York plant. Since Bendix is engaged in classified work at this plant under contract with the U.S. Navy, it was necessary for Mr. Devine to obtain security clearance from the Navy Department. He was given clearance to handle confidential matters within 2 weeks after he was employed and on October 30, 1958, the company submitted a request to the Navy that Mr. Devine be given a secret clearance.

Normally, such clearances are given within 90 days and new employees who fail to obtain the necessary clearance within that 90 days—recently extended to 120 days under an amendment to the collective-bargaining contract between the company and the IUE because in recent months the Navy has experienced more and more difficulty in completing its investigation in 3 months' time—can be and are separated from their employment.

At the end of the 90-day deadline, Mr. Devine's secret clearance had not come through but since he could handle confidential matters and since even then it took the Navy a few days more than 90 to complete its clearances, Mr. Devine was not laid off immediately. But soon 90 days became 100 and 100 became 120 but still no secret clearance for David Devine. Finally, to the worry and concern of the company and to the shock and embarrassment of Mr. Devine, 11 months went by with Mr. Devine still on the payroll and still no secret clearance.

Why this delay? It seemed that during the course of its investigation the Navy had come up with derogatory information about Mr. Devine. Maybe it was not about him. It could have been about another man named Devine or perhaps about some other fellow named David. In any event, whatever information the Navy had about whom, it had to investigate it thoroughly and until this was done Mr. Devine could not be given his security clearance.

Incidentally, the "budget firsters" might note that when I first checked into the reasons why there was such an extended delay in either clearing or denying clearance to Mr. Devine, one of the felt-handed excuses I was given had to do with a backlog of such cases, caused by a shortage of personnel, caused by budgetary limitations. And yet we wonder why we are lagging behind the Russians.

Finally, 11 months after he was hired, Bendix Corp. determined that it could no longer continue to be understanding of Mr. Devine's dilemma and belatedly and reluctantly it separated him from its payroll in October 1959.

Mr. Devine is 58 years old. Understandably, a man of his age finds finding new employment a difficult assignment. For Mr. Devine it was all but an impossible one because he had something more than the calendar stacked against him. In any bid for new employment he had to inevitably face the question, "Why did you leave your last employment?" An honest answer, "That I was unable to get security clearance from the U.S. Navy" was not likely to do much more than guarantee that Mr. Devine's last employment was indeed his last—ever.

Even as it solved Bendix's problems, the layoff of Mr. Devine made his already difficult position all but impossible. Now he had no job and considering why he lost it his chances of getting one were just about nil.

Inquiry as to how long it would take the Navy to either hang Mr. Devine or cut him down brought the startling discovery that under Navy regulations it would take forever. It seemed that when Mr. Devine was laid off, the Navy's problems were also solved. Under Navy regulations the moment Bendix dropped Mr. Devine from its payroll for lack of security clearance, the Navy dropped its investigation into whether or not Mr. Devine was in fact a security risk. Thus, did the Navy toss Mr. Devine into a limbo where, as far as it was concerned, he would remain forever as a marked man with a cloud on his title as a loyal American citizen and his chances of obtaining gainful employment substantially reduced if not, in fact, destroyed completely.

Everyone recognizes that the U.S. Navy cannot waste its time and the taxpayers money pursuing pointless investigations into the security riskiness of a lot of exemployees of its many contractors and a regulation which prevents such wasteful excursions is indeed a wise and prudent one. But surely everyone, except a fogbound security officer, must recognize that what is a wise and prudent regulation becomes a foolish and cruel one when it is blindly applied to the case of a man whose sole reason for being an exemployee is the fact that the Navy dillied and dallied and failed to make a timely completion of his security check.

For 15 long months the Navy fooled around with the serious matter of whether or not a loyal American citizen, one David H. Devine, was in fact a security risk upon whom the United States or his employer could safely rely. The delay finally cost Mr. Devine his job and then the Navy turned around and used this loss of the job as its excuse for doing nothing more to give Mr. Devine a security clearance and thus enable him to at least seek employment as a loyal, honest American.

In this instance, to the everlasting credit which I now wish to publicly give to the Bendix Corp., it was a little more "non-reg," not quite so unbending or so un-understanding as the U.S. Navy. Recognizing, where the responsible Navy personnel seemed unable or unwilling to do so, the cruel and inhuman implications in the Navy's stick-to-the-letter interpretation of its own regulations, the Bendix Corp. determined that if the Navy would not, they must find an outlet to the ridiculous Navy-created impasse confronting Mr. Devine. Accordingly, on January 13, 1960, the Bendix Corp. put Mr. Devine back on its payroll with the understanding that he would not draw his salary or resume his normal working duties. The sole purpose of this rehiring by Bendix was to restart the Navy's investigating procedure into the question of whether or not David H. Devine was in fact a security risk.

Five weeks after he was rehired, Mr. Devine's security clearance came through. My only regret is that having found a replacement for Mr. Devine, Bendix was not able to reemploy him at his old job. I am certain Mr. Devine is grateful to them for helping him regain his birthright; if not his job. David Devine as of this moment is again able to look you straight in the eye; but unfortunately an unemployed American.

Mr. Speaker, I have taken this time for a number of reasons. First, to welcome Mr. Devine back to the ranks of first-class American citizenship, and to express my regrets that we live in an age and under a system where a blundering bureaucrat can enjoy the absolute prerogative of reducing another loyal American to a second-class citizenship status.

Secondly, I would like to give a 4.0 rating to the Bendix Corp. for its truly all-American performance in this very sick un-American situation. I especially want to compliment Mr. Edward Nathan, the security officer at the company's York plant and the other personnel officials of the company for their sympathetic understanding and all-out efforts to help one of their employees in what surely must have been the most trying experience of his entire life.

Finally, and as an old Navy man I do it with regrets, I must in this instance give the U.S. Navy a great big zero for its total performance in the Devine case. However, Mr. Speaker, to err is human and to forgive divine. I am certain that Mr. Devine will live up to his name and forgive the Navy. Certainly, it was evident that from the beginning to the end the Navy personnel involved acted as if they knew not what they were doing.

In conclusion I would like to incorporate as part of my remarks a news story from the York Gazette and Daily of April 30, 1960, which tells again the sad story of what has happened to one American—David Devine:

NAVY GRANTS IT TOO LATE—SECURITY CLEARANCE DELAY COSTS COUNTIAN HIS JOB

A Government agency's delay of many months in granting security clearance for a York countian has cost him his job and his own financial security.

David H. Devine, Mount Wolf, R.D. No. 1, was 58 last October when he lost his job as an expediter for a York firm that manufactures missile parts for the Navy.

He was dismissed because the Navy had delayed—not denied—his security clearance.

No one making inquiries for Devine, including his Congressman, Representatives JAMES M. QUIGLEY, his attorney, Lewis H. Markowitz, and the company, has been able to find out any reason for the delay.

Now, more than 6 months after Devine was discharged, he is still without a job even though he finally received his clearance last February, 2 weeks after his former employer hired a replacement.

He is having a hard time finding another job in his field. His age, for one thing, is considered a drawback by many companies.

His excellent work record is in his favor. Devine has been highly rated in his field. While he was working for General Electric Co. in Fitchburg, Mass., he was given an award for outstanding performance in expediting for a Government contract for jet energizers.

He had the highest type of clearance for his work during World War II.

WHY THE DELAY?

He has never been able to find out why it took 15 months to get security clearance renewed.

Clearance came through only after the York branch, American Civil Liberties Union, to which Devine had reported his problem, asked an attorney member of the ACLU to help.

A clearance period of 60 to 90 days is so much taken for granted by Devine's former employer that the company has this agreement with its union employees: If clearance does not come through in 90 days, the company is free to fire the employee.

In Devine's case (his job is not under union contract), the firm dismissed him after 11 months (November 1958 to October 1959).

When he lost his job, the naval bureau in charge of clearance stopped all work on his case.

The reason for this, the bureau explained to Markowitz, was that processing automatically stops when the applicant is no longer employed in a job requiring clearance.

NO CLEARANCE, NO JOB

With development, Devine discovered that it was almost impossible to get a job without first having clearance. Only the largest industrial firms employ so highly specialized a technician as an expediter. And most of them have contracts with the military.

It took a technicality to get the case moving again. At his attorney's request, Devine's former employer rehired him on January 13, 1960, and put him on leave without pay.

Then there was more correspondence between Markowitz and the Navy. Finally, clearance came through on February 18.

Why did it take so long?

This question was put to a captain in the Office of Naval Materiel, which is responsible for the final stage in the clearance process (preliminary investigation is done by the naval intelligence personnel).

The captain said he was sure the Navy had meant no harm to Devine, but the process sometimes takes longer than the Navy would like, particularly when the applicant has lived in several places. He said he knew of no special reason why Devine's clearance took so long.

Since Devine lost his job last October, he, his wife and two high-school-age children have been living on a weekly unemployment compensation check of $35 and her income from a part-time job. The total is about one-third of Devine's former wage.

His unemployment compensation was held up for about 4 weeks because the Bureau of Employment Security questioned the wording used by Devine's former employer in filling out the application. The question was cleared up, and Devine received his back payments.

FUTILE HUNTS FOR JOBS

He has been job hunting continuously in the York area, Baltimore, New York, and in Pennsylvania in person, and by mail with companies in many other sections.

He is convinced that his efforts were futile until his clearance finally came through.

"For that 4-month period from October to February before clearance came through, there just wasn't much point in even looking for a job. The first thing they (prospective employers) asked me was, 'Why did you lose your job?'

"I had to tell them it was because clearance was delayed. They'd ask me why, and I'd say, 'I don't know.' I really didn't—and I still don't."

The financial strain has been heavy. Devine has had to borrow money several times to pay bills.

Losing his job and being unable to find another is a new experience for him. Each time he changed jobs in the past it was to take what he considered a better one.

He says he is still confident of getting back in his line of work, "God willing—and the Navy."

PERSONAL ANNOUNCEMENT

Mr. HALPERN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. HALPERN. Mr. Speaker, due to unavoidable circumstances I was unable to be on the floor of this House during rollcall No. 62, on H.R. 10596 to change the method of payment of Federal aid to State or territorial homes for the support of disabled soldiers, sailors, airmen, and marines of the United States, and rollcall 63, on House Concurrent Resolution 633, of which I am privileged to be a cosponsor, relating to restoration of freedom to captive nations. If I had been in the House at the time I would have voted in the affirmative on each of these rollcalls. The adoption of House Concurrent Resolution 633 is in full accord with the basic principles of American foreign policy and our adherence to the ideals of fundamental freedoms and human rights of the peoples of the captive nations. I trust it will be implemented vigorously in the carrying out of our foreign relations.

WILLOW RUN LABORATORIES

Mr. QUIE. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. MEADER] may extend his remarks at this point in the RECORD and may include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. MEADER. Mr. Speaker, recently it was my privilege to attend a ceremony sponsored by the University of Michigan, at the Willow Run Airport unveiling two important contributions to scientific knowledge developed at the Willow Run Laboratories as a part of Project Michigan, an Army battlefield surveillance study conducted under contract from the U.S. Army Signal Corps.

Mr. Speaker, one of those developments has been given nationwide publicity and involves photographing of terrain by radar from an airplane many miles distant from the area photographed.

The other project involves mobile radar units for the detection of moving objects the size of a man, vital in modern battlefield reconnaissance.

These are historic achievements and reflect great credit upon the quality of scientific research at the University of Michigan. They also demonstrate how the resources of the Federal Government can be joined with those of our institutions of higher learning to achieve new breakthroughs in science for the benefit of mankind, as well as our national protection.

Because of the interest of my colleagues and our people generally in this subject, I incorporate at this point in my remarks the address delivered by President Harlan Hatcher, of the University of Michigan delivered at the ceremony and an editorial of the Ann Arbor News of April 21, 1960, entitled, "Willow Run Research Paying Big Dividends":

REMARKS BY HARLAN HATCHER, PRESIDENT, THE UNIVERSITY OF MICHIGAN, ON THE OCCASION OF THE ANNOUNCEMENT OF RADAR RESEARCH DISCOVERIES BY THE UNIVERSITY'S WILLOW RUN LABORATORIES, APRIL 20, 1960

Behind the scenes at the University of Michigan exciting events are taking place—events which affect the daily lives of virtually every citizen of this State and Nation. Today we are meeting here to unveil two of these developments, the latest in a long series of scientific and scholarly contributions which have been announced by this university.

And this is as it should be. For such developments—and you can recall some recent ones as well as I: the Salk polio vaccine announcement, the Bomarc guided missile system, the atomic bubble chamber to mention a few—are the hallmarks of a university of this kind. You might even say they are the distinguishing feature.

In an important respect these developments, taken together, constitute the University of Michigan story, a story in which many people have been, and are, involved. Most visible, of course, are the faculty and students most directly concerned. But behind them have stood the regents of the university who have given so much of their time and effort to keep it strong and vigorous, the members of the legislature and State officials who have provided the support so essential to progress, and perhaps most important of all, the people of the State who by their faith in education have helped to advance their own welfare and that of our Nation.

We pay tribute to them today as well as to the men and women gathered here as direct participants in these two projects. In a sense we are not merely announcing two new scientific developments—highly important as they are—but the latest in a long series of dividends to the stockholders of this university—the people who have made it possible.

During the past few days, you probably have heard and read about the research development which brings us here today. On Tuesday, the Department of the Army announced in Washington that the University of Michigan's Willow Run Laboratories had developed an airborne radar system for making sharply defined radar photographs of combat areas. Developed in cooperation with the Army Signal Corps, this day-and-night, all-weather system vastly increases the Army's capabilities for surveilling and identifying enemy targets.

We of the University of Michigan are naturally proud and pleased by this significant achievement of the Willow Run Laboratories. Arrayed behind me is the equipment involved, which has recently been returned from being on display in Washington. Because we want you to share in our pride and pleasure, and because we thought you might wish to inspect this equipment and hear about it in some detail, we have therefore invited you to attend this luncheon.

At the same time, we would like on this occasion to announce still another development of the Willow Run Laboratories, a secret project being made public today for the first time. This announcement will come a little later in the program.

I have already mentioned some of the major research developments of the university. Now let me be specific with respect to our operations here at Willow Run. The university acquired these facilities, many of you will remember, in 1946. Since then, the following major activities have been announced:

The first large undertaking, Project Wizard, was aimed at defense against ballistic missiles. From it evolved, in 1950, a cooperative effort with the Boeing Aircraft Co. toward development of the Bomarc missile system. This ground-to-air weapon is now in operation.

Bomarc: Bo for Boeing and Marc for Michigan Aeronautical Research Center, the former name of Willow Run Laboratories—was followed by Project Adis, whose goal was an integrated system of air defense.

Six years ago, Project Michigan was launched, and it is from this effort that today's announcements come. Project Michigan is a continuing research and development program in engineering and the physical sciences for advancing the Army's long-term capabilities in the area of combat surveillance and target acquisition—the detection, identification, and location of targets.

Not only have these projects added to our Nation's defenses, they also have brought great benefits to the university and the State of Michigan.

Last year, more than 100 graduate students, 50 undergraduates, and 85 faculty members from various instructional departments of the university participated in Willow Run research. For the students, this was far more valuable part-time work than washing dishes or waiting on tables; for the faculty members, this participation meant exposure to modern problems in their fields, and an opportunity to acquaint their students with these questions.

Then, too, the work at Willow Run Laboratories has contributed basic and applied in-

formation to our technology, and attracted nearly $9 million last year to the State.

As the University of Michigan presents these latest developments to you today, I cannot help but reflect upon the similar occasions which I mentioned earlier. Five years ago last week, Dr. Thomas Francis of our faculty announced the effectiveness of the Salk vaccine, opening the way for public use of the serum. In meetings throughout the State this year, we have been telling business and civic leaders about the many achievements of our young Phoenix project of atomic research, the leading effort of its kind in the world. Last fall we dedicated the world's most precise radiotelescope—and a dramatic announcement is coming in that field soon. A medium-energy "atom smasher" of a unique design has been developed by Michigan physicists; a Michigan instrument called the bubble chamber has taken its place as a classic research tool in high energy physics laboratories around the world; and a comprehensive attack in the field of mental health has been launched by the university.

These accomplishments are to be expected of a university. They are outward signs that the institution is doing its proper job, that the funds invested in it are being well spent. Not only does the University of Michigan train thousands of competent undergraduates each year and 44 percent of all the graduate-professional students in the State, it also is able to announce from time to time an important discovery or development such as those you are seeing today.

A few years ago, we made an informal survey of 9 science departments, 10 engineering departments and the University of Michigan Research Institute, and found that their faculty and staff members have authored or coauthored 11,924 articles, books, or other publications in their careers. This represents a vast body of knowledge.

I might summarize, I believe, by saying that while an institution such as the University of Michigan required substantial support, the returns are substantial, as well.

[From the Ann Arbor News, Apr. 21, 1960]

WILLOW RUN RESEARCH PAYING BIG DIVIDENDS

Disclosure that the university has developed an airborne radar system hailed as a major improvement in combat surveillance focuses national attention on the research program being carried out at the Willow Run Laboratories of the University of Michigan.

Although more than 600 persons are on the staff of the Willow Run laboratories, and this unit of the university, in one form or another, has been in operation for nearly 14 years, the general public outside of Ann Arbor still knows little about it. One reason, of course, is that much of the activity at the laboratories adjoining the airport has to do with national defense, and a certain amount of secrecy is involved.

The new radar system was developed for the Army under Project Michigan, which includes about 75 percent of the many studies going on at the laboratories under contracts with Government and industry. Project Michigan was established in 1953 and is sponsored by the Army Combat Surveillance Agency of the U.S. Army Signal Corps. Emphasis in the project is upon basic and applied research in radar, infrared, acoustics, seismics, information processing and display, navigation and guidance for aerial platforms and systems concepts.

The keymen in the radar project are engineers who live in the Ann Arbor area. Dr. Louis J. Cutrona, head of Willow Run's radar laboratory, originated the concept of the new system. Others named as having made significant contributions include Emmett N. Leith, Dr. Weston Vivian, Gilbert O. Hall, Wendell A. Blikken and Dr. Newbern Smith.

Other notable contributions have been made through the Willow Run research activities over the years. When operations began there in 1946, the installation was known as the Michigan Aeronautical Research Center and later was a part of the university's former Engineering Research Institute. In 1950, the Willow Run scientists collaborated with the Boeing Aircraft Co. on the design of the Bomarc missile system—the Marc of the name standing for Michigan Aeronautical Research Center.

The foresight of university officials in acquiring and expanding Willow Run facilities after the war is paying dividends today in significant contributions, not only to national defense but to research and development in other fields. The benefits of collaboration of education and industry are emphasized again this week—not only in the announcement from Willow Run laboratories but in the university's part in bringing the great new Parke, Davis & Co. research laboratories to Ann Arbor. The ramifications of these developments are only dimly visible now, but their ultimate importance to Ann Arbor and Michigan is certain to be great.

FEDERAL MINE SAFETY

Mr. QUIE. Mr. Speaker, I ask unanimous consent that the gentleman from Pennsylvania [Mr. SAYLOR] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. SAYLOR. Mr. Speaker, I recently placed in the CONGRESSIONAL RECORD for the attention of my colleagues recent newspaper accounts of two mine disasters which occurred in Kentucky and Maryland on the 9th of April, taking the lives of six miners. I want to take this opportunity to bring to the attention of my colleagues the results of the investigation conducted by the U.S. Bureau of Mines of these two disasters.

The Federal investigators placed the blame on inadequate safety measures.

The existing Federal Coal Mine Safety Act exempts mines employing 14 or less men from closure orders by Federal inspectors and the two recent disasters took place in these so-called small mines, classified as title I mines under the act.

It is heartening to know that the Senate has dealt so emphatically with this situation by approving overwhelmingly a bill to make all underground mines in the country subject to closure orders by Federal coal mine inspectors, regardless of size.

The passage of S. 743 in the Senate by a vote of 80 to 4 indicates the complete bipartisan support which this legislation has received, and the responsibility of its early enactment into law rests with the Members of the House of Representatives, since it has already received the administration's approval.

S. 743 has been referred to the Subcommittee on Safety and Compensation of the House Committee on Education and Labor, of which the gentleman from Minnesota is chairman. It is my understanding that the subcommittee will meet on Thursday, the 5th of May, to consider pending legislation in executive session. I sincerely hope that the first order of business of this subcommittee will be the consideration of S. 743 so that this needed legislation can be approved by the House during the present Congress.

All miners are entitled to equal protection against unsafe working conditions, and the enactment of this amendment to the Federal Coal Mine Safety Act will help to prevent the recent tragedies which occurred in Maryland and Kentucky.

Mr. Speaker, as a part of my remarks I wish to include an excerpt from the United Mine Workers Journal of May 1, 1960:

REPORTS ON TWO ROOF-FALL DISASTERS

The two roof-fall disasters April 9 that claimed six lives in Kentucky and Maryland were blamed on inadequate safety measures by U.S. Bureau of Mines investigators.

The Federal investigation reports diclosed striking similarities in the circumstances of both disasters. Each claimed three lives, within sight of the drift opening, in a newly opened title I (14 or fewer employes) mine.

The disasters occurred only a few days before Senate consideration of a bill to bring mines of this type under mandatory provisions of the Federal Coal Mine Safety Act. The bill passed the Senate on April 27.

The cave-in that killed three men including the miner listed as owner, in the new drift opening of the Paugh Mine Paugh Coal Co., near Kitzmiller, Md., was attributed by the Bureau report to:

"Failure to take down the dangerous overhanging ledges and loose overburden material before doing any other work at the new mine opening."

The report added: "Starting a new mine opening adjacent to an old, abandoned opening where long exposure to the elements had caused considerable deterioration of the overlying strata, and poor evaluation of the true condition of the roof material in the area by the owner and workmen were contributing factors."

The second roof-fall occurred the same afternoon in the Arlie Hall Coal Co. No. 1 Mine near Houckville, Lawrence County, Ky., taking the life of the owner, his brother, and a third man. The Bureau listed the cause as:

"The inadequacy of the adopted roof-support standard, and working under roof known to be inadequately supported."

Both mines had been open only about 2 weeks when disaster struck. Four of the victims left 16 dependents.

ISRAEL INDEPENDENCE DAY

Mr. PUCINSKI. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. DINGELL] may extend his remarks at this point in the RECORD, and may include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. DINGELL. Mr. Speaker, in this age of nationalism the independence day of a relatively new state is no longer very unusual. With new nations emerging, it seems almost daily in Africa and Asia, it is easy for Americans to overlook a small country's celebration of its independence. The 12th anniversary of the independence of the State of Israel, however, cannot be forgotten.

For many years there has been a strong bond of friendship and affection between the American people and the people of Israel. Our country was a leader in the struggle to secure for the

Jewish people the right to a homeland of their own, after the terrible Nazi holocaust. Since that time we have consistently defended the right of the State of Israel to its existence and to peace. Through public and private aid the American people have generously helped the Israelis build their country.

For its part Israel has done much in the past 12 years. It has become the refuge for all the displaced, homeless, and oppressed Jews of the world. Since May 14, 1948, when the state was declared, 950,000 Jews from eastern and central Europe, from such Arab countries as Yemen and Iraq, and from north Africa have flowed into the country and almost trebled the population. These people came with nothing and were welcomed, housed, trained, employed, and absorbed into the new country. Israeli citizens, both new and old, enjoy a very high standard of living. Industrial production, shipping, the cultivated land area, irrigation, education, and schools—to mention only a few items—have all increased threefold or more since 1948. The Negev, Israel's southern desert region, is being made to bloom. Beersheba, the capital of the Negev, was a sleepy city of 3,000 before the state was declared. Today it has a population of 44,000 and continues to grow. Mayor Touviahu has a master plan of the future of Beersheba which includes the building of a university, city limits of 7,000 acres, and a population of 180,000. Eilat, the frontier of Israel, is on the tip of the country at the Red Sea. Before 1956 some 200 families lived there, now there are more than 5,000 inhabitants.

The greatest contribution of Israel, however, is the example it sets not only for the Middle East but for Africa and Asia as well. The country's proclamation of independence, modeled on our own, states:

> The State of Israel * * * will rest upon foundations of liberty, justice, and peace as envisioned by the prophets of Israel. It will maintain complete equality of social and political rights for all its citizens, without distinction of creed, race, or sex. It will guarantee freedom of religion and conscience, of language, education and culture.

The tiny state, isolated in the midst of hostile nations, is an outpost of democracy. It carries on a program of trade and aid to the new African countries, showing them how industrial and technological advancement can be achieved without communism. It is a constant reminder to the other nations of the Middle East that economic growth and a high standard of living can be attained without turning to dictatorship or to aid from the Soviet East with the resultant pressures. African, Indian and Burmese students mingling with Israelis at the Hebrew University in Jerusalem are learning the lessons of democracy which will keep their countries free. Israeli technicians in Ghana and Burma are teaching these small nations the lessons of Israeli's economic "miracle."

It is for these reasons that May 2 is an important day for Americans. In these troubled times it is a welcome pleasure to send independence day greetings to our democratic neighbor in the Middle East. We can only wish the Israelis every success in continuing the excellent work they have been doing and hope that many new states will follow in its footsteps.

POLISH CONSTITUTION DAY

Mr. PUCINSKI. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. DINGELL] may extend his remarks at this point in the RECORD and may include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. DINGELL. Mr. Speaker, in times of misfortune, people's thoughts invariably turn back to happier and more inspiring days of the past. This is particularly true of the Poles who, after all the sufferings they endured and the sacrifices they made for freedom, find themselves once again enslaved in their homeland by Soviet-imposed Communist totalitarianism. Today on the 169th anniversary celebration of their first democratic Constitution the Polish people, in and out of Poland, join in the commemoration of that great national event. The adoption of that Constitution in 1791 constitutes one of the brightest and most significant landmarks in Poland's political history. The event came at a time when nearly all of the nation was parceled out among her three greedy neighbors—Austria, Prussia, and Russia. Yet, a small band of patriotic, farsighted and dauntless Poles, in the midst of threatening dangers, drafted that historic document and presented it to the country.

That Constitution made Poland a constitutional monarchy, with a responsible cabinet form of government. Ancient class distinction and privileges were wiped out, and the Government was strengthened by bringing the peasantry under the protection of the law. In this and in many other respects the Polish Constitution was in the vanguard of democracy's advance into central and eastern Europe.

THE MAN WHO WASN'T THERE AND WON'T BE

Mr. ROOSEVELT. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. ROOSEVELT. Mr. Speaker, my office has been contacted via letter, telephone, and telegram about my alleged and contemplated appearances in other States conducting presidential preferential primaries.

I want the RECORD to show that I have not appeared in any State of the Union in the matter of presidential primary contests, nor do I plan to do so, with the exception of my own State.

As a member of the "Favorite Son" delegation in California, I am standing "pat" for Brown.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. MARSHALL (at the request of Mr. ALBERT), on account of death in his family.

Mr. FALLON (at the request of Mr. MCMILLAN), for the 2d and 3d of May, on account of illness.

Mr. THOMPSON of New Jersey (at the request of Mr. MCMILLAN), for today, May 3, 1960, on account of official business.

Mr. LOSER, for May 4, 5, and 6, 1960, on account of official business.

Mr. FOUNTAIN (at the request of Mr. WHITENER), for today, May 3, 1960, on account of official business.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. BROCK and include extraneous matter.

Mr. DAGUE.

Mr. BURKE of Massachusetts.

Mr. O'HARA of Michigan (at the request of Mr. PUCINSKI), to revise and extend his remarks during debate on H.R. 11998 and to include extraneous matter.

Mr. POWELL (at the request of Mr. PUCINSKI) and to include extraneous matter, notwithstanding the fact it exceeds the limit and is estimated by the Public Printer to cost $202.50.

(At the request of Mr. PUCINSKI, and to include extraneous matter, the following:)

Mr. KARTH in two instances.

Mr. BURDICK.

Mr. GIAIMO.

Mr. ROOSEVELT.

ADJOURNMENT

Mr. PUCINSKI. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 50 minutes p.m.) the House adjourned until tomorrow, Wednesday, May 4, 1960, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2109. A communication from the President of the United States, relative to providing information on the amounts of economic assistance furnished to Yugoslavia during fiscal year 1959, pursuant to section 143 of the Mutual Security Act of 1954, as amended; to the Committee on Foreign Affairs.

2110. A letter from the Assistant Secretary of Agriculture, transmitting a report for the month of January of the General

Sales Manager, concerning the policies, activities, and developments, including all sales and disposals, with regard to each commodity which the Commodity Credit Corporation owns or which it is directed to support; to the Committee on Appropriations.

2111. A letter from the Assistant Secretary of the Interior, relative to reporting that an adequate soil survey and land classification of the lands in the Helena Valley Unit, Helena-Great Falls Division, Missouri River Basin project, Montana, has been completed as a part of the investigations required in the formulation of a definite plan for project development, pursuant to Public Law 172, 83d Congress; to the Committee on Appropriations.

2112. A letter from the Deputy Secretary of Defense, transmitting a draft of proposed legislation entitled "A bill to authorize the establishment of while-so-serving flag billets for officers of the Navy who are designated for special duty in communications, law, naval intelligence, public information, and meteorology"; to the Committee on Armed Services.

2113. A letter from the Administrator, General Services Administration, transmitting a notice of a proposed disposition of approximately 7,326 short dry tons of kyanite-mullite now held in the national stockpile, pursuant to the Strategic and Critical Materials Stock Piling Act (53 Stat. 811, as amended, 50 U.S.C. 98b(e)); to the Committee on Armed Services.

2114. A letter from the Administrator, General Services Administration, transmitting the report of the Archivist of the United States on records proposed for disposal under the law; to the Committee on House Administration.

2115. A letter from the Comptroller General of the United States, transmitting a report on the audit of the custodianship functions of the Office of the Treasurer of the U.S. Treasury Department, for the fiscal year ended June 30, 1959; to the Committee on Government Operations.

2116. A letter from the Comptroller General of the United States, transmitting a report on examination of selected activities under Department of the Army contracts with Western Electric Co., Inc., New York, N.Y., for Nike guided missile weapon systems; to the Committee on Government Operations.

2117. A letter from the Comptroller General of the United States, transmitting a report on examination of additional fees paid by the Government for contractor financing expenses under Department of Defense contracts; to the Committee on Government Operations.

2118. A letter from the Secretary of the Army, transmitting a draft of proposed legislation entitled "a bill to provide for the collection and dissemination of information on flood hazards"; to the Committee on Public Works.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. KILDAY: Committee on Armed Services. H.R. 10500. A bill to amend the Career Compensation Act of 1949 with respect to incentive pay for certain submarine service; without amendment (Rept. No. 1570). Referred to the Committee of the Whole House on the State of the Union.

Mr. KIRWAN: Committee of conference. H.R. 10401. A bill making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1961, and for other purposes (Rept. No. 1571). Ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. CELLER:

H.R. 12029. A bill to provide for the admission of certain specified refugees; to the Committee on the Judiciary.

By Mr. JOHNSON of Wisconsin:

H.R. 12030. A bill to authorize an appropriation for the special milk program for children for the fiscal years 1962 and 1963; to the Committee on Agriculture.

By Mr. MARSHALL:

H.R. 12031. A bill to authorize an appropriation for the special milk program for children for the fiscal years 1962 and 1963; to the Committee on Agriculture.

By Mr. QUIE:

H.R. 12032. A bill to authorize an appropriation for the special milk program for children for the fiscal years 1962 and 1963; to the Committee on Agriculture.

By Mr. KASTENMEIER:

H.R.12033. A bill to authorize an appropriation for the special milk program for children for the fiscal years 1962 and 1963; to the Committee on Agriculture.

By Mr. JENNINGS:

H.R. 12034. A bill to authorize an appropriation for the special milk program for children for the fiscal years 1962 and 1963; to the Committee on Agriculture.

By Mr. PIRNIE:

H.R. 12035. A bill to authorize an appropriation for the special milk program for children for the fiscal years 1962 and 1963; to the Committee on Agriculture.

By Mr. BOSCH:

H.R. 12036. A bill to amend section 902 of the Internal Revenue Code of 1954 with respect to foreign taxes paid by certain predecessor corporations; to the Committee on Ways and Means.

By Mr. BOSCH (by request):

H.R. 12037. A bill to provide greater privacy in the furnishing to the United States of information required in connection with the 1970 and subsequent decennial censuses of population, unemployment, and housing; to the Committee on Post Office and Civil Service.

By Mr. DONOHUE:

H.R. 12038. A bill to provide for adjusting conditions of competition between certain domestic industries and foreign industries with respect to the level of wages and the working conditions in the production of articles imported into the United States; to the Committee on Ways and Means.

By Mr. FLOOD:

H.R. 12039. A bill to create an International Trade Commission to promote the establishment and improvement of international expositions, trade fairs, and trade marts in the United States and throughout the world; to the Committee on Interstate and Foreign Commerce.

By Mr. HIESTAND:

H.R. 12040. A bill to amend the Fair Labor Standards Act of 1938 to eliminate the conflict and duplication between that act and the several labor standards acts applicable to persons doing business with, or engaged in activities assisted by, the Federal Government; to the Committee on Education and Labor.

By Mr. LESINSKI:

H.R. 12041. A bill to amend the Mutual Security Act of 1954 to encourage the establishment of free democratic governments in the nations of central and eastern Europe which are presently under Soviet domination and control; to the Committee on Foreign Affairs.

By Mr. MURRAY:

H.R. 12042. A bill to provide for evaluation of the work performance of Government employees, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 12043. A bill to amend sections 22, 23, and 24, title 13, United States Code, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. REECE of Tennessee:

H.R. 12044. A bill to amend the Civil Service Retirement Act to include as creditable service certain service performed in Federal-State cooperative programs financed in whole or in part by Federal funds; to the Committee on Post Office and Civil Service.

By Mr. REES of Kansas:

H.R. 12045. A bill to provide for evaluation of the work performance of Government employees, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 12046. A bill to amend sections 22, 23, and 24, title 13, United States Code, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. ROBISON:

H.R. 12047. A bill to amend the Internal Revenue Code of 1954 so as to provide for scheduled personal and corporate income tax reductions, and for other purposes; to the Committee on Ways and Means.

By Mr. SANTANGELO:

H.R. 12048. A bill to extend the educational materials postal rate to certain printed plastic educational reference charts; to the Committee on Post Office and Civil Service.

By Mr. BROOKS of Louisiana:

H.R. 12049. A bill to amend the National Aeronautics and Space Act of 1958, and for other purposes; to the Committee on Science and Astronautics.

By Mr. METCALF:

H.R. 12050. A bill to provide a temporary emergency farm supply adjustment and income improvement program and a temporary economic disaster credit program; to the Committee on Agriculture.

By Mr. MILLIKEN:

H.R. 12051. A bill to establish a body corporate within the Department of Commerce to extend financial assistance to public authorities operating or providing transit and commuter service in our major metropolitan areas; to the Committee on Banking and Currency.

By Mr. SPENCE:

H.R. 12052. A bill to extend the Defense Production Act of 1950, as amended, for an additional 2 years; to the Committee on Banking and Currency.

By Mrs. BLITCH:

H. Con. Res. 675. Concurrent resolution expressing the sense of Congress that the United States should not grant further tariff reductions in the forthcoming tariff negotiations under the provisions of the Trade Agreements Extension Act of 1958, and for other purposes; to the Committee on Ways and Means.

By Mr. BROCK:

H. Con. Res. 676. Concurrent resolution expressing the sense of Congress that the United States should not grant further tariff reductions in the forthcoming tariff negotiations under the provisions of the Trade Agreements Extension Act of 1958, and for other purposes; to the Committee on Ways and Means.

By Mr. DONOHUE:

H. Con. Res. 677. Concurrent resolution expressing the sense of Congress that the United States should not grant further tariff reductions in the forthcoming tariff negotiations under the provisions of the Trade Agreements Extension Act of 1958, and for other purposes; to the Committee on Ways and Means.

By Mr. FENTON:

H. Con. Res. 678. Concurrent resolution to create a Joint Committee on a National Fuels Policy; to the Committee on Rules.

By Mr. MORGAN:

H. Con. Res. 679. Concurrent resolution to create a Joint Committee on a National Fuels Policy; to the Committee on Rules.

By Mr. SILER:

H. Con. Res. 680. Concurrent resolution to create a Joint Committee on a National Fuels Policy; to the Committee on Rules.

By Mr. NATCHER:

H. Con. Res. 681. Concurrent resolution establishing a basic fuels policy for the United States; to the Committee on Rules.

By Mr. FLOOD:

H. Res. 515. Resolution to express the sense of the House of Representatives declaring the policy of the United States relative to the intervention of the international communistic movement in the Western Hemisphere; to the Committee on Foreign Affairs.

H. Res. 516. Resolution that it is the sense of the House of Representatives that the United States will not surrender its jurisdiction or control over the Canal Zone or the Panama Canal; to the Committee on Merchant Marine and Fisheries.

H. Res. 517. Resolution expressing the sense and judgment of the House of Representatives with respect to Canal Zone sovereignty; to the Committee on Merchant Marine and Fisheries.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mrs. DWYER:

H.R. 12053. A bill for the relief of Miss Giuliana Vardeu; to the Committee on the Judiciary.

By Mr. FARBSTEIN:

H.R. 12054. A bill for the relief of Marton and Szidonia Weisz; to the Committee on the Judiciary.

By Mr. FOLEY:

H.R. 12055. A bill to incorporate the Metropolitan Police Relief Association of the District of Columbia; to the Committee on the District of Columbia.

By Mr. MADDEN:

H.R. 12056. A bill for the relief of Vladimir (Talevic) Talevski; to the Committee on the Judiciary.

H.R. 12057. A bill for the relief of Chrysostomos Pascali (Paschalis); to the Committee on the Judiciary.

By Mr. RHODES of Pennsylvania:

H.R. 12058. A bill for the relief of Mrs. Efronia Mouradian; to the Committee on the Judiciary.

By Mr. ROSTENKOWSKI:

H.R. 12059. A bill for the relief of Stella Abrams; to the Committee on the Judiciary.

H.R. 12060. A bill for the relief of Maria Czyz Krupa; to the Committee on the Judiciary.

H.R. 12061. A bill for the relief of Nicolo Campagna; to the Committee on the Judiciary.

By Mr. SANTANGELO:

H.R. 12062. A bill for the relief of Mrs. Bertha Lang; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

Poland Must Be Free

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1960

Mr. DAGUE. Mr. Speaker, today is Poland's Constitution Day and marks the anniversary of the adoption by the Polish people of a constitution, much as we did in 1789, setting forth their determination to remain a free Christian nation with her destiny linked with Western civilization and Latin culture. It is also important on this anniversary to remember that in just 6 short years Poland will celebrate her millennium—a full thousand years of fearless dedication, even in slavery, to the belief that in God's sight all men are equal and, by divine sanction, should be free.

For us moderns the names Chopin and Paderewski bring visions of great masterpieces and remind us of the part these artists have made to the musical heritage of mankind as well as to its legacy of freedom. But antedating these artists and statesmen there was another great Pole—Goslicki—who laid down these fundamental principles, which are accepted as basic politics today; namely, laws must be greater than the individual, such laws must be founded on Christian principles, conflicting views must be compromised through mediation, and rulers must make law the guide of their conduct.

With such a background of Christian principle and patriotic sacrifice we are better able to understand the undiminished zeal of the Poles among us in their determination that their beloved homeland shall be liberated from the tyrant. And those who have accepted America as the land of their adoption are no less zealous for a free Poland since they well know that so long as the land of their forebears is held in bondage there can be no sure freedom for anyone anywhere. Let us then as we cherish our glorious birthright also join with these brave people in commemorating the inception of their liberty and pledge to them our moral, spiritual, and material help in the realization of their proper place in the commonwealth of nations.

HUAC: "A Shaky Reed To Lean On"

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1960

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks, I am pleased to call to the attention of my colleagues a recent New York Times editorial on the House Un-American Activities Committee.

It is also gratifying to me that this eminent paper, as usual, grasped the meaning of my position when it stated:

> The House is responsible for the actions of Representative WALTER'S Un-American Activities Committee. This is the fundamental point, as we see it, of Representative JAMES ROOSEVELT'S massive attack on the committee in a House speech a few days ago.

I heartily agree with the editorial comment that—

> If the security of this Nation were dependent on the kind of exposure for exposure's sake that the committee has repeatedly indulged in, whether investigating actors in New York or schoolteachers in California, then our country would really be in a dangerous condition.

Finally, may I say I certainly concur with the New York Times editorial observation that—

> For such positive subversion as exists, the FBI is sufficient. The United States no longer needs—if it ever did—the aimless pursuit of heresy.

Since one of my colleagues has reported the full text of the New York Times editorial I shall not also do so. But I trust it will be obvious to all that the need for action to abolish the Un-American Activities Committee is being set forth by those of proven integrity, patriotism, and sound judgment.

Whirlpool Awarded Silver Anvil

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1960

Mr. KARTH. Mr. Speaker, under leave to extend my remarks, I would like to call to the attention of the Congress and the people of the United States the awarding of the Silver Anvil, the highest award given by the American Public Relations Association, to the Whirlpool Corp., a large division of which is located in the city of St. Paul, which is part of the Fourth Congressional District of Minnesota. This award was granted to the Whirlpool Corp. for "an outstanding public relations program which assisted greatly at the American national exhibit in Russia in communicating the story of American homemaking to the Russian people."

Last spring Whirlpool was asked by the Departments of State and Commerce and the U.S. Information Agency to send two kitchens: the celebrated Whirlpool miracle kitchen—a research and engineering conception of the kitchen of the future—and a workaday model, used by countless housewives here at home. It was generally believed that these kitchens did more to say "America" in Russian than

perhaps anything else shown at our first national exhibit in Moscow.

Whirlpool has again been asked by the Government to send the miracle kitchen behind the Iron Curtain. Kitchens will also be sent to the International Trade Fairs at Poznan, Poland, and to Zagreb, Yugoslavia. I would like to join the American Public Relations Association in commending Whirlpool for a job well done.

The 1964 New York World's Fair

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, May 3, 1960

Mr. JAVITS. Mr. President, one of the hardest tasks in the creation of anything of great and lasting value is the often unseen work that goes into its beginning. This is as true of buildings as of projects of other kinds. It is certainly the case with the plans for the 1964 World's Fair, to be held in New York City. A number of New York's leading citizens have been instrumental in the work of organizing the New York World's Fair Corp., securing participants and initiating plans for construction. One of the most gratifying effects of this groundwork has been the cooperation of the President of the United States and the Department of State in working with the foreign nations which we hope will participate in the fair. As the President has pointed out, this fair can be a powerful instrument for peace and friendship in freedom.

Among the builders of the World's Fair project for New York, and the Nation, some of whom are now retiring, their work well done, with the naming of Robert Moses as permanent head of the organization was the executive vice president, Mr. Robert Kopple, whose particular efforts and devotion merit public notice.

I ask unanimous consent that a letter which I recently wrote to Mr. Kopple may be printed in the Appendix of the RECORD, and am pleased to note that a similar letter written by Senator KEATING, together with a letter from President Eisenhower hailing the fair have previously been so printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 6, 1960.

HON. ROBERT KOPPLE,
New York World's Fair 1964 Corp.,
New York, N.Y.

DEAR BOB: The obvious growing success of the New York World's Fair is due in great part to the devoted and unselfish spadework you did during the time it was suffering its birth pangs. Certainly your understanding role in the struggle to secure Federal recognition and support for the fair against the opposition of some mighty forces were a most important contribution to the success which has been achieved here in Washington.

New York owes you a debt of gratitude, and you yourself should have a deep feeling of satisfaction and achievement in this regard. Yours is an outstanding public service.

With best wishes.
Sincerely,

JACOB K. JAVITS.

How Much God Is There in Government?

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1960

Mr. BROCK. Mr. Speaker, as we go about our daily chores, and this aptly applies to the membership of this legislative body, many of us are prone to forget the divine force that guides us and very often provides the impetus leading to greater heights.

There is little we accomplish in our daily lives that is not inspired by the spiritual mentor within us, by the Creator who made us, and who will one day deliver us from our burdens.

There is religion in government, although there are too many instances where we fail to recognize it and appreciate it. It is felt by many of us, regardless of race, creed, or the faith we profess.

My good friend and colleague, the Honorable WALTER H. MOELLER, Representative of the 10th District of Ohio, fully recognizes this prevailing moral or religious composition within us.

He has expressed this with great clarity and feeling in a recent contribution to the religious magazine, This Day, for inclusion in their February issue. It is my belief that his article will prove a greater inspiration for all of us in our daily deliberations on the fate of and the future of a great nation.

Therefore, and with the unanimous consent of my colleagues present, may I insert this article in the CONGRESSIONAL RECORD and commend its reading to this membership and those who are fortunate in receiving the issue:

HOW MUCH GOD IS THERE IN GOVERNMENT?
(By Congressman WALTER H. MOELLER, 10th District, Ohio)

The answer to the question in the title of this article is probably that there is as much God in government as there is God in the hearts of the American people. We can say this in America whereas it cannot necessarily be said of more than a few other nations in the world, for we are as close to being a "government of the people, by the people, and for the people" as has ever existed on the face of God's earth.

Certainly it cannot be said of the godless government of Communist Russia, where God still lives in the hearts of millions of people despite every effort to root Him out. Far less could it be said of Poland, for another example, where a devout people are subjected to the merciless whims of an atheistic regime, leavened only by the more or less powerful influence that the Roman Catholic Church and its followers can still bring to bear.

How much God there is in the hearts of the American people reflects the quantity and quality of God, or of religious motivation, in the policies and practices of government, arriving eventually at an answer to the corollary question, "How much God is there in America?"

The people who make up our Government, who determine its policies, who pass its laws, who administer its daily operations, and who pass judgment in the courts on our crimes and on the constitutionality of our laws, are, in a large sense, a cross section of the greater population. It is true that there is something at least slightly extraordinary about them, or they would not be in government. In the cases of a President, a Supreme Court Justice, or even a Member of Congress, there is usually something more than slightly extraordinary before such a position may be achieved. This extraordinariness, however, is not usually of the kind that makes them either more or less religious than the average individual. Thus it is fair to say that where God is concerned, He moves the man in government to about the same extent that He moves the man in the street.

From this we make the assumption that government, as far as its moral or religious composition is concerned, and as far as its net worth Godwise is concerned, is no more or less than a summing up of net worth of the individuals who make up government.

There is, however, no human brain, nor combination of brains, nor electronic computer which can exactly assess these individual godly net worths. We have no unit of measurement upon which to rely, for God and His impact upon the minds and hearts and actions of men is not to be measured in pounds or inches, but is simply a weightless and boundless evidencing of the eternal spirit evoked by Jesus Christ when He said, "Before Abraham was, I am."

For this reason we must turn to the external evidences we can find to substantiate or disprove the existence of God in our Government, such as the moral qualities of the laws which govern us, the mercy and the justice with which these laws are administered, and in the public acts and the private reputations of the men and women who form the Government of the United States.

As I write this, the Congress of the United States has just finished writing legislation to control the corruption and the racketeering which has dominated certain aspects of the American labor movement. Here in microcosmic form we may examine the influence of God and the Godlikeness of the motives which have touched the legislative processes since America began. Here we have an issue which is as close to Godlikeness confronting godlessness as any we are likely to find. Here we have not only the problem of individual sin, but also the problem of a great social and moral issue involving the conscience of mankind. How did we as legislators and as Christians, Jews, or freethinkers react?

Brought to bear upon us were the most powerful forces in American political and economic life. Groups representing labor and capital, the two great and often divergent economic powers, were there. Political leaders from our two great parties wielded every stratagem available to them. Cleavages developed within the parties, based on a combination of geographical and philosophical differences.

Some individuals faced the problem with a strictly practical weighing of the possibilities of political gain or loss.

Others, and I think the majority, devoted themselves to prayerful thought and to close examination of the social and moral issues involved.

Examination of the debates on this legislation discloses that many Members, for example, called attention to some passage from the Scriptures or to some generally accepted moral truth to bolster their arguments, thus indicating that the Congress is not oblivious to what Holy Scripture says, and that our legislators often do rise above

their own material interests and those of their party or their constituents to a higher spiritual level.

Many may quarrel with the terms of the new law. Many have questioned the motives of those who stood on either side of the issue. Yet it is my honest belief that the new result was a clear justification of our democratic processes and of our reliance upon our legislators to permit the hand of God to guide them in the performance of their duty to Him and to the people of the United States whom they are elected to serve.

Let me turn for a moment to the morals and the mores of those who make up the Government of the United States. From my personal experiences up to this time, I am convinced that there is a basic structure composed of deeply honest and sincerely devout religious-minded people upon which the frivolous and the at times sinful is only a facade, more evident to the indiscriminating eye than the solid foundation to which it has attached itself. Further, as we reach positions of real importance among those who exert a significant influence upon public policy and its administration, the moral stature of the individual grows with few exceptions.

On Capitol Hill and elsewhere in our Nation's Capital there are prayer breakfast and luncheon groups which meet at regular intervals and discuss their responsibilities and the issues of the day in terms of religious values. I have attended some of these gatherings, and while I am unable to accept all the conclusions reached, each time I came away with the conviction that the search was made for the divine will, and that the door opened for the presence of God in the deliberations.

It is commendable to know that in the U.S. Capitol, just off the rotunda, is a prayer room where men and women of every faith visit daily and renew in prayer and meditation their private and public oaths of devotion to God and country. Further, each of the Houses of Congress has its fully appointed chaplain, and each session of the Senate and of the House is opened with prayer.

It is by these things and by many other signs that I have come to accept the fact that the majority of the men and women in our Government do have a very definite religious influence in their lives which motivates them as they, amid all human weakness, endeavor to enact just and equitable laws for the land.

In government, as elsewhere, the number who say, "Thus saith the Lord," and that His will must be advanced, is always too few. It raises a challenge for Christian men and women to make service in the Government their ambition. For true it remains also to this day: "Evil triumphs when good men fail to speak."

Twelfth Anniversary of the Independence of Israel

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1960

Mr. GIAIMO. Mr. Speaker, on May 2, Israel celebrated the 12th anniversary of her independence. A tiny David in the family of nations, Israel has been forced to meet and defeat many modern Goliaths in her brief history. In so doing, she has taken her place in the vanguard of freedom-loving peoples everywhere.

The giants that Israel has confronted are the same ones that terrorize many small countries and some larger nations in our contemporary world; international communism, internal economic problems and active aggression by other nations in a world still unable to insure lasting peace. Israel has met these threats to her national integrity, Israel's Government has retained her independence, and Israel's people have preserved their freedom under a democratic state. During the same period, other peoples of greater numbers, other governments of longer experience, other nations with greater resources have succumbed to one or the other modern-day Goliaths.

If Israel accomplished nothing else, she would merit our respect and sincere felicitations on the occasion of her anniversary. But to us in the United States Israel stands as more than a symbol of the indomitable will of a free people to remain free. Throughout all of her struggles, Israel has remained a true friend to us and a stanch defender of democracy in the vital Middle East.

On the occasion of her anniversary, I wish to join with my friends in this great House and with all Americans in extending best wishes to Israel and her heroic people.

The Cross at Nowa Huta

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1960

Mr. KARTH. Mr. Speaker, because a plain wooden cross still stands in an empty lot there is no trouble in the streets of Nowa Huta.

The cross marks the place where the city's first Roman Catholic Church was to be built according to a promise grudgingly given 3 years ago by the Polish Government. Last week when a construction crew came to take the church site for a new school people of Nowa Huta showed dramatically that loyalty to their religion runs deeper than do their ties to Gomulka and his uneasy government. As the cross fell it was as if an alarm had been given to the people to rise. A bloody battle raged around the fallen cross at Nowa Huta during which untold numbers of the citizenry, police, and militia suffered wounds. Fighting ended when the harassed government faced with May Day preparations stopped further work and raised the cross again.

The city of Nowa Huta was to be the symbol for a new Poland that was to arise on the foundations of Marxism-Leninism—as forged in Moscow. Ten years ago the Lenin Steel Foundry was erected and a new town laid out for its workers—but without a church. After the Polish riots of October 1956 a concession was wrung out of the Gomulka regime for Nowa Huta's church. A prominent location was picked and a cross was erected in dedication of the holy place.

The devotion of the Polish people to their church is a strong tradition—far, far stronger than any attachment to the present Communist regime. The reverence for the church was best described by Adam Wazyk in his classic "Poem for Adults" who pictured the pioneer army that had been sent to build Nowa Huta, the new Eldorado. Wazyk pointed out that the builders wore round their necks a little string carrying the cross of Czestochawa.

As deep seated as their religious feeling is the historic love of the Poles for freedom. Today is especially important for it marks the 169th anniversary of their great Polish Constitution which is a landmark in the evolution of the political philosophy of freedom, based on law and order of a true democracy.

Unhappily because of Communist oppression only the free peoples of the world can today openly commemorate this solemn occasion. But the fierce spirit of liberty as brilliantly shown at Nowa Huta, the increasing flood of outspoken criticism by the intellectuals throughout the Polish nation, and the disturbances in 1956, and since, gives heart to free men and women throughout the world that soon the ranks of democracy may again be swelled by free and independent Poland.

The cross which stands defiantly on the vacant lot in Nowa Huta is a symbol of the immortality of the Polish people's passion for liberty.

On this May 3 one can then with great hope echo the dying Ignace Jan Paderewski's prophetic promise: "Polska powstanie—Poland will rise again."

Gen. Sylvanus Thayer Day

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 3, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, Saturday, April 30, will be a memorable date in the history of the town of Braintree in Massachusetts. On that occasion, known as "Gen. Sylvanus Thayer Day," was dedicated the birthplace of Sylvanus Thayer—1785 to 1872—Braintree's most distinguished citizen, founder of Thayer Academy, of the Thayer Public Library, and of the engineering schools at both Dartmouth College and the U.S. Military Academy. Best known nationally as "the Father of the Military Academy," which he served as Superintendent from 1817 until 1833, and also as "the Father of Technological Education in America," General Thayer is presently a candidate for the National Hall of Fame.

Through the intensive efforts of the Braintree Historical Society, Sylvanus Thayer's original homestead, which dates from 1720, has been relocated at its present site on Washington Street, opposite the town hall, and over the past 2 years has been completely restored.

The Sylvanus Thayer House will henceforth be a historic shrine and serve as a community historical center for the town of Braintree.

On the same day, Thayer Academy, founded in 1876 through a generous bequest by General Thayer, honored its founder while celebrating its first alumni day. Thayer Academy and the Braintree Historical Society jointly sponsored a reception and buffet luncheon in the school's memorial gymnasium, attended by returning Thayer Academy alumni, by a large contingent from the U.S. Military Academy at West Point, headed by its Superintendent, Lt. Gen. Garrison H. Davidson, and by the many public-spirited citizens and visiting dignitaries, both civil and military, assembled in Braintree for the dedication ceremonies.

Joining General Davidson at the head table at the luncheon following the reception were Mrs. Robert C. Leggett, president of the Braintree Historical Society; Dr. Gordon O. Thayer, headmaster of Thayer Academy, and Mrs. Thayer; Mr. Gilbert L. Bean, chairman of the committee in charge of the restoration of the homestead; Mr. William F. Spang, president of the board of trustees of Thayer Academy; Mr. Harry F. Rice, Jr., president of the Thayer Academy Alumni Association; Mr. A. Wendell Drollett, president of the Thayer Academy Parents Club; and the Honorable James A. Burke, Representative of the 13th Congressional District of Massachusetts.

Honored military guests included Lt. Gen. Willis D. Crittenberger, chairman of the committee sponsoring General Thayer for entry into the Hall of Fame; Lt. Gen. Anthony C. McAuliffe, president of the West Point Graduates Association; Maj. Gen. Chauncey D. Merrill, commanding the 94th Infantry Division, U.S. Army Reserves; Maj. Gen. William J. Verbeck, commanding officer of Fort Devens and representing Lt. Gen. Edward J. O'Neill, 1st Army; Brig. Gen. Alden K. Sibley, commanding officer of the New England Division of the U.S. Army Corps of Engineers; Col. Paul C. Davis, representing Brig. Gen. Robert Hackett, 56th Artillery Brigade, Air Defense; Col. Joseph Kelly, representing Maj. Gen. Otis M. Whitney, Yankee Division, Massachusetts National Guard; Col. Clement Kennedy, Massachusetts aide to Secretary of the Army Wilber M. Brucker; Col. Karl L. Scherer, commanding the Boston Army Base; Col. Ivan W. Parr, Quartermaster Corps; Col. Norton B. Wilson, secretary of the West Point Graduates Association· Col. Ralph G. Barrows. president of the West Point Society of New England; Col. John G. Booton, past president of the West Point Society of New England; Col. Edwin Allen, commanding the 13th Battle Group, USARTC; and Lt. Col. Joel B. Stevens, information officer of the U.S. Military Academy.

The afternoon parade prior to the dedication ceremonies had as joint marshals two Braintree veterans of World War II, both of whom are wearers of the Congressional Medal of Honor: Mr. Charles MacGillivray, a former U.S. Army Ranger, and Mr. Everett Pope, formerly of the U.S. Marine Corps. The line of march included a contingent of cadets from the U.S. Military Academy, a color guard from the 56th Artillery Brigade—which also included the 18-man honor guard for General Davidson and his group—the 28-piece Regular Army Band from Fort Devens, and units representing the U.S. Army Reserves, the Massachusetts National Guard, the American Legion, the Disabled American Veterans, the Veterans of Foreign Wars, and the Air Cadets; also several military and marching bands.

As principal speaker at the dedication ceremony, Lieutenant General Davidson expressed the warm regard and high esteem held by West Pointers everywhere for Sylvanus Thayer, who himself graduated from the Military Academy nearly 150 years ago, subsequently to become an outstanding educator, engineering pioneer, military leader, and public benefactor.

The program for "General Sylvanus Thayer Day" followed.

Registration of Thayer Academy alumni, Main Building, 9:30 to 10:30.

Film: "Sylvanus Thayer at West Point," Frothingham Hall, 10:30 to 11:30.

Reception for General Davidson and guests, Memorial Gymnasium, 12 to 12:30.

Buffet luncheon, Memorial Gymnasium, 12:30 to 1:45.

Military parade, Washington Street, 2:30 to 3:15.

Dedication of Thayer birthplace, Sylvanus Thayer House, 3:30 to 4:15.

Public inspection of Thayer birthplace, Sylvanus Thayer House, 4:15 to 5:45.

Reception: Thayer Academy alumni and faculty, Frothingham Hall, 5 to 6.

Concert: West Point Glee Club, Braintree High School Auditorium, 8:30 to 10:30.

A buffet luncheon in the Memorial Gymnasium was held for invited guests of Thayer Academy and the Braintree Historical Society. The evening concert presented by the West Point Glee Club in the Braintree High School Auditorium was open to the general public. All Thayer Academy and Thayerlands School buildings were open for inspection by Academy alumni and alumnae throughout the day.

Thayer Academy, situated in Braintree, Mass., was founded in 1876 as the result of a generous bequest by the late Gen. Sylvanus Thayer. Opening its doors in 1877 with a faculty of 3 and a student body of 30, the school has expanded and developed over the years until, with an enrollment of over 600 students, it is now the largest coeducational, country day, college preparatory school in New England. The present institution includes 3 component parts: Thayer Academy proper, comprising grades 9 through 12; Thayerlands School, comprising grades 1 through 8 and the Thayerlands Preprimary School; the 3 schools make private educational facilities available to more than 30 communities of the south shore of Massachusetts. Additional service is rendered by the Academy's sponsorship of a summer school with an enrollment of 250; and, with the collaboration of the American Academy of Arts and Sciences, an advance science studies program designed for 60 talented boys and girls of eastern Massachusetts high schools. The latter program, now in its third year at Thayer Academy, is participated in by 16 regional industries, and by 7 universities—Boston University, Brandeis, Brown, Harvard, MIT, Tufts, and the University of Massachusetts.

Dr. Gordon Oliver Thayer, present headmaster of Thayer Academy, is a graduate of the University of New Hampshire, and received his master of education at Harvard, and his doctorate of education from Boston University. He is a lecturer in education at Tufts, Boston University, and the University of Maine. He was president of the Independent School Association of Massachusetts in 1958–59; and is currently a director of the Alumni Association of the Harvard Graduate School of Education, a delegate to the National Council of Independent Schools, and a secondary school representative to the College Entrance Examination Board. With other American secondary school and college educators, Dr. Thayer will engage in a field study of Russian education during the months of August and September, the project being sponsored by the Comparative Education Society; and he is scheduled to conduct a series of lectures on American schools and colleges in Russia, Poland, Germany, and Yugoslavia during September and October.

Union-Industries Show

EXTENSION OF REMARKS
OF

HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. BURDICK. Mr. Speaker, I would like to call my colleagues' attention to the Union-Industries Show which will be held May 6–11, 1960, in the National Guard Armory, Washington, D.C.

This is a cooperative project between labor unions and management to focus attention on the day-in, day-out good working relationship that exists between union labor and employers in a free-enterprise society. There will be many exhibits shown as specific examples of the product of labor and management working and cooperating together. An exhibition of this type helps also to bring about better employer-employee relations.

The show enables cooperating labor unions to set up displays for the purpose of acquainting the public with the skills and crafts of union labor and to familiarize the public with the union label carried on union-made goods. Employers also exhibit their union-made goods or union services.

The shows have been held since 1938—except during World War II—in major cities throughout the United States. They are sponsored by the Union Label and Service Trades Department of the AFL–CIO. Employers, or companies,

participate in the show at the invitation of the unions with which they have a union contract.

The booths will feature union-made goods or services. For instance, the American Bakery and Confectionery Workers will decorate cakes and give them away at their display. Other exhibits will feature wearing apparel, building equipment, furniture, radios, upholstery, and a wide range of other products. The postal unions will demonstrate their services with an operating post office. The meatcutters will hold about five sheep-shearing demonstrations and drawings for numerous free meat cuts daily.

The International Brotherhood of Electrical Workers will give away an all-electric kitchen valued at approximately $10,000, at a drawing to be held on May 11. The Glass Bottle Blowers Association will give away a boat; the printing trades will set up an operating newspaper and will publish daily news about events occurring at the show. The bricklayers will hold a bricklaying contest for apprentices, and the pottery workers and many others will give educational demonstrations of how they do their daily jobs.

Government agencies which will participate in this year's show include the Department of Defense, the Civil Service Commission, the Office of Civil Defense Mobilization, the Treasury Department, and the Department of Labor.

Joseph Lewis, secretary-treasurer of the Union Label and Service Trades Department, AFL–CIO, which sponsors the show, says:

Our exhibitions prove that harmony between labor and management is practical and possible. The basic function of industry is to increase high quality production and obtain a fair profit. The objective of organized labor is to have security of steady employment at fair wages. Both these goals can be achieved through the teamwork of labor and management.

Over the years, the Union-Industries Show has broken every attendance record for the auditorium in which the show was held. Last year's attendance in San Francisco was over 364,400; largest attendance was in Chicago—900,000.

The show will be open to the general public, admission free. Nothing is sold or offered for sale at the Union-Industries Show.

My Mother, Eleanor Roosevelt

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 3, 1960

Mr. MONRONEY. Mr. President, we who have been privileged to live in the same era with Mrs. Franklin Delano Roosevelt have formed our own pictures of her from newspaper accounts of her activities, from her daily newspaper columns, from her magazine question and answer pages, from books by her and about her, and, if lucky, from personal acquaintance.

As she has continued year after year to be listed in polls as the best loved woman in the world, following her remarkable career as first lady with another in her own right equally unusual, we still ponder how she does what she does, and how she became what she is.

The May Good Housekeeping magazine gives us some new answers to some of our unphrased questions. JAMES ROOSEVELT, her oldest son, writes with Sidney Shalett, his collaborator on a recent book about President Roosevelt, a warm and moving article, "My Mother, Eleanor Roosevelt."

Because of the new insight this story provides of one of the greatest women of our time, I ask unanimous consent that it be printed in the CONGRESSIONAL RECORD. I have inquired regarding the cost and have found that it is $215.

I ask unanimous consent that the article be printed in the RECORD notwithstanding the cost.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MY MOTHER, ELEANOR ROOSEVELT

(By JAMES ROOSEVELT with Sidney Shalett)

In writing of my warm and wonderful life with my mother, Eleanor Roosevelt, I never can forget that I have been privileged to have a mother, as well as a father, who is one of the great personages of our time. Yet I—and my sister and brothers—think of her not in her role as the peripatetic spokesman for democracy, champion of the oppressed and underprivileged, and crusader for a thousand and one good causes, but as our generous, ever-loyal, deeply human mother, who has taught us, inspired us, loved us—and spoiled us—all our lives.

I have written of my father, Franklin Delano Roosevelt, that he was not one but three parents. He was the rollicking companion and playmate of prepolio days; the gallant fighter of his convalescent period, struggling not to lose touch with his children while engaged in his desperate personal battle to conquer his deadened legs; and, finally, the father of the White House period, who had to balance his family relationships against his responsibilities to the world. I have much the same feeling about mother; she has been at least four mothers, each a separate and distinct personality.

First, there was the mother of my earliest memories—shy, uncertain, afraid of her shadow, ridden by inferiority and "guilt" complexes, and dominated by an imperious, all-demanding mother-in-law. In those early days, it seemed completely natural to us children that "grannies" were the real heads of families and that mothers were only slightly above us small fry in the household hierarchy.

Then came the mother who was the heroine of Father's period of illness and convalescence. When infantile paralysis struck her husband, rendering him first a helpless cripple and then a man who never again would walk without the aid of cane and braces, Mother's true strength and courage emerged. She was his nurse, his "legs," his good right arm, his wellspring of confidence. When it became necessary, the erstwhile meek and subservient daughter-in-law even stood up for him against his well-meaning but overpowering mother, who, overcome by the tragedy that had engulfed her Franklin, wanted him to retire from the public eye and bury himself at Hyde Park. Mother became the mortar that held the family together in the face of strains, separations, and financial crises.

Then, in the period of Father's return to public life—first as Governor of New York, then as President—still another Eleanor Roosevelt emerged. This was the mother who kept track of her restless, turbulent brood while she herself evolved into a roving, one-woman task force for social and international causes. Even her family marveled at her seemingly inexhaustible energy, and Father howled with glee when the British, during World War II, gave Mother the code name of Rover.

Finally, there is the Eleanor Roosevelt of today—a woman on her own. Though I am her son, I view her unabashedly as a great lady, a great person, and, above all, a great mother. When Father died, just 26 days after their 40th wedding anniversary, Mother refused to lapse into idle widowhood. Soon she was creating a useful and productive career.

Last October 11, Mother—though she refused to celebrate it—passed her 75th birthday. I am pleased that these recollections of mine are appearing in the issue of Good Housekeeping devoted to observance of its own 75th birthday. I do not mean to write, however, of Mother as if she were an institution. She wouldn't like that, I can assure you.

Despite all the honors that have been heaped upon her, Mother remains completely natural and unassuming and absolutely without side. For example, when she was in India a few years ago, she donned a plain cotton dress and tennis shoes and devoted a long day to touring the slums. She kept going so long she was late for a reception in her honor. Not wishing to keep guests waiting while she cleaned up and changed into appropriate clothing, Mother simply went to the reception as she was and met the leading citizens of Bombay in her soiled cotton dress and sneakers.

It is no easy thing to be the son of two parents who are not only world figures but extraordinarily complex personalities. There is no doubt that my brothers, my sister, and I would have benefited had Mother and Father—particularly Father—been stricter disciplinarians and had they had more time to devote to us.

We were outrageously pampered by our wealthy grandmother, Sara Delano Roosevelt, who delighted in upsetting what parental discipline we had by giving us new cars to replace ones we had wrecked and showering us with costly gifts and trips to Europe. Indeed, Father's softness as a disciplinarian was directly attributable to the fact that his strong-minded Ma-ma, as he called her, tried all her life to dominate him. Even after he became President, she would remind him to wear his rubbers, to drink only bottled water, and to keep himself "in order" when traveling in the tropics. After resisting this sort of maternal swaddling from childhood to manhood, Father developed a psychological block against telling us how to run our lives. Mother had the same feeling.

To me, Mother's true greatness as a person lies in the fact that she is not infallible. Far from it. Her deep, penetrating wisdom often is tempered with naivete, and she will do and say impulsive things or allow herself to be used by persons whose motives are suspect. But these are slips which stem from her heart and from her boundless, instinctive sympathy for humanity.

The real miracle is that Mother ever lived down the traumas of her early childhood and became the strong character that she is. If ever there was a real-life prototype for the "poor little rich girl" character of the lachrymose Victorian novels, it was Mother. Her own mother, Anna Hall, whom Mother remembers as one of the most beautiful women she has ever seen, treated her daugh-

ter as an ugly duckling; she even shamed the little girl by calling her "granny."

It was a different story with her father, Elliott Roosevelt, brother of Uncle Theodore, who became President. He adored her and called her "little Nell" and "golden hair." When he was around, he showered her with all the love and companionship a child could want from a father. But he was not well, and he lapsed into alcoholism (which gave Mother her lifelong horror of strong drink). When Mother was 8 years old, her mother died of diphtheria, and her tyrannical Grandmother Hall refused to sanction more than occasional visits from her father. He, too, died before Mother was 10; for a long time, Mother refused to believe her beloved father was gone, and, as she has written, she lived in her private dream world in which they still were together.

There were other scars that added to her feeling of loneliness and rejection. She lived for a while with a beautiful but tragically unstable young aunt, who sometimes was warm and loving and at other times heaped her with scorn and verbal abuse. There also were two well-loved uncles who became alcoholics. But Mother had a good mind, an inner strength, and an innate sense of humanity—the qualities that eventually led her into what her detractors call her "do-gooding" activities—which enabled her, though she suffered, to survive and grow. It was Mother, incidentally, who gave Father his first closeup glimpses of what poverty meant. She induced Father, then a rather shallow, typically upper class Harvard undergraduate, to call for her at the Rivington Street Settlement House in lower New York, where she was doing social work; then she took him to a tenement to call on a sick child. The experience left him shaken, and he exclaimed, "Human beings can't live this way."

The early years of married life did little to build up Mother's confidence; there was always her formidable mother-in-law in the background, and Father's mother was an empire to herself. To be sure, the marriage of Franklin Roosevelt to his fifth cousin Eleanor was accomplished over his mother's objection. She had nothing in particular against Cousin Eleanor, but she had been looking forward to enjoying her handsome son's company when he had graduated from Harvard, and she wasn't ready for him to leave the nest. Granny took him off on a Caribbean cruise, hoping the romance would cool, but Father was stubborn, too, and, on March 17, 1905, he and Mother were married.

As Mother always had yearned for a mother of her own, her desire to be accepted and loved by Sara Delano Roosevelt was almost pathetic. But the young bride found herself swamped not with affection but with domination by her mother-in-law. Granny was excessively generous—she gave the newlyweds material things they never would have been able to afford otherwise—but she did love to manage. The young couple's first rented house, conveniently close to her own, was selected by Granny. Their second home was a Christmas present from her, but she built one for herself right next to it—with connecting doors. Mother hated that house and protested to Father that she didn't want to live in it, but Granny had her way. Even our summer home at Campobello was a gift from Father's mother. She helped him meet his bills, paid his insurance, and even sent us barrels of apples and potatoes from the Hyde Park farm. Father, of course, was quite accustomed to her generosities and thought nothing of dropping hints on what he might like in the way of gifts. For instance, in November 1913, when he was Assistant Secretary of the Navy, he gaily wrote her: "Dearest Mommer—I'm still alive and have wore out three sets pyjams in 1 year. If you go to Army and Navy store remember your affected son. F.D.R. Also he likes negligee shirts not silk and without collar."

Mother's indecision in those days is hard to believe. It is difficult to visualize the Eleanor Roosevelt of today writing, as she did to Father in 1913: "My head whirls when I think of all the things you might do this coming year—run for Governor, Senator, go to California. I wonder what you really will do." An even more remarkable line appeared in one of her letters to "Dearest Honey"—her customary salutation of that period—shortly after he had been nominated for Vice President in 1920. "Oh, dear. I wish I could see you or at least hear from you," she wrote. "I hate politics."

Father always loved to tease Mother. On their European honeymoon, though he was almost as unsophisticated as his bride, he treated her as if she were a helpless little child. In presidential years, when Mother became such a world traveler, he referred to her as "my will-o'-the-wisp wife" and joked about her fantastic energy. When her public statements differed from his own views, he told her to go right ahead and do as she pleased "because I can always say I can't do a thing with you." Mother learned to return the riposte; when he went out on the campaign trail and was lionized by women's clubs, Mother let him hear from her about the "lovely ladies" who, as she put it, "worship at your shrine."

Mother's strength and courage revealed itself when she was truly a soldier during the difficult, painful period between the time that polio struck and Father's return to active politics. Father himself had a courage that was simply unbelievable. He never let any of the children see him with his spirits sagging, and he constantly conjured up cheery ways to boost our morale. Yet, as I have since learned, he had his periods of black despair, and it was then that Mother came through for him. Working closely with the faithful Louis Howe, Father's political aide, Mother strengthened his resolve not to give in to the temptation to crawl into a hole at Hyde Park and let the world pass him by. Once the active period of his sickness was over, Mother simply refused to treat him as an invalid; she even dismissed the nurses and saw to it that he led as normal a life as was possible for a man in a wheelchair.

As time went by, Mother did more and more things for Father and for the family. Though she died a thousand deaths every time she had to stand up before strangers, she began making speeches for him to keep his name before the public.

During the four winters when he cruised off the Florida Keys in a houseboat, hoping that sunshine and swimming would restore his limbs, she stayed in New York, keeping the family together. Finances were difficult. We never were actually poor; the trouble was that we never learned to live economically, and the private schools, European vacations, servants, and chauffeur-driven cars went right on. Father frequently was forgetful about sending the monthly allowance, and Mother's letters of this period were filled with almost desperate pleas, such as: "I find after paying all the household bills * * * and cash for food * * * I have $151.46. * * * Please send me what you can. * * *" And: "* * * The regular expenses go on the same as ever. * * * I just pray I will have enough. * * *" Mother taught school, wrote articles, and took an ill-fated fling at operating a furniture factory to bolster the family finances.

The emergence of this new Eleanor Roosevelt was not without its price. Father gained a valued and trusted new lieutenant and a new pair of legs and eyes, but he lost a good deal of the woman Eleanor; indefatigable as she was, Mother simply could not be the little homemaker and self-effacing housewife, as well as the political helpmate. Perhaps the evolution was inevitable, and Mother's public career would have developed even if Father had not been stricken with polio; I suspect the drive within her was so strong that she could not have been content forever in a purely domestic role. Be that as it may, the diminution of the woman Eleanor cost Father a good deal in simple companionship and added poignantly to the burden of loneliness that beset him with the advent of polio and the beginning of his years in the glaring limelight of the Presidency.

With all his outward gaiety and gregariousness, it is hard to visualize Father as a lonely man, but there were times when he was dreadfully alone. The Presidency can be as confining as any prison, and Father had the additional physical handicap of not being able to get around on his own; also, he had no real, personal confidants with whom he could talk over matters of a private nature.

By this I do not mean to imply, as so many Roosevelt haters and scandalmongers have untruthfully alleged, that father and mother were not compatible. Even in the years when both of them became so intensely busy, there was a deep understanding and an indestructible affection between them. To the end of his days, Father, in his letters to Mother, addressed her as "Dearest Babs"—the nickname he had given her on their honeymoon. Her tender feeling toward him is indicated in the following excerpt from a letter she wrote to him in 1931, just after he sailed to see his mother, who had been taken ill in Europe: "* * * I hate to see you go. * * * We are really very dependent on each other though we do see so little of each other. I feel as lost as I did when I went abroad. * * * Dear love to you. * * * I miss you and hate to feel you so far away * * *."

Just as Father, even when the terrible years of World War II closed in on him, never ceased trying to be a warm, close, personal father to his five children, Mother, too, always had a maternal eye on us. Neither of them believed in openly interfering or attempting to dominate us. All of us, I am sure, hurt our parents many times by rash or indiscreet actions, but always we received from them the same unswerving loyalty and affection.

Mother was slightly inconsistent; while she did not intrude by injecting herself directly into our affairs and attempting to advise us directly, she constantly was writing Father about our various jams. In the case of my sister Anna, it was poor work at school and later was her interest in boys. In my case, Mother fretted over my erratic scholastic record and what she considered my addiction to frivolity and expensive living. I was following in Father's footsteps at Harvard by joining all the right clubs, and once, when I wrote a candid letter home admitting there had been a certain amount of financial outlay and drinking connected with my initiation into Hasty Pudding, Mother caustically wrote Father at Warm Springs: "Too bad James needs the money; you never can get away from your many golddiggers, can you? I can't say three nights drunk fill me with anything but disgust."

My brother Elliott liked to play cards, and Mother, learning while en route to Europe that two State employees (Father then was Governor of New York) had cleaned him of $70, sent off a hot letter to Albany: "I had a talk with him about gambling but I did not realize it was for sums like that he had played. I think perhaps you had better not tell him we know but if you get a chance say something about using judgment in all things and the right use of money. Mama gave him his Poughkeepsie Savings Bank book which I think was unwise if he is doing fool things of this kind."

As Franklin, Jr., and John came of age, Mother worried about their conduct, too. One letter to the White House asked bluntly: "Will you speak seriously and firmly to F., Jr.,

and John about drinking and fast driving? [Father didn't.] I really think it's important." She also discussed with Father our various business problems and our divorces, but rarely did she mention these matters to us, except obliquely.

Mother came into her own during the 12 years Father occupied the White House. While she made some mistakes, she had become one of Father's greatest assets. Though he delighted in teasing her—often doing it so subtly that Mother wasn't sure she was being ribbed—Father relied upon her in many ways. She made inspection trips, including her memorable survey of the wretched Puerto Rican slums, which left her aghast at the thought that humans could live in such misery. She also appraised situations and personalities for her husband. Her comments were sharp and to the point—e.g., her 1939 letter to Father: "This WPA mess seems to me the fault of the unions. Perhaps no job should be done by WPA which would otherwise be done by regular labor, but that is the only legitimate grievance that I can see." Father valued and respected her judgment, even though he did not always agree with her or follow her recommendations. He was conscious, too, that some of her supercharged activities provided ammunition for the anti-New Dealers, but he did not try to curb her.

I've always felt that Mother's true greatness of spirit revealed itself on that terrible day—April 12, 1945—when Father died in Warm Springs. Harry S. Truman, deeply shaken by the event that had precipitated him into the Presidency, came to see her at the White House. "Is there anything I can do for you?" he asked. Mother looked at him with sympathy and understanding and replied, "Is there anything we can do for you? For you are the one who is in trouble now." At the moment of her supreme grief, she was concerned about the new President's burden.

With Father's death, Mother was confused and lost—but only momentarily. One of the most perceptive things Mother ever has written about herself is found in her autobiographical volume, "This I Remember." Recalling her life in the White House, she observed: "* * * I think I lived those years very impersonally. It was almost as though I had erected someone a little outside of myself who was the President's wife. I was lost somewhere deep down inside myself. That is the way I felt and worked until I left the White House."

That era ended, Mother began working her way out of her impersonal shell and became not the President's widow but Eleanor Roosevelt, active citizen. President Truman appointed her as a delegate to the United Nations Organization meeting in London in 1946, and she served with genuine distinction.

Father, who knew Mother and her overgenerous impulses well, had left a remarkable will in which Mother was the major immediate beneficiary. However, he drew up airtight provisions that restricted her from using a penny of the principal—only the interest from the estate. He had a reason for this, which he confided to me (as the eldest son, I was to be the family trustee) sometime before his death: he was simply afraid that Mother, with her penchant for good causes, would give away the entire estate and be left destitute.

I think that Father was partially right and that Mother, if free to follow her own impulses, indeed would have given away at least a large portion of the estate. He was wrong about one thing, however; Mother never would be destitute. Immediately after his death, she weighed her situation. She could have lived more than comfortably on the estate income, but the idea of idleness appalled her. I once heard her say emphatically that she had no desire to become an old lady in a little lace cap. She decided she would earn an income of her own in order to have money to contribute to the philanthropic, political, and humanitarian causes—as well as the many private, personal charities—in which she so firmly believes.

So Mother went to work. Today she earns a sizable sum as a writer and lecturer, and she gives away the major portion of it, over and above her business operating expenses. By conservative estimate, Mother has given away well over a million dollars.

As one of the three trustees of Father's estate, I sometimes have the unhappy duty of telling Mother she cannot do something on which she has her heart set. Recently, for example, she wanted the estate to invest a considerable amount of money in a four-story townhouse in New York City; she was going to live and work in half of it and rent the other half to her personal physician and his wife. We did not think it was a proper business investment under the terms of father's trust; also, we doubted the wisdom of her incurring such a responsibility at her age, so we turned her down. Mother was hopping mad—mostly at me—but she didn't stay angry long; in fact, I've never known her to stay peeved with any of us for any length of time. She merely went out and made private financial arrangements to buy her house and now is living there happily, with nothing to worry about except a 20-year mortgage.

I can testify personally to Mother's remarkable generosity and also to the fact that she has no large sums of ready cash or other assets. In 1950, when I made my ill-fated race for Governor of California, I finished the campaign owing $100,000. I paid it off with a personal loan from Mother, which I have secured with a life-insurance policy payable to Mother or her estate. I know that her generous act in bailing me out left her with virtually no capital assets except her current income; yet she did it without a murmur.

Similarly, to help my brother Elliott, Mother permitted him to sell off certain real estate which was not irrevocably tied up by Father's will. As a matter of fact, this has been the subject of a fierce family argument, with sis, my brothers, and I all jumping on Elliott for permitting Father's beloved Hilltop Cottage to pass out of the family.

Mother never forgets Christmases, birthdays, or anniversaries, and the Eleanor Roosevelt Amalgamated Annual Gift List is a truly formidable institution. It includes each of her five children and their spouses (even one or two ex-spouses of whom she is fond), her 21 grandchildren, and her 12 great-grandchildren, not to mention innumerable godchildren, relatives, and friends. She starts her yule shopping on December 26 of each year, collecting appropriate gifts whenever and wherever she sees them and piling them in what she calls her "Christmas closet." It did not surprise me a bit when I read in the newspapers that mother, touring Israel last year, had bought a live camel for her granddaughter Nina. Fortunately, the camel was jettisoned before reaching Hyde Park.

Mother divides her time today—when she isn't in Israel, or in Moscow, or teaching her class at Brandeis University, or doing something for the Eleanor Roosevelt Institute for Cancer Research in Denver, or making a speech in any one of the 50 States—between the new townhouse in Manhattan and her rambling cottage at Hyde Park. Each of her residences has the same flavor as any place, including the White House, in which the Roosevelts ever lived. The decor, if you can call it such, is a melange of family photographs, mementos of Father, water colors by the late Louis Howe and other amateur artists, autographed pictures of world figures, well-worn furniture, bric-a-brac, and some plain junk from the four corners of the earth—almost every piece, of course, with a story behind it.

As for Mother's daily schedule—any day—it wearies me just to think about it. She usually arises any time between 6 and 7 a.m., never later than 7:30. Often she entertains departing house guests at the breakfast table, then herself takes off for New York or Washington or elsewhere for a full day of meetings, interviews, and speeches. Before the day is over, she will have dictated one or two newspaper columns and answered a batch of her interminable correspondence. Nightfall will find her back at Hyde Park or New York or starting off for somewhere else to make still another speech. If she is asleep by 1:30 a.m., she is lucky; often she does not get to bed until 3 a.m. Frankly, I don't know how she does it, but her energy is boundless, and she was telling the exact truth when she wrote recently: "At present I look like Methusaleh, but I feel no older than my youngest friends. I am sure that I am no more exhausted at the end of a busy day than many who are half my age."

Mother still is here—very much so—and I pray she will be with us for many years. It is gratifying to all of us who love her so dearly that the calumnies, the vicious libels, the tasteless jokes about Eleanor Roosevelt have all but vanished. True, there still is a crackpot fringe ready to condemn anyone who bears the name of Roosevelt—Hyde Park branch, of course. But from every corner, in this country and abroad, words of respect and affection may be heard whenever the name of Eleanor Roosevelt is mentioned.

Even if I am her son, I think she has earned these tributes and that she has established her place not only in the pages of history but in the hearts of her countrymen. I feel certain that Father would be enormously proud of how Mother has molded her life without him, just as she was—and is—proud of him. To have had such a father and to have such a mother is the greatest legacy a son could ask.

The United Democratic Leadership Team Plan for the Democratic Party and Workers in Upper Manhattan, New York City—This Team Is Composed of the Elected District Leaders Representing 167 Election Districts, 1,300 Trained Workers, and 121,000 Registered Voters

---

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 3, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following material:

THE UNITED DEMOCRATIC LEADERSHIP TEAM PLAN FOR THE DEMOCRATIC PARTY AND WORKERS IN UPPER MANHATTAN, NEW YORK CITY—THIS TEAM IS COMPOSED OF THE ELECTED DISTRICT LEADERS REPRESENTING 167 ELECTION DISTRICTS, 1,300 TRAINED WORKERS, AND 121,000 REGISTERED VOTERS

SECTION I. MEMORANDUM OF PURPOSE

(By Borough President Hulan E. Jack, chairman, the United Democratic Leadership Team)

Down through the ages New York City and the Borough of Manhattan have always

successfully opened its arms to emigrants who were offered great opportunities to develop in continuous growing environment of democratic principles.

These emigrants came from all parts of the world and fully participated in the benefits of this society. Finally, they were absorbed and integrated into the total life of our city.

More recently migrants came from the South to Manhattan to seek opportunities. They too settled here with the hope and the determination to participate without handicap and gain full acceptance in the life of our society.

As these various national groups came, their natural foliage of security was to move into areas where relatives, friends, and members of their racial or national minority resided. In order to participate, they registered and cast their votes to help elect the local officials, city, State and National candidates for office.

The zeal to have a voice in the affairs of the community took many of the given minority groups to the polls. Their homogeneous relationship, born out of the desire to be together, yet a part of the whole, introduced the political identification of these minority groups.

Each of these minority groups is comprised of individuals who are linked together through ethnic and cultural ties. This is the historical background of the growth of minority groups within the political structure of our city.

As the result of participation of these minority groups, a formula was developed in the political structure which is known as the method of assuring each minority a fair share of benefits.

Therefore, in the spirit of continuation of this policy; and in order to strengthen the minority group of which the undersigned Democratic leaders are members; and, as well as to encourage the fullest participation in the total political life of our city, we now embark on a united program of action.

As elected Democratic leaders working within the framework of the New York County Democratic organization, we are fully cognizant of the political growth of our community. We are responsive to the wishes of our constituents that unity is desirable. We, therefore, have answered affirmatively in order to accord greater service to the community. Further to deserve the confidence of the people, we will work diligently to expand the channels of opportunity for all of our citizens without regard to race, creed, color, or national origin.

We recognize that the churches have given inspiration to the great progress made through the years. They are continuing their great influence in helping to shape the future of our citizens in the community by promoting the civic, social, political, and economic welfare. We hail these spiritual leaders and assure them of our wholehearted cooperation. We will also seek to solicit and attract various civic and social leaders as well as citizens possessed with technical knowledge to work with us in advisory capacities as well as develop programs.

We earnestly advocate that qualified persons of integrity be given job opportunities on a basis of full equality of opportunity. We will engage in a program to stimulate our constituents to continue to prepare themselves through education, specialization and training to qualify for job opportunities on a competitive basis free of discrimination at all times.

To encourage the upgrading of deserving, loyal and hard working career civil servants without regard to race, creed, color or national origin to positions in the executive and administrative strata of governmental agencies.

To advocate the eradication of slums and to promote rehabilitation by construction of residential facilities at the rentals that our great reservoir of middle- and low-income people can afford to pay.

To give of our energies to promote programs that will be a part of the master plan for the better life of all of our citizens in the various interrelated neighborhoods and to achieve a more perfect understanding among all of our citizens. In this way no community will be neglected.

We are aware that all the hopes and aspirations of a people, a minority or a group rest in the strength of the political structure. For it is the platform of the political party that attracts the voter and elects the public officials to promote the programs essential to the progress through improvements which the people want.

We, therefore, deem it our profound duty, since we believe that concentrated effort rather than disorganized, will aid the common good, to unite within the framework of the New York County Democratic Organization for the achievement of these aims.

Several committees have and will be formed to implement the programs advocated by the united Democratic leadership team. These will include the economic development, housing, democratic political action (register and vote), health and hospitals.

It is in this spirit of togetherness, cooperation, and teamwork among the many neighborhood Democratic district leaders that a greater measure of service can be rendered on behalf of the total program for the welfare of all of our citizens alike in this great Borough of Manhattan.

We, therefore, pledge to abhor racism as against the best interests of our democratic ideals and, feeling that God has given America the role of inspiring man everywhere with the yearning for freedom, for understanding among men, for a better life and for peace, we are joined to help achieve these glorious goals.

SECTION II. ECONOMIC OPPORTUNITIES

(By Hulan E. Jack)

In our struggle for equality, there are many areas where we of the united Democratic leadership team will be concentrating our efforts. I would like to make a few remarks about our goals and our fight for economic and financial equality.

Out of the national market of $1 billion which Negroes spend yearly in buying, we spent about a half a billion locally and another half a billion in downtown stores. This figure is mainly in retail stores and does not include rent and other services, just across the counter sales.

We spend more than $150 million a year in food stores, yet there is not a single Negro salesman for bread, milk, and many other products. We have been able to get some of our people selling in these stores, but not selling to most of these stores.

In another area, Harlem spends more than $60 million in the whisky business, but Negro salesmen receive only token orders from the big white merchants who own most of the bigger stores. Already your united Democratic leadership team has gone on record as supporting the fight of the liquor action committee. We will support our liquor salesmen in their endeavor to get a fair share of the sales business regardless of the stand taken by the retailers, the industry, or the union. They can rest assured that in their fight for justice we are supporting them and I am appealing to all of you tonight to spread the word—don't spend that dollar for beer, whisky, gin, rum, or any other alcoholic beverage where Negro salesmen are not given the same treatment as white salesmen. Many of us have relatives or friends in this struggle and we must campaign unitedly to make things better for them and our future generations.

I could go on and on pointing out that in nearly every field where selling is involved, we are not getting our fair share of jobs in our own community, not to bring up the point that outside of Harlem, we don't even get a peak in.

All of us know here that in the political arena we are getting nothing but token jobs, and this is also true in many white-collar office and professional jobs. Part of our fight in the coming months will be not only to see that our children are preparing themselves to take jobs in a completely integrated society, but to urge and to stress the use of our voting and purchasing power wisely that we, as Negroes, support those who support us by giving us equality of opportunity.

The subject of economics and finances has also a deeper significance in terms of those of us in the community of Harlem, one which we should feel somewhat ashamed.

It is important to all of us that this community become organized economically as well as politically, and we will make a real effort to organize in this community its financial institutions, its contractors, and the entire business community—all to be mobilized for the benefit of the whole.

We have a savings and loan association which could be a great bulwark of economic stability if it were supported as vigorously as it should be supported.

The Carver Federal Savings & Loan Association is a $10 million institution and can be made into a $100 million institution by proper support.

I am not saying that the Carver has not grown, for its assets have increased by $400,000 in the last 3 months, and it has lent to people in this community a sum of half million dollars in the same period.

We intend to seek out trained and qualified young people and help them prepare to be leaders equal to meet the competition in an integrated society. We shall seek to organize small real-estate and finance companies in our own groups to support our local community businessmen who are pressured by the major chains. We intend to work together, forgetting petty differences, not thinking selfishly, but for the good of the whole and of our community toward opening up opportunity for Negro business and of seeking your support in keeping these businesses thriving.

These are just some of the challenges that face us economically. I have only scratched the surface, but I am pretty sure you get some of the ideas of what I am talking about.

A recent national survey pointed out that the average Negro family has an income of only about $2,300, while the average white family has an income of about $3,400. While these figures are based on a national average, they hold correspondingly true for use here locally.

This is why in all of our discussions as a united community team of political leaders, we of the united Democratic leadership team will strive to erase any difference in this ratio and bring to our fellow citizens a greater economic standard.

We are tired of tokens, we now want steak or the ability to buy steak. We want it for every family in Harlem. We feel that through greater registration and voting, through pooling wisely the finances of the citizens of this community, by militant and positive fighting to open new avenues of opportunity for your youth, and by all of us, you and I, ignoring individual differences, and looking at the greater objective, we can bring the economic standard of this community equal to that of any other group.

To deviate a bit, up here we have a great deal of freedom while down South much of our freedom is curtailed. The team wants it known that they are supporting the sitins of the southern students and advocate

the picketing of the variety chains that refuse to serve people on a nonsegregated basis.

Thus, I feel, we are entering a new horizon in the struggles all of us here in Harlem have fought for over the years. We now set our sights on breaking the economic stranglehold on our community. I, for one, and I have already received the assurances of all of the team that we are united in this, will not cease in this battle. We ask only your unqualified support in this fight for yourselves and your future generations.

SECTION III. REPORT ON HARLEM MEDICAL CENTER

(By Mark Southall)

There is no need to remind you of the number of years we have been struggling to get an up-to-date and modern Harlem hospital center. As you know, the board of estimate on July 23, 1959, authorized the acquisition of the privately owned property in the westerly portion of the block between West 135th and West 136th Streets for the new hospital. Title to the site vested last year. In November of last year, the board of estimate authorized a contract for the services of the architects, Ferrenz and Taylor, for the preparation of complete drawings for the new 500-bed hospital and expansion of facilities at a few of $875,000.

This is known as phase I and is comprised of the new 500-bed hospital which will be a 19-story building. The 500 beds will be allocated as follows: 230 for surgical and surgical specialties; 100 for gynecology; 100 for obstetrics; 70 for rehabilitation. There will be educational facilities for 250 student nurses with classrooms and laboratories, administrative and instructors' offices, offices and rooms for nurse-anesthetists schooling. In addition thereto, there will be a medical and nursing library, and a 400-seat auditorium. Over and above the 500 beds in the hospital building there will be 34 beds in the admitting division. This new hospital building will be fully air-conditioned, will have new staff quarters for interns and will have the usual ancillary facilities to serve the entire hospital center, such as administrative offices, central sterile supply, pharmacy, surgical suites, pathological laboratories, radiology, and radiation therapy, central kitchen, and dining facilities for house staff and hospital personnel, etc. The estimated cost of phase I alone is $17,025,000. It is expected that the preliminary plans for this new building will be finished by the end of May. By late summer, authorization for the preparation of the final plans should be processed or approved. These final plans must be completed within 12 months thereafter. Construction on the new building should start not later than January 1962, although they are pressing for an earlier date. The bureau of real estate is scheduled to start moving tenants from the site in the fall of this year.

Phase 2 of the overall improvement will be started on the completion of the new building. It will provide a new nurses residence building with 250 bedrooms and with appropriate lounge, kitchenette and laundry facilities. It will also contain physical education and recreational facilities such as gymnasium, swimming pool, game and club rooms. There will be a student nurse infirmary and health facilities. There will be two suites for staff supervisors of residence and educational program.

The new nurses residence building will be erected on the site of the old Lenox Avenue building. Other parts of the second phase include alterations to the major portion of the existing women's pavilion to provide geriatric services. The kitchen and dietary services will be modernized in the women's pavilion, pediatric building and the general care building. Premature nurseries in the existing pediatric building will be air conditioned. Parking and/or garage facilities will be provided for approximately 250 cars. Recreational facilities will also be provided for doctors and student nurses.

It is estimated that phase 2 will cost an additional $7 million.

When redevelopment of the Harlem hospital is complete, there will be a total capacity of approximately 1,200 beds.

When completed the city will have spent about $35 million on Harlem Hospital.

SECTION IV. REPORT ON HOUSING

(By J. Raymond Jones)

For many years New York City has been pushing its public housing and slum clearance program. Today, New York City is the unquestioned leader in the construction of low-rent public housing and so-called middle-income housing under title I of the Federal Housing Act. In recent years the middle-income housing program has been supplemented by the Mitchell-Lama law designed to encourage limited-profit housing, renting around $25 a room. New and more unique attacks on blight and deterioration were commenced by the urban renewal program which is still in the pilot project stage and the community conservation program designed to arrest the deterioration of property by alteration, renovation, and relocation of families from overcrowded areas.

What is the objective of each of these programs and how effective have they been in meeting our housing needs?

Public housing legislation was first enacted in New York in 1939. The stated objective was not only to eliminate unsanitary and substandard housing but also to provide housing for persons of low income which would not be overcrowded, and provide proper light, air, and open space. Public housing necessarily operates at a loss in supplying a housing need which private enterprise admittedly cannot meet.

Once started, public housing construction moved forward by leaps and bounds. By 1959, there were 109,000 apartments in public housing projects accommodating 440,000 persons. When all such projects presently in construction or planning are completed, about 600,000 persons will reside in public housing. This is almost as many people as live in the entire city of Buffalo, the second largest city in the State.

Title I Housing was designed to provide so-called middle income housing for persons ineligible for public housing but unable to afford the high rents of unsubsidized private housing. Under this program the Federal Government and the city share the loss incurred in writing down the cost of land which is sold to private housing companies for the purpose of building apartments which will rent at reasonable rates. There are 16 title I projects completed or nearly completed and eight additional projects have moved into the advanced planning stage. When these 24 projects are completed they will total 40,242 apartments. Unfortunately, too many of them are beyond the financial means of the average family in our community.

The Mitchell-Lama limited dividend and limited rent housing program has two phases, one administered by New York City and the other by the State. Thirteen projects have been approved under the State program for New York City with $61 million earmarked for their construction. The balance of the $150 million State funds for limited profit housing has been allocated to communities outside New York City. New York City has also made $150 million available for construction of limited profit housing. Twelve projects have been approved and 10 additional applications are now being processed.

The Urban Renewal program is essentially in the planning stage and cannot be expected for many years to move beyond the pilot project area which covers the area 87th Street to 97th Street from Central Park West to Amsterdam Avenue.

The community conservation program during its short existence has active programs going in Chelsea, lower Manhattan and downtown Brooklyn. A fourth program is scheduled to get underway in east Harlem in the near future. However, it must be remembered this is a conservation activity which strived to reduce population density as one of the means of stemming further deterioration of buildings deemed worthy of saving, thus no gain in housing units will be realized.

Certainly, New York City has a forward looking and comparatively vigorous housing program. But, as residents of the Harlem community, it is of urgent concern to us the extent to which our community is sharing in and benefiting from each of these programs.

There can be no argument as to the sufficiency of the public housing in our community. One must stop to reflect whether the amount of public housing is not out of balance with the overall needs of the community. Since the construction of Harlem River houses, one of the first two public housing projects built in our city, giant low and medium rent public housing projects have continued to rise into the skyline of Harlem. Today, there are at least 10 such projects completed or under construction in our community and at least four others are in advanced planning.

We have no quarrel with this effort to provide decent housing for those of us whose incomes have failed to keep pace with the constant rising cost of living. But, you know as I do, that our community also has many hardworking persons who are ineligible for public housing and who require privately owned housing with apartments renting from $19 to $30 a room per month. This we must have if we are to stem the flight to the suburbs of the many families who economically have long been the backbone of our community.

The Polo Grounds is being sought by the Housing Authority for another public housing project. This vacant land offers an excellent opportunity for the people of the Harlem community to sponsor and construct limited profit housing at a rental that persons ineligible for public housing can afford. A possible approach to housing on this site is a combination of public housing and limited rent, private housing. This would be a giant step toward the desirable goal of balance housing for the Harlem community.

To provide the kind of housing that the families of Harlem need and demand and at rents they can afford we must look to those programs designed to encourage and make it economically feasible for private enterprise to construct housing at reasonable rents. The title I and Mitchell-Lama laws were enacted to accomplish this specific goal. I have pointed out the enormity of these programs in our city, now let us take a close look to see to what extent our community has benefited from them.

Of the 16 title I projects completed or nearly completed in New York City two are squarely in the Harlem community. These two are: Lenox Terrace and Delano Village. Lenox Terrace actually resulted in a loss of 352 dwelling units, while Delano Village resulted in a net gain of 646 apartments. The net gain of 294 apartments from these two projects do not begin to make a dent in the continuously growing demand for housing by our middle-income families. Nor do their average cost per room of $45 meet the requirement of our community.

Of the 25 Mitchell-Lama projects that have been given the green light in New York City not a single one is yet earmarked for the Harlem community. Through the efforts of the united Democratic leadership team two sites are now being processed in mid-

Harlem, one of which has advanced to the preliminary planning stage, and we expect final approval by early summer. The other requires further helpful assistance by departments of city government. In this connection we request the city planning commission to rezone the areas as specified in our recent report to the commission, from a M–3 and M–1 zone to a R–8 zone. In addition, we urge the board of estimate to expedite the removal of the department of sanitation garage from its present site adjoining a developing residential area. These actions will make available an excellent site for our second proposed Mitchell-Lama development.

Housing is a human problem but housing is also an economic problem. A large number of our friends and neighbors through hard work and frugal management have acquired and improved many of the most desirable parcels of real estate in our community. The ownership of land has during the memory of men been one of the principle symbols of stability and status in the community. The advent of the blockbusters and massive housing appear to be tolling the death knell of extensive individual ownership of real property in Manhattan. Does this mean that we are destined all to become itinerant tenants in our community?

It must not come to this. The tools of government have been designed to enable men of foresight and with modest means to take the leadership in the redevelopment of their communities. However, these tools will be of little use without a sympathetic and helpful attitude of the officials in whose custody they have been placed. What good to us is a forward-looking program if it is administered in a manner that overlooks our community?

It cannot be done by a few. For a few voices crying in the wilderness cannot gain the constant attention of active and busy city officials. Housing development in Harlem is not only of vital significance to the community—it is vitally important to the entire city. Ways of moving ahead constructively and sensibly is to utilize committees of Harlem residents. A housing committee made up of competent and knowledgeable members of the community would serve as an effective instrumentality to conduct surveys, compile facts, and to present and pursue meaningful and constructive programs before responsible city officials. A finance committee headed by a man of finance and with members learned in the affairs of finance would be of invaluable assistance in working out arrangements whereby funds would be made available to responsible community groups for the purpose of constructing private rental or cooperative developments in the community.

The proposed housing and redevelopment board which is scheduled to take over and administer the combined functions of title I, Mitchell-Lama, urban renewal, and community conservation should utilize the wealth of professional and technically skilled persons of our community in policymaking, administrative, and technical positions. In this connection we urge Mayor Wagner to consider our recommendation that he appoint to this board the Honorable Robert Weaver, one of New York's outstanding citizens and a housing expert of the greatest ability and highest integrity.

The community conservation program should at the earliest possible time extend its operation into the Harlem community as an aid to the homeowners in restoring and improving the many structually sound brownstones which predominate our community. These homeowners will be found to be excellent partners in conservation for they are constantly striving not only to maintain their property but to improve their entire neighborhoods.

Finally, any construction program should emphasize the use of uneconomic commercial and vacant land first. By so doing additional housing units will be available to families that will have to be relocated at some future time.

The desires and goals of the people of Harlem does not differ substantially from those of any other community. We are a community with varied incomes, varied interests and varied needs. We desire to retain the physical and economic roots which we have sunk so deeply into the Harlem community. We desire a balanced community. Public housing for those who need and desire it, private, middle-income housing for those who can afford it, and conservation of the many good and sound buildings that warrant it. But, most of all, we want to play a major part in that development. If those charged with the responsibility of coordinating the redevelopment of our city will remember this and will tap Harlem's abundant reservoir of brains, skill, and expert experience they will reap a broad base of support and goodwill from which our entire city will benefit.

SECTION IV. JOBS

(By Congressman ADAM C. POWELL)

These are the indisputable and incontrovertible facts of rank discrimination now being practiced in the city of New York.

For some reason or other, a 6 percent quota seems to be reserved exclusively for Negroes holding appointive jobs in the city of New York. They hold 6 percent of the combined commissionerships and board memberships. They hold 6 percent of the judgeships.

Yet, Negroes constitute a thumping 21 percent of the voters in New York County—121,000 registered Democratic voters.

1. Of the 116 commissioners, deputy commissionerships and board members that run the city's 33 major departments, only seven are Negroes—6 percent.

Of the 192 judgeships in five courts where vacancies are filled by the mayor, only 12 are Negroes—6 percent.

In the five commissions which deal primarily with the city's development, real estate and the handling of money, not a single Negro is a member.

In special sessions court where over 75 percent of the defendants are Negroes, there is not a single Negro judge in the group of 24 judges. Special sessions courts handle misdemeanors.

2. There are no Negro judges in the court of special sessions, county courts, surrogates court, court of appeals, court of claims, nor the supreme court.

3. Two Negro judges now sit in the court of general sessions.

4. One Negro sits in the appellate division of the supreme court.

5. Negroes do not fare much better when it comes to commissionerships. There is only one Negro commissioner in the city's departments. He is welfare commissioner.

6. There are two deputy commissioners: department of hospitals and the department of correction.

7. The four other Negroes who serve on the city's boards and commissions include: board of education, board of water supply, civil service commissioner and parole commissioner.

SENATE

WEDNESDAY, MAY 4, 1960

The Senate met at 12 o'clock meridian, and was called to order by Senator MIKE MANSFIELD, of Montana.

Rabbi Morris M. Hershman, of the Joliet Jewish Congregation, Joliet, Ill., offered the following prayer:

Eternal Father of all men: As this august body, the Senate of the United States of America, convenes this day, we pay homage to Thee, sovereign of all nations, and ask Thy divine benedictions.

Thy faithful servants here assembled, who have been chosen to speak for all the citizens of this great land, stand upon a pedestal of tradition and power, of privilege and responsibility. Do Thou imbue them with the spirit, the zeal, the courage, and the faith of our forebears, that their deliberations may strengthen the foundations of our beloved Republic in its domestic and international affairs.

Be Thou, O Heavenly Father, with the President of these United States, as he prepares to confer with the leaders of other lands. Make manifest to all nations that as our leaders represent us, we stand behind them, not as Republicans or Democrats, not as Protestants, Catholics, or Jews, but as Americans all, dedicated to the proposition that in Thine eyes all men are created equal.

Grant unto us, O Lord, wisdom equal to our strength, courage equal to our responsibilities, and vision equal to the challenges before us. May we so conduct our affairs and the affairs of our Nation that we may earn Thy grace of well-being for all Americans and peace for all mankind.

Bless Thou, O God, the work of our hands; the work of our hands, bless Thou it. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., May 4, 1960.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. MIKE MANSFIELD, a Senator from the State of Montana, to perform the duties of the Chair during my absence.

CARL HAYDEN,
President pro tempore.

Mr. MANSFIELD thereupon took the chair as Acting President pro tempore.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Tuesday, May 3, 1960, was dispensed with.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed the following bills and joint resolution, in which it requested the concurrence of the Senate:

H.R. 1493. An act for the relief of Antonio Mendez Garcia and Palmira Lavin Garcia;

H.R. 2085. An act for the relief of Mrs. Margaret Baker;

H.R. 2588. An act for the relief of Buck Yuen Sah;

H.R. 2665. An act for the relief of Briccio Garces de Castro;
H.R. 2671. An act for the relief of Antonia Martinez;
H.R. 2823. An act for the relief of Fumie Yoshioka;
H.R. 3789. An act for the relief of Preciolita V. Corliss (nee Preciolita Valera);
H.R. 4437. An act for the relief of Mrs. Mauricia Reyes;
H.R. 4670. An act for the relief of Karnail Singh Mahal;
H.R. 5589. An act for the relief of Michael J. Collins;
H.R. 7033. An act for the relief of Jack Darwin;
H.R. 7367. An act for the relief of Chieko Sakano and her child, Masao Sakano;
H.R. 7895. An act for the relief of Gloria Anne Loveday;
H.R. 8156. An act for the relief of Jack Kent Cooke;
H.R. 9563. An act for the relief of Josef Enzinger;
H.R. 9652. An act for the relief of Lt. Col. Alonzo C. Tenney;
H.R. 9760. An act for the relief of Sam Doolittle;
H.R. 10230. An act for the relief of Louis J. Rosenstein; and
H.J. Res. 688. Joint resolution for the relief of certain aliens.

HOUSE BILLS AND JOINT RESOLUTION REFERRED

The following bills and joint resolution were severally read twice by their titles and referred to the Committee on the Judiciary:

H.R. 1493. An act for the relief of Antonio Mendez Garcia and Palmira Lavin Garcia;
H.R. 2085. An act for the relief of Mrs. Margaret Baker;
H.R. 2588. An act for the relief of Buck Yuen Sah;
H.R. 2665. An act for the relief of Briccio Garces de Castro;
H.R. 2671. An act for the relief of Antonia Martinez;
H.R. 2823. An act for the relief of Fumie Yoshioka;
H.R. 3789. An act for the relief of Preciolita V. Corliss (nee Preciolita Valera);
H.R. 4437. An act for the relief of Mrs. Mauricia Reyes;
H.R. 4670. An act for the relief of Karnail Singh Mahal;
H.R. 5589. An act for the relief of Michael J. Collins;
H.R. 7033. An act for the relief of Jack Darwin;
H.R. 7367. An act for the relief of Chieko Sakano and her child, Masao Sakano;
H.R. 7895. An act for the relief of Gloria Anne Loveday;
H.R. 8156. An act for the relief of Jack Kent Cooke;
H.R. 9563. An act for the relief of Josef Enzinger;
H.R. 9652. An act for the relief of Lt. Col. Alonzo C. Tenney;
H.R. 9760. An act for the relief of Sam Doolittle;
H.R. 10230. An act for the relief of Louis J. Rosenstein; and
H.J. Res. 688. Joint resolution for the relief of certain aliens.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour; and I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SESSION OF THE SENATE

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Committee on Interstate and Foreign Commerce be authorized to meet in executive session during the session of the Senate today.

I also ask unanimous consent that the Antitrust and Monopoly Legislation Subcommittee of the Judiciary Committee, the Internal Security Subcommittee of the Judiciary Committee, and the Subcommittee on Post Office of the Committee on Post Office and Civil Service be authorized to meet during the session of the Senate today.

These requests have been approved by the minority leader.

The PRESIDING OFFICER. Without objection, it is so ordered.

RELATIONS BETWEEN THE EXECUTIVE AND THE CONGRESS—SPECIAL SESSION THREAT

Mr. JOHNSON of Texas. Mr. President, I wish to make a very brief observation. I ask permission to have printed at this point in the RECORD a statement from a Republican spokesman who attended a White House meeting, a so-called breakfast or, I guess, one of the pep-up rallies they are having down there, these days.

I am surprised that they should become so panicky so early. But Representative BROYHILL, a Republican from Virginia, states that—

"President Eisenhower is thinking about calling Congress into special session if the House and the Senate slash his foreign aid program substantially."

BROYHILL made the statement after he and 16 other Republican Congressmen—

I repeat, Mr. President, Republican Congressmen—

had breakfast with the President at the White House.

BROYHILL said the President made no specific threat—

I guess it was just a general threat—

but that he got the "definite impression" that Eisenhower would call Congress back into session if the mutual security program is materially cut.

Mr. President, I have been in and out of Washington for a good while, and I have not seen many Presidents who enjoyed having Congress in session at any time. If President Eisenhower will come here and will stay with us, and will see that Vice President NIXON is here with us, I am sure Congress is willing to do whatever it may be necessary to do in order to transact the public business.

If he sees fit to call a special session, as the leader of the majority party, I say to him that that is his constitutional right, and he can do so.

In the first place, I believe Congress is going to give careful and prudent consideration to his mutual security bill. We just passed—only the day before yesterday—the authorization bill. I supported the President as strongly as I knew how, in connection with that measure. I think those downtown were a little disappointed—because we passed the bill before they could get on television with their speeches, to talk about it, that evening. But Madison Avenue does not understand legislative procedures as well as the legislators do; and the bill had already passed through the House of Representatives and through the Senate in substantially the same form requested by the President, without the benefit of any threats, suggestions, or even statements by spokesmen that we would have to meet in special session.

I think when we do get to the mutual security appropriation bill, it will reflect the outcome of the kind of consideration every Congress always gives a President's requests. The Members of Congress are very thorough and very careful. They are not rubberstamps. We do what we think is in the best interest of all the people. And I am sure the people think we do, too—as reflected by the outcome of all the elections with which Congress has been faced since 1952.

As a matter of fact, I do not believe history will ever record that any President was so unsuccessful in getting the members of his party elected to Congress as the present President has been; and I do not think Congress is going to alter its judgment simply because of the threats or the whip cracking or the pep-up breakfasts.

Mr. President, I desire to turn now to another matter.

Mr. DIRKSEN. Mr. President, will the majority leader yield at this point?

Mr. JOHNSON of Texas. Well, Mr. President, I have two or three matters to discuss. I shall yield to the minority leader when I get through presenting them. He may want to talk on them, because I know it is his responsibility to make some statement, at least to show that he is on the floor, representing what is left of the Republican Party.

Mr. DIRKSEN. But two of the members of my party are sitting with me, on my side of the aisle; and only one member of the other party is sitting with the majority leader, on his side of the aisle.

Mr. JOHNSON of Texas. That is because one of ours is replacing your Vice President in the Chair.

Mr. DIRKSEN. But the total membership of the Senate is divided on the basis of two on the other side of the aisle for every one on this side of the aisle.

Mr. JOHNSON of Texas. Oh, yes.

Mr. DIRKSEN. So many more of the Senator's colleagues should be in the Chamber now.

Mr. JOHNSON of Texas. I am sure they will be here in time to pass whatever bills come before us.

Mr. DIRKSEN. If the Senator from Texas will yield——

Mr. JOHNSON of Texas. I shall yield to the Senator from Illinois in a minute, if he will permit me to finish my remarks.

Mr. DIRKSEN. Well, I wish to say that I can remember——

Mr. JOHNSON of Texas. Mr. President, I cannot be responsible for what the Senator from Illinois remembers; but I wish to make a comment about the Indiana popularity contest on yesterday.

Mr. President, I have the floor, do I not?

The ACTING PRESIDENT pro tempore. The Senator from Texas has the floor.

THE INDIANA PRIMARY

Mr. JOHNSON of Texas. Mr. President, in referring to the Indiana popularity contest on yesterday, I wish to insert in the RECORD a statement from the ticker from Indianapolis, and to comment on it.

Primary results do not give a clear picture of what is going to happen in November. If any of the primaries would do so, however, it would be the Indiana primary, where the total vote in the Democratic presidential preference primary was greater than the total Republican vote.

I do not think this is a question of personalities. I think the Democratic Party is going to sweep the country in November, from the courthouse to the White House.

One of the reasons why I think the Democratic Party will do that is that the Republicans look backward. They are allergic to looking forward.

Republican National Chairman MORTON has stated, according to the UPI ticker of this morning:

> Republican National Chairman MORTON said today the Truman administration's record would be at issue in 1960, regardless of whether the Democratic presidential nominee likes it.

Mr. President, it seems to me very significant that our colleague, the personable, attractive chairman of the Republican National Committee, Mr. MORTON, feels that he must go all the way back to the Truman administration to find an issue for 1960. Mr. Truman has been gone from Washington and from power for almost 8 years. But it is an unfortunate fact that the Republicans never talk about current issues; they always want to go back to the past. Of course, that is understandable; they only hope the voters have short memories and do not recall what happened nearly a decade ago.

Well, Mr. President, all of us know that Mr. Truman took care of himself fairly well in 1948, even though someone else took care of the polls. He proved in 1948 that the people believed in a man who believed in the people.

As for the Democratic Party, I want to assure, insofar as I am able to do so, that we are not going back to Mr. Coolidge or to Mr. Harding, or even to Mr. McKinley. The Democratic Party is ready now, as it is in any election year, to comment on the real issues that are before the American people. And if the President and the Vice President will perform their constitutional duties, which are clear, I am sure, speaking for the humble Members on this side of the aisle, that the Senate and the Congress will perform their constitutional duties, and that before this session ends, regardless of the political speech we received yesterday, which was delayed a few days because the members of the opposition party could not make up their minds about the health plan that was announced previously, they will realize that we have faced up to the issue of the 1960's, that we have dealt with them responsibly, and that we welcome to our fold any of their flock who may desire to vote and act and talk in terms of the 20th century.

Mr. DIRKSEN rose.

The ACTING PRESIDENT pro tempore. The Senator from Illinois.

Mr. JOHNSON of Texas. I yield to the Senator from Illinois.

Mr. DIRKSEN. No. I will not have the Senator yield——

Mr. JOHNSON of Texas. I thought the Senator asked me to yield to him.

Mr. DIRKSEN. I asked for the floor in my own right.

Mr. JOHNSON of Texas. The Senator has that right. I want to be able to ask questions. He asked me to yield.

Mr. DIRKSEN. No.

Mr. JOHNSON of Texas. That is typical of the Republicans. They cannot make up their minds.

Mr. DIRKSEN. I can make up my mind.

Mr. President, I ask for recognition.

The ACTING PRESIDENT pro tempore. The Senator from Illinois.

Mr. DIRKSEN. Am I recognized in my own right, or not?

The ACTING PRESIDENT pro tempore. Yes.

Mr. DIRKSEN. I have the floor, and the distinguished majority leader can ask me a question any time he desires to, but I have some rights here, and I mean to assert them.

If the majority leader wants to know——

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. DIRKSEN. I will yield after I am through.

Mr. JOHNSON of Texas. Oh, yes. Now——

Mr. DIRKSEN. Now, if the majority leader wants to know how the President of the United States feels about a special session, all he has to do is call him. He is only 16 blocks away from here, and the Senator will have no difficulty getting him on the telephone at any time. He will not have to depend on the ticker tape or a statement by a Virginia Congressman that I have not seen.

I think I know how the President feels about a special session. I have not said anything about it. But I know how he feels about it. Certainly, he would be the last one to take advantage of it, particularly in an election year, when we have a lot of candidates going about the country, performing their political duties. But the President is mindful of that fact. He knows his duty. The Vice President knows his duty. There are some Senators who ought to know their duties, but who have not been too diligent in their attendance. I would merely refer to the fact that an observation was made with respect to whether the President and Vice President know what their duties are. They do know their duties.

We have issues, Mr. President, and we do not have to act as if we do not. I have to remind my beloved friend from Texas—and I do love him, and he knows it—that for 24 years the Democrats were running Herbert Hoover, long after he was out of office. I have never seen the "beat" of that specter, or ghost, or something that happened long ago, continuing to be an issue for so long.

Mr. Truman is very much about and, frankly, I love to make him an issue, because there is a rare and delightful Missourian lack of inhibition in Mr. Truman when he talks back and I like that. There is something colorful about his language that we find only in the "show me State." So if we run against Mr. Truman, he has been out of office less than 8 years; Mr. Hoover was out of office for 24 years, and they were still running against Mr. Hoover. And I remember some of the campaign speeches I made in the Carolinas, where the issue of Mr. Hoover was coming up.

We can bring up Mr. Truman because the inheritances with which we have had to deal—grim, bitter, difficult—were the legacy of the Truman administration, along with a succession of colossal deficits. The taxpayers will still be interested in knowing who has been shepherding the fiscal affairs of this country and trying to protect the sound dollar. So we are dealing with an inheritance, you see, Mr. President, and that goes back only about 8 years.

We are not allergic, and I do not know about this sweep in Indiana, but I do know what the Hoosier voters do in November.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. DIRKSEN. Yes.

Mr. JOHNSON. What did they do in the election last November with respect to Members of the House and the Senate?

Mr. DIRKSEN. The election last November was not a presidential election.

Mr. JOHNSON of Texas. The Senator referred to the last November election.

Mr. DIRKSEN. The election last November was not a presidential election.

Mr. JOHNSON of Texas. The Senator said he knew what they did in an election. Is it not a fact that they elected a Democratic Senator, and is it not a fact that they wiped out almost the last vestiges of Republicanism in the House delegation?

Mr. DIRKSEN. Of course, the voters of a State——

Mr. JOHNSON of Texas. The Senator knows that to be a fact.

Mr. DIRKSEN. They sometimes become a little misguided in the effervescence of a campaign; but just wait until November 1960.

Mr. JOHNSON of Texas. Will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. JOHNSON of Texas. I commend the Senator for his willingness to look ahead to next November. What I was talking about was that the chairman of his party said we are going to turn the clock back 8 years. My friend from Illinois is a man of vision and understanding, and I think he is a very successful leader of the Republicans and

his viewpoint prevails, but a Member of Congress from Virginia states he was at the White House breakfast and got the impression I have heretofore referred to. Perhaps the Senator from Illinois is correct, and there is no intention of having a special session. If the President and the Vice President want a special session, it is the President's duty to call one. If one is called, we will be here, and we will act responsibly and perform our duty.

The Senator from Illinois says he wants to look ahead to November. He finds himself in disagreement with the chairman of his own party, who wants to look back 8 years. He is not interested in what confronts the people in the 1960's; he wants to go back to what the problems were in 1948. I will say that the last time Mr. Truman ran he took pretty good care of himself, and I imagine he will take care of himself again if they make him the issue. But I hope, in the interest of all the people of America, they will follow the point of view expressed by my able friend from Illinois, rather than the view expressed by the national chairman of turning the clock back 8 years.

Mr. DIRKSEN. My esteemed and distinguished friend from Texas said we were allergic to the future, and I had no more than started talking about November 1960—which is the future—than he rose with this comment. I am prepared to take the November 1960 election——

Mr. JOHNSON of Texas. I commend the Senator.

Mr. DIRKSEN. Rather than a ticker tape in the month of May, of something which is a long way off. I must tell my friend about the country editor in southern Illinois who received a letter from a farmer who dealt in iniquity and evildoing, but, somehow or other, his crops were always much better than the crops of his neighbors who were God-fearing and went to church. He wrote a letter to the editor and said:

DEAR BILL: Why is it that I, an evil person, one of iniquity and evildoing, who never goes to church, always have better crops? Look at how much better my crops are than those of my neighbors.

The editor sent him back a one-line reply which stated:

DEAR JOE: God does not make up his accounts in August.

[Laughter.]

The count is not made up on the ticker tape in May; the count in going to be made up in November. I am ready to stand on that any old time.

As we get a second burst of prosperity, we shall not be allergic about the future. Our opponents can go on and run against Mr. Hoover, 28 years after he was President. We will pick up some of the stitches on Mr. Truman and some of the legacies he left us. Then, of course, there will be a lot of unresolved issues—which are still before us, as a matter of fact.

My distinguished friend the majority leader said the message was somewhat delayed because we could not make up minds on the health insurance issue. The Secretary of Health, Education, and Welfare appeared before the Ways and Means Committee of the House of Representatives this morning. It would appear that the dominant party in another deliberative body has not been able to make up its mind on health insurance, so I expect we shall have to help them. By a vote of 17 to 8, in a very responsible committee in another deliberative body, the Forand bill was put back in the pigeonhole.

It is characteristic of the Republican Party to take a little time and not to be pushed off the rock by all the winds of chance and caprice and political fortune, because when we come along the program will be sound. I have recollections of things which went on the statute books over the 25 years I have been around these diggings, which were so fatal in their defects that finally we had to erase them.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. DIRKSEN. I remember Henry Wallace's Potato Act, and the Bituminous Coal Act. Where are they? They were so foul and so weak and so lacking in virtue that we finally had to sponge them off the statute books.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. DIRKSEN. Now we are dealing with a tremendous problem affecting the senior citizens of the country. When we start down that road, what we do will become an irrevocable and irretrievable act, and we want to be sure that we are on the right road when we start.

Mr. SCOTT. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. SCOTT. The distinguished minority leader has mentioned that there has been some delay in the other body on the health insurance bill this year. I should like to invite the attention of the minority leader to the fact—and ask if he does not agree—that the health insurance bill has been kicking around with the opposition since 1949, at which time former Senator Ives, myself, and a number of other Members of both bodies introduced health bills. For 11 years nothing has been done, until we reach the year of 1960, which has some arcane or cryptic meaning, I suppose, for those who have suddenly become alerted to the needs in regard to the health of the aged. Some of us have waited 11 years for the Democrats to do something about it.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. JOHNSON of Texas. How long has the Senator waited for his President to do something about it, I will ask the Senator from Pennsylvania?

Mr. DIRKSEN. I am going to tell the majority leader.

Mr. JOHNSON of Texas. Mr. President, I always enjoy my friend's comments. I feel for him in this kind of situation.

Mr. DIRKSEN. I do not want him to feel for me, Mr. President.

Mr. JOHNSON of Texas. The Senator yielded to me. I hope he will let me finish my statement.

I feel for the Senator. He has reviewed with all the great facilities of his research staff all the New Deal laws of the first 100 days, all the hundreds and—yea—literally thousands of measures enacted for the benefit of the people during the three long terms of President Roosevelt and the two terms of President Truman, and he has come to us and said, "Oh, yes, we have had to repeal things."

What have we had to repeal? The Potato Act. Have we repealed the securities and exchange laws? Have we repealed the stock exchange law? Have we repealed the Holding Company Act? Have we repealed the Social Security Act? All this socialism is talked about. Have we repealed the Marshall plan?

No. The Senator talks about one little "teninCy" potato bill of Henry Wallace's. There is a fellow raising chickens in New York, who served his country faithfully and to the best of his ability, and perhaps got his name involved. I expect the matter was cosponsored. I will bet he was led into this by some Republican from some potato State, but finally, I guess, he agreed, in the spirit of bipartisanship, to have enacted a potato bill.

Now my friend, after he looks over all the great achievements—the achievements which won World War II, the achievements which saved the Republic in 1933, the achievements which rescued the free world and brought back the life of Germany, Italy, and Western Europe—finds what? What does he find that is wrong? "We have performed a great duty. We have served the people. We are entitled to be remembered, because we repealed the little Potato Act."

Mr. DIRKSEN. Mr. President, I had not the slightest idea that my distinguished friend the majority leader was going to get excited about a piece of ticker tape stating something said by a humble Representative in Congress from Virginia. Had I had the slightest notion of it, and had I taken 10 minutes to sit down and bethink myself, I could for the next 3 or 4 hours recite the book, and I think it would stick.

What about the peace treaties after the war was over? Where were they until this administration contrived a peace with Germany, a peace with Austria, and brought bloodletting to an end in Korea?

Oh, if I wanted to take the time in the morning hour, we would be here all afternoon, and I would have a chance to really recite the score.

I did not want to let go by the item about mutual security. I was at the dinner where the President made what I thought was a forthright and vigorous speech. Yes; we acted on the authorization bill. We have never had too much difficulty with the authorization bill. The President was foreseeing anew that the real problem would arise when we deal with appropriations for mutual security. Already the chairman of the subcommittee of the Committee on Appropriations on the other side is in the public prints, talking about a billion-dollar cut. OK; I will wait and meet the challenge when it comes.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. DIRKSEN. But the President knew when he made his speech Monday night at the dinner that the real prob-

lem with regard to mutual security will come when we consider the appropriation of money with which to implement the program.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield with pleasure.

Mr. JOHNSON of Texas. The Senator knows that invariably, all during the President's administration, each year it has become the responsibility of the Senate to restore substantial amounts to the foreign-aid program. Sometimes we have had to resolve doubts in favor of the administration, when there were real doubts. The Senate has done that, and the Senator knows it.

Mr. DIRKSEN. Mr. President, I shake hands with the majority leader for the way he has stood up on many occasions. I thank him for myself and I thank him for the administration for what he has done.

Mr. JOHNSON of Texas. I thank the Senator. The Senator is always gracious, fair, and just. I want to remind him that he does not speak for all the members of his party. I hope that foreign aid is one instance where he can get them all together in the House and can get them all together in the Senate. If he does, I think we will be reasonably successful in giving the President the kind of program he wants.

I remember that one time I was invited to breakfast with the President.

Mr. DIRKSEN. Did it take?

Mr. JOHNSON of Texas. The President is a very fair man. I do not want to leave the impression that this is an unpatriotic administration, because that would be untrue, and if I tried to leave that impression the people would not believe me anyway.

But the President, beset as he was with many world problems, and troubled as he was with the cut which had been made in his foreign-aid program, when a substantial number of his own party had really "let him have it" in the House, was urging the restoration of some $500 million in appropriations. That is a lot of money, particularly when the money is to be used to build a dam in Taiwan, and money cannot be used to build dams at home. It is pretty hard to explain why it is necessary to build an $80 million dam in Taiwan with foreign-aid money—hocus-pocus, a wonderful investment—but if we want to build a $20 million dam in the United States, which will pay back the money, with a 2-to-1 benefit-to-cost ratio, that is heresy, and anyone who favors it is a "budget-buster." People simply do not understand talk out of both sides of the mouth.

The President was telling me about the need to restore at least $500 million, and I told him I had some doubts about the wisdom of going that far. My people had expressed a good many reservations about the program. The reports which I received from our correspondents who had traveled abroad, and from our Senators and Representatives, indicated to me that there was a good deal of waste in the program, and I hoped we could cut it down.

The President implored me to restore at least $500 million. I went into the Appropriations Committee, and the roll was called. The vote was 12 to 11, so I resolved the doubt in favor of the President, but before I cast that vote I expressed the hope to the President that he would try to protect me from attacks by members of his own party for helping to restore that $500 million. I have enough attacks from members of my own party, and I have difficulty taking care of attacks from both sides.

The President assured me that if I would resolve the doubt in favor of the administration and vote to restore $500 million to the bill, he would do his best to protect me from Republican spokesmen. So I came in and voted accordingly.

I do not know whether Representative BROYHILL made the statement attributed to him or not, but I think he is an honorable man. The UPI is an honorable news service, and I suppose it is reasonably accurate.

At any rate, when I looked at the ticker, what do Senators think these eyes beheld? There was the statement by a Republican Representative:

> Ike asked LYNDON to breakfast and it cost us $500 million. Thank God he did not ask him to stay for lunch.

[Laughter.]

I do not believe these issues are to be determined by political messages or political speeches. I believe that down in the dark little room where the Appropriations Committee meets, and where 20 or 25 of the most faithful Members of the Senate sit and look at these requests and hear the witnesses, they are going to vote for what they believe is best for America.

The President's recommendations are always considered. We have been waiting for his recommendations in connection with the health program. Now that he has submitted the message and got the political speech up here, I rather expect expeditious action. We did not want to turn in one direction, with our own message, without the benefit of his research. As I recall, the administration had three sides to the plan. First, it wanted a voluntary plan; then no health plan at all. Then the administration talked about a Federal-State relationship, under which there would be a kind of subsidy from the Treasury. I think the program has been firmed up, and that we can expect some action in the Congress.

In connection with mutual security and other problems, we are going to consider the President's recommendations. In some instances, we will increase the amounts, as we did yesterday in connection with the space bill. In some instances, we will go along with the President's recommendations. In still other instances, we will reduce the amounts. If we did not perform that function, there would be no reason for having a Congress. There are some systems of government which prefer to have no Congress at all. The heads of Government become very irritated with Congress because Congress disagrees with them.

I wish our friends would wait until we really disagree with them. In one breath the President says, "You have not passed anything except civil rights legislation." In the next breath he says, "I am concerned about all you have done." That is talking out of two corners of his mouth. In one breath he says, "We must have every dollar we ask for, to spend all over the world." In the next breath he says, "Beware; do not spend anything at home above the budget."

It seems to me that we should have a single standard. What is good for America is good for the free world. I see no reason why the Congress should not carefully consider new starts here, if we are going to have new starts in other places in the world. When it is all over, the President will have to admit to those who worked up the program—I do not expect him to do so publicly this year—that he got along pretty well with the Congress. He is a fair man, and a just man. I think he will feel that he got along better with the Congress, and got more of his requests accepted by the Congress, and was treated with more dignity and decency by the Congress than any Democratic President has been treated during my memory.

Mr. DIRKSEN. Now, Mr. President, perhaps I can use a little of my own time.

The PRESIDING OFFICER (Mr. FREAR in the chair). The Senator from Illinois has the floor.

Mr. DIRKSEN. Actually the message the President sent to Congress can be expressed in one word. It is a good word down in Texas, where they still have horses. The President was merely saying to Congress "giddiap." He knows that we have been here 4 months, and have 2 months to go if Congress is to adjourn by convention time. There is still much to be done. I thought the President expressed himself vigorously, forcefully, politely, and with the utmost of courtesy. He was merely saying to Congress, "giddiap before you leave for the conventions, so that we can dispose of these matters."

I allude once more to mutual security. Our problems have usually been in connection with the appropriation bill, both here and in the House. It is only natural that the President should express some concern over the situation.

Mr. President, I shall not take any more time. I wish I had seen the ticker tape earlier today. I might have had an opportunity to think up literally scores and scores of things that could be appropriately said on this occasion.

I conclude with this thought: We never attack the majority leader. He misconstrues a love tap for an attack. These are not attacks. We publicize them because the whole country knows that he is here constantly going about the people's business. I try to publicize them, because that is one way of showing my affection for him, and my high regard for his patriotism and devotion to country. So I hope he will never feel that we are attacking him.

Mr. JOHNSON of Texas. I thank the Senator. His sentiments are fully reciprocated.

Mr. CHAVEZ. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. CHAVEZ. I was wondering whether the message was in the nature of an admonition to "giddiap" or whether it was more in the nature of cracking the whip?

Mr. DIRKSEN. The President never cracks the whip. He is a courteous man.

Mr. CHAVEZ. But in this instance, the message seemed to be more in the nature of cracking the whip than a command to "giddiap."

Mr. DIRKSEN. That is one of the weaknesses of the English language. In these semantic difficulties, one can construe the message as cracking the whip. Someone else may construe it as a polite and gentle urging, to the day when we adjourn.

RESOLUTION OF HIGHLAND FARMERS UNION LOCAL, HAVEN, KANS.

Mr. CARLSON. Mr. President, the Highland Farmers Union local at Haven, Kans., Reno County, adopted a resolution petitioning Congress for certain changes in the present farm program.

I ask unanimous consent that this resolution be printed in the RECORD and referred to the appropriate committee.

There being no objection, the resolution was referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

Whereas we feel that the acreage control in the present wheat program is discriminating against the smaller farmer: Therefore be it

Resolved by the Highland Farmers Union local, Reno County, this 23d of April, That Congress give serious consideration for a bill providing that (1) there should be a bushel program of 10,000 bushels per family replacing the present acreage control; (2) to allow the basic number of bushels be supported at 100 percent of parity for a livable income; (3) to keep the family size farmer employed on his farm along with the production of some sorghums, hay, oats, and barley; (4) this should be adapted to the wheat-growing area and would offset the differences in rich and poor soils and the larger and smaller producers; (5) any amount over 10,000 bushels should be stored by the farmer for future use or sold for feed grains.

Highland Farmers Union local at Haven, Kans., goes on record urging full study and work for the welfare of the small farmer.

WALTER BACK,
President.
Mrs. ARTHUR BACK,
Secretary.

REPORT OF A COMMITTEE

The following report of a committee was submitted:

By Mr. BYRD of Virginia, from the Committee on Finance, with amendments:

H.R. 6779. An act to amend section 170 of the Internal Revenue Code of 1954 (relating to the unlimited deduction for charitable contributions for certain individuals) (Rept. No. 1334).

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CARLSON:

S. 3476. A bill for the relief of I. H. Hickman and Max Hickman; to the Committee on the Judiciary.

By Mr. SYMINGTON:

S. 3477. A bill for the relief of Sfc. William H. Riester, Jr.; to the Committee on the Judiciary.

By Mr. CHAVEZ:

S. 3478. A bill for the relief of Evidio M. Lemus-Ramos; to the Committee on the Judiciary.

By Mr. MORSE:

S. 3479. A bill to authorize the payment of per diem to certain members of the Navy and Marine Corps for temporary duty performed after January 1, 1958; to the Committee on Armed Services.

(See the remarks of Mr. MORSE when he introduced the above bill, which appear under a separate heading.)

By Mr. ELLENDER (for himself and Mr. LONG of Louisiana):

S.J. Res. 190. Joint resolution proposing an amendment to the Constitution of the United States relative to the making of treaties and executive agreements; to the Committee on the Judiciary.

CONCURRENT RESOLUTION

GRANT OF FURTHER TARIFF REDUCTIONS IN FORTHCOMING NEGOTIATIONS

Mr. KERR (for himself and Mr. THURMOND) submitted a concurrent resolution (S. Con. Res. 104) expressing the sense of Congress that the United States should not grant further tariff reductions in the forthcoming tariff negotiations under the provisions of the Trade Agreements Extension Act of 1958, and for other purposes, which was referred to the Committee on Finance.

(See the above concurrent resolution printed in full when submitted by Mr. KERR, which appears under a separate heading.)

PER DIEM PAYMENT TO CERTAIN MEMBERS OF THE NAVY AND MARINE CORPS

Mr. MORSE. Mr. President, I introduce, for appropriate reference, a bill to authorize the payment of a per diem to certain members of the Navy and Marine Corps for temporary duty performed after January 1, 1958.

Last fall, I received many communications from enlisted personnel of the U.S. Navy attached to the U.S. Naval Facility, Coos Head, Empire, Oreg., complaining of the fact that their per diem allowances, for which they had received payment, would have to be repaid to the Navy. This presented a problem of tremendous proportions for the enlisted men who were affected by the repayment order. To illustrate the magnitude of the problem, I quote the pertinent paragraphs of one letter addressed to me on the subject. The letter is representative of the many in my file on this case. The enlisted man who wrote had this to say:

I am a construction man stationed at the U.S. Naval Facility, Coos Head, Empire, Oreg. I feel that the Navy is doing me a grave injustice, in which I will endeavor to explain.

In February of 1958, while stationed with U.S. Mobile Construction Battalion No. 11 in the Philippines, I received orders sending me to U.S. Naval Facility, Coos Head, Empire, Oreg., for duty. I departed the battalion on March 4, 1958, and checked in at Coos Head on March 21, 1958. Here I faced a facility under construction, offering no quarters or food, not even disbursing facilities. By good grace of a local hotel and restaurant owner, I was able to charge my room and keep until April 7, when the facility was able to provide food and sheets and bedding for the personnel. So, for 17 days we lived in town with the understanding we would get $12 per day per diem, as set up for this type of circumstance. Later they reimbursed us this amount, a total of $235. This was just fine and all went well until, just a few days ago, I received notice that I would have to repay the Navy the $235. Now this I consider unfair and out of order, since it was no fault of mine that I had to live in town and under orders to report to Naval Facility, Coos Head.

My base pay is $124 per month. Out of this, I have $18.75 going out for a savings bond; $4 for haircuts; $14 tax; $8 laundry; $5 personal, etc. This leaves $75 for me to live on—about $18 per week. If I have to pay back this $235, I may as well be placed in the brig for 3 months or so, because Heavens knows how I would be able to repay this sum.

Can I help it if the Navy was unprepared to feed and shelter me when I arrived here? I had to obey orders. It was my understanding that room and board was part of my pay; now they want me to virtually pay my own.

As soon as this problem came to my attention, I asked the Department of the Navy to supply a full report concerning the possibility of obtaining reimbursement of these per diem allowances through administrative action. Rear Admiral Beardsley, Deputy Comptroller of the Department of the Navy provided me with the requested report and I ask unanimous consent that extracts from the Deputy Comptroller's letter be included at this point in my remarks.

There being no objection, the extracts were ordered to be printed in the RECORD, as follows:

Further reference is made to your communication of August 19, 1959, which pertains to the action being taken by a Navy activity to recover per diem allowances previously paid this member incident to duty at the Naval Facility, Coos Head, Empire, Oreg. This action is being taken on the basis of a "Notice of exception" issued by the Navy Audit Branch of the General Accounting Office.

Entitlement to per diem under the provisions of section 303(a) of the Career Compensation Act of 1949, 63 Stat. 813, is dependent upon members being in a travel status "away from their designated posts of duty." Paragraph 3050–1 of the Joint Travel Regulations provides that members are entitled to travel and transportation allowances only while actually in a travel status while performing travel away from their permanent duty station on public business pursuant to competent orders. Under paragraph 3050–3 of the regulations, a travel status for such purposes, commencing upon departure from the old station under change of station orders, continues until the arrival of the member at the new duty station. Paragraph 1150–10 of the same regulations further defines a permanent station insofar as is here pertinent as the corporate limits of the city or town in which the station is located, or if not within corporate limits, the boundary of such military reservation.

Accordingly, the travel status of this member ceased upon his arrival at Coos Head,

Oreg., and the modification of orders directing temporary duty at that place would not act to create a right to per diem since paragraph 4201, item 5 of the Joint Travel Regulations prohibits the payment of per diem for any temporary duty performed within the limits of the permanent duty station.

It is unfortunate that the member concerned was led to believe that the orders as issued and subsequent modification thereto directing the performance of temporary duty prior to commission of the Naval Facility, Coos Head, would grant authority for the payment of a per diem allowance. However, the orders and modification as issued, present no basis upon which to question the determination rendered by the Navy Audit Branch of the General Accounting Office.

Notwithstanding the circumstances which prevailed at Coos Head during the precommissioning period, the fact remains that this member was performing temporary duty at the location of his new permanent duty station named in his orders.

Mr. MORSE. Mr. President, upon the basis of the foregoing correspondence, it is obvious that we are confronted with one of those unfortunate incidents in which a technicality—a requirement which cannot be overlooked by the Department of the Navy—has caused considerable hardship and inconvenience to many servicemen who are without fault.

In response to an inquiry made of the Department of the Navy concerning a bill to provide relief for the military personnel who were deprived of per diem payments, Rear Adm. McCain advised:

The Navy Department has advised the Naval Facility, Coos Head, that some of the enlisted members could be paid a basic allowance for subsistence and a basic allowance for quarters, if otherwise entitled, to partially compensate the members for expenses incurred during the initial period when quarters and messing facilities were not available. The Navy Department has further taken steps to insure that similar situations do not occur in the future by advising disbursing officers and members of precommissioning details of shore activities of the Comptroller General's ruling.

However, one case similar to that at Coos Head has occurred in the recent past, incident to the establishment of the Naval Facility, Pacific Beach, Wash., also in the spring of 1958. Prior to completion of the barracks and messhall, the precommissioning detail at Pacific Beach obtained commercial housing and messing facilities under the misapprehension that they were authorized per diem. Per diem was later denied them. Therefore, the situation at Coos Head, although unfortunate, is not unique. Relief in that instance should not be afforded without considering the similar situation at Pacific Beach, Wash. Granting relief in but one situation not dissimilar to others would be discriminatory in nature and detrimental to the morale of members who were faced with similar difficulties and were not granted the same relief.

Providing your bill authorized refunds or payments to be made from appropriations available for the pay and allowances of members of the naval service during 1958, the year the disallowed per diem was erroneously paid or unexpectedly denied, the Department of the Navy would interpose no objection to a private bill granting relief to all personnel who are known to have been disallowed per diem under circumstances similar to those at Coos Head, Oreg. The position of the Department of Defense on such a proposal, however, is not known at this time.

I am satisfied that the bill I have introduced on behalf of Navy and Marine Corps personnel in this case constitutes justice and equity. It is my hope that the committee to which this bill is referred will take early action thereon.

The ACTING PRESIDENT pro tempore. The bill will be received and appropriately referred.

The bill (S. 3479) to authorize the payment of per diem to certain members of the Navy and Marine Corps for temporary duty performed after January 1, 1958, introduced by Mr. MORSE, was received, read twice by its title, and referred to the Committee on Armed Services.

GRANT OF FURTHER TARIFF REDUCTIONS IN FORTHCOMING TARIFF NEGOTIATIONS

Mr. KERR. Mr. President, on behalf of myself, and the Senator from South Carolina [Mr. THURMOND], I submit, for appropriate reference, a concurrent resolution expressing the sense of Congress that the United States should not grant further tariff reductions in the forthcoming tariff negotiations under the provisions of the Trade Agreements Extension Act of 1958, and for other purposes.

In the year 1958, after a great deal of soul searching and over a great deal of opposition from all parts of the country, the Congress passed the Trade Agreements Extension Act of 1958. I like to feel that I was partially responsible for keeping it from being worse than it was and helping to mitigate the damage it might do to our economy.

That bill contained authority for the executive department to negotiate with foreign countries for reductions in tariffs. Domestic industries were suffering enough then and further tariff cutting authority should not have been granted, but it was, and since that time our foreign trade situation and our dollar situation have deteriorated so far that even foreign diplomats are pleading with their citizens to buy more American goods and help bail us out of our very precarious financial entanglement.

Redress for injured American industries is just about a thing of the past. Amendments to the Extension Act of 1958 intended by Congress to give assurance to our industries and agriculture have been nullified by lack of administration. The escape clause is rapidly becoming a thing of ridicule—with no vestige of hope for a suffering domestic industry. The Tariff Commission has become but a hollow sounding board with half or more of its members finding excuses for not carrying out their functions that would not be a credit to an Oklahoma school boy explaining to the truant officer. If you want some really entertaining fiction read the reasons advanced by members of the Commission when they refused to obey a Senate-passed resolution directing them to make certain findings with regard to fluorspar and lead and zinc.

Now, on top of all that, with imports of agricultural products increasing, with almost every domestic industry being affected by imports, from steel and automobiles to clothespins, with the dollar situation becoming desperate, our State Department asks the Congress for over a million dollars with which to go abroad and negotiate for the further lowering of our already too low tariff structure.

Any day now, that Department will release a list of the items upon which it may negotiate for lower tariff rates. That list will contain thousands of items—and hundreds of our farms and factories are already worrying that injury will be heaped upon injury with no hope of the redress that Congress intended would be given to them.

Several Senators have asked that I leave this concurrent resolution open for additional signatures and they have asked that they be permitted to join with me in this measure. It would express as the sense of this Congress the postponement or cancellation of the scheduled tariff cutting negotiations set for this fall. I ask that the concurrent resolution be printed at this point in the RECORD so that its contents may be noted by every Senator and that it be made available until the close of business on May 8, for Senators who wish to cosponsor it.

The ACTING PRESIDENT pro tempore. The concurrent resolution will be received and appropriately referred; and, without objection, the concurrent resolution will lie on the desk, as requested by the Senator from Oklahoma.

The concurrent resolution (S. Con. Res. 104) was referred to the Committee on Finance, as follows:

Whereas the Eighty-fifth Congress passed the Trade Agreements Extension Act in August 1958, authorizing the President within a four-year period to reduce existing customs duties up to 20 per centum;

Where as an international conference held under the auspices of the General Agreement on Tariffs and Trade will be convened in the autumn of 1960 and continue into 1961;

Whereas the executive branch of the Government pursuant to the provision of the Trade Agreements Extension Act of 1950 (Public Law 85-686) is engaged in the preparation of a list of products upon which the United States will be prepared to offer further duty reductions, up to 20 per centum, at such international conference;

Whereas profound changes in the international competitive standing of United States producers have occurred since the passage of the Trade Agreements Extension Act of 1958;

Whereas imports have increased sharply since the passage of said Act while exports have declined, thus contributing to the mounting deficits incurred by the United States in the total foreign account, which in 1958 attained the magnitude of $3,400,000,000, and an estimated $4,000,000,000 or more in 1959;

Whereas the gold outflow in partial satisfaction of these deficits since January 1958 has exceeded $3,500,000,000, while the stock of gold at Fort Knox has fallen to a level of $19,500,000,000 against which foreign claims of more than $18,000,000,000 are outstanding, approximately $16,000,000,000 of which could be withdrawn on demand;

Whereas prevention of a disastrous outflow of gold to foreign countries adds to the pressure on the Treasury Department to offer higher interest rates on its current and future borrowings, thus adding to the outlay for interest on the national debt, the interest service on which has already reached the level of $9,600,000,000 annually and bids fair to rise appreciably, thus adding to the national budget additional billions of dollars of fixed charges;

Whereas imports as a whole in 1959 rose approximately 22 per centum compared with 1958, while those from the industrial countries rose more sharply, notably 54 per centum from Japan in the first 9 months of 1959 compared with the same period in 1958, and 43 per centum from Europe during the same period, thus reflecting the sharpened competitive advantage that has been gained by other industrial countries over the United States;

Whereas imports of beef, pork, mutton, and other agricultural products have increased to almost staggering proportions in the face of adequate and frequently surplus production in the United States;

Whereas the United States has moved from the position of a leading export nation in a number of items that are products of mass production and therefore the output of our most advanced industries technologically, among them being automobiles, steel, sewing machines, and typewriters, thus reflecting the startling loss of technological leadership by the United States to other countries that enjoy a wage differential in comparison with this country;

Whereas numerous domestic manufacturers have in the past 2 years made arrangements to manufacture abroad as a means of gaining lower production costs and enabling them to supply foreign markets from abroad rather than from the United States and in some instances to ship into the United States from branches established abroad, thus reducing opportunities for employment of American workers, and foreclosing American suppliers of materials and parts to domestic industry, and small American companies that lack the capital resources to invest in foreign facilities from participating in the economic growth represented by such use of United States capital, thereby producing the total effect of shrinking American industrial power and diminishing tax revenues at a time when the cold war costs of the Federal Government are mounting;

Whereas the shrinkage of United States exports would be much more severe than has in fact been registered but for the extensive subsidization of certain crop exports, notably raw cotton and wheat;

Whereas such subsidization as a means of stimulating exports adds to the burden on the Treasury and thus cannot be looked to for correction of the deficit position of our total foreign account;

Whereas the productivity of labor in other industrial countries has taken a notable leap, stimulated in great degree by some $25,000,000,000 in modern machinery and equipment shipped abroad by the United States during the past 7 years, thus increasing the competitive advantage of foreign producers, particularly in the absence of any significant increase in foreign wage rates compared with those prevailing in this country;

Whereas American industry may expect increasingly sharp and distressing competition from abroad because of the generally weaker bargaining powers of foreign labor unions compared with those of this country, thus offering no hope of any closing of the cost differential between foreign and domestic producers in the foreseeable future;

Whereas this competition, already severe and capturing progressively larger shares of our home market for numerous products, will create grave problems of survival for some of our industries and of maintaining in such industries an American scale of wages and the enjoyment of an American standard of living for their workers, even without further tariff reductions by the United States: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of Congress:

(1) That the United States should grant no further tariff reductions in the forthcoming tariff negotiations under the auspices of the General Agreement on Tariffs and Trade in 1960 and 1961, notwithstanding the authorization contained in Public Law 85–686, known as the Trade Agreements Extension Act of 1958.

Mr. THURMOND. Mr. President, I commend the distinguished Senator from Oklahoma for his initiative in urging the Congress to express its disapproval of any further tariff reductions in negotiations on the General Agreement on Trade and Tariffs.

As originally designed, the Reciprocal Trade Program was intended to encourage free trade and at the same time protect domestic industries from destruction. It was intended that reciprocity be the keynote of the program. In 1959, the United States experienced a $4 billion deficit in balance of payments. While our imports have increased at a tremendous rate, our exports have barely held their own. The sobering and discouraging picture painted by the testimony before the Interstate and Foreign Commerce Committee in the last 2 weeks during the foreign trade study demonstrates emphatically that our trade policy is wanting in major respects.

While we have continued to reduce our restrictions against imports, those nations in the world community which profess to be our friends, as well as those about whom we have no illusions, utilize the devices of imports licenses, currency restrictions and compensatory taxes, as well as tariffs and quotas, to discourage imports from the United States. Despite the protestations to the contrary by the State Department, the facts leave no alternative to the conclusion that there is little reciprocity in the trade program, as administered.

Even in the face of obvious evidence of deterioration of our export-import ratio and our alarming deficit in balance of payments, it is apparent that those who administer this country's trade program are determined to further increase our difficulties by agreeing to further relaxations of tariffs on imports to the United States.

The Congress has the constitutional responsibility to regulate trade and tariffs, and we can no longer shirk this responsibility and leave it in the hands of the single-minded maladministrators in the State Department.

Action should have been taken by the Congress on this matter when the extension of the Trade Act was considered in 1958. Since that extension was for 4 years, we will not have the opportunity to reconsider our actions in full until 1962. I sincerely hope, therefore, that the Congress will adopt this concurrent resolution as a holding action against further deterioration of our foreign trade, pending a full and realistic reappraisal in 1962.

CHARLES BERNSTEIN—AMENDMENT

Mr. JAVITS submitted an amendment, intended to be proposed by him, to the bill (S. 928) for the relief of Charles Bernstein, which was referred to the Committee on the Judiciary and ordered to be printed.

GREAT SALT LAKE NATIONAL PARK, UTAH—AMENDMENT

Mr. MOSS submitted an amendment, in the nature of a substitute, intended to be proposed by him, to the bill (S. 2894) to authorize the Secretary of the Interior to establish the Great Salt Lake National Park in the State of Utah, which was referred to the Committee on Interior and Insular Affairs, and ordered to be printed.

AMENDMENT OF TITLE X OF SOCIAL SECURITY ACT—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of April 29, 1960, the names of Senators MORSE, HUMPHREY, CLARK, JACKSON, MURRAY, LONG of Hawaii, GRUENING, BYRD of West Virginia, SYMINGTON, SMITH, MOSS, and WILLIAMS of New Jersey were added as additional cosponsors of the bill (S. 3449) to amend title X of the Social Security Act to enable the States to provide more adequate financial assistance to needy individuals who are blind and to encourage and stimulate needy blind individuals to become self-supporting, introduced by Mr. HARTKE (for himself and other Senators) on April 29, 1960.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. STENNIS:

Address by Senator GREEN delivered before breakfast group meeting in Vandenberg Room, the Capitol, Wednesday, May 4, 1960.

By Mrs. SMITH:

Keynote address delivered by Senator PROUTY to the Maine State Republican Convention, at Bangor, Maine, on April 29, 1960.

By Mr. HART:

Article entitled "The World Needs Countless Gordon Seagraves," written by CHESTER BOWLES, published in the Louisville (Ky.) Times of March 30, 1960.

EISENHOWER URGES ELIMINATION OF INTERNATIONAL HEALTH MENACE

Mr. KUCHEL. Mr. President, an official recommendation has come from President Eisenhower that the United States immediately take steps to alleviate a menacing and costly problem of sewage pollution of the Pacific Ocean which I trust will receive prompt attention from the Congress.

For more than a quarter of a century, the public health of citizens of and visitors to San Diego County, at the southern extremity of the U.S. Pacific seaboard, has been seriously endangered by discharges of raw or improperly treated sewage from the fast-growing Baja California community of Tijuana. The

Federal Government has been aware of the problem since some time in the middle thirties.

Unsanitary conditions, which last year compelled the closing of sections of beaches to swimmers, necessitate emergency action. The President has requested an urgent appropriation of $256,000 to finance construction of oxydation ponds which will provide interim treatment and reduce the hazard until a long-range program is initiated which it is hoped will result in a permanent solution.

The need for these funds is undeniable. I have just been informed by responsible authorities that recent checks of the ocean water in San Diego County reveal a sudden, unexplained, and sharp rise in the amount of contamination during the month of March. Now, with the summer vacation season almost here, thousands of individuals may be exposed to grave danger if this condition should be repeated. Fear is felt that once again it may be necessary for California authorities to quarantine portions of the seashore which would bring devastating economic injury at the height of the outdoor pleasure season.

Within a short while, it is probable this Senate will have a second occasion within a few weeks to pass on a measure providing money which will finance what is at best only a minimal program to control the threat of epidemics, illness, and economic hardship found in the Mexican sewage disposal. A slightly smaller sum included in the recently passed supplemental appropriations bill unfortunately was lost in conference.

This is not a simple problem, Mr. President. The United States must assist San Diego County and the individual California communities because there are international complications. The Federal obligation is recognized by the International Boundary and Water Commission, the Department of State, the Public Health Service, and the Budget Bureau.

As population and tourist business volume keep rising in Baja California, the possibility of more dangerous ocean pollution increases almost daily. A sewage plant originally built to serve a community of some 10,000 persons cannot be expected to meet the needs of a population exceeding 150,000. Until a new plant is built, stopgap measures are imperative.

Under a treaty between the United States and Mexico, the matter of handling sewage discharges from Tijuana has been supposed to receive preferential attention. Construction of a comprehensive system was authorized back in 1935 but this project still is to be started. The first recorded complaint was noted in 1933.

Recently, the U.S. Public Health Service advised the California Regional Water Pollution Control Board that hazardous conditions have been substantially unchanged from those of March 1959 when a stern warning was given. The Service advocates construction of oxydation lagoons, for which President Eisenhower has requested the money, as quickly as possible. The public health officer of San Diego County has written me it is vital that additional sanitary measures be undertaken and the pollution control board has pointed out that stringent enforcement action long ago would have been taken if the offender—in this case a community in the sovereign Republic of Mexico—were subject to its jurisdiction.

Further delay in attacking this problem will be shameful. It is bad enough that conditions have been allowed to deteriorate since 1933 and that a succession of complaints have been registered over the intervening years. Now that the President has asked for funds enabling the Federal Government to play a role in what admittedly is only a partial and incomplete program, I believe it is the clear duty of the Congress to vote the requested $256,000 and then to consider legislation which my colleague from California and I have introduced, authorizing an international project to provide more complete and satisfactory treatment of this sewage.

THE SUPREME LAW OF THE LAND

Mr. ERVIN. Mr. President, the Public Utilities Fortnightly for March 3, 1960, contained an article entitled "The Supreme Law of the Land," written by Judge Everett C. McKeage, president of the California Public Utilities Commission, who is one of the ablest constitutional lawyers of America. In this article, Judge McKeage makes it crystal clear that a decision of the Supreme Court of the United States, interpreting the Federal Constitution, is not the supreme law of the land. In order that this article can be made available to the Members of Congress and to those of our citizens who may be interested in the important constitutional question with which it deals, I ask unanimous consent that it be printed in the body of the RECORD as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Public Utilities Fortnightly, Mar. 3, 1960]

THE SUPREME LAW OF THE LAND

(By the Honorable Everett C. McKeage, president, California Public Utilities Commission)

A decision of the Supreme Court of the United States can hardly be considered the supreme law of the land, for such a decision is too transitory and mutable. The court decides cases and thereby makes binding declarations affecting the right of parties to the case, but the Supreme Court—or any other court—cannot create laws.

In the September 24, 1959, issue of Public Utilities Fortnightly, there appeared an article by the author which, among other things, asserted that a decision of the Supreme Court of the United States, interpreting the Federal Constitution, is not the supreme law of the land.[1]

This article provoked a number of communications to the author, some supporting his view and others not. The former greatly outnumbered the latter. One inquiry was to the effect: "if a decision of the Supreme Court, interpreting the Federal Constitution, is not the supreme law of the land, what is it?" This is a fair question and deserves a forthright answer.

The answer is simply this: A decision of the Supreme Court, interpreting the Federal Constitution, is merely the law of the case in which such decision was rendered and nothing more. If such decision is treated by persons, not parties to the case, as law, such action is purely voluntary on their part. No person can be compelled to obey the mandate of a court issued in a litigation to which he is not a party, either actual or by representation. Such a decision of the Supreme Court may not be pleaded to bar an action concerning the same subject but between persons other than those parties to the case in which such decision was rendered. This is a fundamental rule of law which is deeply imbedded in the free spirit of this Nation.

The binding effect of a final decision of a court upon the parties to the case is not because the decision is the supreme law of the land but because the law of the land prescribes that such decision shall be binding upon the parties to the case. If this were not true, litigation would be endless between the same parties and controversies would never be resolved. This rule of law is so all embracive that a final decision of a court, if jurisdiction exists, is binding and the law of the case between the parties thereto, even though it be conceded that the decision is erroneous from the standpoint of both law and fact. This latter type of decision is as binding on the parties to the case as one which is a most profound exposition of the law.

This illustrates the true rule of law as to the binding effect of decisions of courts, whether the court be a court of first instance or the Supreme Court of the United States. The final decision of a court binds the parties finally and conclusively, not because it is the supreme law of the land, but because the law of the land has so provided.

The Supreme Court is in no different category than any other court, so far as a final decision is concerned. To assert that a decision of the Supreme Court of the United States, interpreting the Federal Constitution or interpreting any other law, is the supreme law of the land is wholly at variance with long-established constitutional principles and, as Mr. Justice Holmes remarked in connection with another subject, "It won't wash."

INTERPRETING CONSTITUTION

The only thing which might be said to be impliedly to the contrary of the foregoing is the recent statement of the Supreme Court in the segregation cases that the interpretation of constitutional provisions contained in its decisions is the supreme law of the land (*Cooper* v. *Aaron* (358 U.S. 1, 18, 3 L. ed. 2d 5, 17)).

However, if the Supreme Court in that case meant to question this fundamental rule as to the reach of a final decision of that or any other court, it would become necessary to overrule and throw into the discard a host of final decisions of the Supreme Court on the point. While it would hardly be considered necessary to quote authority in support of a principle so elementary and fundamental, out of an abundance of caution, the following is cited from the decision of the Supreme Court, speaking through Mr. Chief Justice Stone, in the case of *Columbia Broadcasting System* v. *United States* ((1942) 316 U.S. 407, 418, 86 L. ed. 1563, 1571, 44 Pur. Ns. 411, 420):

"Unlike as administrative order or a court judgment adjudicating the rights of individuals, which is binding only on the parties to the particular proceeding, a valid exercise of the rulemaking power is addressed to and sets a standard of conduct for all to whom its terms apply."

This language speaks for itself and needs no explanation or rationalization.

[1] "Judicial Supergovernment and States Rights," vol. 64, No. 7, p. 486.

Take the segregation cases as an example. The action of the Supreme Court in those cases is not legally binding upon persons, not parties to those cases. One may respect such decisions but, if he was not a party to such cases or represented by a party thereto or was not an agent, servant, or representative of a party thereto, he is not legally bound by such decisions.

Obviously, this must be true; otherwise constitutional due process would become a sham. A man is still entitled to his day in court.

COURTS NOT LAWMAKERS, BUT

Courts decide cases and in so doing make binding declarations with regard to the rights of the parties to the case but courts cannot create law, although they violate this prohibition under the guise of judicial interpretation and the Supreme Court of the United States is the worst offender of them all because there is no agency of Government above that Court which can effectively redress such prohibited conduct. All courts protest that they do not legislate but, under the guise of interpreting the law, they, in effect, actually do legislate. Of course, this is a form of usurpation of legislative authority which all condemn but which increases as time goes on. This regrettable situation constitutes my major complaint.

WHAT HISTORY TEACHES

A subject so fundamental in nature as this one deserves a thorough investigation. Therefore, let us consult the highest of authority and let us go back to the beginning. Surely the authors of judicial supremacy should make credible witnesses. We shall call to the witness stand Alexander Hamilton, a man of great ability and of giant intellect, but who adhered to the wrong philosophy. Bear in mind that it was Hamilton who contended that a Bill of Rights in the Federal Constitution was not only unnecessary, but that such might be dangerous. Remember how history has demonstrated Hamilton's great error in this regard. Judged by the public estimation of those days, John Marshall was a pigmy as compared to Alexander Hamilton. Eloquently, Hamilton expounded in "The Federalist" the judicial restraints which should accompany judicial supremacy, to the end that the judges only interpret the law, not make law. Following are excerpts from his pen on this great subject:

"Whoever attentively considers the different departments of power must perceive that, in a government in which they are separated from each other, the judiciary, from the nature of its functions, will always be the least dangerous to the political rights of the Constitution, because it will be least in a capacity to annoy or injure them. The Executive not only dispenses the honors, but holds the sword of the community. The Legislature not only commands the purse, but prescribes the rules by which the duties and rights of every citizen are to be regulated. The judiciary, on the contrary, has no influence over either the sword or the purse, no direction either of the strength or of the wealth of the society, and can take no active resolution whatever. It may truly be said to have neither force nor will, but merely judgment, and must ultimately depend upon the aid of the executive arm even for the efficacy of its judgments.

"Some perplexity respecting the rights of the courts to pronounce legislative acts void, because contrary to the Constitution, has arisen from an imagination that the doctrine would imply a superiority of the judiciary to the legislative power. It is urged that the authority which can declare the acts of another void must necessarily be superior to the one whose acts may be declared void. As this doctrine is of great importance in all the American constitutions, a brief discussion of the ground on which it rests cannot be unacceptable.

"There is no position which depends on clearer principles than that every act of a delegated authority, contrary to the tenor of the commission under which it is exercised, is void. No legislative act, therefore, contrary to the Constitution can be valid. To deny this would be to affirm that the deputy is greater than his principal; that the servant is above his master; that the representatives of the people are superior to the people themselves; that men acting by virtue of powers may do not only what their powers do not authorize, but what they forbid.

"If it be said that the legislative body are themselves the constitutional judges of their own powers, and that the construction they put upon them is conclusive upon the other departments, it may be answered that this cannot be the natural presumption where it is not to be collected from any particular provisions in the Constitution. It is not otherwise to be supposed that the Constitution could intend to enable the representatives of the people to substitute their will to that of their constituents. It is far more rational to suppose that the courts were designed to be an intermediate body between the people and the legislature, in order, among other things, to keep the latter within the limits assigned to their authority. The interpretation of the laws is the proper and peculiar province of the courts. A constitution is, in fact, and must be regarded by the judges, as a fundamental law. It therefore belongs to them to ascertain its meaning, as well as the meaning of any particular act proceeding from the legislative body. If there should happen to be an irreconcilable variance between the two, that which has the superior obligation and validity ought, of course, to be preferred; or, in other words, the Constitution ought to be preferred to the statute, the intention of the people to the intention of their agents.

"Nor does this conclusion by any means suppose a superiority of the judicial to the legislative power. It only supposes that the power of the people is superior to both; and that where the will of the legislature, declared in its statutes, stands in opposition to that of the people, declared in the Constitution, the judges ought to be governed by the latter rather than the former. They ought to regulate their decisions by the fundamental laws, rather than by those which are not fundamental.

"This exercise of judicial discretion, in determining between two contradictory laws, is exemplified in a familiar instance. It not uncommonly happens that there are two statutes existing at one time, clashing in whole or in part with each other, and neither of them containing any repealing clause or expression. In such a case it is the province of the courts to liquidate and fix their meaning and operation. So far as they can, by any fair construction, be reconciled to each other, reason and law conspire to dictate that this should be done; where this is impracticable, it becomes a matter of necessity to give effect to one in exclusion of the other. The rule which has obtained in the courts for determining their relative validity is, that the last in order of time shall be preferred to the first.

"But this is a mere rule of construction, not derived from any positive law, but from the nature and reason of the thing. It is a rule not enjoined upon the courts by legislative provision, but adopted by themselves, as consonant to truth and propriety, for the direction of their conduct as interpreters of the law. They thought it reasonable that between the interfering acts of an equal authority; that which was the last indication of its will should have the preference.

"But in regard to the interfering acts of a superior and subordinate authority, of an original and derivative power, the nature and reason of the thing indicate the converse of that rule as proper to be followed. They teach us that the prior act of a superior ought to be preferred to the subsequent act of an inferior and subordinate authority; and that accordingly, whenever a particular statute contravenes the Constitution, it will be the duty of the judicial tribunals to adhere to the latter and disregard the former.

"It can be of no weight to say that the courts, on the pretense of a repugnancy, may substitute their own pleasure to the constitutional intentions of the legislature. This might as well happen in the case of two contradictory statutes; or it might as well happen in every adjudication upon any single statute. The courts must declare the sense of the law; and if they should be disposed to exercise will instead of judgment, the consequence would equally be the substitution of their pleasure to that of the legislative body. The observation, if it prove anything, would prove that there ought to be no judges distinct from that body" ("The Federalist," Everyman's Library—519, pp. 395–399).

JUDICIAL RESTRAINT IN PRACTICE

The utter fallacy of Hamilton's reasoning was and is that courts pay lip service to the rules on judicial restraint which he expounded and honor their observance by their continual breach. History irrefutably proves that this is so and one need not look for proof beyond the dissenting opinions of the Justices of the Supreme Court of the United States when read in connection with the prevailing opinions of that Court. This may be repeated in every State of this Union, as applied to State courts. Courts, generally, just did not pay any attention to Hamilton's teachings on the subject of judicial restraint. However, they did follow his philosophy of judicial supremacy, as history unmistakably records.

Let us call as a second witness, John Marshall who, for 34 years, was the Chief Justice of the Supreme Court of the United States. Following the Hamiltonian philosophy, Marshall had the following to say on the subject of judicial restraint in the benchmark case of *Osborn* v. *Bank of the United States:*

"Courts are the mere instruments of the law, and can will nothing. When they are said to exercise a discretion, it is a mere legal discretion, a discretion to be exercised in discerning the course prescribed by law; and, when that is discerned, it is the duty of the court to follow it. Judicial power is never exercised for the purpose of giving effect to the will of the judge; always for the purpose of giving effect to the will of the legislature; or, in other words, to the will of the law" (22 U.S. 738, 866, 6 L. ed. 204, 234).

It would be idle to present the mountains of evidence which exist showing the utter disregard by the courts of the principle there proclaimed by Marshall; not only by Marshall, himself, but by the Supreme Court over the years. Both the prevailing and dissenting opinions of that Court leave no doubt on this point.

An interesting footnote to this discussion is revealed by the argument put forth by the opponents of judicial supremacy at the time the great debate was on as to whether or not the Constitution should be adopted. Let Hamilton tell us about this. I quote from "The Federalist," Alexander Hamilton speaking:

"The arguments, or rather suggestions, upon which this charge is founded, are to this effect: 'The authority of the proposed Supreme Court of the United States, which is to be a separate and independent body will be superior to that of the legislature. The power of construing the laws according to the spirit of the Constitution, will enable that Court to mold them into whatever shape it may think proper; especially as its

decisions will not be in any manner subject to the revision or correction of the legislative body. This is as unprecedented as it is dangerous. In Britain, the judicial power, in the last resort, resides in the House of Lords, which is a branch of the legislature; and this part of the British Government has been imitated in the State constitutions in general. Parliament of Great Britain, and the legislatures of the several States, can at any time rectify, by law, the exceptionable decisions of their respective courts. But the errors and usurpations of the Supreme Court of the United States will be uncontrollable and remediless.' This, upon examination, will be found to be made up altogether of false reasoning upon misconceived fact" ("The Federalist," Everyman's Library—519, p. 411).

I leave to the candid mind, who has read history, the decision whether or not experience has proven Hamilton right or whether his opponents saw more clearly than he did. The record speaks for itself.

MARSHALL AND HAMILTONIAN IDEAS

That John Marshall, after he became Chief Justice, adopted the Hamiltonian philosophy in practice, as applied to judicial invalidation of the acts of the legislative and executive, cannot be doubted because of the fact that his opinions abound with the philosophy of Hamilton's contribution to "The Federalist." However, in order to follow Hamilton's philosophy, Marshall threw out of the window his own convictions on this subject.

Should there be any doubt on this point, read the following from Marshall's brief, as counsel, in the case of *Ware* v. *Hylton*, which was decided by the Supreme Court prior to his becoming Chief Justice:

"The legislative authority, of any country, can only be restrained by its own municipal constitution. This is a principle that springs from the very nature of society; and the judicial authority can have no right to question the validity of a law; unless such a jurisdiction is expressly given by the constitution. It is not necessary to enquire how the judicial authority should act, if the legislature were evidently to violate any of the laws of God; but property is the creature of civil society and subject, in all respects, to the disposition and control of civil institutions" (3 Dallas 199, 211, 1 L. ed. 568, 573).

Clearly, John Marshall, at the time he argued the Ware case, did not believe in the claimed authority of the judiciary to declare invalid acts of the legislative and executive branches of government. We must assume that Marshall was sincere when he argued in that case against such claimed authority because he must have been aware of the fact that the Constitutional Convention of 1787 refused to the judiciary such authority, although such a grant was suggested.

FRANKFURTER ON LEGISLATION BY COURTS

It would not be doing justice to this subject of courts invading the legislative field without reading Mr. Justice Frankfurter's introductory statement to his book, "Mr. Justice Holmes and the Supreme Court," which he wrote in 1938, prior to his becoming a member of the Supreme Court. Because this statement is so forthright, unequivocal, and refreshing, it is set out in full as follows:

"The history of the Supreme Court would record fewer explosive periods if, from the beginning, there had been a more continuous awareness of the role of the Court in the dynamic process of American society. Lawyers, with rare exceptions, have failed to lay bare that the law of the Supreme Court is enmeshed in the country's history; historians no less have seemed to miss the fact that the country's history is enmeshed in the law of the Supreme Court. Normally historians, much more than lawyers, guide the general understanding of our institutions. But historians have, in the main, allowed only the most spectacular decisions—the Dred Scott controversy or the legal tender cases—to intrude upon the flow of national development through their voluminous pages. The vital share of the court in the interplay of the country's political and economic forces has largely escaped their attention. Not unnaturally the court has been outside the permanent focus of the historian's eye. For the momentum of the court's influence has been achieved undramatically and imperceptibly, like the gradual growth of a coral reef, as the cumulative product of hundreds of cases individually unexciting and seemingly even unimportant, but in their total effect powerfully telling in the pulls and pressures of society. And so the rather arid doctrines of lawyers have largely held the field. This has had two unfortunate aspects. The public has been denied understanding of the intimate share of the Supreme Court in the affairs of States and Nation; the Supreme Court has been deprived of that healthy play of informed criticism from without which is indispensable for the vitality of every institution.

"The technical forms in which issues come before the Court and the professional atmosphere which dominates opinions, have helped to build up the tradition of the Court as a body quite dissociated from the conflicts of politics. To be sure, some business of the Court is of a strictly technical nature. These matters are important, of course; but, on the whole, they are limited in their scope to the interests of the immediate litigants and others similarly circumstanced. Lawyers call it properly enough, private litigation. But of this there was much more before the Court 100 years ago than 50 years ago, more 50 years ago than 25 years ago, and today it might fairly be characterized as a minor aspect of the activities of the Court.[2] Such litigation—that is, ordinary controversies between Jones and Smith—would never have made the Court the storm center of politics it has sometimes become. It is the Court's public business that has excited public interest.

"From the very beginning the Court has had business which in form was an ordinary lawsuit but which affected the Nation as much as action either by the Congress or by the President. The raw material of modern government is business. Taxation, utility regulation, agricultural control, labor relations, housing, banking and finance, control of the security market—all our major domestic issues—are phases of a single central problem; namely, the interplay of economic enterprise and government. These are the issues which for more than a generation have dominated the calendar of the Court. For the special function of the Supreme Court in our scheme of things is to mediate between the individual and government, and to mark the boundaries between State and National action. The Court is the final authority in adjusting the relationships of the individual to the separate States, of the individual to the United States, of the 48 States to one another, and of the States to the Union.

"The Supreme Court exercises this tremendous authority as interpreter of clauses of the Constitution. But the clauses which are interpreted differ drastically in their nature and history, and therefore present sharply different problems for interpretation. Broadly speaking, there are two types of constitutional clauses. First are specific provisions designed to guard against the recurrence of well-defined historic grievances or to impose some specific limitation of power either upon the States or the Central Government in the distribution of authority under our federalism. These provisions are so definite in their terms and in their history that they canalize interpretation within narrow limits. For that reason they are seldom brought into question and even more rarely excite conflicting views about their meaning. Whether a 'fact tried by a jury' has been 'reexamined in any court of the United States' otherwise than 'according to the rules of the common law,' whether a crime is 'infamous,' whether a tax is laid upon articles exported from any State, even whether the prohibition against 'unreasonable searches and seizures' has been violated, allow comparatively meager play for individual judgment as to policy; they are neither frequent nor fighting issues before the Court.

"In the second category are the broad, undefined clauses of the Constitution setting out standards of fair dealing, as well as doctrines of government not expressed in the Constitution but derived from assumptions regarding its purposes. These clauses and implicit doctrines of the Constitution bring very different problems to the court from those just indicated. Words like 'liberty' and 'property,' phrases like 'regulate commerce among the several States,' 'due process of law,' 'equal protection of the laws,' doctrines like those of the separation of powers and the nondelegability of the legislative function, are the foundation for judicial action upon the whole appalling domain of social and economic fact. But phrases like 'due process of law' are, as an able judge once expressed it, of 'convenient vagueness.'[3] Their ambiguity is such that the Court is compelled to put meaning into the Constitution not to take it out. Such features of the Constitution render peculiarly appropriate a favorite quotation of John Chipman Gray: 'Whoever hath an absolute authority to interpret any written or spoken law, it is he who is truly the lawgiver to all intents and purposes, and not the person who first wrote or spoke them.'[4] Thus, in deciding whether an act of Congress is a deprivation of property or a Massachusetts tax is an undue burden on interstate commerce, the scope for interpreting the Constitution is relatively wide and the opportunity for exercising individual notions of policy correspondingly free. This is the most active and controversial sphere of Supreme Court litigation. Within it the Justices are cartographers who give temporary location but do not ultimately define the ever-shifting boundaries between State and National power, between freedom and authority.

"It is plain, therefore, that judges are not merely expert reporters of preexisting law. Because of the free play of judgment allowed by the Constitution, judges inevitably fashion law. And law is one of the shaping forces of society. That is why to neglect the Supreme Court's role in our social and economic history is to omit vital factors of the story. The Supreme Court gives direction to economic forces, especially to the pace and the range of their incidence. No matter how powerful the pressures behind the use of the corporation as an instrument of enterprise, it cannot be denied that the Supreme Court has enormously furthered corporate growth.

"We speak of the court as though it were an abstraction. To be sure, the court is an institution, but individuals, with all their diversities of endowment, experience, and outlook, determine its actions. The history of the Supreme Court is not the history of an abstraction, but the analysis of individuals acting as a court who make decisions and lay down doctrines, and of other individuals, their successors, who refine, modify,

[4] From a sermon by Bishop Hoadley, quoted in Gray, "The Nature and Sources of the Law" (2d ed., New York, 1921), pp. 102, 125, 172.

and sometimes even overrule the decisions of their predecessors, reinterpreting and transmuting their doctrines. In law, also, men make a difference. It would deny all meaning to history to believe that the course of events would have been the same if Thomas Jefferson had had the naming of Spencer Roane to the place to which John Adams called John Marshall, or if Roscoe Conkling rather than Morrison R. Waite had headed the Court before which came the Granger legislation. The evolution of finance capital in the United States, and therefore of American history after the Reconstruction period, would hardly have been the same if the views of men like Mr. Justice Miller and Mr. Justice Harlan had dominated the decisions of the Court from the Civil War to Theodore Roosevelt's administration. There is no inevitability in history except as men make it."

In my opinion, this statement of Mr. Justice Frankfurter exposes the complete unreality of the claim that ours is a Government of laws and not of men. It is worth reading many times. I do not agree with the philosophy implied in this statement, but it is substantially true.

In addition to the article by the author, adverted to at the beginning of this piece, I desire to call the reader's attention to the case of *Smith* v. *Allwright* (321 U.S. 649, 665, 666, 88 L. ed. 987, 998), wherein it is implied, by citing with approval the dissent of Mr. Justice Brandeis in the case of *Burnet* v. *Coronado Oil & Gas Co.* (285 U.S. 393, 405–413, 76 L. ed. 815, 823–828), that the Court will be inclined to "reinterpret" its former decisions on constitutional issues, where it appears that such decisions are erroneous and that it would be difficult to correct such error through legislative action so as to overcome the effect of such decisions. Such a philosophy is judicial supremacy run wild. Philosophy of this quality does not, in my opinion, comport at all with the ethos of a government of, for, and by the people. In other words, the Supreme Court will judge of the needs of the body politic and render a decision accordingly by overruling prior decisions.

My final thought is this: If it be supposed that a decision of the Supreme Court, interpreting the Federal Constitution, becomes the supreme law of the land, then it follows that a subsequent decision of that Court overruling that decision (this has happened many times—the segregation cases are an example) would result in the Supreme Court setting aside the supreme law of the land. In such circumstances, it would have to be then admitted that the Supreme Court is an absolute superlegislature with the unrestrained authority to make and revoke the supreme law of the land at its will.

This illustration underlines the utter impermissibility of the contention that a decision of the Supreme Court of the United States, interpreting the Federal Constitution, becomes the supreme law of the land. The invalidity of such a judicial philosophy is obvious. The supreme law of the land could change from day to day because the Justices of the Supreme Court had changed their views or new members had come on the Court. The Federal Constitution cannot be made to rest upon such evident judicial quicksands.

COURT DECISIONS OFTEN REVERSED

Judicial history abounds with instances where the same court decided the same issue contrarily in the same case or in different cases within relatively short periods of time, because either one or more of the judges of the court entertained changed views or new members came on the court. The Supreme Court of the United States is the outstanding example of this sort of thing. I cite the legal tender cases, the income tax cases, and the flag salute cases, wherein provisions of the Federal Constitution were at issue and were interpreted, the Supreme Court first holding one way and then shortly thereafter holding the exact opposite. There are other instances of cases of this kind. It is little wonder that a decision of that Court could hardly be called the supreme law of the land. A court decision is too transitory and mutable to rise to the dignity of the supreme law of the land, as history has so abundantly demonstrated by the cases just cited. The supreme law of the land is not that ephemeral, evanescent, and flexible.

WASHINGTON WARNED AGAINST IT

Hamilton's and Marshall's words expounding judicial rectitude should be the rule, but, in practice, the contrary has been true. This is all the more reason for erecting bulwarks to safeguard the law against judicial infraction. The moral sermon of Marshall in the Osborn case does state the limits of judicial action and anything beyond that is plain, unadulterated usurpation, matters not under what guise or euphemism it masquerades. It was changed by usurpation which George Washington so strongly warned against in his Farewell Address to the Republic.

SENATOR MURRAY OF MONTANA

Mr. LONG of Hawaii. Mr. President, I have just received an editorial written by the editor of the Honolulu Star-Bulletin, Mr. Riley H. Allen, in which he pays honor to the great Senator from Montana, JAMES E. MURRAY, who has announced his plan to retire from active elective political life.

I ask unanimous consent to have the editorial printed in the RECORD at this point in my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Honolulu Star-Bulletin]

HAWAII HONORS SENATOR MURRAY

Hawaii's two U.S. Senators have appropriately recognized the friendly efforts of Senator JAMES E. MURRAY, of Montana, to get statehood for our territory.

In Washington yesterday, Senators HIRAM L. FONG and OREN E. LONG spoke before the Senate Interior and Insular Affairs Committee of which Senator MURRAY is the longtime chairman. They wholeheartedly praised his efforts to advance the cause of statehood for Hawaii.

It is a tribute in which all Hawaii can happily join.

Senator MURRAY has been long a supporter of Hawaii statehood—even at a time when many of his Democratic colleagues, particularly those of the South, were voting regularly against the statehood bills.

Senator MURRAY is retiring from active elective politics because of age. He leaves a record of distinction and is honored on "both sides of the aisles"—by Republicans and Democrats alike.

Hawaii sends him Aloha and admiration.

THE EAST-WEST CENTER

Mr. LONG of Hawaii. Mr. President, the report submitted to Congress last January by the Secretary of State, pursuant to chapter 6 of the Mutual Security Act of 1959, recommended that the proposed East-West Center be established at the University of Hawaii. It will be of interest to the Members of this body that this view is concurred in by a great number of distinguished scholars who have served as visiting professors at the University of Hawaii in recent years and who, therefore, know firsthand the excellence of this school and its unique qualities which make it the obvious site for the proposed East-West Center.

In view of our recent action to authorize the creation of the East-West Center, I ask unanimous consent to have the remarks of these scholars inserted at this point in the RECORD.

The PRESIDING OFFICER (Mr. FREAR in the chair). Is there objection?

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

T. H. Tsien, associate professor of Chinese, department of oriental languages, University of Chicago:

"As a visiting professor of Asian studies at the University of Hawaii last summer, I had the opportunity to observe the unique advantages of the islands as a meeting point for East and West. I am proud of the foresight and efforts which the University of Hawaii has been devoting to the development of understanding of Asia throughout the last several decades.

"I have learned that the University of Hawaii was one of the very few American universities to develop a full program on Asia and the Pacific as early as 1920. At about that time, the university announced: 'Standing midway between continental America and the Orient, Hawaii must understand the Orient as well as the Occident. More than usual attention is therefore given to the languages, literature, philosophy, and history of the lands bordering upon the Pacific.' I believe that it was the first university in this country to offer courses in the Japanese language, and that universities on the mainland did not teach the Japanese language until more than a decade later. Around 1930 its program on Asia and the Pacific ranked third among major institutions offering the largest number of such courses in the United States.

"These are merely a few points indicating that Hawaii has the people and resources to make it an ideal place for establishment of a center for the promotion of international understanding and improvement of relations between the United States and many Asian and Pacific countries."

Hubert C. Heffner, professor of dramatic literature, Indiana University:

"In 1958 I was a Carnegie visiting professor at the University of Hawaii and took the opportunity to gain as wide an acquaintance with the institution as possible. I was deeply impressed, not only with the institution as a center of higher education, but also with the cosmopolitan attitude that prevailed upon the campus. Students from many nations are enrolled there. This is only natural since, as you know, Honolulu is the crossroads of the Pacific between the East and the West. For some years the university has sponsored a summer program of considerable significance devoted to Asia and Eastern thought. Moreover, they have a series of programs in Oriental language, literature, civilization, and culture. Many scholars from the Orient have at one time or another lectured on the campus and served on the faculty.

"Hawaii itself is a magnificent showcase for the Orient, exhibiting the Americanization from citizens of various religions and races amicably living together, intermarrying, and operating our American democratic institution. It seems to me in that respect alone, the University of Hawaii is a natural selection for the establishment of the proposed center. I was impressed, too, with the high quality of the administrative personnel. Shortly after I went there as Car-

negie visiting professor, Hawaii selected a highly competent and dynamic president whom I know only by his reputation. I did, however, meet the other administrative officers of the institution and in every instance was impressed with the caliber of the man and the quality of his performance."

Hubert C. Armstrong, professor of education, Claremont Graduate School, Claremont, Calif.:

"Having spent 2 years in the Orient and considerable time in the islands on a research project as well as teaching in the university there, I feel that no other place in the world would be as suitable for productive activity in furthering the relations between America and the Orient. This could be one means of succeeding in peace as well as we do in war."

Dugald S. Arbuckle, professor of education, Boston University:

"A project of this nature is greatly needed to improve the relationships between the people of America and the people of Asia. I have had the privilege of working at the University of Hawaii several years ago, and I can think of no more logical a place to establish such a center."

Cortez A. M. Ewing, research professor of government, University of Oklahoma:

"Your university is in an enviable tactical position and it has the responsibility for synthesizing the philosophies and cultures of East and West * * *. Hawaii is ideally situated geographically and magnificently qualified culturally to serve as the site for such a cultural center. The university there is already filling such a role for a limited area. Both facilities and area should be expanded for the benefit of American relations with Oceania and the Orient. The University of Hawaii has a novel but very useful function to perform as an integrating agent between Oriental and Western cultures."

Herbert Feigl, director, Minnesota Center for Philosophy of Science, University of Minnesota:

"During the 4½ months of my residence there I gained the most favorable impressions of the university and of the many related activities at Honolulu. The place simply radiates a spirit of enterprise, no doubt even more enhanced since the attainment of statehood last year. The University of Hawaii has in many respects already acquired the role of strategically located meeting place of East and West. I have been impressed with the eagerness and the abilities of many students from the Orient.

"I had occasion to read the proceedings of the East-West philosophy meetings (1939, 1949, and 1959) arranged and organized under the wise and effective leadership of Prof. Charles A. Moore of the University of Hawaii's philosophy department. I have also obtained quite a few impressions of the continual interchange of Oriental and American ideas in various fields of science, art, religion, and education. Although much more than mere beginnings, these fruitful activities certainly deserve a much broader base for future expansion.

"I am sure I need not explain to you the paramount importance, in view of the current world situation, of the program envisaged for the proposed Center. Mutual understanding of East and West in all areas of learning, planning, and action is surely one of the most constructive tasks and most hopeful endeavors to be tackled."

James L. Hymes, Jr., chairman, childhood education department, University of Maryland:

"I had the opportunity during the summer of 1958 to be a visiting professor at the University of Hawaii. That short firsthand experience deeply impressed me with the unique opportunity the University of Hawaii has to serve as a cultural bridge between the East and the West. * * * I feel this would be a step with tremendous impact on our whole relationships with all the peoples of the Pacific area."

Edward Joseph Shoben, Jr., professor, Teachers College, Columbia University:

"Quite aside from the vital fact that the development of this institution would have an important bearing on general education in both the Hawaiian Islands and among American scholars generally, it has an implication that strikes me of still greater significance. There are few places in the world where Asians and Westerners have proved their capacity to get on together as effectively as in Hawaii. Merely making this fact more visible to Asiatic leaders and other representatives of the Asian nations would seem to me to be of central importance. But to establish a cultural center for the mutual training of Asiatics and Caucasians in a place of such relative accessibility in the Pacific as Hawaii and to make possible the sharing of research and educational processes on the part of people from both the East and the West are moves that impress many of us as a most enlightened form of implementing a policy of friendship and mutuality. We have much to learn from Asians, just as we have much to offer them. There are few contexts in which this kind of interchange can take place so well as in a well-planned educational endeavor. Having taught at the University of Hawaii and twice spent time in our 50th State, I can attest to the practicality, utility, and unique advantages of Hawaii as a locale for this enormously desirable venture."

Edward H. LaFranchi, chairman, educational administration, University of Southern California:

"I have spent some time at the University of Hawaii and am strongly impressed with the potential which that university has to become such a center. Its location is ideal. The university personnel are capable and the entire setting is very favorable. In fact, general conditions have been such that the university already has taken on some of the aspects of such a center very successfully. I am sure anything which can be done to promote this work would be profitable to our entire Nation."

Richard B. Morris, chairman, history department, Columbia University:

"I am indeed very much excited about the proposal for a Center for Cultural and Technical Interchange between East and West which you are planning to set up at the University of Hawaii. I think this is a brilliant idea and that it will serve a very useful purpose."

Richard Armour, professor of English, Scripps College, Claremont, Calif.:

"I am very strong for the International Center as a way to improve East-West relations and promote understanding between Asian peoples and ourselves. Hawaii is geographically and culturally the ideal place for this important enterprise."

Richard L. Park, department of political science, University of Michigan:

"It appears to me that Hawaii does have much to offer, academically and socially, for such an effort. Among many assets in Honolulu is the splendid support given to worthwhile causes by a solid group of local citizens. Beyond that is the university and also related industrial and agricultural and research endeavors of special significance to students from Asia."

Edward P. Coleman, professor of engineering, University of California:

"While a visiting professor at the University of Hawaii, I had the opportunity to observe their progressive work on race relations in world perspective and some of their technical activities in the fields of engineering and mathematics. It was striking indeed for me to see the sensitivity of that university for a continuing interchange of cultural knowledge between all nations and particularly between America and the Pacific nations. I would regard such a center, if established at the University of Hawaii, as being under the most capable leadership possible and at perhaps an ideal geographical location. I unhesitatingly reiterate my support."

E. William Noland, chairman, division of social sciences, University of North Carolina:

"I have a great affection for the University of Hawaii and all the people I came to know there. I am completely convinced of the rationale for such a center at your institution and I appreciate your giving me the opportunity to say so."

JOANNE LEA (BUFFINGTON) LYBARGER

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1286, S. 477. The bill has been cleared by both the majority and the minority leaderships.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 477) for the relief of Joanne Lea (Buffington) Lybarger.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the bill, which had been reported from the Committee on the Judiciary, with an amendment, on page 2, after line 2, to insert a new section, as follows:

SEC. 2. Claim for such benefits shall be filed within six months of the date of enactment of this Act: *Provided*, That no benefits shall be payable prior to the date of filing such claim.

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of any benefits payable to, or on account of, the surviving children of deceased individuals under (a) the Railroad Retirement Act, or (b) any law conferring benefits upon the survivors of veterans of World War I, the minor child, Joanne Lea (Buffington) Lybarger, of Albuquerque, New Mexico, shall be held and considered to be the child of Alvin Earl Lybarger who died on October 28, 1953, the said Alvin Earl Lybarger having cared for such child since her birth and having instituted proceedings to adopt such child which were pending at the time of his death.

SEC. 2. Claim for such benefits shall be filed within six months of the date of enactment of this Act: *Provided*, That no benefits shall be payable prior to the date of filing such claim.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. DIRKSEN. Mr. President, the bill was reported unanimously by the Committee on the Judiciary.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill (S. 477) was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. JOHNSON of Texas. Mr. President, I move that the Senate reconsider the vote by which the bill was passed.

Mr. DIRKSEN. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

USE OF SURPLUS AGRICULTURAL COMMODITIES FOR EXPANSION OF WORLD TRADE

Mr. SCHOEPPEL. Mr. President, in June 1953, I appeared before the Senate Foreign Relations Committee in support of my amendment to the mutual security bill for the use of CCC stocks for expanding world trade. At that time I said:

> Through the operations of the price support program here in the United States, we have accumulated large surpluses of agricultural commodities. With a great portion of the population of the free world needing food and clothing it seems unrealistic to me that we should maintain these high stocks of food and fiber in the United States. I sincerely believe that these stocks can be changed from a liability to an asset through the utilization of these commodities in furthering our mutual security program throughout the free world.

I offered for the consideration of that committee a proposal to sell up to $1 billion worth of Commodity Credit stocks to reinforce the mutual security program. My proposal authorizes the Secretary of Agriculture to transfer Commodity Credit Corporation stocks available for expanding world markets to the administrator of the mutual security program.

It authorized the administrator of the mutual security program, within limitations to be set by Congress, to offer such stocks for sale through private traders to cooperating nations under conditions negotiated by him with receiving countries in exchange for local currencies.

In June 1953, I introduced S. 2127, which later became S. 2475. At that time a number of Senators joined me in sponsoring that bill.

Senate bill 2475 authorized the President to use agricultural commodities to improve the foreign relations of the United States and for other purposes. That bill passed the Senate in July 1953, and on July 10, 1954, it was signed by the President and became Public Law 480.

As of December 31, 1959, nearly $12½ billion worth of surplus commodities have been sold for foreign currencies donated for relief abroad or bartered for strategic commodities under the act.

WHEAT AND RICE AGREEMENT BETWEEN UNITED STATES AND INDIA

Mr. SCHOEPPEL. Mr. President, I wish to discuss the momentous wheat-rice agreement signed today between the Governments of the United States and India.

This agreement, by far the largest single transaction negotiated to date under title I, Public Law 480, calls for the shipment, over a 4-year period, of 587 million bushels of wheat and 22 million hundredweight of rice.

Figures of that size, standing by themselves, have little meaning. Let me put them into perspective with a few comparisons.

The 587 million bushels of wheat, loaded into freight cars, would make a solid train stretching virtually all the way across the country from New York to Los Angeles. That much wheat represents the movement, on the average, of a shipload a day for 4 years. It is approximately equal to half of an average U.S. wheat crop.

The 22 million hundredweight of rice that will be shipped is over half of an average U.S. rice crop. It is more rice than the American people consume as food in any one year.

Those are the physical dimensions of the food represented by today's agreement. But what does this great food transaction mean in terms of better diets for the Indian people? What does it mean in terms of economic gains, not only for India, but also for the United States?

Food imports on the scale represented by this agreement obviously will mean improved diets for the some 425 million people of India. This big population has been putting great pressure on the short food supply. Bear in mind that India's population is increasing at the rate of about 2 percent a year. By the end of 4 years—the length of time the agreement will run—India's population will be in the neighborhood of 460 million.

The agreement signed today will assure India's teeming millions of a sizable increased food supply. The agreement not only provides wheat for current consumption but also permits the build-up of substantial wheat and rice reserves as a buffer against famine. Under the agreement, India will import 440 million bushels of wheat for consumption over a 4-year period. In addition, 147 million bushels of wheat and 22 million hundredweight of rice will be put into storage as a reserve against contingencies. Incidentally, this is the first Public Law 480 agreement to span a 4-year period, and the first to provide for such large-scale stockpiling of food.

The desire to help the needy burns strong in this country. The United States has a long history of sharing its abundance with the less-fortunate peoples of the world. It will be recalled that at the end of World War I, this country sent vast supplies of food to war-ravaged areas of Europe. During World War II, one of our slogans was: "Food Will Win the War and Write the Peace." Since the end of World War II we have, indeed, been using food to write the peace. Right after the war, nationwide campaigns were carried on to conserve food and ship it to needy people in Europe and Asia. The present program of expanded exports, including the United States-India agreement, is completely in keeping with our 40-year-old tradition of holding out a helping hand. Every American can well be proud of that tradition.

Aside from the humanitarian aspects of the agreement, we can see that India also will derive some solid economic benefits.

First of all, increased imports of grain will help put down a troublesome inflation in Indian food prices. This upswing in prices is the natural result of high demand colliding head-on with short food supplies.

India will benefit economically in another way. India will pay the United States $1,276 million in Indian rupees for the wheat and rice covered by today's agreement. Of that total, the United States will turn $1,076 million back to the Indian Government for economic development—half in the form of loans, half as grants. The remaining $200 million will be used to pay U.S. expenses abroad and to finance other U.S. agency programs, including market development. And here is a final figure bearing on the size of the transaction: The cost to the Commodity Credit Corporation of the wheat and rice involved in the agreement was $2,119 million.

It may be asked, What is the United States getting out of all this?

We are getting a great deal.

Our shipments of food to India and elsewhere under this agreement are helping to promote American foreign policy. Our farm products are helping to build up the strength of the free world, not only by meeting immediate urgent needs of friendly foreign people, but also by promoting economic development. Furthermore, by providing needy people with food, we are helping to create among millions of free-world people a humanitarian "image" of the United States—an asset of enormous value in this day of serious international tensions.

Our food exports tend to stabilize domestic market prices. That is not to say that exports are a cure-all for our domestic farm problems. They are not. In spite of the large quantities of wheat which will go to India under today's agreement, wheat legislation is still very urgently needed. At the same time, however, substantial exports of wheat tend to reduce the downward pressure of heavy market supplies.

Do not forget that exports help us reduce burdensome storage charges. These constitute one of the big costs of supporting prices of farm products.

Part of the foreign currencies obtained from sales of wheat, rice, and other commodities are being used to develop new markets for U.S. farm products. Most of this work is being done in cooperation with U.S. trade groups. When it comes to wheat I want to mention the Great Plains Wheat Market Development Association, representing the Great Plains area, and wheat associates. These groups maintain field offices in Europe, South America, and Asia, to promote expanded use of U.S. grain. For rice, the U.S. Rice Export Development Association has given its fine cooperation.

All in all, the United States-Indian agreement is good. It is good for India; it is good for the United States; it is good for the free world.

In appraising this very significant transaction, I recall the words of Arnold Toynbee. He said:

> Our age will be well remembered, not for its horrifying crimes nor its astonishing inventions, but because it is the first generation since the dawn of history in which

mankind dared to believe it practical to make the benefits of civilization available to the whole human race.

We can be glad that, as a people, we have had a part in that.

MONTANA CONSERVATION COUNCIL

Mr. MURRAY. Mr. President, I wish to call the Senate's attention to some good work being done by the Montana Conservation Council.

The council is a grassroots citizens organization which promotes coordinated and beneficial development of my State's natural resources. It does this through a dynamic education program based on study and discussion. The council testified before the Senate Select Committee on National Water Resources last fall in Missoula, and has strongly supported legislation such as S. 2549, the proposed Resources and Conservation Act. Recently the council contacted 25 State and Federal agencies regarding resource development, following up these queries with fruitful discussions with five chief administrative officers concerning the need for better informed conservation and natural resource technicians.

Along with my colleagues, the junior Senator from Montana [Mr. MANSFIELD] and Representative METCALF, I have been assisting the council in a small way by encouraging operating agencies to consider council recommendations. In cooperation with our great, late colleague, Senator Dick Neuberger, a distinguished member of the Post Office and Civil Service Committee as well as the Interior Committee, I hoped to augment the in-service training program of Federal officials in the broad area of conservation and resource development. Dick Neuberger is gone, and I shall retire upon the completion of my present term. I know there are many others who will wish to carry on this program.

Recently I suggested to the Honorable Roger W. Jones, Chairman of the Civil Service Commission, that his agency could perform a distinct public service by encouraging conservation education within Federal departments. Mr. Jones now has under consideration detailed proposals as recommended by the Montana Conservation Council, including the suggestion that a pilot project in in-service training be initiated in Montana, with the participation of the Forest Service, Fish and Wildlife Service, agricultural extension programs, Montana State University, Montana State College, and other organizations.

Mr. President, for the information of the Senate and other interested readers, I ask unanimous consent to insert in the RECORD immediately following these remarks a statement of the leadership-training problem prepared by the Montana Conservation Council and an article entitled "Have You Tried Teaching by Field Trips?" appearing in the April 1960 issue of Montana Education. It was written by Mr. Mark Sorenson, eighth grade teacher at Hamilton, Mont.

I view this excellent article as one of the unanticipated benefits to conservation education which results from an enthusiastic local effort to teach our children and grandchildren how to understand and appreciate the meaning and value of conservation.

There being no objection, the statement and article were ordered to be printed in the RECORD, as follows:

STATEMENT OF LEADERSHIP-TRAINING PROBLEM, MONTANA CONSERVATION COUNCIL

It should be recognized that all agencies, State and Federal, which deal with matters in the broad realm of conservation are, in the final analysis, responsible to the public. In one regard, their programs will succeed or fail, be worthwhile or not, in relation to the public's general understanding and support of those programs. In another regard, their programs will succeed or fail, be worthwhile or not, in relation to what they contribute to the overall advancement of sound resource management, through the development of public conservation understanding.

But neither programs nor agencies which sponsor them, nor field personnel endeavoring to carry them out can operate adequately unless there is general public understanding and support, coupled with a genuine understanding on the part of the personnel of the agency, of the relationship of their work to the much broader conservation goals.

Administrators of conservation agencies are rightly concerned over the economic, material, and technical aspects of their agencies' resource-management responsibilities, such as growing, harvesting, marketing, or engineering problems. Such resource-management responsibilities cannot be fulfilled adequately outside of the context of their social and cultural impacts. Thus, administrators likewise must be concerned over the social and cultural implications of their activities, as they are related to the broader values inherent in all natural resources.

It is apparent that the training of agency personnel in technical skills overshadows the training in and recognition of human and social values. It is logical that its overshadowing is attributable to academic training which is geared for and aimed at acquiring technical skills, with insufficient concern for training which results in a depth and breadth of understanding on the part of the individual.

Part of the reason for this problem lies at the doors of the training institutions. They supply the resource agencies with technically trained individuals. They in some measure set up curriculums at the behest of accrediting committees of professional societies. They also endeavor to meet the requirements of the particular labor market for which their graduates are training. Then in doing these things, they overlook, or at least tend to deemphasize, the broad academic and social education of their students.

Another source of the problem is to be found in the agencies themselves. In many instances, inservice training involves only further technical training and overlooks these same broad qualities. The leadership of the agencies is usually, properly, and understandably derived from within each agency. These leaders, with all due respect for their administrative and technical competence, are themselves products of the technical institutions, and have been molded by the policies, philosophies, and traditions of their respective agencies. Thus the circle is closed.

Industry has come to recognize this problem, and has sought ways of developing dynamic executive leadership. It has recognized fundamental responsibilities to facets of economic and social problems which, but a few years ago, were considered far outside of industry's realm. For instance, industries are spending large sums to give their young executive talent a breadth of training, study, and experience which most technical training institutions do not supply.

In a similar manner, conservation agencies, in order not to lose their position of leadership, must recognize their responsibilities to such broadening training of their staffs, in order to develop leadership skills at all levels within their own organizations. Such leadership skills are needed to meet two problems:

1. To successfully administer and carry out agency programs.

2. To develop competent, well-informed, dynamic lay leadership and support on the community level.

It is in recognition of these problems that the Montana Conservation Council, in fulfilling the responsibilities imposed by the resolution pertaining to leadership training, is interested in fostering serious institutional and agency concern and discussion of these matters. Such action and analysis should point the way toward the development of dynamic training programs which will assure that agencies and institutions will redeem their leadership obligations to the public.

[From Montana Education, April 1960]

HAVE YOU TRIED TEACHING BY FIELD TRIPS

(By Mark Sorenson, Hamilton, Mont., eighth-grade teacher)

We've had such wonderful success with our eighth grade conservation field trip each spring—it is looked forward to with almost as much enthusiasm as the Christmas holidays—I thought others might appreciate the outline we've worked out that serves as a guide in preparing and taking a field trip. These suggestions should help you, regardless of the type of field trip you are planning:

I. PLANNING PRIOR TO THE TRIP

A. Securing permission for the trip: (1) From the principal; (2) from the parents; (3) from the place to be visited.

B. Arranging for the trip: (1) Securing resource personnel and officials; (2) clearing and checking details of transportation; (3) planning the trip procedure—(a) selection of pupil groups, group leaders, and parent assistants, if any; (b) with whomever is to conduct the tour; (c) formulate trip policies and conduct rules; (d) discussion in class of the mechanics of the trip in order to reduce confusion and to let the pupils know what to expect; (e) discuss what to do in cases of emergencies; (4) discuss the things to be looking for; (5) discuss the importance of the field trip and why a day of school is taken for such an enterprise.

II. THE TRIP

A. Check last minute pretrip details: (1) Bathroom; (2) check equipment, lunches, etc.; (3) provide a means of "letting off steam" before getting on the bus; (4) any last minute changes that may have come up.

B. Policy in regard to taking pictures.

C. Necessity for taking notes.

D. Check, at various times, to see that all are present.

E. Are safety and conduct rules being observed?

III. FOLLOWUP ACTIVITIES

A. Thank-you notes to those contributing to the success of the trip.

B. Composition for English may be written.

C. Read materials related to things observed.

D. Trip experiences may be shared with other classes.

E. Class discussion of information gained as a result of the trip.

F. How may future trips be improved.

In glancing over this outline, a teacher may decide that it would be easier to do this teaching from behind the desk. However, since much of the planning and subsequent activities are done with the children, the teacher's task is not so formidable and time-consuming as one would be led to believe.

Actually, it is a means of combining and relating language arts, arithmetic, reading, art, etc.—practically all phases of the curriculum.

Then, too, many of us travel in an area numerous times and see nothing. This is also true of children. But when things of importance are pointed out to them to see first-hand, a much more lasting impression is left with the student than when gleaned from a book or heard in a schoolroom lecture. Also, they learn to be observant.

The following suggested topics may help:

(1) A lumbering operation, or perhaps an industry that exists because of a byproduct of the lumbering industry.
(2) A lumber mill.
(3) Cover for wildlife.
(4) Effects of overgrazing.
(5) An irrigation project.
(6) Examples of soil erosion.
(7) Effects of dust storms.
(8) Contour or strip farming practices.
(9) Stream pollution.
(10) A local industry.
(11) A visit to the local bank.
(12) A visit to the county courthouse.

In the event a field trip is to be organized, may I offer these two very important suggestions:

(1) Don't let your tour involve too many students. Two or more trips may be necessary if large numbers of children are involved. More than 35 and the group will become too unwieldy and the effectiveness of the trip will suffer.

(2) Have your group well indoctrinated before the trip. A poorly disciplined group of youngsters will also defeat the aims of the tour.

At this point I would like to mention our spring conservation field trip. We, in Hamilton, are very fortunate, indeed, to have the personnel of the Bitterroot National Forest ready and more than willing to lend us a helping hand, especially Mr. Carl Wetterstrom, acting supervisor in charge of timber management.

Test questions, too

When approached on the possibility of the Forest Service working with the school to organize a conservation field trip, Mr. Wetterstrom enthusiastically consented to work up such a trip, including a "field trip schedule and program," and test questions. This type of resource help is very necessary.

An added feature of Mr. Wetterstrom's field trip is the multiple chart he has worked up. This chart contains about 20 sheets of illustrations and statistics which he uses to motivate his lectures and to make them more easily understood. At the conclusion of the tour, he passes out a number of pamphlets published by or for the Forest Service which accentuate the points brought out in the course of this trip.

This field trip covers a multitude of conservation practices pertinent to this section of our State. It will not be necessary to go into detail in regard to these practices because the trip schedule shows, in an abbreviated way, the principal categories covered.

The schedule shows that the first stop is Lick Creek. This area was first logged in 1907–11. Since that time the Forest Service has instituted an experiment known as a sustained yield project. Through experimental study plots, experimental pruning, thinning, seed study, and systems of logging, they hope to be able to log this area approximately every 10 years. These experimental practices are carefully explained and shown to the pupils. As a preliminary to this, the students are presented with a wonderful nature lesson in identification of trees and forest plants and the uses and importance of wood.

Lunch is eaten (here an ideal picnic location) before boarding the bus for our next stop. The children enjoy this hour of relaxation very much.

Our next stop is Rye Creek on the opposite (east) side of the Bitterroot Valley. Here we see the results of poor logging practices, overgrazing, water erosion, and so forth. The Rye Creek drainage was once a verdant and beautiful valley, its surrounding hills covered with a fine stand of trees and grasses and, according to the old timers, its crystal-clear stream was abundant in trout. Many years ago, before any regulations were in effect this valley was completely denuded of its protective covering of trees. The hills were closely grazed. Today, a muddy and sluggish stream, devoid of fish life, meanders through this territory carrying the good top soil with it into the Bitterroot River.

When the students have such practices as this shown to them they cannot help being impressed with the necessity of wise conservation policies. I am sure you can see the lasting effects this field trip will have on the youngsters.

The U.S. Soil Conservation Service has also been very helpful in organizing and conducting field trips for us. The trips conducted by this service gave us firsthand information about soil conservation in the cultivated areas of the valley, the water erosion problem, the drainage problem, and so forth, as well as a lesson on trees and logging as related to soil conservation.

If you have never tried the field trip method of teaching, why not give it a whirl? If you plan it carefully, execute it according to plan, and utilize proper followup procedures, I am sure you will feel a deep sense of satisfaction with a job well done and a lesson convincingly taught.

THE LOOM OF TIME

Mr. BYRD of West Virginia. Mr. President, no doubt a part of our probation in this life is the limitation of our knowledge of the ways of God. How different it would be if we could see things as God sees them, could understand the divinity that is shaping our end. In the "Gesta Romanorum," that 14th century collection of legends and miracles and fables, there is the story "The Hermit and the Angel."

A hermit and an angel once set out on a journey together. The angel was in human form and garb, but he had told the hermit about his exalted rank. The first night they stopped at a humble home by the wayside, where, for the love of God, they were granted food and shelter. In the middle of the night the angel arose and strangled the infant child of their host as he was sleeping in his cradle. The hermit was amazed and horrified at this deed of his companion, but since he knew that this was an angel he kept silent. At the end of the next day's journey they were entertained at a mansion in a city, and when they departed the angel stole the beautiful golden cup out of which his host had drunk the wine at dinner.

On the next day's journey they were crossing a bridge over a deep and dangerous stream when they met a pilgrim. The angel said to the pilgrim, "Canst thou show us, good father, the way to the next town?" When the pilgrim turned to point out the road, the angel picked him up and flung him over the parapet of the bridge into the river. Seeing that, the hermit said to himself, "Surely this is a devil with whom I travel, for all his works are evil." But he said nothing to the angel.

That night, as darkness came on, snow was falling; and they heard the howling of the wolves in the forest. In the distance they saw a light in the window of a cottage, and making their way thither, they asked for refuge. The surly master of the house with oaths and curses turned them away from his door. "Yonder," he said, "is the pigsty. That is the place for dirty beggars like you." So they passed the night in the pigsty among the swine. In the morning, the angel went to the man's house and thanked him for his hospitality, and for a keepsake gave him the stolen goblet.

At this, the hermit's anger and horror would no longer be contained. "Get thee gone, wretched spirit," he cried. "Thou pretendest to be a messenger from heaven; yet thou requitest good with evil and evil with good." Then looking upon him with compassion in his eyes, the angel said: "Listen, shortsighted mortal. For love of that infant son the father had been made covetous, breaking God's commandments to heap up wealth for his boy, which the boy, if he had lived, would have wasted in riotous living and debauchery. My act which seemed to you so cruel saved both parent and child. The owner of the golden goblet which I took had once been abstemious, but he was becoming a drunken sot. The loss of his cup has set him to thinking, and he will mend his ways. The poor pilgrim whom I threw into the river was about to commit a mortal sin, when I interfered and sent his soul unsullied into heaven. As for this wretch who drove God's children from his door, he is, indeed, pleased for the moment with the bauble I have given him; but hereafter he will burn in hell." When the hermit heard these words, he bowed his head and murmured, "Forgive me, Lord, that in my ignorance I misjudged Thee."

Although the ways of Providence to us are ofttimes inscrutable, one day we shall be able to see, what we can now behold by faith, that—

> There's a wideness in God's mercy,
> Like the wideness of the sea.

And the heart of the Eternal is most wonderfully kind.

Man's life is laid in the loom of time
To a pattern he does not see,
While the weavers work and the shuttles fly
Till the dawn of eternity.

Some shuttles are filled with silver threads
And some with threads of gold,
While often but the darker hues
Are all that they may hold.

But the weaver watches with skillful eye
Each shuttle fly to and fro,
And sees the pattern so deftly wrought
As the loom moves sure and slow.

God surely planned the pattern:
Each thread, the dark and fair,
Is chosen by His master skill
And placed in the web with care.

He only knows its beauty,
And guides the shuttles which hold
The threads so unattractive,
As well as the threads of gold.

Not till each loom is silent,
And the shuttles cease to fly,
Shall God reveal the pattern
And explain the reason why.

The dark threads were as needful
In the weaver's skillful hand
As the threads of gold and silver
For the pattern which He planned.

SOVIETS ACCEPT NUCLEAR EXPLOSIONS FOR RESEARCH

Mr. CHURCH. Mr. President, I ask unanimous consent to have printed in the RECORD a news report published in today's New York Times. The article tells of a Soviet announcement, made just yesterday, to the effect that the Soviet Union will accept the use of nuclear explosions in a joint U.S.-U.K.-U.S.S.R. program designed to improve the capabilities of a control system to detect and identify underground nuclear tests. In this announcement the Soviet Union also indicated its willingness to have a moratorium on underground nuclear weapons tests below the threshold set in the treaty be declared in the form of unilateral statements by each of the three parties to the test ban negotiations. Finally, the Soviet Union agreed to send, on May 11, a team of its scientists to meet with scientists from the United States and Great Britain to plan the joint and coordinated research program.

The Soviet announcement is a welcome one. It moves the Conference on the Discontinuance of Nuclear Weapons Tests a step closer to a successful conclusion. It does not resolve, by any means, all of the remaining problems but it is a definite move in the right direction.

I am particularly gratified that the Soviets now realize the importance of using nuclear explosions in a research program. Such experiments ought to give us valuable data on how to distinguish nuclear explosions from earthquakes and thus allow the control system to reduce the number of unidentified underground events that might be suspected of being nuclear weapons tests.

Earlier this year, on January 8, I wrote to the Secretary of State and suggested "that the three powers concurrently agree to jointly conduct a series of underground nuclear explosions, which will add no further contamination to the air, but which may form the basis for fashioning a mutually acceptable detection and inspection system with which to police a subsequent ban on underground nuclear weapons tests." In my letter I pointed out "that the lack of ample data concerning underground tests might well be the underlying reason for the inability of the scientists to reach agreement now upon the requirements for a reliable detection system. We have conducted only four or five underground nuclear tests, and the Soviets have never indicated that they have conducted any. A heavily instrumented series of underground tests, in the Soviet Union and in the United States, or at other points on the globe, would certainly yield resulting data of significant importance."

On January 11, 1960, I informed the Senate of my proposal to the Secretary of State. A research program to be conducted by the United States, Great Britain, and the Soviet Union obviously should not be expected to perform miracles, but it should equip us with increased knowledge on ways to perfect controls over a nuclear weapons test ban agreement, embracing all nuclear weapons tests. I think we should be encouraged over this latest development.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request of the Senator from Idaho?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RUSSIANS ACCEPT ATOM TESTS TO AID DETECTION STUDY—AGREE AT GENEVA TO WEST'S IDEA ON RESEARCH PROGRAM—STEP FORWARD SEEN

(By A. M. Rosenthal)

GENEVA, May 3.—The East-West negotiations on ending tests of nuclear weapons moved a step forward today.

The progress came after weeks of marking time when the Soviet Union reversed its stand and accepted a Western proposal that experimental nuclear explosions be carried out as part of an East-West research program on scientific detection methods.

This program is an important link in the chain of negotiations. The West believes that it is impossible for scientists by present methods to detect any difference between earthquakes and small-scale underground nuclear blasts. It was only on condition that a research program be carried out to improve detection methods that the West agreed to consider a moratorium banning all tests.

WEST INSISTENT ON TESTS

The United States, the Soviet Union, and Britain have been trying for more than a month to work out a three-part agreement: A treaty banning all but small-scale underground tests, a moratorium on all tests, and a joint research program.

The United States and British representatives at the negotiations here have been insisting that the research program would not work unless the scientists were permitted, under East-West control, to set off some nuclear explosions and watch the reactions of seismographic detection machines.

Moscow had rejected this proposal, insisting that chemical explosions would do the trick and provide enough information.

Today, however, Semyon K. Tsarapkin of the Soviet Union, acting on instructions received from Moscow during the night, said that the Soviet Union "reluctantly" would agree to a "strictly limited number of joint underground nuclear explosions" during the research program.

MEETING DATE ACCEPTED

This announcement, made during the 202d meeting of the nuclear negotiators, was part of an intricate series of moves made by the Russians. Western specialists, analyzing the moves, said that taken together they moved the negotiations forward but that important problems remained and some new ones had been opened by Mr. Tsarapkin.

These were the Soviet steps that the West saw as moves forward:

Acceptance of the idea of experimental nuclear explosions.

Acceptance of May 11 as the starting date for a meeting of East-West scientists in Geneva to make plans for the research program, which would go into operation with the signing of the moratorium and the treaty.

Acceptance of the Western proposal that the moratorium be declared in the form of unilateral statements by each of the three powers. Originally, the Russians had asked that the moratorium be tied in legal form directly to the treaty.

The Western experts also noted these points in the Soviet statement that indicated long and hard negotiations ahead:

The Soviet Union asked that the research program and the experimental explosions be carried out jointly by East and West.

The United States feels that the research should be carried out largely on the basis of existing national detection programs, with observers from the other side present, and the results then coordinated. Mr. Tsarapkin said that this would lead to trouble and the questioning of results and declared that the scientists from the two sides should work as a team.

SOVIET THOUGHT TO FEAR TRAP

Mr. Tsarapkin again insisted that the moratorium last 4 or 5 years. The West has not committed itself but is thinking of a much shorter moratorium period.

Mr. Tsarapkin said the nuclear powers should agree that the moratorium would not automatically expire if at its end the research program had failed. In this event, the three countries should get together on extending it, he said. The West does not want to give this commitment, but it might consider an agreement for a conference several months before the date of expiration.

The Russian insistence on a mechanism for extending the moratorium apparently stems from Soviet fear of a trap. The trap the Russians seem to see is that the West would merely go through the motions of a research program, stall until the moratorium ended and then be free to resume small-scale tests while the only legally binding document was the treaty banning large-scale tests. The Russians say the only tests they themselves are interested in are the large ones.

The Soviet statement today did not touch on the major unsettled problem—the number of inspections to be allowed. Outside the conference room, Mr. Tsarapkin said that the Russians were sticking to their fundamental positions: that the number must be small and politically determined.

The Soviet delegate said the West would have to abandon its stand that the number of inspections be related to the expected number of borderline seismic disturbances.

Moscow's refusal to accept a scientific basis for the number of inspections is tied in an important way to Soviet attitudes to disarmament and control problems. The Russians have made it plain that they regard decisions on control and inspections as a matter of political sovereignty and that they will not agree to put this matter into the hands of scientists.

DR. BETHE BELIEVES NUCLEAR TEST BAN ESSENTIAL; FEARS IT MAY BOG DOWN

Mr. PROXMIRE. Mr. President, at recent hearings before the Joint Atomic Energy Subcommittee, atomic physicist Dr. Hans Bethe presented technical testimony on difficulties connected with the creation of a completely foolproof, technically cheatproof detection system to check up on a nuclear test ban. As a result of that testimony, an important sector of the general public, and perhaps even some of my colleagues, may have gotten the impression that Dr. Bethe believes a test ban should not be concluded unless the Russians agree to the placing of 600 seismic detection stations in their territory.

It is plain to me that this interpretation is a serious misunderstanding of Dr. Bethe's position. Careful study of his testimony, as supplemented by a statement, shows that he believes that a test ban achieved on the basis of the present Geneva negotiations would in fact be highly desirable from the specific viewpoint of American national interest.

On April 25, Dr. Bethe made to the Philosophical Society of Washington a speech which makes this doubly clear.

As a recognized expert on the technical problems connected with a test ban, Dr. Bethe's views carry a great deal of weight. I have been able to secure a transcript of his speech; and, with Dr. Bethe's permission, I should like to place an excerpt from it in the RECORD.

I wish to give special emphasis to these statements by Dr. Bethe:

We wish to have 100-percent assurance on some small matter, and by wanting 100-percent certainty on this matter we may lose the most important things.

I say we cannot afford to resume tests. We cannot afford to stop the negotiations.

I ask unanimous consent to have an excerpt from Dr. Bethe's speech to the Philosophical Society printed at this point in the RECORD.

There being no objection, the excerpt from the speech was ordered to be printed in the RECORD, as follows:

I think the opponents of a test cessation agreement have forced us into considering more and more, and smaller and smaller, technical details, technical details which become more and more absurd and which become more and more detailed and absorb the energies of a great many people.

In discussing all these details we have forgotten the important issues. Nobody talks about the important issues. Everybody talks about the big hole.

What are the important issues? I think the problem is not a technical problem. The problem is a political problem which requires clear thinking and clear decision, and it does not require these silly things about detecting explosions carried out in a big hole.

Dr. Edward Teller has argued about as follows—I have heard it several times, and many of you may have heard it in his television show where he met Lord Russell of Britain—he argues we cannot afford to have the Russians cheat on a test ban. We cannot detect small nuclear explosions, especially if they are decoupled. Since we can't detect them, we will not know whether the Russians cheat or not. So far so good. But then comes a beautiful step in logic. Since we can't know, they will cheat.

In fact, I have heard some people (not Dr. Teller say that the Russians are cheating even now.

If they cheat, the argument goes on, they will soon catch up with us in these small weapons. And they will surpass us in small weapon technology. If they surpass us in small weapon technology then we shall be completely at their mercy. This argument of Dr. Teller's seems to me open to challenge at many points.

Suppose we grant for a moment—which I do not wish to grant—the importance of small weapons technology, of small nuclear weapons. Suppose the Russians see it the same way, which I don't think they do. Suppose the Russians risk detection of a violation which might, of course, come by one of the many people who defect from Russia, rather than by technical means. Nevertheless, suppose they wish to carry out clandestine nuclear tests.

Carrying out such tests in a clandestine way, in violation of an agreement, clearly is a very difficult and extremely slow operation. It would take years to make one fully decoupled 20-kiloton test, longer to make two tests, and to make appreciable progress they would have to make a whole series of tests.

Thus for several years we would be safe from such tests. In any case, the discussions at Geneva at this moment are not about decoupled tests, but have as a basis the President's proposal of February 11, namely to stop by treaty only the tests above earthquake magnitude 4.75. To monitor these tests, the Geneva system of 21 stations in the U.S.S.R. would be entirely adequate. If, at the end of a moratorium period of 2 to 3 years, we have found no better way by research, we may have to ask for the closely spaced net of stations which I proposed recently in the hearings conducted by Mr. HOLIFIELD, i.e., a net of small, unmanned stations at a spacing of 125 miles, each having one seismograph.

If then a series of decoupled shots were carried out, all in one location, this series would undoubtedly be detected without difficulty. So the violator would have the added complication that he would have to move from place to place, and each time do it somewhere else for fear that the system will detect it.

I submit that if the Russians really were intent on developing tactical nuclear weapons, they would have a far easier time to accept our proposal of February 11 as it stands. They would have a far easier time if such testing were allowed, because then they could make a whole series very quickly, and could catch up with us very quickly. So if this were their intention I think they would have behaved differently. They would have said this is wonderful, let's test below 20 kilotons.

It is just immensely faster, immensely more efficient to test when you are allowed to.

Supposing the argument is then made that we also can improve our tactical weapons capacity. Sure, we can. But we already have a very large arsenal of tactical nuclear weapons. We have tactical nuclear weapons ranging from 20 or more kilotons down to 1 kiloton, and to fractions of a kiloton. We have nuclear weapons of all sizes and shapes; heavy ones and particularly light ones. There is, in my opinion, very little of military value that we do not have.

There are some gleams in the eyes of a few people, in particular of Mr. Dyson, who is not a weapons technologist. These gleams in the eyes I could discuss if there were time, but I don't think they are important enough to talk about them.

We could do more—one can always do more—but I submit that we are pretty sure that we are far ahead of the Russians in the small-weapons field; and even if they make a lot of tests they will only barely catch up with us, and there is not very much more of real military value which we can learn.

But in all of this I have conceded that tactical nuclear weapons are the thing which the Russians would want to test.

I believe they wouldn't do that at all. I believe if we resume tests—and some people have advocated that we do—or if the negotiations broke down, then the Russians would not test tactical nuclear weapons; they would test large thermonuclear weapons. These are the ones of which we have to be afraid. These are the ones which threaten our homeland. These are the ones by which the Russians could, at any time, destroy the United States by a surprise attack.

And I think it is these strategic weapons, very large ones and smaller ones, that the Russians would choose to test if we chose to terminate the agreement—terminate the moratorium.

Again, it is said that in every weapons field we can go ahead and they can go ahead, and sure enough that is true, there are some things which we can still do, and there are some specific things that I know about and that we could still do. I think they have more to do than we. They simply are not as far advanced as we are. And it is my strong belief that if testing were resumed, then the Russians would gain far more than we would.

It is very difficult to argue about the future. It is much easier to argue about the past. And about the past we know what happened.

In 1955 the Russians proposed to stop nuclear testing as of the 1st of January 1956. This was a proposal which I think they meant quite seriously. By the end of 1955 they had one, and only one, real hydrogen bomb tested. We had half a dozen or more.

If we had left it at that point, it stands to reason that they would not have a suitable warhead for intercontinental ballistic missiles. It stands to reason that if we had accepted their proposal at the time, that we would now not need to be afraid of the missile gap. Since we let the tests go on, they caught up relative to us, and we have to be afraid of the missile gap.

This is the story of the past, and I think all it illustrates is that if you have two competent teams working on one thing, and one team is ahead of the other, the one which is behind has more to learn and will catch up faster in the future. And I think this would continue in the future.

For all these reasons I believe that it is a far smaller risk to have a test cessation agreement than to resume tests. It is a far smaller risk even if we consider only Russia and the United States, even if we consider only the military situation.

Many opponents of the test ban want 100 percent assurance that we can detect all possible Russian tests. Do we have 100 percent assurance that the Russians will not make use of the missile gap and make a surprise attack while we are weaker in missiles than they are? Do we have 100 percent assurance that they will not invade some other country, and that somehow we are dragged into war by that?

We wish to have 100 percent assurance on some small matter, and by wanting 100 percent certainty on this matter we may lose the most important things.

I said we cannot afford to resume tests. We cannot afford to stop the negotiations.

I think the more important argument than the one that I have given is the argument about other countries which might join the nuclear club. This argument has been given by President Eisenhower, and it is also very much in the minds of the Russians.

I think a country which is prosperous like Russia will not risk destruction by a nuclear war. I think a country which is still poverty stricken, like China, would be much more adventurous. I think it would be extremely dangerous to have China get the nuclear bomb.

If we have a test cessation agreement this doesn't guarantee in any way that China will adhere to it. However, if we don't have such an agreement, if, as has been suggested, for instance, by Mr. Dyson, we wait 10 years, then we can be sure that China will have nuclear weapons. And where, then, is our 100-percent assurance.

There are other adventurous countries that you could name which are less important than China.

There is another point. The ICBM's and nuclear weapons have come to a point where they make no sense. I think this is more and more recognized by a large number of people, both in this country and in Russia, and in other countries.

I think the only way out is to have a set of well-monitored, well-conceived, and very carefully considered and negotiated agreements on the limitation of armaments, and I want to say limitation of armaments because I consider complete disarmament extremely dangerous because of the possibility of concealment of some weapons. But well limited disarmament seems to me to be the desirable thing.

We have the Russians in a frame of mind now where they are quite willing to talk about such matters. The agreement on test cessation makes sense only—only—if it is fol-

lowed by other agreements. If this remains the only agreement, I think we might as well not have it.

But how can we expect the Russians to be willing to negotiate, or to agree to other measures of disarmament which might be more far reaching and might be more important for the peace of the world than this one, if already in this little one, where we risk so very little, we are as sticky as we have been?

The Russians have got the impression—and I think rightly—that whenever one demand has been fulfilled, we make another. They have got the impression that we are never satisfied. This is exactly the impression that we got in the Baruch negotiations, in the negotiations directly after the war, about the international control of atomic energy in general. We got the impression that it is impossible to negotiate with the Russians. I think—and I don't know, because I don't know the minds of the Russians well enough—I think they are rapidly getting the impression that we are now impossible to negotiate with; that it is impossible to get an agreement which is satisfactory to us, because we insist on a hundred percent security in a world where there is no such security.

We must watch out very carefully lest the peaceful Russian approach which has been brought in by Mr. Khrushchev be replaced by a more violent line, such as that of Stalin. And I do not know where our hundred percent security would be if that happened.

RUSSIANS GRANT IMPORTANT CONCESSION AT GENEVA TEST BAN TALKS

Mr. PROXMIRE. Mr. President, a significant step forward seems to have been taken yesterday at the Geneva negotiations on the ending of nuclear weapons tests, when the Soviet Union agreed to accept a western proposal that experimental nuclear explosions be carried out to improve scientific detection methods. New York Times reporter A. M. Rosenthal points to a possible snag, in that the Soviets have asked that the proposed research program and experimental explosions be carried out "jointly" by East and West, while the United States has maintained that the research should be carried out largely on the basis of existing national detection programs, with observers from the other countries present, and the results then "coordinated." Nonetheless, an important step toward agreement has been taken, and it brings achievement of a workable test ban just that much closer.

The distinguished Senator from Idaho [Mr. CHURCH] has already placed in the RECORD the excellent article written by Mr. Rosenthal, I understand; and I desire to call the attention of all Senators to the article.

Mr. President——

The PRESIDING OFFICER (Mr. ROBERTSON in the chair). The Senator from Wisconsin.

DR. BETHE'S STATEMENT TO ATOMIC ENERGY SUBCOMMITTEE SHOWS RUSSIANS WOULD HAVE A HARD TIME CHEATING UNDER PRESENT GENEVA DETECTION PLAN

Mr. PROXMIRE. Dr. Bethe's views on technical questions relating to a test ban were well summarized in a statement supplementing his testimony to the Special Subcommittee on Radiation, of the Joint Committee on Atomic Energy. His remarks will, I am sure, be incorporated in the report of those hearings; but in order to bring them to a wider audience at this time, I ask consent that they be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

REMARKS OF DR. HANS A. BETHE, SUPPLEMENTING TESTIMONY GIVEN ON APRIL 20–21, 1960, BEFORE THE SPECIAL SUBCOMMITTEE ON RADIATION OF THE JOINT COMMITTEE ON ATOMIC ENERGY

1. The system of stations which has been developed at Geneva (about 21 stations in the U.S.S.R., with 100 seismographs each) is adequate to monitor the limited test ban proposed by President Eisenhower on February 11, 1960; namely, a ban on underground explosions giving seismic signals equivalent to an earthquake magnitude of 4.75 or greater. It has been estimated that there will be about 100 earthquakes of this magnitude per year in the Soviet Union, and that 60 to 70 of these cannot be identified as earthquakes and could thus be suspected of being explosions. If 20 inspections are permitted per year, this would allow inspection of 30 percent of the unidentified events. In no case could the coverage sink as low as 10 percent, because even if no identification were possible at all, 20 inspections would still cover 20 percent of all seismic events of this magnitude. I believe that even 10 percent inspection would be a very strong deterrent against the Russians' conducting clandestine tests in violation of a treaty. Moreover, I believe that the estimate of a 60 to 70 unidentified earthquakes in an average year is very conservative.

2. Dr. Richard Latter has shown that a mere redistribution of stations, keeping their number at 21, would greatly enhance the capability of the Geneva system to identify earthquakes and explosions. A moderate increase of the number of stations to 30 would reduce the number of unidentified earthquakes above magnitude 4.75 to as few as 9 per year. Magnitude 4.75 corresponds to 20 kilotons under standard Nevada conditions. The number of earthquakes in the U.S.S.R. above 5 kilotons equivalent which would escape identification by the Latter system of stations is estimated to be only 36 per year. Thus, with 20 inspections, the Latter system could deter clandestine tests down to well below 5 kilotons under Nevada conditions.

3. Research on seismic detection will greatly improve our ability to distinguish earthquakes from explosions. We have so far used almost exclusively the first motion as a criterion for this distinction. I expect that closer study will show other distinguishing characteristics, associated with the later parts of the wave. It seems to me likely that 2 to 3 years of intensive research would improve our ability of identification by at least a factor of 5 so that then the Latter system of 30 stations could monitor explosions down to 1 kiloton in standard conditions. Already now, the Geneva system of 21 stations can detect and locate (though not identify) explosions down to well below 1 standard kiloton.

4. The capability discussed in paragraph 3 is important for the detection of partially decoupled shots. The Cowboy experiments have shown that one can get partial decoupling in a hole of smaller size than that required for full decoupling. It has been estimated that a hole of 70 cubic meters (about 2,000 cubic feet) per ton of explosive is required to give the full decoupling by a factor of 300. A hole of one-tenth this volume (7 cubic meters per ton of explosive) appears, according to the Cowboy experiments, to give one-tenth the decoupling, i.e., a decoupling factor of about 30. (I differ from Dr. Albert Latter's testimony in this: He has stated that this decoupling is achieved in a hole of one-thirtieth of the standard volume; however, he has privately agreed with my interpretation.) There are existing cavities in salt domes big enough to take a few, let us say 2 to 3, kilotons with full decoupling. If such a cavity were used to explode a bomb 10 times larger, the decoupling would be expected to be 30; i.e., a 30-kiloton bomb exploded in such a cavity will look like one kiloton in Nevada tuff. Such an explosion, however, can be detected and located by the agreed Geneva system.

5. It is technically feasible today to design a system of seismic stations which would detect, locate and identify fully decoupled explosions of 20 kilotons. With full decoupling, by a factor 300, a 20-kiloton explosion looks like 70 tons in standard Nevada conditions. A net of stations of 200-kilometer (125-mile) spacing would detect and identify such explosions. These stations would be unmanned and automatic, and each station would have only one seismograph. The optimum design of instruments for such stations will still have to be worked out; it may turn out to be better to have somewhat greater spacing but to have an array of, let us say, four seismographs in each station. Estimates of the cost of such stations have been made by a very competent team at the Sandia Corp. in Albuquerque, N. Mex. The cost is about $100,000 per station, including coding of the seismograph information for transmission and other features designed to make the stations essentially tamperproof. The transmission would probably be by cables which might add another 50 to 100 million for the U.S.S.R.

If fully implemented, this system would involve about 600 unmanned stations in the Soviet Union. However, most of the U.S.S.R. is aseismic, and in this area it would be sufficient to detect and locate seismic events: Since there are normally no earthquakes, any disturbance would indicate an explosion. I estimate that for this purpose a spacing of 400 kilometers would suffice, and if this number is accepted for the aseismic regions, the total number of unmanned stations in the U.S.S.R. may be reduced to about 200.

A system of unmanned seismic stations, to supplement the present Geneva system, would greatly increase the capacity of the system to distinguish explosions from earthquakes also at higher yield (1 kiloton and more) and would thus greatly reduce the number of on-site inspections required.

6. The unmanned stations should have seismographs which are capable of recording high frequency waves (about 10 cycles per second), in addition to the medium frequency waves (of about 3 cycles per second) normally recorded. This is expected to increase the ability of the umanned stations to record decoupled explosions and the first motion generated by these explosions. Further research on high frequency recording and on the noise at these frequencies is required.

High frequency recording will foil most of the proposed attempts at further decoupling (beyond a factor 300) even if these decoupling proposals should otherwise turn out to be feasible, which is contrary to my expectation. This is because the initial pressure spike, due to the impact of the air shock wave on the wall of the cavity, will be recorded just as strongly at high frequency as the steady pressure in the cavity. Only the steady pressure, not the spike, is reduced by such schemes as the distribution of carbon dust in the cavity.

7. There is also a distinct possibility that the high frequencies will be much weaker in earthquakes equivalent to 70 tons than they are in explosions of this size. If this turns

out to be true, the identification of these small explosions would be greatly facilitated.

8. A closely spaced net of stations will probably enable the seismologists to determine the depth of the source of the disturbance much more accurately than is now possible. This would be a powerful tool in distinguishing earthquakes from explosions since only few earthquakes occur in the top mile of the earth's crust.

Such a net would probably also make it very difficult to confuse the signal by setting off several nuclear explosions simultaneously at places a few miles from each other, as proposed by Dr. Teller.

9. In spite of the testimony of Mr. Meade, I still maintain that the construction of a large cavity in salt, of 2 million cubic meters volume, is a major undertaking. A violator would have to be afraid that such a construction job would be detected by other means than seismographs; e.g., by photography from satellites.

The disposal of the brine alone seems a formidable problem. The volume of the brine will be many times the volume of the salt and may be estimated at perhaps 100 million barrels.

(a) To dump this into an old oil field requires a major field, and a lot of pipes which would be visible. Moreover, this would greatly limit the geographical areas where big cavities might be suspected to be constructed, and hence would reduce the number of seismograph recordings which would require on-site inspection to very few.

(b) Mr. Meade suggested dumping the brine directly into the sea. I suppose this would be the Caspian Sea—this restricts construction of cavities to the shores of the Caspian, again a very limited geographical region.

(c) If the cavity were constructed elsewhere, it would probably be necessary to dump the salt into a river. If this were done in one of the very large rivers in North America—the Ohio, the Columbia or the St. Lawrence—it would at least double their natural salt content over a period of 2 years. Chemical analysis of river water would be a very simple safeguard against digging of salt cavities.

10. The construction of large cavities in limestone, as proposed by Dr. Teller, seems far more difficult than in salt. I discussed this problem with some chemists. The limestone would first have to be heated to about 1,000° centigrade and decomposed, at considerable expense in power. Then it would have to be cooled to room temperature, at considerable expense of cooling water, in order to have the lime dissolve. More important is the fact that lime is almost insoluble in water: it would require the entire water supply for New York City for over a year to dissolve the lime in a cavity of the size discussed by Mr. Meade. Direct mining operation, at great expense, would probably be more feasible. It is also questionable whether the walls of a limestone cavity would have the desirable elastic properties of a salt cavity.

11. It would be most suspicious if two signals were recorded by the detection stations which originate from the same source. It would therefore be very dangerous for a violator to use the same location for two or more tests. This goes especially for decoupled tests in large cavities if they can be detected by a system of unmanned stations. This greatly adds to complication, cost and time required for testing.

12. Even if the Russians wanted to violate the treaty (which I don't believe) and even if they wanted particularly to develop small weapons (which I also don't believe) the restrictions imposed by any detection system, even a very imperfect one, would greatly impede their progress and slow it down to a snail's pace. However, if testing were resumed below magnitude 4.75, they could operate openly, easily and quickly and could soon catch up to our present position in tactical weapons. On the other hand, we already have tactical weapons of many yields and sizes, and it would be difficult (though not entirely impossible) for us to make further progress of real military significance.

13. I do not agree with Dr. Brown's statement that tests at 1 kiloton would permit us or the Russians to develop efficient higher yield tactical weapons without any further tests. The minimum yield required for this purpose is more likely to be 3 to 5 kilotons. This is also the opinion of the Los Alamos Laboratory.

TEST BAN OPPONENTS SEEK TO BLOCK TREATY RATIFICATION

Mr. PROXMIRE. Mr. President, in this morning's newspapers, Marquis Childs describes the extraordinary activity occurring behind the scenes in attempts to block ratification of a test ban treaty when it is submitted to the Senate, should the current Geneva negotiations end successfully.

Mr. Childs describes the attempt to turn the results of the recent hearings before the Joint Atomic Energy Subcommittee "into a snow job to intimidate wavering Senators from voting for a treaty." He points out that the lengths to which opponents of the test ban have gone are quite extraordinary. He writes:

They have sought to make it appear that the scientists who testified were all in agreement that detection methods as currently known are so faulty that no control or inspection system would be acceptable.

To bring Mr. Child's description of these extraordinary goings-on to the attention of all Senators, I ask permission to have his article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 4, 1960]

TEST BAN FOES WORK OVERTIME

(By Marquis Childs)

The opponents of a nuclear test agreement are doing their very best to try to insure that if a treaty is submitted to the Senate it will either be strangled in committee or defeated on the floor.

The lengths to which they have gone are quite extraordinary. They have sought to make it appear that the scientists who testified before a subcommittee of the Joint Congressional Atomic Committee were all in agreement that detection methods as currently known are so faulty that no control and inspection system would be acceptable.

Hans Bethe, one of America's most distinguished physicists who has been a proponent of an agreement, says this is simply not so. He undertook in his testimony to show that by adding more seismic stations, at an additional cost of not more than $60 million, virtually all the risk of cheating would be removed. Previous to the public session Bethe had been brought up before hostile committee members in a closed meeting and subjected to such savage bullying that he told associates later it was perhaps the most painful experience in his entire career.

In short, despite the conscientious resolve of Chairman CHET HOLIFIELD, an effort is being made to turn the results of the 4 days of hearings into a snow job to intimidate wavering Senators from voting for a treaty.

For Bethe and a great many distinguished scientists the issue is so clear. Both the Soviet Union and the United States have long-range missiles capable of delivering megaton warheads to almost any point in their respective territories. The size of the warhead could perhaps be reduced by further testing and the speed and range of the missile thereby increased.

But since both sides have sufficient capability for almost-total destruction this would mean a small gain. Incidentally, in his speech last week Secretary of Defense Gates, who favors a test-ban agreement, put the mutual capability of the United States and the Soviet Union in more or less these same terms.

By stopping testing under a control and inspection agreement there is a chance that the spread of nuclear weapons can be checked. At the same time, with inspection stations set up inside the Soviet Union as well as in the country the first step toward breaking down the barrier of secrecy will have been taken. It will also be a first step in the general direction of disarmament.

The danger is that if the United States comes back with more and more objections and finally if the treaty is not ratified, the opportunity will be lost.

Fortunately, majority opinion in the administration is for an agreement. The Democrats have so far resisted any politicking on this perilous issue. Senator JOHN F. KENNEDY responded immediately to President Eisenhower's proposal for a moratorium on small explosions with a generous and high-minded declaration that, as President, he would observe such a moratorium.

As Senator HUBERT HUMPHREY'S record amply testifies, he has taken the lead in disarmament in recent years. More thoroughly than anyone in Congress and perhaps even in the executive branch he understands the complexities of the problem both in nuclear and conventional arms.

The science and technology panels of the Democratic advisory council came up with a recommendation for moving with all possible speed toward an agreement, despite the risk that with the present stage of detection research there could be some comparatively inconsequential cheating.

Even if at the summit Great Britain, the United States, and the Soviet Union were to agree on the still-outstanding questions, it would still require 2 or 3 months of work by the negotiators before the terms of a treaty could be drawn up. This means that it could not possibly be put before a Congress that must adjourn in early July.

But it is conceivable that the President might call a special session for ratification of the treaty after the elections. That would enable him to put all of his prestige and influence behind it before he leaves office. And that should assure its ratification as the last and perhaps the most significant act of his administration.

MAY 4 TO 14, NEW YORK WORLD TRADE FAIR DAYS

Mr. KEATING. Mr. President, Governor Rockefeller has proclaimed May 4 to 14 to be New York World Trade Fair Days, in commemoration of the opening of the fourth annual U.S. World Trade Fair, to be held in New York City. Today, being May 4, is the first of New York's World Trade Fair Days, and it is, therefore, appropriate that some mention be made of the opening of the fair.

The New York World Trade Fair is an important and significant event for all who are active in seeking to increase American trade with the other Nation's of the world. All of us are familiar with the excitement and the spirit of economic vibrancy which accompany events

such as this. I commend all who are engaged in this important and far-reaching endeavor. I certainly hope the vigorous efforts devoted to this very vital means of expanding America's contacts with other trading nations will aid in stimulating America's export trade.

Mr. President, I ask unanimous consent that the proclamation by the Governor of New York designating May 4 to 14 as World Trade Fair Days be printed at this point in the RECORD. I also ask unanimous consent that an article written by Brendan M. Jones on the Trade Fair, which appeared in today's New York Times, be printed at this point in the RECORD.

There being no objection, the proclamation and the article were ordered to be printed in the RECORD, as follows:

The fourth annual U. S. World Trade Fair is to be held in the city of New York from May 4 to 14, 1960, in the city's magnificent coliseum. It is fitting that official recognition be given to this important occasion with an official welcome to all who participate in and visit the fair.

For many years New York has been the hub of the Nation's foreign commerce. Through the port of New York annually passes a greater dollar volume of international cargoes than through any other port in the United States. Millions of New Yorkers earn their livings either directly or indirectly from foreign-trade activities. The massive movement of goods through this port is basic to the economy of the city, the State, and the Nation.

Here in this great common marketplace of the Western Hemisphere—the U.S. World Trade Fair—will be displayed the goods and services of more than 60 nations. Businessmen from every State in our Union and all over the world will visit this international trade fair—to buy and to sell, to inspect new goods and materials, to form new business associations, to gain new merchandising ideas.

The U.S. World Trade Fair has additional value beyond the fundamental expansion of foreign trade. It provides a showplace for the industrial talents of 60 nations. It helps not only to stimulate trade, but to foster international amity and good will.

Now, therefore, I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim May 4 through 14, 1960, as World Trade Fair Days in New York State, and I urge the people of the entire State to take advantage of the opportunities herein available.

[From the New York Times, May 4, 1960]

TRADE FAIR HERE IS OPENING TODAY—MORE THAN 60 COUNTRIES TO BE REPRESENTED IN WIDE VARIETY OF EXHIBITS

(By Brendan M. Jones)

Designers intent on getting the last bauble into place in just the right way mixed with laborers moving potted plants and other scenery yesterday as opening time neared for the United States World Trade Fair.

The fair, in its fourth year, will begin an 11-day run at the Coliseum today with noontime ceremonies in which city, State, Federal and foreign officials will join. More than 60 countries will be represented in the colorful show of quality world production, ranging from food specialties to intricate electronic equipment.

The Coliseum's four exhibit floors yesterday presented a multilingual abstract of contrived chaos as more than 3,000 exhibitors labored to unpack and set up displays. But there was a certain professional polish to the disorganized disarray, and it did not take much imagination to see that, when the final scene was set, fairgoers would not be disappointed.

Most of the exhibitors, it was evident, had been through the hectic business of trade-show preparations many times. Late yesterday many were intent on perfecting displays for today's opening, which will be preceded by an inspection tour by Vice President RICHARD M. NIXON.

Later still other high-ranking officials will tour the fair, but the really important visitors will be commercial buyers. These are the "VIP's" of the trade show, and on their reactions and orders will depend success in selling the thousands of products from Europe, Asia, Africa and the Americas to the rich American market.

Only second in importance to these commercial buyers will be the great New York public, representing the American consumer. Visitors will see an impressive pageant of quality merchandise, largely home products, and countless other items designed for leisure and more pleasant living.

ADDRESS BY SENATOR JAVITS

Mr. JAVITS. Mr. President, last night I had the privilege of making an address at the ambassadors' dinner preceding the World Trade Fair which is opening this morning at the Coliseum, in New York. I ask unanimous consent that my remarks on that occasion be printed at this point in the RECORD, in connection with my remarks here.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE WESTERN ECONOMIC COMMUNITY

For the first time since World War II the nations of the Western community—representing the greatest aggregation of industrial production in the world—are confident of their economic future and of their capability to compete with the Communist bloc. This is the biggest economic news of 1960.

The economic development in Western Europe is providing the kind of solid base which must exist if these countries in partnership with the United States, Canada, and other industrial nations are to launch successful programs of aid and trade of the magnitude required. Also, Western Europe shows a new capability for joining with us to combat a major drain on the less developed areas which is at the same time a serious impediment to their progress—the radical price swings in the primary commodities they produce. Within an acceptable period, the average citizen in the less developed areas of the free world must gain a sense of sharing in free world development, at least to the extent that he will have the training and opportunity to earn a decent living and have a stake in maintaining the free political and economic institutions which make that possible.

The spirit of cooperation necessary to launch and sustain this joint effort clearly exists among the leading members of the Western community. Two days ago I returned from Europe where I had the honor to address the Assembly of the Council of Europe at Strasbourg, France, on the major economic problems confronting the Western community. I was delighted by the sense of confidence which Western leaders are displaying toward the resolution of these problems and the excellent prospects they see for continued economic development in expanding market areas.

This is major news for the United States which from mid-1954 to mid-1959 extended $12.7 billion in economic assistance to the less developed areas of the non-Communist world but which obviously cannot sustain an aid program singlehanded on the scale demanded. Economic success in Western Europe indicates that Italy, France, the German Federal Republic, and the United Kingdom can become the key partners with the United States as we strive to raise both assistance and investment to newly developing areas—now estimated at about $4 billion annually—to 50 percent above the present effort.

This is significant news for U.S. traders who want to compete on equal terms with other nations for Western European markets in view of the broader markets and increasing purchasing power there. U.S. business has shown on the whole a most commendable calm despite protectionist pressures rising in some quarters based on the fear that a serious trade split might develop among Western European nations which would squeeze out U.S. goods. If this can be averted, then I foresee an unprecedented expansion in the demand for American goods throughout the area. U.S. exports to the Common Market countries alone in January and February 1960 amounted to more than $546 million—a 52 percent increase over the same period in 1959—and if higher tariffs and increased quotas are avoided, U.S. sales abroad will continue to climb impressively.

Western Europe's entry into a major partnership aid program would not be good news for the Communists whose economic aid program to the less developed nations of the free world alone recently passed the $3 billion mark. The new aid partnership already under way in the Development Assistance Group (DAG) and incorporated in plans for the proposed Organization for Economic Cooperation and Development automatically has the effect of loosening the economic noose which the Sino-Soviet bloc hopes to tighten around the people and the resources in the less developed areas of the free world. Therefore, we can expect the Communists to devise countermeasures aimed at undermining the young economies we seek to strengthen. Their easiest mark will be those countries relying heavily on sales from primary commodities exported abroad in large quantity and we must protect ourselves against such maneuvering without delay.

Perhaps the key to full presence by the United States in the economic affairs of Western Europe lies in the establishment of the newly proposed Organization for Economic Cooperation and Development as set forth in the recent report by the Group of Four, of which Randolph Burgess of the United States is Chairman. This organization would succeed the Organization for European Economic Cooperation and with the United States and Canada as full partners—compared to their status as associate members of the OEEC.

The new OECD emerging under such auspices could become the prime mechanism which under the management of the leading industrial nations of the non-Communist world would seek to—

1. Press for liberal trade policies to keep markets open;

2. Devise methods to deal with the effects of violent commodity price fluctuations regardless of the cause;

3. Help coordinate public and private assistance and investment policies to make them more conducive to greater industrialization of the free world's less developed areas; and

4. Aid in the development of markets for the goods turned out by the new industries of industrializing nations.

One year ago when I spoke at this very same forum, it was my conviction that a new partnership concept in trade and aid was the appropriate and essential next step to be undertaken by the United States and our Western European allies. Nevertheless, I am surprised at the amount of progress made to date. Discussions in Europe revealed to me that there has been a noticeable reorientation of thinking by our friends abroad who see very clearly that their own economic outlook cannot be permanently divorced from conditions in less developed areas—that ways and

means must be found to avert a serious trade disagreement between the "Inner Six" and the "Outer Seven"—and that just as Marshall plan aid helped so many of them make a rapid recovery, the same principle must now be applied by all of us to the less developed free world areas as soon as possible.

There are still trade barriers standing which cause much concern, especially those by OEEC members who maintain quota discrimination against the United States and Canada and against the so-called third countries in the less developed category. A minimum of over $2 billion of trade is estimated as the minimum trade still subject to these quotas. As a result of the current surplus running in favor of Western Europe at an annual rate of $4 billion in 1958 and 1959, this would seem to be an excellent time to reduce some of these quotas. Such action would not only encourage U.S. sales abroad, but it would also encourage third countries to produce what they can most economically in the assurance that they will not be unfairly cut off from a potential market. If that is not done, the less developed nations may wind up supporting uneconomic industries themselves which, in turn, survive only because of protectionist policies designed to cut out competition from industrial countries.

The United States, plus the six member nations of the European Economic Community (EEC), alone account for one-half of all the exports from the primary commodity producing countries—and this excludes oil exports. The United States and the EEC also account for one-half of the exports of the countries now in the first stages of industrialization. On a commodity basis, the United States and the EEC take anywhere from between one-half and four-fifths of the cocoa, coffee, copper, ground nuts, and rubber sold on world market.

Commodity price fluctuations are a long-standing problem not solely related to the recession of economic activity which took place in the Western industrialized countries in 1957 and 1958. Between 1954 and 1956, the price indexes on primary commodities showed fluctuations just as violent—coffee, 43 percent; cocoa, 83 percent; tea, 29 percent; copper, 55 percent; and rubber, 70 percent. And, in spite of the increasing prosperity in Europe and North America during those years, the steady downward trend of commodity prices was also evident. Between 1956 and 1959 the following sharp fluctuations in the commodity price indexes took place: coffee, 35 percent; cocoa, 55 percent; tea, 32 percent (this precipitous drop took place in less than 6 months between 1956 and 1957 and less than a third of it has been recovered since that time); copper, 80 percent; rubber, 35 percent down and then a 55 percent recovery; and wool, 50 percent. These percentages measure the extremes of the fluctuations and most of them have been in part recovered. Nonetheless, they reveal a very unstable situation—and they also show, within the extremes, a steady downward trend in most of the commodity prices.

During these same years—from 1956 to 1959—the annual value of the commodities mentioned above imported by the members of the OEEC, the United States, and Canada averaged between $4 billion and $5 billion. This figure lends itself to an apt comparison with the $4 billion a year of public and private assistance and investment in the less developed areas which is estimated to be the average annual contribution of the Western industrialized nations to those countries from which they purchase primary commodities. The dependence of the developing nations upon markets in the industrial West for their primary commodities is in monetary terms equal to or greater than their dependence on assistance and investment, and just as the latter cannot operate successfully unless there is a steady flow, so must the effect of the extreme price fluctuations of primary commodities be smoothed out in order to provide a solid basis for the economic development of the nonindustrialized nations of the free world.

I urge support for expositions for peace, a reciprocal program of trade exhibits in the United States and other countries, especially those in the less developed areas of the free world. This program would utilize counterpart funds—local currency resulting from U.S. foreign aid and the food-for-peace program—to stage U.S. trade exhibits abroad and foreign exhibits here. To my mind, a desirable goal for expositions for peace calls for the staging of 80 to 100 exhibits during the next 18-month period. This means there should be at least a 100-percent increase over the proposed program which, the Department of Commerce informs me, amounts to U.S. participation in less than 40 international trade fairs between now and the end of 1961.

An imaginative, well executed program of trade fairs can materially boost U.S. export and import trade. It can help us overcome a multibillion-dollar imbalance in our international payments attributable to the expenses of our peace leadership. Also, trade fairs can have a very real impact on increasing the traffic handled in the port of New York where one of our most persistent problems has been the port's decreasing share of foreign trade relative to the share going to other fast-growing ports in the United States. Our port and the magnitude of business it handles is a very important reason why New York is justifiably considered the business and financial capital of the world.

Mr. JAVITS. Mr. President, the city of New York and the State of New York are very proud of accommodating this fair; and I am glad that my colleague, Mr. KEATING, has called attention to it, and has placed in the RECORD the proclamation on the subject by the Governor of New York.

Mr. KEATING. Mr. President, will my colleague yield at this point?

Mr. JAVITS. I yield.

Mr. KEATING. I heard about my distinguished colleague's speech; and I only wish that I myself had had the privilege of requesting that it be printed in the RECORD.

Mr. JAVITS. I thank the Senator very much.

Mr. President, I wish to state that the trade fair movement in which we are engaged is most important, not only for the stimulation of American trade, but also for the stimulation of the trade of other countries. Furthermore, as we are about to begin to realize, about the highest of aid is trade. I think it is important to be thinking of a new program to be called the Exposition for Peace, where we can enormously accelerate the number of exhibits which we furnish and which other countries submit. Right now we expect to have 40 trade fairs in the ensuing year. The idea would be to increase the number to 80, especially giving an opportunity to Africa, and other underdeveloped areas of the world which need the opportunity to show their wares, as well as to see ours.

In that respect, it is very important that counterpart funds which are made available through our mutual aid program and the food for peace program be made available on a reciprocal basis in this Exposition for Peace. I expect to offer necessary legislation for that purpose, and I am much pleased to announce to the Senate this very outstanding example in the World Trade Fair which is going on in New York this morning.

BIRTHDAY TRIBUTE TO CARDINAL SPELLMAN

Mr. KEATING. Mr. President, today marks the 71st anniversary of the birth of His Eminence Francis Cardinal Spellman. The spiritual influence of this beloved churchman has touched many lives, not only those of his own devoted flock, but also the lives of countless thousands throughout the Nation and the world who have felt the radiation of his friendship and his humanity.

As U.S. military vicar, Cardinal Spellman has journeyed to the far corners of the world to minister to the spiritual needs of members of the U.S. Armed Forces. Particularly, on many occasions in the past, he has chosen to sacrifice his own comfort in order to be with the troops overseas at the sacred season of Christmas. His presence at distant bases around the world has been a memorable and inspirational experience for the American military personnel to whom he has brought not only the blessing of God, but also the warmth of his own personality.

Cardinal Spellman has won the admiration and love of both his fellow Catholics and those not of his faith. He has accomplished this by the unstinting giving of himself to the manifold causes of devotion and compassion that have ennobled him in the hearts of all who have known him.

Cardinal Spellman, as well, has been in the forefront of the great spiritual movement to foster a closer kinship among the peoples of the world, through the creation of mutual understanding and mutual respect. This unceasing personal effort toward the goal of unity among men in the climate of friendship and of peace will remain the enduring contribution of the distinguished prelate whose 71st birthday is celebrated today.

Mr. JAVITS. Mr. President, I, too, should like to join in congratulating Cardinal Spellman on his 71st birthday. My colleague has already spoken eloquently of the cardinal's role as military vicar.

As a boy who was born and bred in New York City and who is very familiar with the cardinal's role in our city, I should like to add my tribute to Cardinal Spellman. Not only as a religious leader, of which my colleague has spoken so eloquently, but also as a civic leader, his influence in our city is most beneficent and spreads to all sections of the population.

Cardinal Spellman has distinguished himself by his leadership and benefactions which are completely nonsectarian in character; and I think he has led his own church and distinguished laymen in his church in fields of benefaction which have been of tremendous benefit to our city. The cardinal is especially connected with the New York Foundling Home and St. Vincent's Hospital. It is rare that a churchman makes as broad a mark upon his diocese as has our beloved Cardinal Spellman. I think

when one presents both parts of this life, that which is devoted to spiritual leadership and ministration to souls both at home and abroad, and that which is devoted to spreading goodness in terms of health and welfare for all the people, one has a complete picture of what Cardinal Spellman means to New York.

FAILURE OF THE PRESIDENT TO REAPPOINT WILLIAM R. CONNOLE TO THE FEDERAL POWER COMMISSION

Mr. DODD. Mr. President, I ask unanimous consent that I may proceed for 25 minutes, in addition to the 3-minute limitation.

The PRESIDING OFFICER (Mr. CHURCH in the chair). Is there objection to the request of the Senator from Connecticut that he be allowed to proceed for an additional 25 minutes? The Chair hears no objection, and it is so ordered.

Mr. DODD. Mr. President, I ask stances attending the close of a distinguished public career are always cause for serious reflection. Last week we received word of the ending of two such careers—one at its honored end, the other almost at the beginning. How different were the circumstances.

Most of us were here last week as the Senate paid tribute to the great senior Senator from Montana, JIM MURRAY. Here was a public life ended in a way each of us may hope to end his.

Advanced in years, laden with public honors, the object of tributes from all sides, Senator MURRAY voluntarily and gracefully ended a long life of brilliant achievement in the service of his State and country, and announced retirement with the plaudits of a grateful nation ringing in his ears. None could observe such an occasion without being deeply stirred, without a welling up of sentiment, and a hopeful reflection upon the nature of public life in a free society.

But, if we could be so touched at the happy retirement of Senator MURRAY, what should we feel at the tragic dismissal of William R. Connole from the Federal Power Commission? What must our reflections be upon a brilliant career snuffed out in its early years? What should be our sentiments when we see 5 years of selfless, devoted, and creative service to the public good abruptly dismissed at a Presidential press conference and cast aside without even the courtesy of an explanation?

There is more involved here than the sympathy one feels over undeserved misfortune or the frustration one experiences at needless injustice. The Connole question goes to the heart of effective free government and lights up the most serious questions of public philosophy.

The President and his administration may think that the nomination of Thomas J. Donegan to the Federal Power Commission brings an end to the regulatory career of William R. Connole and stifles the discomforting controversy that has arisen concerning his reappointment. But it is not the end. It is rather the beginning, the beginning of a determined attempt to get to the truth about his dismissal, the beginning of a new investigation into the mess enveloping our regulatory agencies, the beginning of the fight for the philosophy that regulatory commissions should be protectors of the public interest and not the pliant tools of the industries they are supposed to regulate.

A public servant with an extraordinary record of devotion to the public interest has been dismissed by the President. No charges have been made against him. No public criticism has been leveled at him. No reason for dismissal has been given.

"I think I can find a better man," said the President airily, though he did not specify what standard, what measurement, what qualification he was using.

Why was Connole not reappointed? Who recommended against him? What aspects of his public record have displeased the President?

In what respects is the President's new nominee, Mr. Donegan, "a better man" than Mr. Connole, insofar as the duties of a Federal Power Commissioner are concerned?

William Connole, the Congress, and the American people are entitled to know the answers.

And the only opportunity Congress will have to smoke out the truth will be during the proceedings on the confirmation of the nomination of his successor.

The President's statement has made inevitable a comparison of the qualifications of Mr. Connole with those of his suggested successor.

Mr. Donegan's background has been that of an FBI agent, a special assistant to the Attorney General, and a member of the Subversive Activities Control Board. I know and respect Thomas J. Donegan. I want to make that perfectly clear at this minute. I am familiar with Mr. Donegan's record and background. I want to say, as clearly and as definitely as I know how, he has an excellent record and an excellent background. It is all good.

The experience which service in the FBI and Justice Department espionage activities furnishes a man prepares him for many things. But it certainly does not prepare one to perform the highly complex and specialized duties of a Federal Power Commissioner.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. DODD. I am happy to yield to my friend from Wisconsin.

Mr. PROXMIRE. It is my understanding that the distinguished Senator from Connecticut has had some experience in this field himself. Is that not true?

Mr. DODD. Yes, I have. I have been in the Federal Bureau of Investigation. I served as a special Assistant Attorney General. I place great value, if I may say so, upon this type of service. It is a high type of service. Mr. Donegan has had a remarkably good career in this field.

Mr. PROXMIRE. I merely desired to qualify the Senator from Connecticut, because his modesty prevents him from qualifying himself in this respect. The Senator has had experience with the FBI, as he has admitted.

Mr. DODD. Yes, I have.

Mr. PROXMIRE. The Senator has had experience as an Assistant Attorney General. Perhaps no Member of the Senate better understands the kind of background Mr. Donegan has had. The Senator speaks with great respect of Mr. Donegan and of his background, his integrity, and his ability, but the Senator is pointing out something which is very, very pertinent; that is, with respect to being a member of the Federal Power Commission, a position to which Mr. Donegan has been nominated for appointment, Mr. Donegan has no background whatsoever.

Mr. DODD. None at all, that I know of.

Since my colleague has raised this point, Mr. President, I should like to add that I do not feel qualified to sit as a member of the Federal Power Commission, although I have had additional experience as a practicing lawyer for many years and as a Member of Congress in both the House and the Senate. These backgrounds, in my judgment, do not qualify one for such an important post, which is complex and highly technical.

Interestingly enough, Mr. President, when questioned about his background, Mr. Donegan himself said, as quoted in the New York Times, "I have never had anything to do with utilities outside of paying my gas bill." Capable as he may well be, there is nothing in his record that I know of that would make him a better man on the Federal Power Commission than William Connole.

So much for Mr. Donegan.

What of Mr. Connole's record?

William Connole was the youngest man ever appointed as Commissioner of an independent agency. He came to the Federal Power Commission after a distinguished record as general counsel for the Connecticut Public Utilities Commission. An independent in politics, his confirmation was highly recommended by the two Republican Senators then representing Connecticut in the U.S. Senate.

This, of course, was in 1955.

And so his career started under happy auspices indeed. He had only to acquiesce in the proindustry decisions of the Commission majority and his reappointment to a second term would come as a matter of course. He had only to display sufficient enthusiasm for the wishes of the industry he was supposed to be regulating, and a lucrative career in private industry was sure to be his as soon as his service on the Commission ended.

But William Connole carried to his Commission duties an inquiring mind and a keen dedication to the public interest. He came to the Commission at a critical hour of the Commission's history, just after the Supreme Court had made clear and definite the duty of the Federal Power Commission to regulate in the public interest the prices charged by gas producers to gas pipelines and ultimately to consumers.

Mr. Connole's concept of public duty brought him quickly and repeatedly into

conflict with the majority of the Commission. The record of these disagreements is eloquently written in the 74 dissenting decisions which Commissioner Connole filed during his term.

While the Commission majority was refusing its responsibility for setting up a regulatory rate formula, Connole was fighting hard for one.

While the Commission majority was permitting initial price increases which have caused the cost of natural gas at the wellhead to almost triple in the last decade, Connole was opposing these excessive increases.

While the Commission majority was permitting gas producers to mark up their prices on the pretext that they were paying taxes which they were not paying, Connole was consistently dissenting. That is the record.

While the Commission was permitting gas producers to collect the full amount of proposed increases, even though no rate hearing was held and no finding made, Connole was fighting to protect the consuming public.

While the Commission majority was waiving the traditional requirement that gas producers refund charges which are later determined to have been excessive, Connole was fighting this incredible abdication of the public interest.

In all, the 74 dissenting decisions filed by Commissioner Connole can be divided into four groups.

Mr. President, I want to make it perfectly clear at this point that my examination of the decisions was not a complete examination. I could not read them all. For my own purposes, for the discussion this afternoon, I have divided the 74 dissenting decisions into 4 groups or types.

In two types of issues, Connole's dissents have been tested through the gamut of the Federal court system, and his dissents on key cases have been upheld. On the famous Catco initial rate case, for example, all 12 of the judges on the U.S. Court of Appeals and the U.S. Supreme Court sustained Connole's position and struck down as illegal the decision of the Commission majority.

On the other two sets or types of issues, test cases are now in the courts and decisions are eagerly awaited.

To the impartial observer, this would seem an incredible record for a single Commissioner to make during his first term.

Thus there has been a growing volume of praise for Connole from all groups who have reason to follow the activities of the Federal Power Commission—all groups, that is, except the gas producers.

Anthony Lewis, a distinguished newspaperman, of the New York Times, has said, "Mr. Connole has become known as the foremost friend of the consumer on the Federal Power Commission."

A survey of the Federal Power Commission by Fortune magazine last fall indicated that Connole was the only member of the Commission ready, able, and willing to take on the regulatory task that the law imposes upon the Commission.

Mr. PASTORE. Mr. President, will the Senator yield?

Mr. DODD. I yield to my good friend the very able Senator from Rhode Island.

Mr. PASTORE. First, I applaud and compliment the distinguished Senator from Connecticut, a very dear friend of mine, for bringing up this very timely subject, as he is doing this afternoon. I do not know whether the Senator recalls it or not, but several years ago we had a protracted hearing on the so-called natural gas bill. As the Senator has pointed out in his statement, the Supreme Court had ruled in its opinion that the Federal Power Commission had the responsibility of regulating the price of natural gas from the point of its source.

Mr. DODD. Yes; I remember that.

Mr. PASTORE. That rule and opinion were resisted by many people in this country. I think the President of the United States was sympathetic to the resistance. I think the President felt that we should enact a law which would change the meaning and the power of the Supreme Court decision, because he felt that natural gas was a commodity which should not be regulated by a Federal edict.

I was a member of the committee which considered the matter. As a matter of fact, I was in charge of the bill when it came to the floor.

The bill did pass, after some of us put up a very stalwart fight against it. We did not prevail. The Senator will recall that though the bill ultimately did pass, the President vetoed it. This veto was because of a scandal which occurred at the time. Were it not for the scandal, the President was sympathetic towards the philosophy of the bill, and he would have signed it into law.

I recall that at the time of that hearing, practically all of the members of the Federal Power Commission came before our committee. I think their feeling was unanimous in sympathy with the bill—in other words, they did not want the responsibility of regulating natural gas prices, and they were for the bill which would have changed the meaning of the Supreme Court opinion.

The significant thing—and I feel that the Senator from Connecticut has put his finger on the tragedy in the President's failure to reappoint Mr. Connole—is the fact that the whole background and history of Mr. Connole's service on the Commission have been for the consumer interest. He has fought incessantly, and sometimes all alone, to maintain and protect the consumer interest.

I quite agree with the distinguished Senator from Connecticut, without passing any judgment in derogation upon Mr. Connole's prospective successor. I am not here to judge Mr. Donegan in any way. In all probability, he is a fine man and may be a qualified man. I do not go into that question at all. But the sad commentary is this: In view of the background history of the natural gas bill, and in view of the fact that the prices have been going up astronomically in the past few years, the burden of which has been sustained by the consuming public, the man who, for one time in the history of the administration, stands up and fights for the little man, the consumer, is the one man who is not reappointed. Is that not a fine commentary?

Mr. DODD. It is a sad commentary.

I thank the Senator from Rhode Island. I well remember his work in connection with the natural gas issue. I was in the other body at the time. I followed the subject closely. I recall when Mr. Connole was nominated by President Eisenhower to be a member of this Commission. The Senator from Rhode Island presided at those hearings, with his usual great ability and fairness.

I am very happy that the Senator has commented as he has with respect to this very grave issue.

Let me make it clear again, that I am not passing judgment on Thomas Donegan. I say again, for the benefit of the Senator from Rhode Island, that all I know about him is good. I am not condemning him. I think it is too bad that his name was submitted at this time for this place.

The issue is just what the Senator from Rhode Island says it is. Here is one man who has stood up and fought for the consumer. He seems to understand why we have established the Federal Power Commission, and what the reasoning of Congress was when it established the Commission.

In Connecticut Mr. Connole has an excellent reputation, and he has built a fine one here as a member of the Commission. What does the President do with him? Out of hand, in an abrupt, highhanded fashion, he says, "I am going to get a better man." I say this is no way to treat a man who has performed as has Mr. Connole.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. DODD. I yield to my good friend the distinguished Senator from Alaska.

Mr. GRUENING. I should like to ask the able Senator from Connecticut, who is rendering a great service in bringing this matter to light, whether the conclusion is not almost inescapable that this administration is anticonsumer minded, and pro-big-interest minded. Is that not the same pattern to be seen in every regulatory commission under this administration? The original purpose of these commissions as established under other administrations to protect the public has been completely perverted by the Eisenhower administration which, as someone has well said, using a figure of speech, has "set the foxes to guard the chickens."

Mr. DODD. That is very well put. I quite agree with my colleague from Alaska.

The Dickinson Law Review, commenting on Connole's dissenting opinion in the famous Catco case, to which I made reference a few minutes ago, stated:

> Although many briefs and several court and commission opinions have been written on the subject of initial rate conditions, Commissioner Connole's dissent in this case provides by far the most lucid and cogent treatment of the topic. It is a matter of wonder that he found heart to hold to his convictions in the face of repeated Commission majority rejection of his views while that majority was evincing "its manifest, protracted unwillingness to come to grips with

the job of regulation," to borrow a phrase from "the unnatural problems of natural gas."

As rumors about Connole's impending dismissal began to circulate, support for Connole poured into Congress from all sections of the country.

Connole received the unanimous endorsement of the Great Lakes Conference of Railroad and Utilities Commissioners.

Thirty State public utility commissions have taken the unusual step of recommending his reappointment. A national committee of mayors asked the President to reappoint him. A joint letter, signed by a distinguished group of professors of administrative law and regulation at Columbia, Harvard, Pennsylvania, and Yale Universities, have lauded Connole and have expressed shock at the President's decision.

A mounting number of editorials and feature articles praising Connole have appeared in the most respected newspapers in the country from coast to coast. An impressive array of consumer groups and public interest groups has urged Connole's continuance in office.

This is the man who is being driven from public office by an administration so arrogant that it feels it need not even explain to the American people the reason why.

Connole's record can stand the most searching inquiry, but what of the record of the Commission as a whole; what of the other "better men" whom President Eisenhower has appointed and reappointed?

The Commission majority has had its way. While Connole's dissents have lighted the fire of public controversy which may in the future work a great good, and while the courts have repeatedly struck down anticonsumer actions of the Commission, neither Connole nor the courts has been able to reverse the trend established in hundreds, nay thousands, of rate increase applications.

The Federal Power Commission today is in a shambles.

Charged with the responsibility for working out a formula for the regulation of gas prices in the public interest, it has failed for long years to do so, or even to make the attempt to do so.

Charged with the responsibility for protecting the public from unwarranted gas producer rate increases, it has allowed those increases to almost triple in a decade.

Charged with the responsibility for reasonably swift action on rate increase questions, it has not decided a major producer rate case for 6 years and is presently inundated with a backlog of more than 2,000 cases.

The FPC has been reprimanded by the Supreme Court for abdicating its responsibilities. It has suffered reversals in lower courts in the majority of cases where its decisions were involved. It has experienced the humiliation of seeing a host of State and local utility commissions seeking the tribunal of the Federal judiciary in order to protect the consuming public from the actions of the Commission, which is supposed to be the chief protector of the consuming public.

The Commission stands condemned by the very groups which not so long ago looked upon it as a great guardian of the public interest.

During the period in which dawning recognition of Connole's service manifested itself in the press, there have been mounting attacks on the Commission as a whole.

A feature article in the Washington Post recently stated:

> In recent years there has been increasing cause to wonder whether the FPC is still a regulatory agency on behalf of the public, or a referee on behalf of the industry; a quasi-judicial body, or perhaps an oil-gas-power chamber of commerce endowed with Federal prestige and sponsorship.

A study by the Gas Distributors Information Service, after documenting the incredible rise in gas producer prices as compared to other commodities says:

> The most remarkable aspect about the rapid rise in producer prices during the 1950's, and particularly since 1954, is that it has been accomplished in the absence of any real showing that a higher price was needed either to keep the gas producers financially healthy or to encourage exploration. Instead the rise has resulted from the producers' ability to demand, almost entirely on the basis of what the market would bear, an ever higher price for gas reserves.

The feeble, futile, incompetent, spineless performance of this Commission has helped to call into serious question the worth of all independent regulatory commissions, which were once thought to be a panacea for consumer problems.

Articles by political science professors, such as "A Case for Scuttling Regulatory Agencies," by Peter H. Odegard, are advocating the abolition of the independent agencies, so great is the disgust caused by the failure of the Federal Power Commission and its sister agencies to carry out the task entrusted to them.

"I think I can find a better man," says the President, apparently well satisfied with the other "better men" he has appointed who have dragged the prestige of the independent agencies to an all-time low. These are the "better men."

And with this careless phrase, he has brought to a temporary end the work of one of the outstanding figures in the history of the independent agencies, without explanation, without propriety, without observance even of the common decencies owed to a public official.

This has been a shabby performance. There is something about it that cries out for investigation.

Ideally, the independent agencies of Government should regulate the public service industries under their jurisdiction free from the pressures of the executive or the legislative branch. Ideally, they should carry out their functions solely in the public interest and in the most judicial manner.

Unfortunately, these ideal conditions do not exist and perhaps they never will.

The President has used his power of appointment to subvert the Federal Power Commission, and to make it a mouthpiece for the gas-producing industry it is supposed to regulate. That is the fact.

Congress must respond to this by using its power of confirmation to prevent the further deterioration of the independent agencies, to bring about their reform, and to enforce upon these commissions a philosophy that places the public interest first and gives the consumer the protection these agencies were set up to provide.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. DODD. I am very glad to yield to my friend the Senator from Pennsylvania.

Mr. CLARK. I understand that the time of the Senator is running out. Perhaps he would like to request a few minutes more so that he may finish his remarks.

Mr. DODD. I shall conclude in just about a minute.

Mr. CLARK. I should like to ask a question of the Senator from Connecticut.

Mr. DODD. I yield.

Mr. CLARK. I commend my friend from Connecticut for the very fine speech he is making, and I assure him of my support in this regard. While I was mayor of Philadelphia I had the obligation and duty of coming to Washington to testify in opposition to the natural gas bill at hearings which were presided over by the Senator from Rhode Island [Mr. PASTORE]. I know how hard he fought against that bill. I know now that what that bill would have done by legislation the Federal Power Commission has done by administration. As I understand the situation at the present time, with Mr. Connole off the Commission, and two vacancies, there will be three gas and pipeline representatives on the Commission and no representative of the general public. Is that correct?

Mr. DODD. That is my understanding also.

Mr. CLARK. I hope that the Senator will use his influence with the Committee on Interstate and Foreign Commerce, and that some others of us will also, to see to it that it will be a long, long time before two estimable gentlemen, and men of character, I am sure, and of the highest integrity, but without the slightest knowledge of the field which they are supposed to regulate, will be confirmed. I hope that the time will come, within the next year or the next year and 6 months, when the entire composition of the Commission will undergo such a change that it will represent what it was intended to represent; namely, the public interest, and not the private interests of those who are being regulated.

Mr. DODD. I thank the Senator for his contribution to the discussion. I will conclude in a minute. I had something to say about what we might do. I thank the Senator for his suggestion that we do all we can to have the Committee on Interstate and Foreign Commerce make a most thorough examination of the qualifications of these two nominees. In addition, I would like to see this great committee examine thoroughly into the causes for the dismissal of Mr. Connole, because I believe his dismissal casts an ominous shadow not only on the Federal Power Commission, but also on every other independent agency

and, indeed, on every department of Government. I raise this point. Does not the Senate have more of a responsibility now with respect to confirmations? Is it not a part of our duty in considering nominations to look at the whole subject matter?

The PRESIDING OFFICER (Mr. McGEE in the chair). The time of the Senator from Connecticut has expired.

Mr. DODD. I ask unanimous consent that I may proceed for 1 additional minute.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator may proceed.

Mr. DODD. I believe the committee should look thoroughly into the reasons for the Connole dismissal.

We will never have a better opportunity than than presented to us Monday when the President sent to the Senate two new nominations to the Federal Power Commission. Confirmation should not be granted until a full explanation of the Connole question is made to the American people. If the Senate permits the President to dismiss a highly experienced Commissioner with proven mastery of his field, in favor of a man with no experience or special qualifications of any kind for the post, it is failing abjectly in its responsibility to protect the public.

First, the Senate must insist upon a full explanation of the reasons behind the dismissal of Commissioner Connole.

Second, we must make the most searching examination of the background and qualifications of the President's nominees measured against the highly specialized and tremendously complex task awaiting them on the Commission.

The day has passed when top Commission posts can be handed out to anyone whom the President sends up for confirmation. The sorry record of scandals, of acceptance of favors by Commissioners, of subservience to powerful interests has brought us to a crisis in the history of the independent agencies.

We must either clean them up, and put them on their feet, or wipe them out and try a new approach to the problem of regulating public service industries in a manner that will be just to them and fair to the public.

Mr. PASTORE. Mr. President, I believe this is a fitting place to read into the RECORD an editorial which appeared in the Providence Evening Bulletin of May 2, 1960:

CONSUMERS FACE THE LOSS OF A FRIEND ON THE FPC

William R. Connole was selected by President Eisenhower and appointed a member of the Federal Power Commission in 1955. His record in office as a defender of the public's interest has been excellent.

Some of the most important work of the FPC involves regulation of the pipeline companies that transport gas from the wells in Texas to the gas consumers in other parts of the country, including Rhode Island. The pipeline companies, quite understandably, try to fix their rates high to yield greater profits. They are generally supported, and sometimes controlled, by the enormously influential gas-oil industry of the Southwest. At the other end of the line are the gas consumers who, quite understandably, prefer low gas transmission rates which will be reflected in lower monthly gas bills.

The FPC is the referee. Its duty is to approve rates high enough to give the pipeline companies a fair return but low enough to protect the interest of the consuming public.

In this unequal contest, with the massive lobbying pressure of the gas-oil industry on one side and the leaderless interest of the consumer on the other, Mr. Connole repeatedly has dared to speak up for the consumer. A committee of mayors has applauded his record in these words: "Mr. Connole alone in the FPC has held out for effective regulation."

Mr. Connole's 5-year term expires in June. His record has been endorsed and his reappointment urged by the New England Conference of Utility Commissioners, the Great Lakes Conference of Railroad and Utilities Commissioners, the utility commissioners of Tennessee and California, and by 11 professors of administrative law and government at the law schools of Columbia, Harvard, Yale, and Pennsylvania.

Rumors have been circulating for weeks that Mr. Connole would not be reappointed. There have been hints that the oil-gas lobby had brought pressure to bear to have Mr. Connole dropped in favor of a commissioner more sympathetic with the industry's point of view.

President Eisenhower was asked about this at his press conference on Wednesday. He confirmed that he did not intend to reappoint Mr. Connole.

"It is my responsibility to appoint people and to get the best people I can," he explained. "This Mr. Connole came to see one of my staff in December to ask about his reappointment, and they said they would look into it. I think I can get a better man, that's all."

In view of all the circumstances—the Connole record, the demonstrated susceptibility of Federal regulatory agencies to outside pressure, the massive resources of the gas-oil lobby, the disquieting rumors of wire pulling, and the foul odors that are beginning to rise from this incident—the public is entitled to a clearer and fuller statement from the President than the curtly inadequate one he offered on Wednesday.

I think this editorial is quite apropos to the splendid remarks by the distinguished Senator from our neighboring State of Connecticut this morning.

Mr. GRUENING subsequently said: Mr. President, this morning, because of the morning hour and the unanimous consent agreement which gave to the Senator from Connecticut [Mr. DODD] time for a longer speech, I was unable to make a comment, and I now ask unanimous consent that my comment be printed in the RECORD at the conclusion of the speech by the Senator from Connecticut [Mr. DODD].

The PRESIDING OFFICER. Is there objection to the request of the Senator from Alaska? The Chair hears none, and it is so ordered.

Mr. GRUENING. Mr. President, the Senate has just heard a great speech, a classic, a philippic, in the finest tradition of the Senate. The Senator from Connecticut [Mr. DODD] has made it unmistakably clear that the policy of this administration, as evidenced by the failure to reappoint Commissioner Connole, the one outstanding dedicated Commissioner wholly concerned with the protection of the public interest, is to pervert the purpose of this regulatory Commission, which in earlier administrations was created by the Congress, upon the recommendations by other Chief Executives, to protect the public interest.

The Senator from Connecticut [Mr. DODD] has made it clear that this action will in effect result in a "scuttling" of the Federal Power Commission.

I likewise highly commend the repeated efforts on the part of my good friend the junior Senator from Wisconsin [Mr. PROXMIRE], for bringing attention to this flagrant perversion of the purpose for which this important regulatory Commission was created. Both he and the Senator from Connecticut [Mr. DODD] have rendered a very important public service. I hope it will bear fruit.

It is now a fact that there are two vacancies on the Federal Power Commission. It is my hope that the Senate, in its wisdom, will keep those places vacant, so that the next President may have an opportunity to fill the Commission by the appointment of two members who are dedicated to the public interest. I venture the suggestion to our Democratic candidates that they would, I think, offer great hope to the consuming public if they would announce that, if elected, they would reappoint Commissioner Connole to the Federal Power Commission.

Mr. President, I yield the floor.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that I may speak for 8 minutes on the same subject to which the Senator from Connecticut has already addressed himself.

The PRESIDING OFFICER. Is there objection?

Mr. KUCHEL. Mr. President, I do not intend to object, but did the Senator from Wisconsin request 8 minutes?

Mr. PROXMIRE. Eight minutes.

Mr. KUCHEL. So the morning hour would be concluded at 2 o'clock?

The PRESIDING OFFICER. Yes; at 2 o'clock the morning hour will be concluded.

Mr. GRUENING. Mr. President, I ask unanimous consent——

The PRESIDING OFFICER. The Senator from Wisconsin has pending a unanimous-consent request on which action has not yet been taken. Is there objection to the request of the Senator from Wisconsin that he be permitted to speak for 8 minutes?

Mr. BUTLER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Maryland will state it.

Mr. BUTLER. Under the rule, the morning hour will come to an end at 2 o'clock, will it not?

The PRESIDING OFFICER. That is correct.

Mr. BUTLER. Then, as I understand, the Senate will proceed, under a limitation of debate, on the Department of Commerce conference report.

The PRESIDING OFFICER. On the Department of Commerce appropriation conference report.

Mr. BUTLER. I have no objection.

Mr. CLARK. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Pennsylvania will state it.

Mr. CLARK. Would a unanimous-consent request be in order to extend the morning hour until 2:15?

The PRESIDING OFFICER. It would be in order.

Mr. CLARK. Mr. President, I ask unanimous consent that the morning hour may be continued until 2:15, in order that Senators who have brief statements to make may be heard.

The PRESIDING OFFICER. Is there objection?

Mr. KUCHEL. Mr. President, reserving the right to object—and I say this in a most friendly fashion—yesterday when the unanimous-consent agreement was entered, by which a vote would take place after 30 minutes of debate, some Senators indicated their desire to have the vote come as early as possible, so that they might leave the Senate.

I wonder if the Senator from Pennsylvania would consider withdrawing his request, since the yea-and-nay vote will be disposed of in about 30 minutes.

Mr. CLARK. I thank the Senator from California. He has made a reasonable suggestion. I withdraw my request.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Wisconsin that he may proceed for 8 minutes? The Chair hears none, and the Senator from Wisconsin may proceed.

Mr. PROXMIRE. Mr. President, I commend the distinguished Senator from Connecticut [Mr. DODD] upon what I believe was an excellent statement. I hope his fine speech will receive the widest possible dissemination throughout the country. I think the American public should know about it. I think it should be an issue in the 1960 campaign. It is a very legitimate issue.

Mr. President, there has been a vigorous protest against the President's replacement of Federal Power Commissioner William Connole with a man who has himself admitted that he has no background of education or experience which would qualify him to serve as Federal Power Commissioner. Believe me, the American public will hear much more about this Presidential action from now on. To date, however, there has been very little chapter and verse documentation to establish the fact that Mr. Connole's record is, indeed, that of a very highly qualified Commissioner, who has fought for justice and equity for the consumer and for the producer, too. I intend to supply some of that documentation.

In his 5 years as a member of the Federal Power Commission, William Connole has been known as the dissenting Commissioner. By no means can all his dissents be characterized simply as upholding a "consumer's interest." Cases in Federal regulation of public utilities are extremely complex, and the points at issue are technical. Sometimes they are only indirectly connected with the price of gas to the ultimate consumer. Simply labeling Connole's dissents as motivated by a consumer's point of view, would be an oversimplification.

In one important group of dissents involving the Dorchester case and the Phillips Petroleum case—docket No. G–10908—Connole maintained that an original contract was binding in a case where the rest of the Commissioners argued that a new price determination should be made. In this case, the majority's decision would have reduced receipts to the gas producers. Connole's viewpoint was upheld by the 10th Circuit Court and by the Supreme Court, which denied certiorari. By adopting Connole's dissenting arguments, the courts gave convincing proof that his grasp both of theory and practice in interpreting the Gas Act and the problem of gas regulation was sounder than that of his fellow Commissioners.

One of Connole's most important dissents, later vindicated by the Supreme Court, came in the so-called Catco case—which has also been discussed by the Senator from Connecticut [Mr. DODD]—so named for the consortium of producers—Cities Service, Atlantic, Tidewater, and Continental Oil Co. It involved the largest gas reserve—almost 2 trillion feet—ever committed to the interstate market in a single sale. The initial price of 22.4 cents per thousand cubic feet was the highest wholesale price ever proposed in the entire Southwest. Writing in Fortune magazine, Richard Smith commented:

> When the deal came before the FPC, the Commission at first decided that the record as presented was inadequate to support unconditional certification. It ordered a temporary certificate until the presentation of additional facts showed that the high initial price was in the public interest. Then, after Tennessee and the Catco producers filed on a rehearing, the Commission had a change of heart and certified the transaction at an initial price of 18 cents, with a promise of as much of the balance (4.4 cents) as an immediate rate investigation showed to be just and reasonable. The decision made no friends for the FPC. The head of Tennessee Gas told the Commissioners the producers would not accept a conditioned initial price. At this, a majority of the Commissioners simply capitualted. No new evidence had been supplied to induce the Commissioners to think any better of the 22.4 cent price but all of them, with sole exception of Commissioner Connole, decided that never mind the price, it was in the public interest to bring this gas to market.

On petition from the New York Public Service Commission, this deal was brought to the U.S. Supreme Court. A unanimous decision written by Justice Tom Clark found that the initial price should be made a consideration of prime importance because "the price certificated will in effect become the floor for future contracts in the area." As Fortune magazine put it:

> It was not lost on the producers that the Catco decision was delivered by a Texan, and a conservative, Tom Clark, and that it was not only a unanimous decision, but one in a major case.

Another group of Connole dissents involved the so-called phantom-tax issue. Traditionally, pipeline companies have included taxes in the costs which they have passed on to the consumer. Because of the complexities of the Internal Revenue Code, which provides depletion allowances, fast writeoffs, and other tax gimmicks favorable to the oil and gas industry, a certain amount of tax originally predicted may not actually be paid. The majority of the Federal Power Commission, deviating from longstanding policy, held that these unpaid phantom taxes could also be charged against the consumer. The case went into the courts, where, not surprisingly, Commissioner Connole's viewpoint was upheld.

A final category of cases in which Connole has frequently dissented involves rate applications from gas transmission companies. Beginning more than a year ago with the Shamrock case, Connole has consistently dissented from approving rates when there has not been a finding of justness and reasonableness. In his written dissent in the Shamrock case, he cited the precedent of the Amarillo-Borger Express, Inc., case, which was decided by a Federal court on appeal from an ICC ruling, and established the importance of a finding of justice and reasonableness in rate regulations. In the past year, Connole has dissented from more than 50 such rate cases, simply citing the Amarillo-Borger precedent. These dissents cannot be labeled as being simply based on a consumer's interest. Rather, they demonstrate a desire on the part of Commissioner Connole to observe well-established legal precedents.

Perhaps the most tragic aspect, from the point of view of the Federal Power Commission of the President's failure to reappoint Connole, is bound up with the fact that the Commission has a vast backlog of cases awaiting decision. In several areas large numbers of cases depend on a final decision being reached in a leading case. One of the most important of these is the Phillips Petroleum Co. case. This dispute arose about 10 years ago, when the FPC decided it had no jurisdiction over producers' rates—that is, rates at the wellhead or on the field. On appeal from the Wisconsin Public Utilities Commission, the Supreme Court held that the Federal Power Commission did indeed have jurisdiction over rates at the producer level and that the FPC had an obligation to fix rates. This placed the burden of providing procedures for fixing these new rates squarely on the FPC which has been occupied with the preparation of this case ever since. More than a year ago, their chief examiner produced a recommended decision on which the full body has not yet acted.

Connole has studied the briefs and arguments of this case at great length and would be well qualified to help write the

final decision on this extremely important leading case. Producer and consumer interests alike desire a speedy end to the prolonged consideration of this matter. Now that the President has appointed two new Commissioners, both lacking in public utilities regulation experience, the publication of a final decision is likely to be held up for a further long period. The Phillips case will set the precedents for effective regulation at the wellhead and in the field. Previously the jurisdiction of the Federal Power Commission was apparently confined to regulation of transmission companies.

Mr. President, the latest issue of Electrical World carries an editorial entitled "Politics and Public Power: The Need for a Public Statement." It concerns the President's failure to reappoint William R. Connole to the Federal Power Commission. Electrical World is a highly respected McGraw-Hill publication, an expert voice in the electrical industry. The editorial begins:

It now seems certain that Federal Power Commissioner William R. Connole is not going to be reappointed when his term expires next month. What is not so certain is the reason or reasons why he is being "dumped."

The editorial goes on to charge the administration with what it terms the "inordinate lack of decisiveness for which it has become famous—or infamous," in its handling of the Connole case. It suggests that pressure from the gas industry, irritated by Connole's forthright dissents on behalf of the consumer, and further antagonized by his support for a national fuels policy, may be responsible, stating:

If * * * he is being purged because of natural gas pressure, then the administration owes everyone concerned a better explanation of its action—or inaction—than it has made so far.

Mr. President, to bring this editorial from Electrical World to a wider audience, I ask unanimous consent that it be printed in the RECORD at this point.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLITICS AND PUBLIC POWER—THE NEED FOR A PUBLIC STATEMENT

It now seems quite certain that Federal Power Commissioner William R. Connole is not going to be reappointed when his term expires next month. What is not so certain is the reason or reasons why he is being "dumped."

Reports circulating in Washington, and widely printed in the Nation's press, have it that Connole's stringent attitude toward regulation have antagonized some of the large natural gas producers. And they, in turn, have put pressure on the White House.

The administration, in handling this matter, has again displayed that inordinate lack of decisiveness for which it has become justly famous—or infamous. For what is plainly needed here is a public statement by responsible White House sources clarifying the matter. It is the very least that Connole, the FPC, and the industries which it regulates deserve. Furthermore, by failing to affirm or deny the reports of Connole's pending demise, it may be sowing the seeds of a political battle it might otherwise avoid.

Consider these circumstances: First, the reports have it that Connole is being pushed out because the natural-gas interests were annoyed by his tough attitude toward regulation on "behalf of consumers." This, of course, is precisely what he's paid to do. Protection of the consumer through regulation is the Federal Power Commission's function under law. If Connole has violated FPC or administration policy, that's one thing. If, however, he is being purged because of natural gas pressure, then the administration owes everyone concerned a better explanation of its action—or inaction—than it has made so far.

Secondly, it is possible that Connole's views on the need for a national fuels policy have antagonized the gas boys as much or more than those on regulations. He has said, "This country lacks any policy that guides us in the use of * * * energy." Also, "It scarcely seems arguable that a fuel as versatile and so economically suited to high priority uses as natural gas ought not to be substituted for the vastly more abundant and advantageously situated supplies of coal and residual crude (oil) in absence of compelling reasons." He calls for a national fuels policy developed from "an objective group dominated by the Federal Government, but using the facilities of industry and independent research groups."

If Connole is being "dumped" for these views, the administration might find itself under political fire from the Democrats during the coming campaign for "selling-out" our national resources.

Finally, there hangs over the entire affair the pall of a congressional investigation of FPC. And Connole's conduct, along with that of the other Commissioners, will be subject to the most searching public scrutiny.

It must be pointed out here that the decision to dismiss Connole was taken long before Representative OREN HARRIS decided to probe FPC. Under no circumstances should any impropriety uncovered by HARRIS—and there is no evidence at this writing that there has been any impropriety at all—be allowed to be used as the reason for Connole's dismissal.

The administration can clarify the matter with a statement. It's a fair question to ask why it has not yet been issued.

The PRESIDING OFFICER (Mr. MCGEE in the chair). The hour of 2 o'clock has arrived; and the time of the Senator from Wisconsin has expired.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that I may proceed for an additional 15 seconds.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. PROXMIRE. Mr. President, columnist Drew Pearson, with his usual unparalleled journalistic acuity and initiative, has revealed in this morning's newspapers the contrast between the conduct of Mr. Connole, who, as Mr. Pearson writes, "Did not pal around with oil and gas lobbyists on free junkets, but is being dropped" and Federal Power Commission Chairman Jerome Kuykendall, who did exactly that, but has been reappointed.

Mr. President, I ask unanimous consent that the article by Mr. Pearson be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD.

[From the Washington Post, May 4, 1960]

KUYKENDALL ENTERTAINED, KEEPS JOB

(By Drew Pearson)

This column has obtained a photostat of an unpublished letter from Chairman Jerome Kuykendall of the Federal Power Commission to the Legislative Oversight Committee regarding the number of free airplane junkets and other entertainment supplied him by the oil and gas industry which he regulates. It's an interesting document.

It's especially interesting when compared with the record of Commissioner William Connole, champion of the consumer, who did not pal around with oil and gas lobbyists on free junkets, but is being dropped. In contrast, President Eisenhower reappointed Kuykendall.

It's also interesting in view of the fact that Mr. Eisenhower recently fired Chairman John Doerfer from the Federal Communications Commission because he went on a yachting trip with a big broadcaster. However, he's not firing Chairman Kuykendall, who went on many trips with oil and gas lobbyists. He's firing Commissioner Connole instead.

Here is the record, taken from Kuykendall's own letter to the Harris committee, October 17, 1957, of his various trips and entertainment.

ENTERTAINMENT RECORD

"Hotel accommodations were provided me at the following conventions and meetings at which I was the scheduled speaker:

"September 1953, Independent Natural Gas Association, Houston, Tex. *

"October 1953, Texas Mid-Continent Oil & Gas Association, Houston, Tex.*

"October 1953, American Gas Association, St. Louis, Mo. *

"March 1954, American Power Conference, Chicago, Ill.

"June 1954, Edison Electric Institute, Atlantic City, N.J. *

"September 1954, Independent Natural Gas Association, New Orleans, La.

"Although I was not on the program of this meeting, I flew there from Omaha, Nebr., where I had attended a meeting of the Interstate Oil Compact Commission, so that I could inspect offshore drilling operations in the Gulf of Mexico at that time, as well as attend the meeting.

"October 1954, Association of Edison Illuminating Co., White Sulphur Springs, W. Va.*

"April 1956, Practicing Law Institute, New York, N.Y. *

"April 1956, Texas Independent Producers & Royalty Owners Association, Dallas, Tex.

"Also visited FPC regional office at Fort Worth, Tex.

"April 1956, Independent Petroleum Association of America, Los Angeles, Calif.

"April 1956, American Public Power Association, Los Angeles, Calif.

"(Attendance at two conventions listed immediately above involved one trip to Los Angeles.)

"September 1956, Independent Natural Gas Association, San Antonio, Tex.

"October 1956, American Gas Association, Atlantic City, N.J.

"April 1957, Southeastern Electric Exchange, Boca Raton, Fla."

FREE TRIP RECORD

In addition, Chairman Kuykendall listed five free airplane trips paid for by oil and gas interests. What he did not mention, however, was that on one tour of the Southwest, courtesy of the Texas Mid-Continent

---

"* My wife accompanied me on the trips indicated by an asterisk."

Oil & Gas Association, only the three Republican Commissioners went along. Commissioner Dale Doty, appointed by President Truman, and Claude Draper, with a 20-year record of trying to protect the consumer, did not.

Later Doty was dropped by Mr. Eisenhower, in the same way Connole is being dropped now. He was not friendly to the oil and gas companies.

Chairman Kuykendall also failed to mention that he attended a cocktail party in his honor given by Stanley M. Morley, Washington attorney for West Coast Transmission, which at that very moment was applying for a certificate to build pipelines to the Pacific Northwest.

He also omitted mention of the fact that he was dined by Ed Falck, an attorney for several power companies, and flew to Chicago with Falck to attend the National Association of Railroad and Utility Executives.

The five cases in which Chairman Kuykendall took free airplane transportation from oil and gas interests, according to his own letter to the Harris committee, were:

Trip to Houston and tour of Texas and Louisiana, September 30 and October 1, 1953.

Trip to St. Louis and return for Mrs. Kuykendall paid by American Gas Association, October 1953.

Trip to Atlantic City and return, June 1954, paid by Edison Electric Institute.

Trip to Gulf of Mexico to inspect offshore oil, arranged for by Louisiana conservation commissioner, September 1954.

Trip to Seattle and Grand Coulee, August 1956, paid for by Pacific Northwest Pipeline Corp.

That's the record of the man who was reappointed to the Federal Power Commission in contrast to Commissioner Connole, defender of the consumer, who was not.

DEPARTMENT OF COMMERCE AND RELATED AGENCIES APPROPRIATION BILL, 1961

The PRESIDING OFFICER. Under the order entered on yesterday, the Senate will now resume consideration of the motion of the Senator from Delaware [Mr. WILLIAMS] that the Senate further insist upon its amendment No. 13 to House bill 10234, making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1961, and for other purposes, request a further conference thereon with the House of Representatives, and that the Chair appoint the conferees on the part of the Senate.

Under the order, debate on the motion is limited to 30 minutes, to be equally divided and controlled, respectively, by the Senator from Delaware [Mr. WILLIAMS] and the Senator from Florida [Mr. HOLLAND].

Mr. WILLIAMS of Delaware. Mr. President——

The PRESIDING OFFICER. The Senator from Delaware is recognized.

Mr. WILLIAMS of Delaware. Mr. President, let me inquire whether the Senator from Florida wishes to speak first.

Mr. HOLLAND. No, Mr. President. The Senator from Delaware is the mover of the motion, and I believe he should open the debate.

Mr. WILLIAMS of Delaware. Very well.

First, Mr. President, I ask unanimous consent that a copy of the amendment in question—No. 13—be printed at this point in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

Senate amendment numbered 13: On page 12, line 11, insert "No common carrier by water subject to the Shipping Act of 1916, as amended; the Merchant Marine Act of 1936, as amended; or any other Act; shall directly or indirectly issue any ticket or pass for the free or reduced-rate transportation to any official or employee of the United States Government (military or civilian) or to any member of their immediate families, traveling as a passenger on any ship sailing under the American flag in foreign commerce or in commerce between the United States and its Territories and possessions; except that this restriction shall not apply to persons injured in accidents at sea and physicians and nurses attending such persons, and persons rescued at sea, and except that this restriction shall not apply to persons referred to in section 405(b) of the Merchant Marine Act, 1936, as amended (46 U.S.C. 1145(B)), relating to steamship companies carrying mails of the United States: *Provided*, That nothing in this section shall prevent the United States Government from entering into contractual arrangements with said companies for reduced transportation rates involving the traveling expenses of those Government employees (military or civilian) when such transportation costs are paid for by the United States Government. Any person or corporation who knowingly violates this section shall upon conviction thereof be fined not less than $500 nor more than $10,000 at the discretion of the courts for each such violation."

Mr. WILLIAMS of Delaware. Mr. President, this amendment has been approved by practically every agency of the Government, including the Defense Department.

The purpose of the amendment is to prohibit the American merchant marine from giving to employees of the U.S. Government free or reduced-rate transportation.

Many years ago Congress enacted a similar provision as it affects the American railroads, and later a similar restriction was incorporated in the law dealing with the airlines.

Under existing law, neither the American railroads nor the American airlines are permitted to offer to employees of the U.S. Government free or reduced-rate transportation other than at the rates offered to the general public.

Approval of this amendment will not in any way restrict the right of the U.S. Government to contract or to make arrangements with the shipping companies for reduced rates in connection with the transportation of military or civilian personnel or their dependents when such transportation is being paid by the U.S. Government.

This amendment will extend the same rules to the American merchant marine. It does not mean that any of these carriers will be prohibited from extending to employees of the Government excursion rates, when such rates are also available to the general public.

Before proceeding to discuss the amendment, I wish to express my appreciation to the Senate conferees for the effort which they have made in trying to persuade the House conferees to accept this amendment. However, in full recognition and appreciation of this effort, I am still asking that they join in my request that the Senate refuse to recede on this amendment and that, instead, the Senate go on record as insisting upon its approval and requesting a further conference with the House.

When this Department of Commerce appropriation bill was before the Senate this amendment was approved without opposition; and I am not too impressed with the argument advanced by some of the House Members that the amendment would have been accepted if it had been included in a regular legislative bill, rather than in this appropriation bill.

I call their attention to the fact that on at least three different occasions during the past 5 years the Senate has overwhelmingly approved the adoption of the same proposal as an amendment to legislative bills, and each time it was rejected in conference.

The latest rejection was last year, in early September, at which time the argument was advanced that with the Senate expecting to adjourn the following week there would not be time for another conference, and the sponsors of the bill did not want to jeopardize its enactment at that session.

This time the situation is different. This year the amendment was deliberately offered to a bill early in the session with the thought that should the House again be reluctant to accept the measure we would have plenty of time to continue the negotiations in conference.

The bill to which this amendment is attached, H.R. 10234, has already passed both the House and the Senate, and all amendments in controversy, with the exception of this one amendment, have been agreed upon by the conferees.

I emphasize again that even if this bill were approved and signed by the President tomorrow, it would not become effective until July 1 of this year, nearly 8 weeks away. Therefore, the argument that there must be a rush for the approval of this conference report without further effort to insist upon this amendment cannot be supported.

I cannot overemphasize the importance of having Congress approve this amendment.

Let us not overlook the fact that in the same bill to which this amendment has been attached, appropriations of more than $250 million are authorized as subsidies to be paid to the American merchant marine during the fiscal year 1961. This is the same industry which is offering these free or reduced-rate trips to public officials.

To what more appropriate bill could this amendment be attached than one which provides for a subsidy of more than one-quarter of a billion dollars to the American merchant marine?

How can there possibly be any argument against an amendment which

would prohibit this industry, which is the beneficiary of a multi-million-dollar subsidy, from giving free or reduced-rate vacations to employees of the U.S. Government who determine the amounts of these subsidies?

There is no question that we in Congress, with the cooperation of certain officials in the executive branch, establish the rates and the amounts of these subsidy payments.

During recent years much criticism has been expressed about certain officials in the executive branch who have accepted entertainment from taxpayers who were vitally concerned with major decisions those officials were making.

A few years ago a prominent official of the Presidential staff was forced to resign, as the result of the criticism of his having accepted gifts and subsidized hotel accomodations from a person who was interested in certain decisions then pending in one of the departments.

In the very recent weeks the chairman of one of our regulatory Commissions resigned under criticism for having accepted extensive entertainment on a yacht furnished by a company which was interested in a decision he was in a position to make.

Again, within the past week a committee of the House of Representatives issued a strong criticism of certain employees of the Interior Department who had spent several days at the home of an official of a company with which they were in the process of negotiating an agreement.

No one can definitely prove that the terms of these arrangements or the decisions made by the officials who accepted the entertainment were in any way influenced or that the companies which extended the entertainment received more favorable consideration as a result thereof.

On the contrary, the officials who accepted the entertainment emphatically deny that such was the case. Nevertheless, Congress and the public in general have strongly criticized such procedure as being highly improper and unethical, to say the very least.

If we in Congress are going to establish a code whereby representatives of the executive branch are to be censured when they accept excessive entertainment or subsidized vacations from companies with which they are making decisions, how can we in Congress refuse to live by the same code?

If this amendment is rejected today by the Senate how can Congress defend its action—for then we would be saying that we insist that both the Members of Congress and those in the executive branch shall have the right to accept free or reduced-rate transportation for ourselves and our families from the American merchant marine?

What is the difference between a subsidized hotel accommodation or a subsidized vacation on a yacht within the continental borders of the United States for an official of our Government and a subsidized ocean voyage for the same official or his family?

It cannot be denied that under existing law such subsidized vacations are freely available to public officials who are in a position to help these industries. Within the past 8 years, the American merchant marine has received nearly $1½ billion in subsidies that have been voted upon by the Congress, with over one-quarter of a billion dollars in subsidies being approved in the same bill to which this amendment is now attached.

I am not charging that any public official who has accepted such reduced rates or free transportation has been unduly influenced; nor am I charging that the American merchant marine in offering the reduced rates or free trips to Government officials in a position to help them have done so from any ulterior motive. I will state, however, without any fear of contradiction, that they did not offer free trips or reduced rates to us before we were elected to Congress or before we were appointed to public positions where we could determine the rates of these subsidies.

Let us stop kidding both ourselves and the American people. If we believe in the principles of this amendment, let us support it by our votes today. By so doing we shall clearly establish the fact that we do not think it proper for any public official to accept lavish entertainment or subsidized vacations which are paid for by any segment of industry or any individual in connection with whom we are in a position to make important decisions.

What is of equal importance, let us establish the fact that we are willing to abide by the same code of ethics which we establish for others.

Mr. HOLLAND. Mr. President, in the first place, I want to say I appreciate the motives which animate the Senator from Delaware. I made common cause with him by accepting the amendment, in spite of the fact that it was a legislative amendment addressed to an appropriation bill. I assured him I would fight for it in conference. I offered to join as a cosponsor in offering it before the legislative committee. Members of my committee in conference stuck with me, without exception, in insisting before the House conferees that the amendment of the able Senator from Delaware should be accepted by the House.

Mr. President, I should like to be able to say that there is some hope that that end will be attained, but I could not say that here with frankness and honesty to the Members of the Senate. The objections made by the House conferees, while not at all in accord with my own belief that this is legislation which should be enacted, though it should preferably come before the legislative committee, were, however, very difficult to meet. The first was that this was legislation being offered on an appropriation bill. Anybody in the House so disposed could block the whole conference report by making a point of order against it, and the conferees made it very clear that they knew such a point of order would be made. As a matter of fact, some of the conferees would have made the point of order if the majority had been disposed to accept the amendment.

In the second place, the House conferees said that this same legislation had been before their legislative committee in the other body and had been acted upon unfavorably, and that the legislative committee was very much adverse to this legislation and it would certainly oppose it.

In view of those positions, the House conferees insisted that we should recede from the position of the Senate. We did not do so. We had assured the Senate that we were going to fight to the last ditch on this matter, and we did. We refused to recede. Though there were some members who felt they were doing a futile thing, there was hope expressed that the House might accept the amendment.

As I stated yesterday, I went immediately from the conference to the distinguished Senator from Delaware to tell him that we had refused to recede, and that his battle now had moved to the House of Representatives, and if he had friends there who were willing to sponsor his efforts, he should get in touch with them, either to have them ask for a roll-call, or to make an argument upon the merits of the amendment, or in some way to insist upon its adoption.

I do not know what happened to the efforts of the Senator from Delaware in that direction, but I do know the RECORD shows that when the matter came before the House of Representatives, and the conferees moved that the House refuse to recede and accept the Senator's amendment, by unanimous vote, though a voice vote, the House took the position that had been recommended by their conferees.

We went to the conference knowing that two agencies of Government had objected to details of the Senator's amendment, and we had them help us in preparing modifications of the amendment which would have met their objections. One of the objections came from the Panama Canal Company and the other from the Defense Department. I have the two letters here, although I will not encumber the RECORD by placing them in it. We tried to get the conferees of the other body to agree to the modification of the amendment so as to meet those two suggestions for change, and they would not do so.

I regret that the amendment of the Senator from Delaware cannot be approved at this time. I regret that he did not have it in proper form. I regret that he did not have it before the legislative committee. I regret he did not have it before our committee. He certainly would have had a decent and serious hearing before our committee if he had taken it there.

Notwithstanding the failure of the Senator from Delaware to do so, we have made his cause our own and have done everything honorable and reasonable that conferees can do to stand up for the position of the Senator from Delaware. I do not regret that fact at all. I think

it was a good cause. I would be willing, before the legislative committee, to make the strongest showing I know how. The Senate's position is clear. The Senate's course was clear. We have shown what we want to do in this field.

Mr. President, Congress is composed of two Houses, and in order to get legislation enacted, the two Houses have to agree. In this bill there is tied up nearly $3½ billion. The Senator says it does not make any diference whether it is passed now or not. It does make a great deal of difference, because the largest part of this money is in trust funds, and in order for the Bureau of Public Roads to do its planning and the Bureau of the Budget indeed to know in connection with certain requests in subsequent appropriations those plans will depend on what is done with respect to this legislation.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield to the Senator from Massachusetts.

Mr. SALTONSTALL. I say what I do with considerable regret, because I think there is a great deal of merit in the proposition of the Senator from Delaware. The Senate conferees stood by the position of the chairman, the Senator from Florida, completely, so the House conferees took this matter back in disagreement. There were six conferees of the House there. Every one of them, Republicans and Democrats, were against the amendment of the Senator from Delaware. So we asked them to get a vote on it from the House, and they got it, which sustained their position.

I have not conferred personally, but there have been talks with every member of the House conferees since that time, and there is not one of them who is going to change his position.

As the Senator from Florida has said, the Commerce Department appropriation depends on this one item. It involves the question of Members of Congress paying their way on steamers. That is an appropriate subject for legislation. It was put in the appropriation bill as a legislative amendment on the argument of the Senator from Delaware, but the House will not take it. If we take this matter back to conference now, as the Senator from Delaware requests us to do, the conference is going to be stalled. The most that could come out of it would be some statement in the conference report. We cannot get the conferees to put that statement in the conference report, because the only conference report will be on the House side. There will be none on the Senate side. The House conferees will not put in the conference report a statement with which all of them disagree.

Therefore, while I think there is a great deal of merit in what the Senator from Delaware proposes, I think a further conference this year on this subject would be futile.

Mr. HOLLAND. Mr. President, I appreciate the highly cooperative statement of the distinguished Senator from Massachusetts. My time is about to run out, but I want to say two or three other things.

Largely because of the amendment which we accepted, on which we tried to do our best, this bill has been held up an unconscionable amount of time. This bill was reported in February. It was the first appropriation bill reported to the Senate in this session. The bill was approved and passed by the Senate in March. It went to conference in April. We are now in May. My distinguished friend from Delaware wants to prolong final action on it to June or July, or some indefinite time in the future, not recognizing the fact that important fiscal decisions have to be made based upon the amount included in the bill and the time of the passage of the bill.

Mr. President, I am willing to go the twain miles that the Bible urges one to go when he is urged by others to go 1 mile. I think we have gone that twain.

I say, with all pleasantness and with all courtesy, I think my distinguished friend from Delaware, whose positions I approve very frequently and in whose perseverance I glory, is carrying this a bit far, in asking the Senate to hold off further action on this important bill, after this history. We are unable to accomplish anything further in this field, when the conferees on the other side tell us in so many words they will not even ask for the appointment of conferees on the question.

Mr. President, we have a bicameral Congress. The Senate does not legislate by itself. There is an important bill before the Senate. It has been worked on for a long time. It has had the approval of the 27 Members of the Senate who constitute the Appropriations Committee. There has been hard work by the conferees. There has been a hard effort on the part of the conferees in regard to the particular proposal of the Senator from Delaware.

The position of the Senate is clear and the skirts of the Senate are clean in this matter. I do not think, because of our concern with getting the other body to adopt our point of view, we should longer postpone final action on this vital matter, which, as I have said, involves the appropriation of nearly $3½ billion of public money.

Mr. President, does any Senator wish time to speak in opposition to the motion? If not, I am ready to yield back my remaining time, if the Senator from Delaware is ready to yield back his remaining time.

The PRESIDING OFFICER (Mr. CANNON in the chair). Does the Senator from Delaware yield back his remaining time?

Mr. WILLIAMS of Delaware. Mr. President, I wish to use about 2 minutes of my time.

Mr. President, I appreciate the effort which the Senator from Florida has made thus far, and I hope he will not stop now that we are on the verge of victory of getting this agreed to.

The Senator from Florida claims that it is important for the bill to be passed today so that certain decisions can be made. I wish to point out again that the bill relates to appropriations for the fiscal year 1961, and no decisions in connection therewith can be carried out before July 1. There is no rush, and it is only an excuse.

It has been suggested that this proposal should be offered before a legislative committee. For each of the past 5 or 6 years it has been before a legislative committee. There have been hearings. We have been unable to make any progress because Congress apparently wants to preserve its right to get some more subsidized vacations.

Another point was made that this involves legislation on an appropriation bill and would be subject to a point of order in the House.

Mr. President, it would not be subject to a point of order in the House, the Senator is in error. Under the rules of both the House and the Senate legislation which is adopted on an appropriation bill is subject to a point of order only in the House in which it originates. We in the Senate cannot raise a point of order in regard to legislation which is included in an appropriation bill coming from the House, nor can the House raise a point of order to any included in the Senate.

Therefore, this could be voted on in the House, if the House so desired.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. WILLIAMS of Delaware. I yield.

Mr. HOLLAND. Has not the proposal been voted on in the House and rejected unanimously by a voice vote?

Mr. WILLIAMS of Delaware. It was voted on in the House and rejected by a voice vote, with very few Members on the floor.

Mr. President, in regard to the position of the Defense Department, the Defense Department did approve the amendment as the language was written. In the colloquy at the time we debated the matter, I advised the Senator from Florida that the language was drafted by the counsel with the intention of taking care not only of the officials of Government but also of their dependents when such costs was being paid by the U.S. Government.

The Department of Defense did come back later to say it thought there should be some additional clarifying language to make sure beyond any doubt that the dependents would be included when their transferral was being paid by the Government. I advised the Senator from Florida that if the conference committee wished they could have added the additional language which the Department requested. This would have only carried out the Senate's intent. That would have been fully acceptable.

As the Senator from Florida pointed out, he did try to get the conferees to accept that, but apparently the House did not want to accept anything.

Likewise, in regard to the Panama Canal Company's suggestion, the Company would in no way be affected by this amendment in regard to the carrying

of its own employees. This would be true when the employees were being sent to Panama, being given vacations at the expense of the Government, or being returned to the United States. The language would not have affected that transportation.

The amendment would have affected, and was intended to affect, transportation by the Panama Canal Company when offered to Members of Congress or to anyone in the legislative branch who was taking a trip which was not an official trip but just a plain vacation at the taxpayers' expense. That would have been prohibited, and I think it should be prohibited.

I emphasize again, the adoption of this amendment would in no way restrict the operations of the U.S. Government. I have received several letters from the various departments expressing their approval of this amendment. All of those letters say that these departments have no objection to the amendment as drafted.

Finally, if the Senate will agree to this motion, we will be laying down the same code of ethics for the Congress that we prescribe for others. We would be saying we are willing to live by the same code which we lay down for the executive branch; namely, that no Government employee who is in a position to vote upon or to render an important decision affecting any segment of our industry shall take free or reduced-cost vacations or accept subsidized accommodations from that individual or industry.

The PRESIDING OFFICER. The time the Senator yielded has expired.

Mr. HOLLAND. Mr. President, the Senator has indicated the Defense Department approves the proposal. I do not wish to encumber the RECORD by including the entire letter, but I should like to read the last two sentences from a letter addressed to the chairman of the Committee on Appropriations, the Senator from Arizona [Mr. HAYDEN] written by John S. McCain, Jr., rear admiral, U.S. Navy, Chief of Legislative Affairs, dated April 4, 1960:

> By depriving the Government of an opportunity to enter into such agreements for the transportation of dependents, the cost of transportation to the Department of Defense would be increased.
>
> In view of the foregoing, the Department of the Navy, on behalf of the Department of Defense, recommends that the Williams amendment be modified when the bill goes to conference so as not to prevent the U.S. Government from entering into contractual arrangements with carriers for reduced transportation rates for the travel expenses of the dependents of Government employees.

The Williams amendment covered the personnel themselves, both military and civilian, but did not cover their dependents.

Our conferees went to the conference with an amendment, prepared by and approved by the Department of Defense. We were ready to modify the Williams proposal.

Likewise, with reference to the Canal Zone problem, I have already stated—and I am sure the Senator from Delaware will accept my statement—it is a fact that there was an objection, and there was a suggested amendment, and we went to the conference with it. It was a very simple one, to be drafted by way of a modification to the amendment.

The House conferees were not willing to join us in perfecting the amendment of the Senator from Delaware.

Mr. President, I say again that I think we have gone as far as reasonable men should ever be required to go. I think the skirts of the Senate are completely clean. The RECORD will show that the responsibility in this matter, for not adopting the amendment, is clearly on the other body, which I do not criticize, because it is the conscience of the House and the thinking of the House Members which has to be satisfied.

Mr. President, I hope the Senate will reject the motion of the Senator from Delaware and will then proceed to the completion of this business.

The PRESIDING OFFICER. The time of the Senator from Florida has expired.

Mr. WILLIAMS of Delaware. Mr. President, I understand that the time of the Senator from Florida has all been used; is that correct?

The PRESIDING OFFICER. The Senator is correct.

Mr. WILLIAMS of Delaware. I am willing to yield back the remainder of my time and to vote. I certainly hope that the Senate will approve the motion. As I said before, the bill does not have to be signed and become a law until July 1. We have ample time to send this back to conference and to establish clearly in the law this very important point; namely, that the Congress does not think any public official should accept free or reduced-rate transportation or subsidized vacations from any segment of our industry, and what is even more important is that we are willing to live by our own code.

Mr. President, I ask for the yeas and nays on the motion.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Delaware [Mr. WILLIAMS]. The yeas and yeas have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from New Mexico [Mr. ANDERSON], the Senator from Virginia [Mr. BYRD], the Senator from Mississippi [Mr. EASTLAND], the Senator from Tennessee [Mr. GORE], and the Senator from Montana [Mr. MURRAY] are absent on official business.

I also announce that the Senator from Missouri [Mr. HENNINGS] is absent because of illness.

I further announce that the Senator from Minnesota [Mr. HUMPHREY], the Senator from North Carolina [Mr. JORDAN], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Wyoming [Mr. O'MAHONEY], and the Senator from Alabama [Mr. SPARKMAN] are necessarily absent.

Mr. KUCHEL. I announce that the Senator from Utah [Mr. BENNETT], the Senator from Nebraska [Mr. HRUSKA], and the Senator from South Dakota [Mr. MUNDT] are necessarily absent.

The Senator from Indiana [Mr. CAPEHART] is absent on official business.

The Senator from Kansas [Mr. SCHOEPPEL] is detained on official business. If present and voting, the Senator from Utah [Mr. BENNETT], the Senator from Nebraska [Mr. HRUSKA], and the Senator from South Dakota [Mr. MUNDT] would vote "yea."

The result was announced—yeas 38, nays 46, as follows:

YEAS—38

Aiken	Dworshak	Morse
Allott	Fong	Muskie
Bush	Frear	Prouty
Carroll	Goldwater	Proxmire
Case, N.J.	Hart	Scott
Case, S. Dak.	Javits	Symington
Church	Keating	Thurmond
Clark	Kefauver	Wiley
Cooper	Kuchel	Williams, Del.
Cotton	Lausche	Williams, N.J.
Curtis	McCarthy	Yarborough
Dirksen	McGee	Young, Ohio
Douglas	Monroney	

NAYS—46

Bartlett	Gruening	Mansfield
Beall	Hartke	Martin
Bible	Hayden	Morton
Bridges	Hickenlooper	Moss
Brunsdale	Hill	Pastore
Butler	Holland	Randolph
Byrd, W. Va.	Jackson	Robertson
Cannon	Johnson, Tex.	Russell
Carlson	Johnston, S.C.	Saltonstall
Chavez	Kerr	Smathers
Dodd	Long, Hawaii	Smith
Ellender	Long, La.	Stennis
Engle	Lusk	Talmadge
Ervin	McClellan	Young, N. Dak.
Fulbright	McNamara	
Green	Magnuson	

NOT VOTING—16

Anderson	Hennings	Murray
Bennett	Hruska	O'Mahoney
Byrd, Va.	Humphrey	Schoeppel
Capehart	Jordan	Sparkman
Eastland	Kennedy	
Gore	Mundt	

So the motion of Mr. WILLIAMS of Delaware was rejected.

Mr. HOLLAND. Mr. President, I move that the Senate reconsider the vote by which the motion was rejected.

Mr. KUCHEL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HOLLAND. Mr. President, to conclude action on the matter, I now move that the Senate recede from its amendment No. 13, being the amendment proposed by the Senator from Delaware [Mr. WILLIAMS], which we have just debated.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Florida.

The motion was agreed to.

Mr. HOLLAND. Mr. President, I ask unanimous consent to have printed at this point in the RECORD a table which reflects the amount of the 1960 appropriation, the 1961 budget estimates, the amounts in the House and Senate versions of the bill, and the amount finally agreed upon in conference, under each of the categories in the bill.

There being no objection, the table was ordered to be printed in the RECORD.

Department of Commerce and related agencies appropriation bill, 1961 (H.R. 10234)

FEDERAL PATENT POLICIES

Mr. LONG of Louisiana. Mr. President, yesterday I made a speech explaining how the patent policies of the Department of Defense amount to a $6-billion-a-year giveaway of private rights at public expense. I am going to try to correct this situation in this Congress. Undoubtedly, there will be tremendous pressure brought to bear by large corporations which benefit from this tremendous bonanza at public cost.

I ask unanimous consent to have printed in the RECORD the table 23(a), entitled "239 companies and institutions receiving largest amounts of military research and development contracts in the fiscal years 1954–56," which shows the 239 largest contractors and the amounts of money they received for research and development on a guaranteed-profit basis during those years.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 23(a).—*239 companies receiving largest amounts of military research and development contracts in the fiscal years 1954–56* [1] *(parent corporations and subsidiaries are not consolidated)*

North American Aviation	$420,712,000
General Electric Co	338,102,000
Western Electric Co	264,195,000
Boeing Airplane Co	211,567,000
Hughes Aircraft	203,009,000
General Dynamics	146,978,000
Martin, Glenn L., Co	136,225,000
Bell Aircraft Corp	133,723,000
Aerojet General	115,074,000
Westinghouse Electric	105,483,000
Northrop Aircraft, Inc	105,174,000
Curtiss-Wright Corp	98,426,000
Radio Corp. of America	87,639,000
Lockheed Aircraft Corp	84,253,000
Sperry Rand Corp	83,230,000

[1] Totals for the 3 fiscal years are comprised of "procurement actions" of $50,000 or more in fiscal 1954, and "procurement actions" of $10,000 or more in fiscal 1955 and 1956.

TABLE 23(a).—*239 companies receiving largest amounts of military research and development contracts in the fiscal years 1954–56 (parent corporations and subsidiaries are not consolidated)*—Continued

Source: Department of Defense.

Mr. LONG of Louisiana. I also ask unanimous consent, Mr. President, to have printed in the RECORD at this point a number of letters I have received from other Senators expressing agreement with the position I took on the patent policy question.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

U. S. SENATE,
COMMITTEE ON INTERIOR
AND INSULAR AFFAIRS,
April 27, 1960.

Hon. RUSSELL B. LONG,
U.S. Senate,
Washington, D.C.

DEAR RUSSELL: Thank you for sending me a copy of your proposed speech on the patent policy of the Department of Defense. You have done a tremendous research job bringing together the material contained in it with the powerful documentation for the conclusions you have reached.

I have always believed that patents resulting from Government research, financed with taxpayers' funds should become the property of the Government available for proper use by any of our citizens. Certainly, they should not be permitted to get into the ownership and control of corporations with monopoly records. I recall that Senator William Langer delivered an indictment of such practices during the atomic energy debate of 1954 containing material comparable to that which you have drawn together.

My very best personal regards.

Sincerely yours,

JAMES E. MURRAY,
U.S. Senator.

U.S. SENATE, COMMITTEE ON
LABOR AND PUBLIC WELFARE,
Washington, D.C., April 27, 1960.

Hon. RUSSELL B. LONG,
U.S. Senate,
Washington, D.C.

MY DEAR RUSSELL: I am glad to have your letter of the 26th, with which you enclosed copy of a speech you plan to make in the Senate in the near future, based on your hearings and study of the patent policies of various agencies of the Federal Government.

Like you, I feel that when the Government pays for research, the fruits of the research, including patent rights, should belong to the Government. I am sure you have presented the case forcefully in your speech and I look forward to reading it at my first opportunity.

With kindest regards and best wishes, I am,

Very sincerely,

LISTER HILL.

U.S. SENATE,
Washington, D.C., April 29, 1960.

The Honorable RUSSELL B. LONG,
U.S. Senate,
Washington, D.C.

DEAR RUSSELL: Thank you for sending me a copy of your address on Federal patent policies. I am taking it home with me and expect to read it this weekend.

I have long admired your position on matters of this kind and I look forward to reading this speech with great interest.

With best wishes.

Sincerely yours,

THOMAS J. DODD.

U.S. SENATE,
May 2, 1960.

Hon. RUSSELL B. LONG,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR RUSSELL: Thank you for sending me an advance copy of the speech which you

intend to deliver in the near future on Federal patent policies. I had been generally aware of the situation you described but am astounded at some of the facts which you have brought together so convincingly. It is good cause for reconsideration of the patent policy of the Department of Defense to discover that barely half of all the patents held by the biggest companies are being put to use, while the smaller companies use more than three-fourths of the patents which they hold.

I am glad that you will be calling this situation to the attention of the Senate and of the Nation. I will look forward to hearing your speech on the floor of the Senate.

Aloha and best wishes.

Sincerely yours,

OREN E. LONG,
U.S. Senator.

U.S. SENATE,
April 27, 1960.

Hon. RUSSELL B. LONG,
U.S. Senate,
Washington, D.C.

DEAR RUSSELL: Thank you very much for your thoughtfulness in sending me a copy of the address you intend to make on Federal patent policies.

Russell, I think you made some excellent points in your proposed speech and I want you to know that it is my hope that you will be able to get some corrective legislation.

With warmest personal regards.

Sincerely,

MILTON R. YOUNG.

U.S. SENATE,
April 30, 1960.

The Honorable RUSSELL B. LONG,
U.S. Senate,
Washington, D.C.

DEAR RUSSELL: I appreciate your letter and the copy of your speech, which evidences so much study of the complicated question of patent policy. I look forward to commending you on the floor of the Senate at the time you make your address.

Sincerely,

ALBERT GORE.

PROCEDURE FOR ASSESSING CERTAIN ADDITIONS TO TAX—CONFERENCE REPORT

Mr. BYRD of Virginia. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 9660) to amend section 6659(b) of the Internal Revenue Code of 1954 with respect to the procedure for assessing certain additions to tax. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER (Mr. CANNON in the chair). The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see House proceedings of May 5, 1960, p. 9591, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. BYRD of Virginia. Mr. President, the Senate made two amendments to the bill.

Amendment No. 1 removed the 3 percent limit on medical expenses incurred by the taxpayer for the care of his dependent mother or dependent father or the dependent mother or father of his spouse, or a dependent individual who stood in loco-parentis to the taxpayer or his spouse, if such dependent has attained the age of 65 before the close of the taxable year. The House accepted this amendment except that portion relating to a dependent standing in loco-parentis to the taxpayer or his spouse, and we were forced to recede on that point.

The House conferees refused to accept Senate amendment No. 2, providing a personal exemption for certain foreign students who were residing in the taxpayer's home. This amendment was rejected with the understanding that a suitable amendment would be worked out by the Treasury and presented in connection with another bill.

I urge the adoption of the conference report.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

Mr. KERR. Mr. President, I move that the Senate reconsider the vote by which the conference report was agreed to.

Mr. BYRD of Virginia. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

INCOME TAX TREATMENT OF NONREFUNDABLE CAPITAL CONTRIBUTIONS TO FEDERAL NATIONAL MORTGAGE ASSOCIATION—CONFERENCE REPORT

Mr. BYRD of Virginia. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7947) relating to the income tax treatment of nonrefundable capital contributions to Federal National Mortgage Association. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see House proceedings of May 5, 1960, p. 9589, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. BYRD of Virginia. Mr. President, the Senate made two amendments to this bill which were accepted by the House conferees; one of which was clerical, and the other provided a new effective date. The bill as passed by the House was to be effective for taxable years beginning after December 31, 1958. Under the Senate-passed bill, this new treatment will be fully available for taxable years beginning after December 31, 1959, and with respect to prior years to which the 1954 code applies, no deficiency will be assessed for any such year where the taxpayer has treated the amount in question either as a deduction or as an adjustment of income. Thus, the new treatment will be available for all transactions of this type since the rechartering of the Federal National Mortgage Association in 1954. Reduction in the basis of the stock issued in this past period will be required only if the amount was claimed by the taxpayer-subscriber as a deduction or as an adjustment of income.

I urge the adoption of the conference report.

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). The question is on agreeing to the conference report.

The report was agreed to.

Mr. KERR. Mr. President, I move that the action by which the conference report was agreed to be reconsidered.

Mr. BYRD of Virginia. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

INCOME TAX TREATMENT OF CERTAIN DEALERS' RESERVES—CONFERENCE REPORT

Mr. BYRD of Virginia. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 8684) to provide transitional provisions for the income tax treatment of dealer reserve income. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER. The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see House proceedings of May 5, 1960, p. 9590, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. BYRD of Virginia. Mr. President, the bill provides two alternative methods for paying the tax due on the income which has not previously been reported. First, it provides that such amounts can be treated as required changes in methods of accounting. This means that the reserves built up prior to 1954—if such years are closed—need not be reported for tax purposes, and that only the excess of the current balance over the 1954 balance in the reserve is to be reported. A second alternative provided permits the computation of the deficiencies, or overassessments, which would arise if the income had been reported in the proper years, and then the sum of these amounts, plus interest up to the time of selecting this alternative, may be paid in 10 annual installments, generally beginning in 1961. The House conferees accepted all of the Senate amendments with the exception of amendment No. 7, upon which we were

forced to recede. Amendment No. 7 reduced the period for electing to pay the deficiencies for the years involved in installments from 10 years to 5 years. Thus, the taxpayer will have 10 years in which to pay such installments as heretofore stated.

I urge the adoption of the conference report.

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

Mr. KERR. Mr. President, I move that the action of the Senate whereby the conference report was approved be reconsidered.

Mr. BYRD of Virginia. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

PRESIDENT EISENHOWER'S DOUBLE STANDARD ON SPENDING

Mr. GRUENING. Mr. President, yesterday, the President sent to Congress another message which was correctly summarized by Mr. Robert C. Albright, staff reporter of the Washington Post, in this morning's issue of that publication, by saying that the President "in an unusual message" called upon the Congress "to forget about election year politicking, shun heavy Federal spending, and get something 'done for America.'"

I want to commend our very able majority leader, the senior Senator from Texas [Mr. JOHNSON] for promptly and properly calling attention to the President's "double standard."

The Post's news story reports his comments as follows:

> Accusing the President of using a "double standard" on spending, the Texan said many people were still puzzled by two separate speeches the President made Monday. He said the President warned one group that domestic spending must be cut, and cautioned the other that foreign spending must not be cut, drawing "cheers" both times.

I am more than happy to have the voice of our distinguished majority leader ring out with clarion clearness to point to the flagrant inconsistency and contradiction inherent not merely in the President's latest lecture to Congress, but also in the policies he has pursued, is pursuing, and is attempting to force upon the legislative branch of the Federal Government.

The double standard consists in constantly warning Congress to shun what President Eisenhower calls "Federal spending," when such appropriations are designed for the needs of the American people, but at the same time to insist on the heaviest kind of spending for identical needs in 104 foreign countries. In the foreign field, the President insists there must be no reduction, no retrenchment, no economy.

Repeatedly during this Congress uncontrovertible evidence has come through the cold figures of the President's budget, through press releases from the White House, and through Presidential messages, that the President was opposed to adequate public works for the American people, was opposed to adequate Federal assistance to education, was opposed to adequate measures to conserve and expand the utilization of our basic natural resources—whether in forests, minerals, hydroelectric power—was opposed to adequate airport construction to meet the urgency of the jet age, was opposed to adequate appropriations to aid small business by research, was opposed to adequate legislation to overcome the foul pollution of our rivers and to eliminate sewage from our water, was opposed to adequate aid for our depressed areas, was opposed to adequate measures to provide health insurance for our aged—all these, and much else which the President has declared would be wasteful, inflationary, extravagant, and would unbalance the budget. But at the same time, the President has sent to the Congress, with the strictest injunction that every cent thereof is necessary, a $4,150 million foreign-aid program which includes public works abroad, aid to education abroad, measures to conserve and expand the utilization of basic natural resources abroad, airport construction abroad, aid to small business abroad, aid to overcome river pollution abroad, and every other conceivable activity abroad—in other words, precisely the same kinds of projects in 104 foreign countries which he wishes to deny the American people.

The twin policies—unidentical twins, let it be noted—by which the needs of the American people are derided, downgraded, pared down by threat of veto, and by actual veto, are reemphasized by the further recent announcement that the President's hopeful goal and watchword in the matter of pending legislation is one-third of the Congress, plus one, so that his vetoes may be upheld—are properly labeled "the double standard."

The Washington Post has a fancier name for it. In a leading editorial entitled "Prod From the President," published this morning, the Post refers to it as "the curious ambivalence" exhibited by President Eisenhower. The dictionary might furnish other synonyms, such as "dichotomy," which, in the field of logic, is defined by Webster as "division of a class into two subclasses, especially two opposed by contradiction, as 'white' and 'nonwhite.'" If we are to rely on this more "hi-falutin" language, we may presume that the program of President Eisenhower to help foreign countries is "white"—and, incidentally, the Senate recently authorized it almost to the amount the President requested—and that the congressional aspiration to take corresponding care of similar needs of the American people is "nonwhite." Or, to go into the field of psychology or psychiatry, we might refer to the double standard as "schizoid."

Another aspect of the double standard which is emphasized by some of the latest Presidential recommendations, in addition to the undesirable one to raise the interest rate ceiling—a banker's bonanza—but a consumer's curse, and which runs counter to his pleas to fight inflation—are the President's requests that Congress should furnish "research assistance to the coal industry," when a bill to do just that was vetoed by him; the request to round out a program of natural-resource development, when the Presidential budget drastically cuts proposals to do this, such as in the field of forestry and hydroelectric development, and vetoes proposals to achieve those ends in the Public Works Act.

To sum up, the double standard is the hallmark of the Eisenhower administration—in short, the least possible for the folks at home, and the most possible for the people of other countries. I am glad that our majority leadership in the Senate has made that point crystal clear; and I congratulate our able leader, the Senator from Texas [Mr. JOHNSON], for going to the heart of the difference, to the essence of the contrast that distinguishes the aims of the Democratic Party and of the majority in the Congress from those established by the Republican Party leadership in the White House. It is clearly the purpose of our party to do something for America, to the extent that Presidential vetoes of what is for America will permit.

PUBLIC BUILDING PROJECTS APPROVED BY THE COMMITTEE ON PUBLIC WORKS

Mr. CHAVEZ. Mr. President, in order that the Members of the Senate and other interested parties may be advised of public building projects approved by the Committee on Public Works, under the Public Buildings Act of 1959, I submit, for inclusion in the CONGRESSIONAL RECORD, information on this matter.

The first is a list of 64 new buildings approved by the Committee on February 3, 1960.

At its meeting on April 29, 1960, the committee approved 28 projects for modification, alterations, and repairs to existing buildings, and 14 projects for construction of new buildings, 3 in the District of Columbia, and 11 in other sections of the country.

Approval of these buildings is based on prospectuses submitted to the committee by the Administrator of General Services, in compliance with the provisions of Public Law 248, 86th Congress. In addition, the Administrator appeared before the committee in executive session, and discussed the public building program, its operation, and the need for the recommended new buildings and alterations to existing buildings. He outlined his procedure for the construction of public buildings by contract awarded by competitive bids.

The committee also approved five small watershed projects under the provisions of Public Law 566, 83d Congress, as amended. A list of these projects is attached.

There being no objection, the tabulations were ordered to be printed in the RECORD.

Resolutions approving projects under the Public Buildings Act of 1959 (Public Law 249, 86th Cong.)

Date referred to committee	Location	Project	Estimated cost	Date approved

THE DISCLAIMER AFFIDAVIT

Mr. CARLSON. Mr. President, during the past few weeks I have received from college officials and students in our State many letters regarding the disclaimer affidavit which must be signed by students who secure loans through Public Law 864, The National Defense Education Act of 1958. Letters on both sides of this matter have been received.

I have just received a very outstanding letter on this subject from Mr. Henry A. Fast, of Bethel College, North Newton, Kans. Bethel College is one of our outstanding private schools, and I wish to call the letter to the attention of the Senate. Therefore, I ask unanimous consent that the letter be printed in the RECORD, as a part of these remarks.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BETHEL COLLEGE,
North Newton, Kans., April 27, 1960.

The Honorable FRANK CARLSON,
U.S. Senator,
Washington, D.C.

DEAR MR. CARLSON: We want you to know that Bethel College appreciates the loan funds the Government makes available to deserving students in order to encourage them to finish their college or university training.

But, in our judgment, it is extremely unfortunate that the Government in Public Law 864 (the National Defense Education Act of 1958) requires the student to sign the "disclaimer affidavit" if he would take advantage of the loan offer. This requirement in Public Law 864 should be repealed forthwith, as recommended by President Eisenhower in his January 18, 1960, budget message.

In our judgment, the disclaimer affidavit:

1. Is discriminatory. It singles out students who need a loan for their college training as suspect of communism unless they prove themselves innocent. This is a very unfair insinuation.

2. Is futile. It is hardly an effective way to discover disloyalty or to promote loyalty. It certainly would not deter a convinced Communist from signing the oath.

3. It appears like an unfriendly thrust at American colleges and universities. It implies that the Government does not trust its schools of higher learning.

Actually, however, these schools have far more effective ways of screening deserving students from the undeserving than this disclaimer affidavit could possibly achieve.

For these and other reasons we urge again that this source of irritation, the disclaimer affidavit, be repealed without delay.

Respectfully yours,

HENRY A. FAST,
In behalf of the Bethel College Faculty.

GRIEVANCES OF MEMBERS OF GENERAL TEAMSTERS LOCAL NO. 174

Mr. MAGNUSON. Mr. President, I have received a telegram which reads in part as follows:

We, the undersigned rank and file members of General Teamsters Local No. 174, hereby petition Congress for redress of grievances.

Then the wire sets forth the grievances. The wire is signed by many rank and file members of the union. They suggest appropriate congressional remedial legislation. I understand proposed legislation has been introduced by the distinguished Senator from Indiana, which has gone to the Committee on Labor and Public Welfare. I should like to have this matter called to the attention of the committee, and I ask unanimous consent to have the telegram printed in the RECORD at this point.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

SEATTLE, WASH., *April 20, 1960.*

Hon. WARREN MAGNUSON,
Senate Office Building,
Washington, D.C.:

We, the undersigned rank-and-file members of General Teamsters Local No. 174, hereby petition Congress for redress of grievances:

1. Undue delay of the monitorship has led to the squandering of over $1 million of Teamsters rank-and-file moneys and the denial of our basic rights to a convention to elect officers of our own choosing as guaranteed by the Landrum-Griffin law.

Please use your good offices to bring this matter to the attention of Congress, and the appropriate congressional committee to investigate the misconduct of the monitors and the Federal court judge and cause the necessary remedial legislation.

BATTLE OF THE BUDGET

Mr. WILLIAMS of Delaware. Mr. President, my good friend the distinguished senior Senator from Maryland [Mr. BUTLER] has devoted his latest newsletter to a subject that touches upon every taxpayer in America—the Federal budget. Earlier this year Senator BUTLER sent out some 5,000 questionnaires to his constituents in Maryland asking them to join in "the battle of the budget" by giving him their ideas as to where their money should go. Response was so great that he inserted the questionnaire into the RECORD, extending an invitation to all readers of that august publication.

The results make up his newsletter this week, and I am happy to report that they give every indication of the public's awareness of the fight that the Senator from Maryland and many of us here in the Senate are waging to keep expenditures in line with taxes. As one individual from Accokeek, Md., put it:

> Only when the "stockholders" of the Nation take a more detailed interest as they do with their own family budgets will we start the long road back to a healthy economy and more away from the dangerous area we are now drifting in.

I ask unanimous consent that the newsletter, entitled "The Battle of the Budget," by the senior Senator from Maryland, be inserted in the RECORD.

There being no objection, the newsletter was ordered to be printed in the RECORD, as follows:

CONGRESSIONAL VIEWPOINT—THE BATTLE OF THE BUDGET

(By JOHN MARSHALL BUTLER, U.S. Senator, Maryland)

WASHINGTON, May 2, 1960.—"This represents a highly desirable effort to strengthen our democratic form of government in a practical manner. It is most encouraging." So writes a constituent from Arnold, Md., on the back of my "Battle of the Budget" questionnaire which I mailed to nearly 5,000 people earlier this year. And I want to state that the answers are most encouraging, too.

Ninety percent of the replies ask for a reduced budget, with the savings to be applied against a debt or tax reduction. Those who do specify request that the excess be used to reduce the debt and not taxes, which ought to give a few politicians fiscal food for thought. Nine percent state they are satisfied with the President's $84 billion budget, while only 1 percent recommend an unbalanced budget.

A breakdown of the major targets of the 90 percent in favor of reductions reads like this: Agricultural price supports, mentioned by 84 percent; foreign aid, mentioned by 66 percent; commerce and housing, 51 percent; labor and welfare, 49 percent; veterans' benefits, 47 percent; natural resources, 41 percent; and general Government expenses, 37 percent. Specific suggestions in these areas are that the Government stop buying school lunches, that it follow the Hoover Commission's recommendations for reducing administration expenses, that the Government get out of public housing, and that Washington withdraw from river development and public power.

One Marylander in Darlington has this to say about farm price supports: "Cut to the bone and then grind up the bone for fertilizer." Another constituent from Salisbury simply explodes, "Ye gods." Someone from Lubbock, Tex., suggests that the "Battle of the Budget" "might more correctly be termed 'The Battle Against Socialists and Bureaucrats.'" And a lady from New Orleans submits the lowest Federal budget of all—$37.1 billion, with the remainder to be applied against a reduction in the national debt. My "Battle" was printed in the CONGRESSIONAL RECORD, which accounts for the many questionnaires that I received from across the country.

I believe that many Marylanders and Americans who previously were unsure of how they could contribute to the battle to keep our expenses within our income are now girding themselves. As someone from Accokeek puts it: "Only when the 'stockholders' of the Nation take a more detailed interest as they do with their own family budgets will we start the long road back to a healthy economy and move away from the dangerous area we are now drifting in." Amen.

FEDERAL MARITIME BOARD DECISION IN THE ATLANTIC AND GULF-PUERTO RICO GENERAL INCREASE IN RATES AND CHARGES

Mr. GRUENING. Mr. President, I wish to call the attention of the Senate to a decision of the Federal Maritime Board of April 29, 1960, in the Atlantic and Gulf-Puerto Rico general increase in rates and charges which, while of particular interest to the noncontiguous areas of the United States—Alaska, Hawaii, and Puerto Rico—is also of concern to everyone having an interest in the U.S. merchant marine.

Two points in the decision are of special interest.

First, the Federal Maritime Board, reversing action it has taken in the past, holds in the Puerto Rico case that, in establishing the value of a carrier's investment in property as a means of determining a fair rate of return, thus setting rates to be charged, the carrier may not include a fictional reproduction cost of vessels it never reproduces.

I look upon this as eloquent vindication of action taken by my colleague Senator BARTLETT and by me in introducing an amendment to the bill, S. 2618, which would provide for the exchange, by domestic carriers, of old ships taken from the mothball fleet of the Maritime Administration for new ships from the reserve fleet. The amendment we introduced, but which was not adopted by the Interstate and Foreign Commerce Committee when the bill was reported by that committee, would have provided that, with respect to vessels received from the reserve fleet in exchange for old vessels, a carrier would be required, for rate-setting purposes, to limit the value of the new ship to its actual exchange value. It would not be permitted to include, in the value of its equipment investment, a totally fictional reproduction cost of vessels it never reproduces.

The importance of this to the Alaska trade is demonstrated by the fact that, in previous decisions of the Federal Maritime Board in which increases in rates for Alaska have been granted, the Board has allowed the carriers to Alaska to include reproduction costs of vessels in the rate base, even though the carrier concerned has, as a matter of fact, never reproduced its vessels. The Maritime Board itself, while allowing the factor to be included in the rate base, admitted that the reproduction cost element was "hypothetical" and that the record showed that the vessels of the carrier—referring to the Alaska Steamship Co.—would probably not be reproduced, and that the company had, historically, never operated with newly constructed tonnage.

This new decision of the Federal Maritime Board will, I hope, eliminate forever the unrealistic policy formerly applied under which carriers could load their rate base with a fictional cost of reproduction of "phantom vessels"—to use the term employed by the Federal Maritime Board—thus unduly inflating the evaluation of their property, resulting in unjustified increases in rates to be paid by the shipping public.

I am glad the Maritime Board has come to realize, as is stated in the decision on the Puerto Rico case, that carriers regulated by that agency are entitled to a "fair return on the reasonable value of the property at the time it is being used for the public," and that they may not expect to tax those dependent on their services in order to earn a return on an investment they never made.

A second reversal of rate-setting policy by the Federal Maritime Board which appears in this new opinion deals with another aspect of shipping regulation which has long perturbed Alaskans and others to whom it has seemed that decisions of the Board were based on fantasies apparent only to the Board and the carrier, and not on fact. I refer to the practice of the Board of allowing carriers before it to include in their evaluation of property for rate-setting purposes items of property which are not owned by the carrier at all.

Under this "Alice in Wonderland" theory, a carrier could claim, for purposes of establishing the value of its investment, the value of chartered vessels, which it did not own and never intended to own, thus establishing the base upon which an alleged fair rate of return is computed.

It is with satisfaction that I note that the Board now confesses error in applying this policy in the last case in which

increases were granted to the Alaska carriers. I am indeed glad to see that the light has dawned on the Federal Maritime Board and that its members are now able to see that which was clear to the rest of us long ago. It is cause for congratulation to the Board that it now concludes that, with respect to property used but not owned by the carrier, "the carriers are not devoting their capital to the shipping public insofar as such property is concerned to include the value of nonowned property in the rate bases would grant the carriers a windfall at the expense of the shipping public."

The importance of the decision of the Federal Maritime Board to Alaska is manifest. Dependent as Alaska is on water transportation, the 49th State is utterly at the mercy of the Board with respect to the establishment of water transportation rates which, to a very great degree, determine the cost of living in Alaska, thus, further, the rate at which the State can develop its great resources. Historically, Alaska has been crippled by unrealistic rate-setting practices of the Federal Maritime Board and its predecessor agencies, which have resulted in cruelly exorbitant rates for water transportation. The unmatched natural resources of my State can never make their full contribution to the economy of the United States unless our water transportation rates are set at a level which will encourage, and not stifle their development.

Within the last 2 years, the State of Alaska has been forced to submit to freight rate increases for water carriers of 26.5 percent. But this is not all. On January 10, the Federal Maritime Board again permitted an increase of 10 percent in Alaska freight rates to go into effect prior to a hearing on the matter. Hearings on the increase will soon be conducted by the Board, and we may hope the Board will not inflict this permanently upon the hapless citizens of Alaska. However, as I pointed out in earlier remarks to the Senate on this matter, possible disapproval of the increase by the Board cannot undo the damage that has already been done. The inflationary effects of a 10-percent freight rate increase have already burdened the overburdened economy of my State in a way which will hinder and hobble business enterprise in a thousand ways. The economic thermometer will not go down automatically, even if the increase in rates is not made permanent as a result of the final decision of the Board.

The State of Alaska cannot allow this phenomenon of ever-increasing water freight rates to continue. We have reached a real crisis in ocean transportation.

It may be that the only real solution to our problem of high transportation costs lies in effective legislation and in basic revisions of the merchant marine laws as they affect shipping to Alaska, Hawaii, and Puerto Rico. Possible legislative solutions will continue to be carefully considered with this in mind.

Meanwhile, I am hopeful that the recent decision of the Federal Maritime Board to which I have addressed these remarks indicates the adoption of more progressive policies of rate regulation which will result in the establishment of transportation costs for the noncontiguous areas which will be, at least more realistic than has been the case in the past. As it is, having in the past been a severe critic of Federal Maritime Board policies from which Alaska has suffered for many years, I am happy to accord due praise to its latest action. May it continue in the newly charted course of enlightenment and apply the same policy to Alaska shipping as well.

PATENTS FOR PLANTS

Mr. FREAR. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 960, S. 1447.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The CHIEF CLERK. A bill (S. 1447) to amend section 161, title 35, United States Code, with respect to patents for plants.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Delaware.

The motion was agreed to; and the Senate proceeded to consider the bill.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill (S. 1447) was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first paragraph of section 161, title 35, United States Code, is amended to read as follows:

"Whoever invents or discovers and asexually reproduces any distinct and new variety of plant, including cultivated sports, mutants, hybrids, and newly found seedlings, other than a plant found in an uncultivated state, may obtain a patent therefor, subject to the conditions and requirements of this title."

Mr. FREAR. Mr. President, I ask unanimous consent that there be printed in the RECORD in connection with this bill a short statement.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The purpose of the proposed legislation is to amend the first paragraph of section 161, title 35, United States Code, the Plant Patent Act, so that patents may be applied for and obtained on tuber-propagated plants which are now excluded.

STATEMENT
